Three different methods of approaching this work have been tried in Germany. The first, the unofficial method; bodies of farmers would form into organizations, a number of which would designate themselves as national, assuming the right to speak in the name of the farmers of the nation. This mode was found as ineffective in Germany as it is in the United States. The next method tried was that of direct official organization by the Government, and this, for many and obvious reasons, was also found to be impracticable. The third method was the semiofficial organization, culminating in the Landwirtschaftsrat, and this has proved successful; and the measure before us, as you know, is but an adaptation of the German system.

Now, going back to Mr. GOODWIN'S question, as an instance of the kind of "limitations" which would beset a Government department in attempting to do the work outlined under the resolution, let me quote a recent example.

As you may know, the borough president of New York, in order to reduce the cost of living, started in New York City what are known as the "free markets." Space was given free under the Brooklyn Bridge approaches for the sale of the products which the farmers brought in. By this means the farmers were to get into immediate touch with the consumers, thereby benefiting themselves on the one hand and the consumers on the other. From all accounts this venture proved a great success. While in New York lately I called on the borough president, and after he had explained the operation of this plan I remarked that it seemed to me that such an effort was impracticable so long as it was done by direct official action; that this endeavor would be likely to bring him up presently to the political "buzz saw." He could not see the matter in this light; on the contrary, he said he was going to assist in starting similar institutions in Philadelphia and in Baltimore.

Shortly after, when in Boston, I read an account in one of the daily papers which indicated that the borough president really had come up against the "buzz saw." The account stated that the borough president's secretary rushed into his chief's office exclaiming: "There's a wild-eyed committee outside, and a lot of them, too, and they want to see you." "Send them away," he replied. "They won't go," said the secretary; and in they came, the entire lot, and the spokesman stepped up, saying, "We are a committee of the retail grocery men, and we want to know what all this free market business is about. We pay taxes and we pay rent, and can you tell us why you start a proposition calculated to drive us into bankruptcy?" That may be good politics, and perhaps it may not. Perhaps the borough president will find that out next election time.

Now, let us go back to the proposal before us; let us assume that it be put into operation; that the details of the routine work of the township, county, State, and national commissions have been mastered; that the great distributing organization is in working order, and what then? Shall all this machinery be placed in the hands of the Government? Shall the Government be given the power of directing the distribution of billions of dollars' worth of products annually? Would not this be a dangerous power? Would it not be a power unprecedented in the economic history of nations? It seems to me that the work of directing the handling, the purchase, and sale of the products of the American farmers is not a governmental function. The assumption of such functions would not be tolerated even under such paternalistic Governments as those of Persia, Siam, Burma, or Morocco.

It would be as impracticable to have the distribution of farm products under the control and direction of the Government as it would be to have the distribution of shoes, clothing, and dry goods under the control of the Government. Such control and direction would not even have the merit which would entitle it to be considered as good socialism. It would in substance be socialism run mad.

It is, of course, possible for the Department of Agriculture to render valuable service in this work; valuable service can likewise be rendered by the chambers of commerce, the boards of trade, the International Institute of Agriculture, and other similar bodies.

Senator NORRIS. What about the expense of the organization of the entire system proposed?

Mr. LUBIN. The expense for maintaining the entire system of national, State, county, and township commissions, the cost for the clerical force and for its operation should be borne by an assessment which would fall on the members forming the township commissions. Taking the required total for the maintenance of a township commission as 100 units and supposing there be 100 members in the township, then each member would be required to pay one-hundredth part of the total; if there were 50 members, each would have to pay one-fiftieth part; if there were 25 members, each would pay one twenty-fifth. Of the total assessment thus raised the township commission would retain a portion to meet its own clerical and operating expenses, and the remainder would be assigned in given proportions toward the expense for the clerical force and operation of the county, State, and national commissions. To insure the consistent and coherent operation of the entire system I would suggest that it operate under charters (for which an initiation fee could be charged) to be granted by the national commission to the State commissions, and by the State commissions to the county and township commissions. The general laws under which the commissions would operate could be laid down in these charters.

Senator NORRIS. Yes; but how about paying the headmen, the men that do the guiding?

Mr. LUBIN. Those men would not want any pay.

Senator NORRIS. Well, then, Mr. Lubin, your national commission would be composed almost entirely of wealthy men.

Mr. LUBIN. Really the question before us is not one of wealthy men but of competent men. If a compensation were attached to these positions it is likely that they would be eagerly sought after by men of mediocre ability. Of the 29 men on the national commission, the President could select the 15 farmers from, say, the most competent members of the prominent agricultural associations. The 14 men, the experts on carriage, finance, interstate relations, parcel post, the "captains of industry," the men of national reputation, all these would not have to be paid. In view of the indirect benefits which the operation of these commissions would confer, in view of their broad national importance, such men would be glad to serve without compensation.

Mr. GOODWIN. You think, then, that these men would give their time, that they would not require any money, that they would consider it an honor to initiate this idea and would work for nothing?

Mr. LUBIN. Yes; I think that these men would not alone be willing to give their time, but that, in view of the broad national importance of this matter, they would be very glad to do so. I take it that every intelligent man understands that the question of the distribution of our farm products to the best economic advantage concerns not only the American farmers, but that it also concerns all consumers, and especially so all interested in land values, in securities, and in the maintenance of a steady wage rate. Now, take it in the case of a railway president like Mr. Ripley. He, as well as his colleagues of other roads, surely understands that the value and dividend of his road is dependent on the earning power of the farmers on either side of the track. This alone would be sufficient spur to induce him to serve on this commission, and he will not be likely to want your $1,500 nor your $2,000 nor your $5,000 for this service. If he serve at all, he will serve free of charge, and will give the best service that is in him.

Mr. GOODWIN. Do you think that a man like Mr. Ripley, or a man from Sears, Roebuck & Co., who understands shipping and the handling of men and affairs, or any other big man, could afford to surrender his time from the business in which he is at present engaged and turn himself over to this commission, which would require so much of his time and effort, whether he gave his time gratuitously or for a salary?

Mr. LUBIN. I certainly do; and for the reasons that I have already given; especially so since the time which has to be given up to the sessions of the commission in Washington would not be nearly as considerable as may at first be supposed. It must be remembered that the actual work under the commission will be carried out the year around by the working staff, by the secretary general, and the clerical force under him. But one or two sessions of the commission a year at Washington, lasting a few days each, like those of the Landwirtschaftsrat at Berlin, would probably be all that would be required.

And right here it is pertinent to bring up the question, "Would not this proposal meet with serious opposition, especially with opposition from capitalistic interests?" Yes; it certainly would. In fact, it has already met with some strenuous opposition from that quarter. But it would be a mistake to say that it has met with opposition from all the capitalistic interests. It has only met with opposition from that small proportion which profits by the present chaotic and fortuitous marketing conditions. It is reasonable to suppose that the far greater proportion of the capitalistic interests, when the significant bearing of this matter is properly understood, will favor this proposal as being a conservative measure, a measure not alone in the interest of the American farmer but likewise so in the interest of capital. There are those who are seeking for capital, and there are those who have already acquired it. It is the purpose of those who have already acquired capital to conserve it, and what better means of conserving that capital can be pointed out than through the stability which would result from the distribution of the products of the American farmers to the best economic advantage? Just as soon as this phase of the proposal before us will be rightly understood it can be confidently expected that the capitalistic interests will favor it as much as the farmers and the consumers.

And on this head it may not be irrelevant to present the following from the Los Angeles Times of December 6:

"Competition between the transcontinental railroads and the steamship companies using the Panama Canal has become so keen and its results are making themselves felt in such far-reaching fashion that President William Sproule, of the Southern Pacific Co., in an authorized interview here to-night, said:

"'The commerce of the Pacific coast is in the throes of a transportation crisis. * * * We are after the oranges and the apples and the celery and the casaba melons at this season of the year, and when the season for deciduous fruits opens we expect to be in that line, too. * * * The tonnage from California to the Atlantic seaboard by sea and rail combined in August, September, and October of 1913 was 120,000. Of this the railroads got 56 per sent and the sea carriers got 44 per cent. For the same period in 1914 the total tonnage was 170,000. Of this the railroads got 39 per cent and the sea carriers got 61 per cent. Thus the sea carriers' proportionate takings of the total tonnage from California for these three months increased 17 per cent, while the tonnage by rail decreased to the same extent.'"

In a statement to the Times of December 9, Mr. Julius Krutchnitt, chairman of the executive committee of the Southern Pacific Co., said:

"The number of railroads that have gone into receiverships in late years and the lack of signs of any betterment in the railroads' condition sometimes leads me to believe that one after another all the railroads of this country will pass through the courts' hands, the weaker ones first and then the stronger ones. * * * But such a condition of affairs can not go on forever."

Well, what should be the remedy? Should it be the refilling of the Panama Canal? Should it be in the higher rates to the railroads? Why not find the remedy in an increased volume of carriage, and how else may this be found than through a system of scientific marketing? The attempt to maintain the railway rates prevailing before there was a Panama Canal by simply raising the present rates would be but another way of nullifying the economic utility of the said canal.

"But," say the railroads, "unless you give us higher rates you will drive us into receiverships, into bankruptcy," and so we have here a vicious circle. Around and around we go, and the circle is vicious all the way round.

And pray, what do higher rates for carriage mean? What do they mean for the home price of farm products? They mean that an increase in the cost of carriage brings a corresponding decrease in the price of the product, and not alone for the amount carried, but for the entire amount offered for sale in the home market.

Let us take, as an example, peaches and apricots, of which one-third of the entire production is sold for home consumption, one-third for the home canneries, and one-third for shipment outside of the locality. A rise in the cost of carriage high above the normal rate will prevent the shipment and cause a glut in the locality, lowering the price. He who buys for shipment will, of course, pay no more than the canner or the buyer for home consumption; it thus follows that a rise in the cost of carriage will lower the home price of the quantity carried, of the quantity canned, and of the quantity for home consumption. A rise in the price of carriage is, therefore, a distinct block in the road to progress, just as surely as a decline in the cost of carriage means a distinct step forward in the field of progress.

Thus we see that the carriers are now brought up to a condition which they must face. We must, on the one hand, either curtail the carriage facilities or raise the rates or drive the carriers into bankruptcy; or, on the other, we must increase the quantity of products to be carried and thereby increase the earning power of the carrier by reason of the increased volume carried.

And is there not plenty of scope for the increase of the quantity to be carried? There certainly is when we remember, for instance, that the German Empire is not as large as our State of Texas and only a little larger than the State of California. Yet Germany holds 66,000,000 people, and on mighty poor land. You get a good portion of Prussia poor, miserable sand, and those people have to labor hard to make that land perform some of the functions of farm land. Now, in extent we have empire overlapping empire. Shall we make these over, bound hand and foot, to a few trusts and thereby consign our interests to Mephistopheles, to the devil, or shall we, rather, travel in the pathway that will bring out the potentialities of this great and mighty force?

Let me give but one example of these potentialities. We all know that there is a world-wide demand for olives and olive oil. Spain, for instance, produces 71,000,000 gallons of olive oil a year; Italy, 69,000,000 gallons, and France, 9,000,000, but California produces only a nominal quantity. Now, recently, while traveling from Los Angeles to San Diego, it seemed to me that the hill country in that region was of about the same character and climate as the olive-growing lands between Rome and Tivoli. There is room between Los Angeles and San Diego for from five to ten million olive trees. Why are those olive trees not there? Simply because the distributing machinery for olive-tree products in California is so defective that the further development of production is negatived.

In its issue of October 20, 1914, speaking on the subject before us, the Louisville Courier Journal says:

"Systematic marketing has been highly developed in Europe, while in this country it has barely made a beginning. The day is coming when the producers of the United States will adopt the European method, and when their organizations will stand for something other than sound and fury. * * * Assuredly the farmers and consumers of this country ought to be able to handle the problems of food distribution to as good effect as it has been done in Europe."

In concluding my statement, I am prompted to say that if you gentlemen of the Senate and of the House are able to advance this work toward a successful issue, if through your efforts the resolution pass the Senate and the House and receive the signature of the President, you will have accomplished an important labor toward shaping the destiny of the United States. For an effective measure which would throttle the trusts and insure the distribution of the products of the farm to the best economic advantage may truly be denominated a measure which would reinforce the great experiment—the experiment which was made here in founding this Republic. Among the founders of the Republic were men whose minds transcended the commonplace and the mediocre. These transcendent minds looked forth into something beyond the mere practical. It was their purpose to build up an empire of light—light which should tend to dispel the darkness from off the face of the earth. This was the empire that they intended to build, and this is the empire which you, as the lawmakers of this Republic, are called upon to guide forward in the direction which they have set for you. If you have lost the spirit and hold only to the letter, then they have builded in vain; they then have builded upon a rotten foundation, and the rottenness is in yourselves. But if you have within you the spirit that transcends the letter, the spirit that inspired and moved the mighty founders of this Republic, then their labors will not have been in vain; they will then have builded to a purpose; the experimental days in the life of this Republic will be at an end and the experiment will have materialized into a structure which shall be enduring, permanent.

ADDENDA.

The following letter of September 28, 1914, was addressed to Congressman W. S. GOODWIN:

Commenting on your several communications, I wash to say that you should have a serious talk with the Democratic leaders of the House, so that if they see their way clear, they may exert the proper effort in having House joint resolution 344 immediately passed by the House and by the Senate.

Apart from anything that has been said in the hearings, I would add the following:

1. The strength of Germany is directly due to the Landwirtschaftsrat.
2. It can easily be adapted and adopted in the United States.
3. It would elliminate the trusts.

Please remember that I did not invent this Landwirtschaftsrat; it is no brilliant inspiration of mine; I am simply a reporter, and as such I tagged after the administrations of Roosevelt and Taft to take this up. They did take something up, but it was a faint shadow with no substance. So I sent out thousands of documents written so that the farmer with mud on his boots could understand.

And when the farmer began to squirm, Mr. Taft, toward the end of his term, begun to "get busy," but his cry was in incomplete shape and went out entirely too late.

Then the Democratic Party came along and took hold of the lines, and promised to give the farmer rural credits. The promise was given on the "Give me liberty or give me death" style. The farmers were to have rural credits immediately—if not sooner. The farmer was to have the best and first place in the legislative trough—a trough to be supplied with good and rich legislative slops. He was to have it sure, right there and then, and the first installment was to be rural credits. "Sink or swim," "live or die," the farmer was to have it sure. Rural credits were his. The Democratic Party affirmed this over and over again. And a Democratic majority has now been in session for a longer period than any session ever in the history of the United States. So there was plenty of time for the Democratic

Party to deliver the goods to the farmer. But, let me ask, what has the farmer got from this same Democratic Party up to this minute? What has he got in the form of rural credits? Do you know? Does anyone know?

And now to return to H. J. Res. 344: If the Democratic Party allows this resolution to go into innocuous desuetude, it will prove itself truly to be possessor of the long ears that we frequently see it pictured with, for just as sure as the Democratic Party allows this Landwirtschaftsrat matter to go by default, it will be picked up and taken up by the Republican Party. What effective use this can be made of in practical politics will be evident to you if you will read over the hearing, and read it quietly, and pick out point one, point two, say up to all the points that will count, and you will have a respectable number of counts, invaluable on the stump, invaluable in the papers, and damaging to the party which had the opportunity of handling this matter, but which either overlooked it by reason of a sluggish brain or, worse yet, for fear of offending the trusts, for, mark you, this proposal gives a deathblow to the trusts, as you know, and as nothing else can do.

DAVID LUBIN.

The Olympic National Monument.

EXTENSION OF REMARKS
OF
HON. ALBERT JOHNSON,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 24, 1915.

Mr. JOHNSON of Washington. Mr. Speaker, I take this opportunity of presenting some statements with reference to the proposed reduction of the size of the Olympic National Monument, which monument lies within and comprises the heart of the Olympic Forest Reserve. That the monument will be greatly reduced in size now seems certain. It should be made clear, however, that lands taken out of the monument are not thrown open to homestead, except under such regulations as apply to lands in forest reserves. Many persons who have written to me do not seem to realize that although certain townships are to be taken out of the monument they will still remain within the Olympic Forest Reserve, and will continue so to remain.

The reduction, when made, will permit mining and prospecting for minerals on lands where such activities are now forbidden, and which are known to contain tin, manganese, mica, feldspar, copper, and so forth.

In connection with this reduction in the size of the monument two interesting statements have developed. One is that although the monument was established for the protection of the Olympic elk—now known as Cervus Roosevelt—it develops that the breeding grounds, the winter feeding grounds, and nearly all of the summer feeding grounds are without the present lines of the monument.

Also, the present herd of elk is established at about 7,000 and is increasing rapidly. The feeding of the elk will soon become a problem, particularly as it is thought that many fine agricultural valleys in the Olympic Forest Reserve will be opened for settlement before many more years have passed.

Another item of interest is the discovery that many townships in the monument have been so carelessly surveyed that they contain double area.

In connection with the proposed change of boundaries, I received the following letter from Hon. H. S. Graves, Chief of the Bureau of Forestry:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, February 11, 1915.

HON. ALBERT JOHNSON,
House of Representatives.

DEAR MR. JOHNSON: In our recent conference you requested a statement in regard to my conclusions and recommendations relative to the Mount Olympus National Monument. I have made a specific recommendation looking to a modification of the boundaries of the monument which will retain the scenic portion within the monument and restore those portions which contain very heavy timber to exclusive national forest status. The portion of the monument which would under this plan be restored to the forest would be handled under the national forest principles and be subject to the same protection from every standpoint as the balance of the Olympic National Forest and other national forests. The various resources, however, would be available for use, which under the national monument withdrawal is impossible.

The portion which would remain as a national monument comprises the main mass of high mountains and would constitute an admirable unit for a national park, if it should finally be deemed wise to take such action. I am desirous of seeing an investigation made of the question of whether a park should be established, this to be a joint investigation by the park authorities of the Interior Department and representatives of the Forest Service.

Certainly the scenic features of the Olympic Mountains are unique and very remarkable, and this resource should not only be protected but developed. In the administration of the national forest full consideration is given to the protection and development of the recreation resource so that the whole region, including both the portion which would remain in the monument and that portion which would remain in the national forest, will be safeguarded, so far as this feature, as well as other features, is concerned. Specifically the changes in the boundaries which I am recommending will result in the restoration to the national forests of the following areas:

Willamette meridian and base.

T. 28 N., R. 9 W.[1]: Unsurveyed sections 4 to 9, 16 to 21, 28 to 33, inclusive.
T. 28 N., R. 7 W.: Unsurveyed sections 1 to 3, 10 to 15, inclusive.
T. 28 N., R. 6 W.: Unsurveyed sections 1 to 18, inclusive.
T. 27 N., R. 9 W.[1]: Unsurveyed sections 4 to 9, 16 to 21, 28 to 33, inclusive.
T. 26 N., R. 9 W.[1]: Unsurveyed sections 4 to 9, 16 to 21, 28 to 33, inclusive.
T. 25 N., R. 8 W.: Unsurveyed sections 19 to 36, inclusive.
T. 25 N., R. 7 W.: Unsurveyed section 19 to 36, inclusive.
T. 25 N., R. 6 W.: Unsurveyed sections 19 to 36, inclusive.
T. 24 N., R. 8 W.[2]: Unsurveyed, all.
T. 24 N., R. 7 W.: Unsurveyed, all.
T. 24 N., R. 6 W.: Unsurveyed, all.
T. 23 N., R. 8 W.: Unsurveyed, all.
T. 23 N., R. 7 W.: Unsurveyed, all.
T. 23 N., R. 6 W.: Unsurveyed, all.
T. 22 N., R. 8 W.: All (partly surveyed).
T. 22 N., R. 7 W.: All (partly surveyed).
T. 21 N., R. 8 W.: Surveyed sections 4 to 9 and 16 to 18, inclusive.
T. 21 N., R. 7 W.: Sections 1 to 6, inclusive, partly surveyed.

Very sincerely, yours,

H. S. GRAVES, *Forester.*

The Forest Bureau is also contemplating some road extension in the Olympic Reserve, a statement concerning which recently appeared in the Tacoma Ledger, as follows:

STATE MAY GET MUCH ROAD MONEY—NEW POLICY OF FORESTRY SERVICE ANNOUNCED HERE LIKELY TO PASS CONGRESS.

Hundreds of thousands of dollars additional for road expenditure in the State of Washington will be available for undeveloped sections if the new policy agreed upon by the forestry department officials and the Secretary of Agriculture is sanctioned by Congress, as is expected, according to Charles H. Flory, of Portland, assistant district forester, who was in Tacoma yesterday.

Mr. Flory came here for a conference at the Commercial Club with members of the intercity national park committee and County Engineer D. H. White relative to road matters this year affecting the forest reserve either within this county or within the policy of the intercity committee.

Mr. Flory said the Forest Service had long realized that the national forest areas took up so much of the area of certain counties—in some from 20 to 40 per cent—that they were a drain upon the county in a way, as being an area unavailable for county taxation, thus making the rest of the county pay a higher tax rate.

LOANS ON UNSOLD TIMBER.

"Congress has recognized the need of assistance for the counties," said Flory, "and has allowed 25 per cent of the net receipts from sales of timber in the forest reserves to go every year to building of roads and schools in the county where the sales were made. This has been a good thing for those counties where sales were going on, but for the undeveloped counties the policy has not helped. It is now proposed to ask Congress to allow the advance of such money to those counties every year as might result from the sale of timber, holding the timber itself as security for the sums advanced. A careful cruise of the timber would first be made to determine its value, and the amount advanced would be paid back when the timber is sold. In this way it is expected there will be hundreds of thousands of dollars available for Washington road and bridge development."

Mr. Flory says his office has had applications for a dozen or more road projects this year, although there is money enough for only one or two. He thinks there will be $15,000 available for Pierce County work within the reserve limits, and while here yesterday discussed the matter of building the Carbon River Valley Road into the northern side of the park. Surveys for this road, which would extend from Orting by way of Fairfax, were completed last year by M. Roy Thompson, former county engineer. If the north side road should be built, the mountain will be completely encircled, permitting the construction of a chain of chalets.

THREE ROADS UNDER WAY.

"There are three road projects either practically completed or under way now by the Government in the forestry reserves of the State of Washington," said Mr. Flory. "One is the Wind River Road, in Skamania County; a second the Loop-Loop Road, in Okanogan County to Methow; and the third is the White Salmon River Road."

In this connection the following statement concerning the Olympic Highway is of interest:

THE WONDERFUL HIGHWAY AROUND OLYMPICS—A 350-MILE HIGHWAY OPENING NEW FIELDS TO SETTLERS AND TOURISTS.

HOQUIAM, *February 16.*

A 350-mile drive through beautiful scenery, lakes, sea, and mountains, traversing valleys of fertile land, an automobile road clear around the mysterious Olympic Mountains, the only unexplored section of the United States—such is, in brief, the story of the Olympic highway that will interest the Seattle motorist, when completed. Of this great highway, 295 miles are constructed, and only 55 miles of the road remain to be built, the section on the west side of the peninsula between Lake Quiniault, in northern Chehalis County, and The Forks, in southwestern Clallam County, all but 7 miles of it across the Quiniault Indian Reservation and western Jefferson County.

As an attraction for the automobile tourist, the value of this great highway is hard to estimate.

[1] The west tier of sections in each of these townships is apparently excessive, and according to present calculations is about 2½ miles wide on the latitudinal line.

[2] The north tier of sections in this township is abnormally long in the meridianal line, and each section should contain about two ordinary sections.

The Olympic Highway is a combination of State roads Nos. 9 and 14 and certain county roads, to make a road clear around the Olympic Peninsula, and is a project long advocated by those who are familiar with the resources of the Olympic Peninsula. While State road No. 9 and State road No. 14 have been recognized projects for a number of years, the Olympic Highway, as a road looping the peninsula, was only adopted two years ago by the State legislature.

With the completion of State work on the highway north of Hoquiam, to open the road to Quiniault Lake, and the building of the highway along the west side of Hood Canal, between Hoodsport and Duckabush, the Olympic Highway becomes a realty from Quiniault clear around the peninsula to The Forks, 5 miles north of the Jefferson County line in western Clallam County. With the clearing of slides from the highway along Hood Canal in the spring the autoist can drive from Lake Quiniault clear around the Olympic Mountains to The Forks without difficulty, and all the time he will be passing some of the most beautiful scenery in the entire country. When completed, those familiar with the country's great scenic highways declare there will be no road in the country to excel, and few to compare, with the Olympic Highway.

The road winds through the greatest single forest of the Northwest, it being estimated the west side of the peninsula alone contains a stand of approximately 125,000,000 feet of timber, including some of the finest fir, cedar, and spruce the great Northwest has produced. This area includes the rich area of the Quiniault Indian Reservation.

At points the road runs out to the Strait of Juan de Fuca or skirts Hood Canal. At other points it runs at the foot of the Olympic Range of mountains, and snow-capped peaks tower above the tourist. At other places the traveler comes upon such lakes as Quiniault and Crescent. He is now ferried from one end of Crescent Lake to the other, a distance of 12 miles, between hills covered with their virgin veil of green; hills which run down almost to the water's edge. The highway survey crosses the Quiniault Valley and River at the foot of that lake, and that silver body of water spreads out for a distance of 3 miles between steep and high wooded mountains, which run down to the lake on both sides, while in the distance beyond the lake one sees the towering peaks of Olympus and Queets, and, nearer by, Mount Baldy. The white of the snow and glaciers on these peaks is seen in a setting of gray-brown crags and the rich green of the forest below, with the green of the lake in the foreground.

Again the road passes through wide, rich valleys in which the ranchers already have brought their land to a good state of cultivation. The valleys of the Olympic Peninsula are all rich in soil and are well protected, making them adapted to almost any kind of agricultural or dairy pursuits. On the south, east, and north sides of the peninsula these valleys, with means of getting to market open, are fast being developed, and there are many fine ranches to be seen along the highway or back on the side roads which run into the Olympic Highway.

On the west side of the peninsula, however, it is different. The Quiniault Valley, containing several thousand acres of land, is already well settled.

The road will cross the Queets River about 4 miles from the Pacific Ocean, will follow up the Clearwater Valley for several miles, and then strike across to the Hoh and from there across to The Forks.

Western Jefferson County, cut off as it is by the Olympic National Forest, presents a matter of interest to the State of Washington at large, for about half the area between the western national forest line and the Pacific Ocean is owned by the State, either as school, university, or capital lands. Western Jefferson County alone contains about four townships of State lands. This is heavily timbered, but at present inaccessible.

As nearly as can be ascertained, from figures furnished by engineers of the various counties traversed by the Olympic Highway, the portion of the road already opened represents an expenditure of at least $2,000,000. Only about one-tenth of this sum has come from the State public-highway fund, the remainder having been expended by the counties, part of the sum being from the permanent highway fund, levied by the State, but which is spent by the county on whatever main road it desires, so long as the funds are used on a State specification highway. That the $2,000,000 estimate is none too high is shown by the fact that Chehalis County alone has expended $980,000 on the Olympic highway crossing it, of which $83,000 has been furnished by the State. Ninety-nine miles of the road is in Chehalis County. Thurston has 25 miles of the Olympic Highway; Mason County, 48 miles; Jefferson County, 78 miles, counting both the east and west ends of the county; and Clallam County has 100 miles, a total of 350 miles.

The greater part of the road now built is high-class highway, with good gravel surface and good grades, though parts of the road are not entirely up to the standard, but easily passable and safe, and with only a few bad hills, and autoists say these are not at all out of the ordinary.

A few days ago I received the following letter from Mr. Graves:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington.

Hon. ALBERT JOHNSON,
House of Representatives.

DEAR MR. JOHNSON: I have received your letter of February 24, inclosing a communication from Mr. F. H. Stanard. I shall be very glad to inform you when I can ascertain the time of final action on the part of the two Secretaries regarding my recommendations for the reduction of the area of the Mount Olympus National Monument.

I shall also be glad to keep you informed about the plan of development for the Olympic Peninsula. This plan will contain specific recommendations looking to public improvements.

Very sincerely, yours,
H. S. GRAVES.

I have been informed that the recommendations of Mr. Graves have been approved by the Secretary of Agriculture, and that the approval of the Secretary of the Interior may be expected at any time, possibly before these remarks can be placed in print.

From all the foregoing it will be noted that at last we are to have some improvements and betterments in the great Federal holdings in the Olympic Peninsula. Progress in the actual work may be, and probably will be, slow, but it is most gratifying to know that the start has been made. During the three sessions of the Sixty-third Congress I have devoted much time to this end, and I know that the people of western Washington will be pleased that the many matters of detail pertaining to the Olympic Peninsula will be looked after by two Members of Congress, Hon. L. H. HADLEY and myself. It goes without saying that in all matters for the development of the southwest, the Member from that section has had the support of the entire State delegation. After March 4, however, Clallam and Jefferson Counties, with nearly three-fourths of the Olympic Forest Reserve, go into the district which will be represented by Mr. HADLEY, leaving the smaller portion in the district I have the honor to represent—hereafter to be known as the third district.

Steam as a Motive Power in Navigation.

EXTENSION OF REMARKS
OF
HON. EDWARD W. TOWNSEND,
OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915.

Mr. TOWNSEND. Mr. Speaker, there has been some discussion on the floor of the House recently of the question to whom should the honor be given historically for the application of steam as a motive power for navigation.

Very fortunately for historical accuracy, W. F. Sadler, jr., who is adjutant general of New Jersey, has delved into the archives of my State and produced documentary evidence which, to anyone who will read so much of that evidence as I may be able to reproduce here, proves that Mr. Fitch, then a resident of New Jersey, made this application of power before it was applied so by any other invention. It is not necessary that I should base any argument upon the documents which Gen. Sadler has been so kind as to forward to me; but rather I shall here present in permanent form in this RECORD a transcript of those authentic and very interesting documents. But to add historical value to what I here present I shall insert, first, a letter written to me by Gen. Sadler, because, besides briefly summarizing the Fitch claim, it contains some very interesting historical matter concerning Mr. Fitch aside from the facts directly relating to the wonderful invention:

STATE OF NEW JERSEY,
OFFICE OF THE ADJUTANT GENERAL,
Trenton, January 25, 1915.

Hon. E. W. TOWNSEND,
House of Representatives, Washington, D. C.

DEAR MR. TOWNSEND: Supplementing my letter of a few days since, in regard to the Fitch matter, would say that on April 15, 1785, steam, as a motive power, was conceived by Fitch to be applied to carriages, then to vessels. On August 20, 1785, he exhibited a practical model, and on August 29, 1785, he memoralized Congress in respect to internal navigation, especially on the Mississippi. On September 27, 1785, he submitted drawings and models of his boat to the American Philosophical Society at Philadelphia.

On March 18, 1786, New Jersey passed a law giving Fitch the sole and exclusive right to operate steamboats on the navigable waters of the State for 14 years. On February 3, 1787, Delaware granted similar rights, and on March 19, 1787, New York did the same. On March 28, 1787, Pennsylvania passed a similar act, and on November 7, 1787, Virginia did the same.

On July 26, 1788, Fitch made a trip in his boat, with witnesses, a distance of 20 miles, from Philadelphia to Burlington. On October 12, 1788, the boat ran from Philadelphia to Burlington carrying 30 passengers. In 1790 the boat made regular trips. On August 26, 1791, Congress granted letters patent covering a period of 14 years, and the document was signed by Washington, Jefferson, Randolph, and Gen. Henry Knox, the commissioners.

In 1793 Fitch went to France and left his drawings with Mr. Vail, which drawings were loaned to Fulton.

On July 2, 1798, Fitch died in Kentucky—probably committed suicide.

He was born in the town of Windsor, Conn., on January 21, 1743, and on December 29, 1767, married Lucy Roberts. In 1769, because of his unhappy married life, he left home, walked to Albany, then to New York and across New Jersey to Trenton, where he took up his residence. He started to make brass sleeve buttons and cleaned clocks, enjoying considerable prosperity, when the War of the Revolution commenced.

He enlisted in the American Army and was made first lieutenant of a company raised in Trenton. William Tucker, an old resident, was appointed second lieutenant, and Fitch proposed changing places with him because he felt that Tucker was more able to do military duty.

His services as gunsmith were soon so greatly needed that he was appointed armorer by the Committee of Safety of the Province of New Jersey, and so greatly were his services needed that he worked on Sunday, causing his expulsion from the Methodist Church. When the British reached Trenton in December, 1776, they destroyed his shop and his tools.

He, having crossed the river with the Army, was with Washington's forces at the Battle of Trenton, which occurred on December 26, 1776. After the battles of Trenton and the Battle of Princeton he located for a time in the town of Warminster, in Bucks County, Pa. He was with the American troops at Valley Forge.

In 1780 he was made a deputy surveyor, and did work in Kentucky and Virginia. In 1781 he surveyed in Virginia.

In 1782, while trying to take some boats to the Mississippi, he was captured near the mouth of the Muskingum River. Two of his party were shot and subsequently scalped. The balance were taken to Detroit, where there was a military post. Two weeks after their arrival at Detroit they were taken to Prison Island, reaching there on May 25, 1782. After five months they were taken to Quebec, and a month later were sent, for exchange, to New York, where they arrived after a voyage of 10 weeks, and were released.

Fitch made his way back to Warminster, and early in 1783 a company was formed and he was sent to survey lands in Virginia and Kentucky. In December, 1784, he petitioned Congress for an appointment as surveyor in the western country.

In April, 1785, it occurred to Fitch that steam power could be employed to move wagons along roads and he began to plan steam carriages. He gave this up, however, and turned his attention to the propelling of boats by steam. There is plenty of proof that Fitch's boat operated on the Delaware River in 1790, and, as you know, Fulton's boat was not operated on the Hudson until 1807.

I think I said in a former letter that James Rumsey claimed that he had first suggested the propelling of boats by steam. His claims were investigated by a committee of the Pennsylvania Legislature and a committee of the New Jersey Legislature, who decided that Rumsey had no claims whatever.

Fulton's steamboat, the *Clermont*, made the trip from New York to Albany at the rate of somewhat less than 5 miles an hour. Fitch's steamboat ran between 2,000 and 3,000 miles on the Delaware River during the summer of 1790, 17 years earlier, at the rate of from 7½ to 8 miles an hour.

I have many facts and much data on this subject, but feel that I should not burden you with more of it at this time, because I have given you a general outline. As I wrote you recently, I am having some photographs made of original documents, which I will forward to you within a few days.

If there are any further facts and figures that you would like to incorporate into your proposed speech, please do not hesitate to ask for them, as I feel that Fitch should be given some recognition and that the people of the country at large should in some way be made to understand that he and not Fulton was the inventor of the steamboat.

Very truly, yours,

W. F. SADLER, Jr.

Following the above letter of Gen. Sadler's I shall present in their order these seven documents in support of the Fitch claim, and which, I think, all fair-minded readers will concede make a demonstration of the validity of his claim. The documents are:

Petition of John Fitch to the New Jersey Legislature, February 27, 1786.

Petition of John Fitch to the New Jersey Legislature, March 14, 1786.

Affidavits of prominent men regarding John Fitch's boat, tubes, and boiler, 1788.

Report of committee, Pennsylvania Legislature, in favor of John Fitch, October 31, 1788.

Petition of John Fitch to the New Jersey Legislature, November 1, 1788.

Letter of John Fitch to the New Jersey Legislature, November 3, 1788.

Final petition of John Fitch to the New Jersey Legislature, November 25, 1788.

Petition of John Fitch to the Legislative Council and General Assembly of New Jersey, dated Trenton, February 27, 1786, stating that he "proposes to apply the force of steam engine to the use of navigation."

Requests appointment of a committee to examine his plans.

To the honorable the Legislative Council and General Assembly of the State of New Jersey:

The petition of the subscriber humbly showeth that your petitioner proposes to apply the force of steam engine to the use of navigation (by impelling vessels to go through the water with considerable rapidity without the assistance of winds or current) and many other useful purposes.

Wherefore, your petitioner humbly prays that your honors will be pleased to appoint a committee to examine the proposed plan, together with the opinions of several gentlemen of eminence and character in these Middle States, who have favored him with their certificates respecting it; and grant such encouragement to your petitioner, as on the report of your committee, his proposals may, in the wisdom of your honors, appear to deserve.

And your petitioner, etc.

JOHN FITCH.

TRENTON, *February 27, 1786.*

Petition of John Fitch to the Legislative Council and General Assembly of New Jersey, dated Trenton, March 14, 1786, stating that he has "constructed an easy method of urging boats through the water by the proper application of the force of steam." Requests exclusive privilege of constructing boats impelled by the force of steam.

This petition is indorsed by Robert Pearson, jr., A. Hunt, Stacy Potts, Thomas Yard, Samuel Tucker, Rensselaer Williams, John Stevens, jr., W. M. Bell, Isaac Smith, John Cox, Samuel W. Stockton, and W. C. Houston.

To the honorable the Legislative Council and General Assembly of the State of New Jersey:

The remonstrance and petition of John Fitch humbly showeth

That your petitioner having constructed an easy method of urging boats through the water by the proper application of the force of steam, whereby the inland navigation of these States is likely to be greatly promoted, the principles whereof have been honored with the approbation of gentlemen of the first character for philosophical knowledge in several of these States, who have expressed their desire of seeing it carried into execution by an experiment.

And as it has been the general practice of giving encouragement to new inventions and useful improvements by allowing their first projectors the advantage of their discoveries for some reasonable time, therefore your petitioner humbly prays

That your honors will be pleased to grant him the exclusive privilege of constructing boats impelled by the force of steam, and the advantages arising from that discovery, for such length of time as to your honors shall seem proper.

And your petitioner, etc.

JOHN FITCH.

TRENTON, *March 12, 1786.*

We, the subscribers, having examined the principles of the steamboat constructed by John Fitch, are of opinion that it may be the means of improving the inland navigation of these States to great advantage, and therefore that it deserves the protection and encouragement of the legislature.

ROBT. PEARSON, Jr.	JOHN STEVENS, Jr.
A. HUNT.	W. M. BELL.
STACY POTTS.	ISAAC SMITH.
THOS. YARD.	JOHN COX.
SAML. TUCKER.	SAML. W. STOCKTON.
RENSSEL'R WILLIAMS.	W. C. HOUSTON.

Certificates showing that John Fitch's steamboat, 60 feet in length, carrying upward of 30 passengers, steamed from Philadelphia to Burlington, a distance of 20 miles, in 3 hours and 10 minutes, on October 12, 1788; also certificates regarding his tubes and boilers. Signed by 15 prominent men of Pennsylvania.

Certified as true copies of originals produced by John Fitch before William Cavenough, notary public, Philadelphia, October 27, 1788.

PHILADELPHIA, *October 18, 1788.*

No. 1. We whose names are hereunto subscribed do certify that we have been in John Fitch's steamboat of 60 feet in length in the River Delaware when the said boat was propelled through the water with a considerable degree of velocity regularly and uniformly without any manual labor by the force of steam, and we are clearly of opinion that the rivers of America may be navigated by the means of steamboats, and that the present boat would be very useful on the western waters.

JOHN EWING.	JAMES HUTCHENSON.
ROBT. PATTERSON.	T. Y. MATLACK.
ANDREW ELLICOTT.	CHAS. PETTIT.
JOHN SMILLEY.	J. B. SMITH.
DAVID REDICK.	DAV'D RITTENHOUSE.

No. 2. This may certify that on the 12th instant we, the subscribers, went in Mr. John Fitch's steamboat from this city to the city of Burlington, 20 miles in the space of 3 hours and 10 minutes, there being upwards of 30 passengers on board, and that said boat was propelled through the water entirely by the force of steam; and from our own observations we are of opinion that the discovery which Mr. Fitch has made may be of much service to inland navigation.

JOHN POOR.
JOHN ELY.

PHILADELPHIA, *October 18, 1788.*

No. 3. On the 16th instant I was on board Mr. Fitch's steamboat in the river Delaware; saw it perform; and I do certify that it was impelled by the force of steam at the rate of at least 4 miles an hour against the strength of tide, and am fully convinced that the force applied to that boat would be sufficient to carry it against the most rapid waters between the mouth of French Creek, on the Allegheny, and the mouth of Muskingum, on the Ohio, and that on an average it would carry it between 3 and 4 miles an hour on any of the western waters.

JONA HEART,
Captain, First United States Regiment.

PHILADELPHIA, *October 18, 1788.*

No. 4. This may certify that I, the subscriber, was one of the committee appointed in March, 1786, by the general assembly of this State on the petition of John Fitch and Arthur Donaldson, respecting their several schemes for the improvement of navigation by means of steam engines; when Mr. Donaldson produced his plan to the committee for drawing water in at or near the bottom and forcing it out abaft as a means of propelling a vessel forward.

The committee having fully heard the petitioners and afterwards received Mr. Fitch's model of an invention for moving a boat by means of a steam engine, agreed to make a report to the house in his favor.

JAMES IRVINE.

PHILADELPHIA, *August 7, 1788.*

No. 5. Mr. Fitch, in his explanation of this draft to me, before he presented it to the Philosophical Society, mentioned that his intention of conveying the water from his forcing pump in a tube that passed through the fire was that it might thereby be set a boiling before it entered in the receiver, lest the cold water mixing with the boiling water in the receiver should impede the generation of the steam.

JOHN EWING.

No. 6. (Indorsed:) Presented to the society September 27, 1785.

R. PATTERSON, *Secretary.*

No. 7. Some time about the middle of the sixth month of 1786, I was consulted by Henry Voight, of this city, clock and watch maker, respecting the application of a spiral tube for the purpose of generating steam, a drawing of which he then showed me and requested my opinion of its utility if applied to John Fitch's steamboat. I advised him not to adopt it immediately, but wished him to make use of the common boiler till such time as the merits of this new invention should be fully ascertained by experiment.

Timothy Matlack, to whom this invention was communicated soon after my having first seen it, accompanied me yesterday to examine the tube itself, and found it nearly ready to be placed in the boat, and we are both clearly of opinion that it is constructed on the same principles with those of the plan at first exhibited to us.

At the request of said Henry Voight and John Fitch, partners in the steamboat, I hereby certify that the above-mentioned facts are truly stated in every respect, to the best of my knowledge and belief; and I also further declare that I have neither part nor share in the said steamboat nor any interest whatsoever in the concern.

JNO. NANCARROW.

PHILADELPHIA, *September 15, 1788.*

On the 17th day of September, 1788, before me, Isaac Howell, Esq., one of the justices, etc., came John Nancarrow, above named, and on his solemn affirmation, according to law, did declare and say that the above written certificate, signed by him, is true according to the best of his knowledge and belief.

JNO. NANCARROW.

Affirmed before me.

ISAAC HOWELL.

No. 8. About the last of June, 1786, Henry Voight, of this city, clock and watch maker, showed to me the draft of a spiral tube for generating steam, as a device of his own, for supplying cylinder of John Fitch's steamboat. John Nancarrow, of this city, an engineer by profession and much accustomed to the erecting of steam engines in England, was present at the time, and I then understood that he had been consulted upon it a few days before. We both advised Mr. Voight to exhibit the first experiment on the steamboat by means of the common great boiler rather than involve himself in the difficulties and delays which would probably arise in the execution of this new mode of generating steam. Mr. Nancarrow and myself have this day examined the tube, now nearly ready for the purpose aforesaid, and find that the principles on which it is constructed are the same with those of the said plan.

Mr. Voight having shown the plan aforesaid to me very soon after my arrival here from Georgia enables me to ascertain the time thus nearly.

At the repeated request of Mr. Voight and of John Fitch, I make known and certify the facts aforesaid; and I do declare that I have no part or share in the said boat.

TY. MATLACK.

PHILADELPHIA, *July 14, 1788.*

On the 17th day of September, 1788, before me, Isaac Howell, Esq., one of the justices, etc., came Timothy Matlack, above named, and on his solemn affirmation, according to law, did declare and say that the above written certificate, signed by him, is true according to the best of his knowledge and belief.

TY. MATLACK.

Affirmed before me.

ISAAC HOWELL.

I, William Cavenough, notary and tabellion in and for the Commonwealth of Pennsylvania, by lawful authority duly admitted and sworn, dwelling in the city of Philadelphia in the said Commonwealth, do hereby certify and attest unto all whom it doth or may concern, that the aforegoing writings from No. 1 to No. 8 do contain just and true copies of original certificates to me the said notary bona fide, produced by John Fitch in the said certificates named, and that I have carefully compared the said copies with their respective originals and do find them exactly to agree with each other. And I do hereby further certify that the several gentlemen signing and subscribing their names to the said certificates now are or heretofore have been in the posts, trusts, or employments hereinafter following their respective names, viz: John Ewing, provost of the university and vice president of the philosophical society; Robert Patterson, professor of mathematics and natural philosophy; Andrew Ellicott, professor of mathematics and astronomy in the Episcopal academy; John Smiley, member of the executive council for the Commonwealth of Pennsylvania; David Redick, present vice president of the Commonwealth of Pennsylvania; James Hutchenson, one of the secretaries of the philosophical society; Timothy Matlack, late secretary to the State executive council for the Commonwealth of Pennsylvania; Charles Pettit, late Member of Congress from the Commonwealth of Pennsylvania; Jonathan Bayard Smith, present prothonotary of the court of common pleas for the city and county of Philadelphia; David Rittenhouse, present treasurer for the Commonwealth of Pennsylvania; John Poor; John Ely; Jonathan Heart, captain of the First United States Regiment; James Irvine, late vice president Commonwealth of Pennsylvania; John Nancanon.

In testimony whereof I, the said notary, have hereunto set my hand and affixed my seal of office in Philadelphia aforesaid, the 27th day of October, in the year of our Lord 1788.

[SEAL.] WM. CAVENOUGH, *Notary Public.*

Report of the committee of the General Assembly of Pennsylvania, dated October 31, 1788, in favor of John Fitch, and refusing the request of James Rumsey to operate the steamboat in the waters of the State of Pennsylvania:

The committee to whom was referred the petitions of James Rumsey, John Fitch, and Henry Voight beg leave to report—

That having examined the said petitions and with great attention heard the parties in support of their respective claims are unanimously of opinion that the law which grants to John Fitch an exclusive right to all boats propelled by fire and steam, hath not only secured unto him, his heirs, etc., the exclusive right to the method he had then invented for the purpose of applying the power of fire or steam in order to propel boats, but also whatsoever improvements he make himself or obtain from others during the time limited by said law. And however improper so extensive a law may be in its principles, yet considering that upon a faith of the said law, several citizens have spent much labor and money for which they are not yet reimbursed. And notwithstanding the legislature may have a right to repeal laws which convey grants that are highly injurious to the general welfare, yet the resuming such legislative grants ought never to be done unless upon the most pressing necessity.

Your committee therefore beg leave to offer the following resolutions, viz:

"*Resolved*, That the prayer of the petition of James Rumsey be granted, excepting so far as it respects the propelling of boats by the force of fire or steam.

"*Resolved*, That the prayer of the petition of Henry Voight can not be granted."

The foregoing is a true copy of the original remaining on the files of the General Assembly, Philadelphia, October 31, 1788.

J. SHALLUS, *Assistant Clerk.*

Petition of John Fitch to the General Assembly of New Jersey, dated November 1, 1788, protesting against the claims of James Rumsey:

To the honorable the Assembly of the State of New Jersey:

The petition of John Fitch, of the city of Philadelphia, humbly showeth—

That your petitioner, in consequence of the countenance and support granted him by the honorable the Legislature of New Jersey, as well as by four other of the Middle States, has with unremitted diligence and prodigious expense brought his steamboat to a very considerable degree of perfection, and is still pursuing his plan in full confidence of reaping the reward of his labors under the sanction of the laws he hath obtained. That your petitioner heard with great concern that a petition had been presented to your last honorable house by or on behalf of a certain James Rumsey with a view of obtaining a law to deprive him of his just and legal rights granted him by your honorable predecessors, and that your petitioner, the moment he heard of his design, hastened to Trenton, but did not arrive time enough before the house broke up, yet he had the happiness to find that nothing was done to the prejudice of your petitioner. That since that time a similar attempt was made on behalf of the said James Rumsey in the Assembly of Pennsylvania, who, by committee, gave a long and patient hearing to both parties, and they, by report, determined in the most solemn manner in favor of your petitioner, which report he begs leave to hand in herewith. That receiving intelligence of the renewed intentions of the friends of the said James Rumsey to repeat an application to your honorable house, your petitioner presents himself before you, praying that you will be pleased to do nothing to invalidate the laws heretofore solemnly made in his favor, but that your petitioner may be heard at the bar of your honorable house by counsel in defense of his rights, as well in support of his steamboat, as in support of his claims to the emolument and use of boiling water in a pipe or tube the more effectually to create steam, a mode he devised and laid before the Philosophical Society previous to any pretentions ever suggested by James Rumsey, which your petitioner is ready to prove. That the new Congress being vested by the Constitution with powers of granting exclusive rights for inventions, your petitioner flattered himself that instead of repeating his claims before the individual houses of assembly he should only have been called on by the said James Rumsey to support his several claims before that body, whereby much expense of time and money might be saved to the public and themselves; but if your honorable body should think proper to go into the business, your petitioner humbly prays that he may be allowed time and opportunity to defend his just claims and rights, and your petitioner as in duty bound will ever pray.

JOHN FITCH.

TRENTON, *November 1, 1788.*

Letter of John Fitch to the Legislature of New Jersey, dated November 3, 1788, in support of his petition of November 1, 1788, relative to his steamboat and pipe boiler.

States that his plan for a pipe boiler was laid before Congress in August, 1785, and recorded in the Philosophical Society in the following month. Intimates that James Rumsey obtained his ideas through improper methods:

To the honorable Legislature of the State of New Jersey, now sitting at Princetown, November 3, 1788:

The subscriber humbly begs leave to subjoin the following reasons to his petition in support of his just claims to his steamboat and pipe boiler, and doubts not but your indulgence will save a great expense and trouble in having the subject represented by counsel, which reasons are as follows, viz:

First. The law is positive and clear, and no explanation nor alteration can take place in assembly to the prejudice of the subscriber.

Second. That a patent stands on ground very different from a law, the one being open to all men, but the other to be obtained only after deliberation and public consent.

Third. The specification so warmly contended for applies to the power employed to produce the effect and not to any indifferent intermediate agent, such as wood, water, or iron. But if, for argument sake, this was even admitted, the part now urged was fully specified in the contest with the subscriber and Arthur Donnaldson before the Assembly of Pennsylvania, as per their minutes and Gen. Irvine's certificate.

Fourth. That the Law of Nations, vattel 36 and 200; the Law of England, 21 James I; constitution of New Jersey; and the special law in question are all clearly in his favor.

Fifth. That having expended his money and the money of others in full confidence of public faith their houses and their farms are not more firmly secured to them than the property conveyed by this law.

Sixth. That any limitation or restriction to the law not warranted by the law itself would be a violation of the Constitution, which directs all controversies about property to be divided in courts of justice. A contrary procedure would introduce a most alarming precedent.

Seventh. That all ways and modes of invention made public before the passing of the law are open to common use, unless special prior grants should interfere.

Eighth. That the invention now contended for of pushing water from the stern was published 50 years ago by Mons. Bernoulli, a celebrated genius, in France, and republished with improvements by Dr. Franklin before the passing of the law that no suggestion of ignorance of such publications shall avail a subsequent protender.

Ninth. That even if the arguments used in favor of James Rumsey contained any real weight, they are produced at a wrong hour. The law is passed, and it is too late. He made no objection in Virginia or elsewhere.

Tenth. That with respect to the boiler it was the original thought of the subscriber, and the similarity thereof is nowhere to be found in the books.

Eleventh. That the scheme of the subscriber was to convey water into the pipe and then convey the said pipe into the body and through the hottest part of the fire in order to boil the water before it went into the great receiver. This is explained and certified by the papers in the possession of the Philosophical Society of Philadelphia.

Twelfth. That this pipe, instead of being a trifling object, as contended by the counsel of Mr. Rumsey before the committee of the Assembly of Pennsylvania, is the only pipe and passes all the water consumed

by the engine, which in the present small machine consumes about 30 gallons in an hour.

Thirteenth. That the originality of the idea of boiling water in a pipe is recorded in the philosophical society September, 1785, a body recognized by law as capable of receiving such deposits, and that the said idea of pipe boiling can not be confined to any specific dimensions, otherwise every fresh foot of pipe added to an engine would require a fresh law.

Fourteenth. That the subscriber carried his plans and drawings to the Assembly of Virginia, everywhere exposing his scheme, and that from this first drawing either by direct or indirect means, by circuitous information, James Rumsey may have got the idea of the boiler he now claims. The plagiarism is certainly retortable with equal force to any charges against your petition.

Fifteenth. That James Rumsey, in his pamphlet and by the acknowledgment of his counsel before the committee of Pennsylvania, does not pretend to any idea of a pipe boiler longer ago than the winter of 1785–86, whereas a drawing and description of the pipe boiler of the subscriber was not only laid before Congress in August, 1785, but a drawing and description was lodged with the philosophical society in September, 1785.

Should this be the opinion of the legislature, the petition of James Rumsey will be laid aside.

JOHN FITCH.

NOVEMBER 3, 1788.

The final petition of John Fitch to the Legislative Council and General Assembly of New Jersey, dated November 25, 1788, claiming the pipe boiler as his original invention and protesting against the false pretensions of James Rumsey:

To the honorable Legislative Council and General Assembly of the State of New Jersey:

The petition of John Fitch humbly showeth—

That the legislature of this State did by a law passed in the month of March, 1786, vest in your petitioner the exclusive right of constructing, etc., steamboats within the State, granting him at the same time full power to apply any machinery on board his boat which he might deem proper, provided the boat was propelled by the force of fire or steam; that your petitioner has learned with grief and surprise that a bill is now lying before your honorable house to vest in James Rumsey an exclusive right to a pipe boiler, a machine that your petitioner has long used in his boat, and which is essentially necessary to the completion of that design for which your law was made in his favor.

Your petitioner humbly conceives that vesting such right in James Rumsey is an interference with private property already conveyed by law, and will produce such a clashing of laws as is impolitic in a well-regulated State. Your petitioner has authentic documents to prove that he was in possession of the secret of a pipe boiler as early as the year 1785, before your law in his favor was enacted, and that in September of that year he laid a drawing of it before the Philosophical Society in Philadelphia. After this period he communicated his principles to a friend and acquaintance of the said Rumsey, from whom he has reason to believe Mr. Rumsey adopted the idea. Mr. Rumsey's claim to the idea is many months posterior to this date; and as your petitioner had previously thereto communicated his views to the public without any reward, he conceives that he is entitled to the law he has obtained as his only emolument, and that the bill depending before your body if enacted into a law would be an unjust and cruel invasion of his indubitable right. The law on your table in his favor forbids any machine being made on the same principles with those of his description of boilers, which is giving the improvement either of Mr. Rumsey or Voight the preference of an original invention, as said description will undoubtedly include the original invention itself, which is invariably on the same principles. A precedent of this kind your petitioner conceives was never known—for the improver to take the preference of the original inventor. Therefore, if Mr. Rumsey or any other person even propose an improvement in the structure of the machine your law will preclude the legislature from framing a posterior law to advance this improvement to the rank and confer on it the emoluments of the original invention.

Your petitioner begs leave to remind this honorable body, moreover, that, as the encouragement of invention and genius and securing the property and benefits of them to the owner seems to be referred by the new Constitution to the Congress of the United States, it is probable this dispute between Mr. Rumsey and him will be ultimately decided before that body.

He therefore prays that, if it seem good to your honorable body, it may now be referred to that tribunal, and no law be passed at your present session. But should this legislature resolve at present to take up the bill, your petitioner humbly prays that he may be indulged with a hearing by his counsel before your honorable body in support of his rights. And your petitioner, as in duty bound, shall ever pray.

JOHN FITCH.

PRINCETON, *November 25, 1788.*

The Relations of the District of Columbia to the General Government.

EXTENSION OF REMARKS

OF

HON. WILLIAM P. BORLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 2, 1915.

Mr. BORLAND. Mr. Speaker, I do not intend to discuss the intimate personal or local history of the District, nor to catalogue the various acts of Congress relating thereto, nor to present to you tedious statistics. I hope to take briefly a broad glance at the situation.

The District of Columbia exists by virtue of the provision of the Federal Constitution giving Congress exclusive jurisdiction over a district not exceeding 10 miles square which shall be ceded to the United States for the purpose of the seat of Government. The reason for this provision of the Federal Constitution is found in the early history of the Continental Congress and of Congress under the Articles of Confederation. The Federal Government, in its infancy and in its feebleness, found itself unable to command respect, maintain dignity, or even to protect its own peace and safety if required to meet in a city in some one of the States where the police authority and the maintenance of public order was entirely under the control of the local sovereignty. This was the compelling cause of the creation and establishment of the District of Columbia. It was desired that Congress should have exclusive jurisdiction over sufficient territory to establish in peace, dignity, and safety the National Capital, and to protect the administration of the national power and the sessions of the National Legislature. Washington is not only primarily a national capital; it is exclusively a national capital. It belongs to the people of the Nation. It has been determined that no government can exist in the District of Columbia, no matter what its form may be, which is independent of the Federal Government. The District of Columbia is not, never has been, and never can be an organized political entity like a State, nor even a corporate political entity like a municipality, with power to deal on a contractual basis with the Federal Government. I say this because it seems to be fashionable in discussing the affairs of the District to use the term "organic act" in referring to the act of 1878, and to talk of a solemn contract as though some contractual relations existed between two relatively equal bodies which could not be violated or altered without the consent of both. The reference to any particular act of Congress creating or altering its relations to the District of Columbia as an organic act, in the sense that word is used, in creating a new entity in the system of States, is a legal absurdity.

Congress is charged not only with the right but with the duty to deal with the District from time to time as altered conditions may justify. It is absurd to talk of an act as though it were irrepealable and beyond the power of amendment, or as though it were a contract based upon some form of valuable consideration. The only restriction upon the power of Congress to deal with the District is that it shall not invade private property rights except within the well-defined limitations of the exercise of the police and taxing power. Congress can exercise all of the usual powers of taxation over the District which are exercised by States through their municipalities or otherwise over the property of private citizens. Congress has not relinquished, waived, nor bargained away any portion of its taxing power, and it has no moral right to exempt private property in the District, either real or personal, from the operation of laws imposing taxes which are usual and necessary in other portions of the United States.

Prior to 1874 the District enjoyed a Territorial form of government with a species of local autonomy. In 1874 this local government broke down. The policemen, firemen, and city employees were unpaid, an enormous public debt had been contracted. The credit of the District was entirely exhausted, and at the same time the tax burden was very grievous. The physical appearance of Washington at that time must have been ludicrous if we believe the account of Louisa M. Alcott. She described in detail the pigs she met on Pennsylvania Avenue and their individual traits and habits. I suppose the cows still fed in Lafayette Square at that time. The debt which had been incurred for public improvements was out of all proportion to the population of the city, and any tangible results were scarcely apparent. Various reasons were given for this humiliating condition. It is said that the great number of ex-slaves who poured into Washington during and following the Civil War demoralized the local government and introduced an element of ignorance and corruption which made home rule impossible. This may be partially true, but the demoralizing effects of the Civil War were by no means confined to Washington. Hundreds of municipalities and a score of States were struggling with the unusual burdens and revolutionary changes of that period, and they were required to meet their problems unaided by the Federal Government. The truth is that all of the larger cities of the country were suffering from the era of extravagance and corruption which followed the Civil War. New York had its "Tweed ring" which saddled it with an enormous public debt. Many of the cities throughout the country were burdened with public obligations recklessly imposed upon the people without adequate return. Private property was everywhere confiscated by the tax burdens to meet these obligations. Many of the

cities were utterly unable to refund their public indebtedness at any rate of interest, and public securities were considerably below par.

Some American municipalities actually went out of existence as a means of avoiding this weight of obligations, which were wholly political and largely fraudulent. Washington, however, was fortunate in being the National Capital. It was imperative that a city government be maintained here of the best type, and that it be done without the confiscation of private property. Law, order, and the usual functions of the local government must be carried on and paid for. Washington must not be permitted to suffer from the sins of its political rulers, or even from its own sins, although other American municipalities could hope for no special relief. In 1874 the District was put into the hands of the receivers, and its affairs were straightened out by Congress. The Federal Government contributed by special appropriations as much as was needed to keep the District government running, and even to provide for the interest on the public debt.

I will not stop now to discuss the honesty of this public debt, nor whether the refunding of it, which was accomplished by the Federal receivers, was in the interest of the local bondholders or in the interest of the people. I do not know whether the persons who claimed to own the bonds paid 30 cents on the dollar for them or less. I do not know how many private fortunes in the District or elsewhere began with the refunding of these bonds. It is utterly useless to stir the depths of that stagnant pool. I do know, however, that the financial and property-owning interests in the District were treated liberally at that time by Congress, as they have been treated liberally ever since.

The act of 1878 establishing a permanent government for the District of Columbia proved to be a wonderful blessing to the District. Its liberality to the District is doubtless due to the utter financial and political prostration in which the District was then found. It is the wildest dream of the imagination to call it a solemn contract, as though it were a contract between two independent and competent parties. It imposed then and imposes now no obligations upon the Federal Government beyond the obligation contained in the Federal Constitution to provide a seat of government for the Federal power. The false note in all of this recent discussion has been to treat the interest of the property owners of the District as something entirely apart from the rights of other American citizens. The District was not created and is not governed in the interest of those who choose to buy real estate here. It is not a foreign nation or principality with whom a treaty must be made. The taxes collected in the District are not tribute from a fallen foe, but they are a part, and only a very small part, of the money which Congress has lavished on the National Capital.

The act of 1878 relieved the District from its embarrassments and removed a great load from private property. It prevented the confiscation of property by excessive taxation. It relieved the people of the District from the results of mismanagement. It refunded the public debt at the rate of 3.65 per cent interest. At that time no State or municipality in the Union could refund its public debt for less than 6 per cent, and in most cases, on account of the sale of the bonds below par, they were paying from 8 per cent to 10 per cent. For more than 30 years the District has enjoyed this low rate of interest.

This would be a great benefit even if the District had to pay all of the principal and interest, which is no more than all other American municipalities were compelled to do with indebtedness of this character. This result was achieved by placing the credit of the United States behind the bonds. It is now claimed that the United States not only guaranteed the bonds, but jointly agreed to pay them. If the technicalities are with the District in this matter, the people of the United States must submit, whatever may be the moral aspect of the question. The act of 1878 not only saved the District at the time, but has made possible its continuous growth and improvement. It has made it truly a national capital. Congress has paid 50 per cent of the running expenses of the District, and in addition thereto it has spent a large amount of money in improving the District in various ways, which is not charged against the District. These improvements are of a class that other cities would have to pay for themselves, or look to the generosity of some patriotic citizen. The most striking of these is the park system. Congress has done so much for the District in addition to its contribution of one-half of the running expenses that it may be truly said that we found Washington of mud and left it of marble.

The act of 1878 provides that taxation in the District should be limited to 15 mills on all of the real property and upon all personal property not taxable elsewhere. This is a very moderate rate of taxation. It must be remembered that this rate covers all of the taxation paid by a property owner in the District. It includes what in other States throughout the Union would be divided into several additional assessments. It includes not only the general expenses of the District government, but the school taxes, street improvements, special assessments, road taxes, and so forth. While in the other municipalities an additional tax for the support of the county and State is assessed.

The rate of assessment in the District of Columbia is 66⅔ per cent of the cash value. In other cities the rate of assessment runs from 33⅓ to 100 per cent, so that it requires some care to compare the tax rate in the District with the tax rate elsewhere, and it is very easy to make misleading figures. The statistics are available in a speech of Judge Prouty, of Iowa, in Congress, and therefore I will not repeat them. It is sufficient to say that the cost of government per capita is higher than in any other city, except New York and Boston, while the rate of taxation per dollar on property in the District is the lowest of any municipality of 100,000 people or over, and the per capita wealth in Washington is the greatest of any city on the globe. Fifteen mills is the average taxation in American cities for city purposes alone, which does not include such taxes as the school tax, and special improvements such as street paving, and frequently does not include park taxes. In addition to this the property owner in the average American city must pay county taxes and State taxes. The aggregate which he pays runs from 30 to 50 mills on the dollar. If the assessment of property were only half the assessment of property in the District of Columbia he would in that case pay more taxes, but the assessment probably averages very close to the assessment of the District of Columbia.

Property in the District of Columbia is not overtaxed. I may illustrate by a comparison with my own city of Kansas City, Mo. That city raises approximately $6,000,000 for city purposes, including the general fund, schools, and public improvements, and it raises about $3,000,000 more for county and State purposes. Thus this city, which is fairly moderate in its tax rate, has constructed one of the most beautiful park systems in the world, raises $9,000,000 from 250,000 people, while the city of Washington raises about $7,000,000 from 350,000 people. In that city the special improvements such as street paving are paid for by the abutting property owners, and this is an almost universal rule in American cities. The Supreme Court of the United States has declared that these improvements are special benefits which are not properly included in the general term "taxes."

The act of 1878 provided that there should be levied in the District of Columbia a tax of 15 mills on all real estate and all personal property not taxable elsewhere. It does not seem to be generally understood by the people of Washington that this act has been violated for 30 years in the interest of a privileged class. In the act of Congress providing the machinery for the assessment of personal property in the District the words in the act of 1878 were changed by the addition of the word "tangible" before the words "personal property." I would not undertake to say how this word "tangible" crept into the law. The result is that there is no legal machinery in the District for the taxation of intangible personal property, such as stocks, bonds, and investment securities generally. A merchant pays on his stock of goods because that is tangible, but the banker or the owner of invested capital pays nothing on his securities. There is no inheritance tax in the District of Columbia, although such a tax exists very generally in the American States. The low tax rate of 15 mills, the exemption of intangible personal property, and the absence of an inheritance tax have resulted in bringing to the District of Columbia a large number of invested fortunes representing wealth which was not created in the District, but which was created in some one of the several States. The owner of one of these invested fortunes who thus withdraws his wealth from the State which produced it, and where it can be subject to taxation, practically escapes taxation on it by becoming nominally a legal resident of the District of Columbia. The State from which he withdrew the fortune is doubly wronged, for it not only loses that taxable wealth, but it continues to pay its full quota of the expenses of the District of Columbia for the protection and enjoyment of the owner of the fortune. In my judgment this condition of affairs is morally and economically wrong.

The fact that Washington is the National Capital is no reason for providing tax exemptions in favor of those citizens who can remove their wealth here. Property in the District of Columbia should be assessed and taxed upon an equal and just basis in comparison with property in other American cities. Of all localities in the country the National Capital should be the last place where invested wealth can escape its just share of public burdens. An experience on the District of Columbia

Committee and a subsequent service on the Appropriations Committee of the House has led me to believe that to bring the taxes within the District to a just level with taxes outside of the District it is necessary, first, to segregate public improvements from the general fund, and tax them upon the abutting property owner. Second, to provide for the taxation of intangible wealth on the same basis as tangible property. Third, to provide for an inheritance tax. All of these reforms will meet with bitter opposition from certain elements in the District, but no reform is ever popular and no tax was ever received with enthusiasm. If these reforms are accomplished the District, instead of raising $7,000,000 annually, will raise $11,000,000.

The plan of paying one-half of the District expenses out of the Federal Treasury and one-half out of the District revenues is responsible for keeping static these abuses of the taxing system. In practice the plan is that every dollar raised in the District shall be matched with a dollar out of the Federal Treasury. If the untaxed wealth in the District were subject to taxation and the revenues of the District correspondingly increased the charge upon the Federal Treasury would also be increased. As long as the $7,000,000 raised from small house owners and business men, supplemented by an equal amount from the Federal Treasury, is ample for the District expenses no serious attempt is made to tax the exempt classes. As soon as a serious attempt is made it will reveal that the half-and-half plan has long since performed its function, and is becoming an increasing burden to the Federal Government, and a temptation to extravagance. Hence the sacredness of the half-and-half plan is the citadel of privileged wealth. It is sometimes urged in justification of the half-and-half principle that the Federal Government owns half of the real estate in the District. So far as I can find this was never true. When the boundaries of Washington extended only to Florida Avenue it may have been possible to make such a showing by charging to the Federal Government all of the area of streets, squares, parks, and other land used for city purposes, as well as that used for Federal purposes. My best information is that the Federal Government actually occupies for Federal purposes less than 100 acres in the District of Columbia. It has the title to a great deal of land like the big parks and the tiny parks at the intersection of avenues, which it has acquired for the beautification of the city, and which it holds not as a private landowner but as trustee for the public. Most of the avenues shown on the map as of exceptional width are not so in fact, the surplus width being actually fenced into the front yards of the adjoining proprietors. I believe that all of the public land in the District will total less than 20 per cent of the area of the District.

The half-and-half plan of contributing to the support of the District has broken down and must be repealed. Its absurdity as applied to the present conditions is shown by the following facts: When the law was originally passed in 1878 the revenues of the District were only about $3,000,000, and it was necessary for the Federal Treasury to contribute an equal amount in order to maintain a city government fit for a national capital. To-day the revenues of the District are more than $7,000,000. If the Federal Government is required by law to contribute an equal amount, the total is $14,000,000. Congress has only found it necessary to appropriate $12,000,000 for all the expenses of the local government. This leaves a surplus which will have to be used in one of three ways: Either it must be spent foolishly and extravagantly in raising salaries and in unnecessary public work to support a ring of contractors and bankers, or it must be used to reduce the already low tax of 15 mills on the property in the District, or it must remain in Uncle Sam's Treasury until needed. I favor the last. Why should we yield to the clamor of bankers and contractors in the District? Why should we decrease the taxes on the real estate speculators in the District when we are compelled, by the war in Europe, to increase the taxes of all other American taxpayers?

The situation is getting worse yearly. Next year the District revenues will be $8,000,000, and if the half-and-half plan is maintained Uncle Sam will have to add another $8,000,000. Soon the District revenues will be $10,000,000, and if doubled under the existing law there will be $20,000,000 to spend and waste. I favor the amendment that proposes to apply the District revenues to the expenses of the District government as far as available and pay the balance of the expenses out of the Federal Treasury. This is fair to the District. It does not raise the taxes of a single merchant or small home owner in the District, but it does enable Congress to pass laws to catch the tax dodgers and to tax the untaxed wealth of the District without at the same time being compelled to match every dollar raised in the District with a dollar out of the Federal Treasury and thus raise the taxes of the whole United States. The Federal Government owns certain property in the District which is used exclusively for the city, and which brings in a revenue, like the market house and the fish wharf. It makes the District a present of these revenues, and then it has to match them, under the present law, by an equal amount out of the Federal Treasury. Every time a saloon keeper on Pennsylvania Avenue pays $1,000 license the people of the United States have to pay an additional $1,000 for that saloon.

The half-and-half plan should be repealed. It is unjust to the people of the United States and demoralizing to the people of the District. But dinner-table diplomacy is a fine art in Washington. Many Members of Congress and more Senators are found voting for the exemption for the rich in Washington that they would not dare vote for in their home cities. I know a Senator who had no sooner reached Washington than he sent back and sold his home in his own city and bought a new and fashionable house here. Of course he is silent as the tomb on tax reform in the District.

The half-and-half plan should be modified by providing that a fair tax be levied upon all private property in the District at approximately the same rate that such property would bear in other American cities and that the Federal Government should contribute either on the basis of its holdings as a private landowner, or on the basis of the increased burdens, if any, which it places on the District to maintain a higher standard of government than would be necessary in other cities.

Much has been said about making Washington a beautiful city, and the appeal to the Nation at large is always on this basis, but it is utterly impossible to show any connection between these tax exemptions and the beautification of Washington. Washington has been beautified by Congress, and will continue to be so beautified without expense to the property owners, and thus Washington enjoys an advantage which no other city can possibly enjoy. It is more than probable that the liberality of Congress has discouraged rather than encouraged the growth of the spirit of public enterprise in the District. The presence of the Federal Government has never been a burden on the people of Washington, but is an asset to any city. Uncle Sam has a pay roll of $50,000,000 a year in Washington, and no panic has ever stopped his pay roll.

The present plan of the city of Washington follows, in a general way, the plans of Maj. L'Enfant, which were made out at the instance of President Washington. As far as they have been adhered to, they have resulted in a very beautiful city, although beauty was not the primary reason for such plans. The first element to be considered in a national capital is not beauty, but strength and defensibility. In this respect Washington is woefully deficient. Twice in our national history we have found that Washington was utterly incapable of defense from a military standpoint. In 1814 the disaster really happened; in 1864 it was only threatened. However, the National Capital is here, and whether it be defensible or not, it has around about it the powerful arms of Uncle Sam, and the whole Nation must stand or fall with the Capital. The Capital can not protect the country, nor be the last citidal of its strength, as is the case in most powerful nations, but the country can and will protect the Capital in any case of risk. The plans of Maj. L'Enfant contemplated that Washington should be laid out on a very generous scale. The usual number of streets were provided for, but of a width which was then thought unusual. In addition to the usual streets were the avenues running diagonally across the city, which were all of unusual width. At the crossing of these avenues were arranged circles and squares. At a glance it would appear that this was a plan merely to beautify the city, and a design to create a large amount of public grounds and open space within the District. We know, however, that this was not the primary object. The idea was adapted from Napoleon's plans for Paris, and is a very useful and effective way of guarding against a sudden rising of the populace, accompanied by rioting and mob violence, which so frequently disturbs capitals and threatens the Government. Napoleon conceived the idea that if a sufficient number of circles and squares, connected by broad avenues, could be dispersed throughout the city of Paris, he could plant artillery at the circles and sweep any one of the radiating avenues clear of a mob in a very few moments. The most striking example of this idea is La Place d'Etoile, in Paris, which, taking advantage of a little knoll, is surrounded by radiating boulevards like the spokes of a wheel. From this commanding point of Paris all that side of the Seine can be held in order by a minimum number of men and guns. Fortunately we have never been called upon to put this idea to a test in Washington.

The plan remains with us as one of those happy accidents which produce beauty and which are the despair of the artist who labors so hard with line, scale, and rule to accomplish, in the creation of artistic beauty, that which is so frequently done without his aid or even his knowledge.

It took Washington three-fourths of a century to grow into L'Enfant's plan; but what is three-fourths of a century in the life of a nation? It is well for us that the plan was comprehensive enough at the beginning. About a decade ago it was assumed that an improvement could be made upon L'Enfant's plan, and a committee of artists was set to work on a plan for the beautification of Washington. This has resulted in some fragmentary good. It has resulted in the permanent reclamation of the unsightly swamp near the Potomac Drive. It may further result in the grouping of public buildings in some artistic and imposing way. As far as I can discover, however, it has utterly neglected the possibilities of beauty in other locations of the District. It did not take advantage, as it might have, of the beautiful circle of hills surrounding Washington and the wonderful valleys behind them. It provided no circling boulevards adapted to the topography of the country, opening up the more remote sections of the District for future development. It is not for me, as a mere layman and an untutored barbarian, to criticize a plan gotten up by a committee which themselves admit that they are fine artists. It is my misfortune, however, to grasp only the art which links itself to nature, and smell with a rather keen nose the midnight oil which betrays the laborious efforts of the literary hack or the artistic hack, to grasp only the conventionalities of others. However, we should all be gratified, though we may differ as to details, that Washington is rapidly becoming the most beautiful capital in the world, and the only danger that we have of marring its beauty is in overloading it with too many statues and monuments, many of which we may eventually destroy. In the brief time of six years that I have served in Congress 11 statues or monuments, or an average of two a year, have been constructed. This is going fast enough, it seems to me, for a capital which we hope will endure for several hundred years at least.

The obligations of the Federal Government toward the National Capital do not stop with a mere reform in its financial relations. It should be the aim of Congress, with the cooperation of the people of the District, to build here not only the most beautiful but the most progressive city in the country. Living conditions in Washington should reflect the high type of the American ideal of city life. A city is both a home and a workshop. In most of the American cities the workshop idea predominates, because their very existence as cities depends upon their industry and commercial operations. In Washington the home idea predominates.

The great population of Washington is dependent upon the existence here of the seat of the Government. The largest employer of labor in the District is Uncle Sam, and even the commercial and financial interests here are dependent upon the business created by the sessions of Congress and the employees of the Federal Government. Washington is not a manufacturing city, and never will be. It is entirely unlikely that Congress would encourage or even tolerate the creation of manufacturing districts in the District of Columbia, with the massing of industrial population, the danger of strikes, boycotts, lockouts, the fluctuation in the labor market, caused by recurring trade depressions, and all of the problems which arise in an industrial center. No one but a few real estate agents could possibly profit by the establishment of manufacturing industries in the District. In all other respects it would be a distinct and irreparable disadvantage. On the other hand, Washington will be not only the Nation's Capital and the center of its political life, but in many respects the center of its artistic, literary, and scientific life. It will always be a great educational center and will be the greatest convention city of the United States. We are on the eve of a new awakening of the civic consciousness all over our land. Cities which have boasted only of their material wealth and their pagan appeals to the senses are beginning to have a soul. This soul of the city is a realization of the demands of social justice. The humblest worker in the city is entitled to decent conditions for home and family life. He is not only entitled to them, but through the inscrutable justice of Providence we realize that he will either get them or inflict the penalty upon the city at large. Slum politics have never plundered Washington as they have other cities, but slum conditions exist here, because they are a by-product of American civilization. A city can not be made exclusively of boulevards, parks, grand-opera houses, and public buildings. Washington should not only be known throughout the world as the city beautiful, but as the city with a soul. This is a type of civic effort in which the good people of Washington can command the enthusiastic support of the Nation. Many other American cities are far in advance of Washington in grasping this problem, although they have greater burdens to carry and greater problems to solve.

The time has come for constructive legislation for the city of Washington. Not constructive in the mere sense of expending Federal money wisely or unwisely in the purchase of property or the erection of public buildings, but constructive in the sense of establishing a rule of social justice which will bring the city organism to its highest development.

In my view, the first step in this direction is a reform in the tax laws, by which special privilege should be abolished and all taxpayers made to stand on an equal footing. Second, the abolishment of the alley slums, with their danger of physical and moral contamination. Third, the rehousing of the former slum dwellers in sanitary quarters. Fourth, the physical appearance of all parts of the District should be improved, including the reclamation of the Anacostia Flats, the bed of Rock Creek, and other abandoned spots. Both banks of the Potomac should again be in the control of the District by a recession of the Virginia shore. Fifth, a control of the public utilities of the District. There should be universal transfers between the street car lines, and better car service. The price of gas in the District is now 85 cents, while in Indianapolis, Ind., it is 60 cents and in many other American cities it ranges from 70 cents to 75 cents. Electric current in the District is selling at 10 cents per kilowatt, and the greatest natural hydroelectric power in the world lies at the very door of the District without being used. As fast as these public utilities come under public ownership they should be put upon a business basis, so that they will pay not only their running expenses, but the sinking fund represented by the investment. Sixth, the schools should be made social centers, especially in view of the fact that the plain citizens of Washington have no other common meeting point. All of the schools should be modernized on the Gary plan. They should be made not only centers of instruction for the children, but for the adults as well. They should combine manual training, public baths, public playgrounds, physical and public recreation, day nursery, and library features. They should be open every night, either for public discussion or amusement, and available for any legitimate meeting, either political, civic, or social. In offering recreation of this kind they should lead to a higher standard of citizenship by putting low-class and doubtful places of amusement out of business. Seventh, if I may borrow again an illustration from my own city of Kansas City, Washington should have a board of public welfare to look after the condition of its police court, its juvenile court, public dances, cafés, and other places of resort, and expending its activity in helpful ways for the young citizens, especially the inexperienced boys and girls, who may drift into the dangerous environments of a big city. Kansas City, under the direction of its welfare board, even conducts a free legal aid bureau for poor women and laboring men who can not afford to go to law to secure their rights. It conducts a municipal loan bureau, which has almost solved the loan-shark evil. These are some of the constructive measures which ought to find their highest development in the Nation's Capital, so that life here would not only be more beautiful, but purer and cleaner than ever before in the world's history. Before we had gotten very far on such a program as this, Washington would not only be known as the most beautiful city, but as the city with a soul.

A Tribute to Cotton.

EXTENSION OF REMARKS

OF

HON. JOHN W. ABERCROMBIE,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915.

Mr. ABERCROMBIE. Mr. Speaker, under the privilege extended by the House I shall print in the RECORD the beautiful tribute to cotton which our able, eloquent, and popular colleague, the gentleman from Tennessee [Mr. MCKELLAR], delivered on the occasion of a social meeting held recently in the city of Washington for the purpose of promoting the culture, the manufacture, and the use of the South's chief product. Always eloquent and happy in expression, Mr. MCKELLAR was

unusually happy and eloquent on that occasion. He impersonated "King Cotton," and spoke as follows:

I am King Cotton! "Master of human destinies am I. Fame, Love, and Fortune upon my footsteps wait." I clothe the world with my fleecy staple and from my juicy kernel I give food to all mankind and to all beasts. My mother was Discovery, my father was Invention, and Manufacture has made me famous in every land under the sun. I bring wealth to all who deal in me—to those who plant me, to those who raise me, to those who sell me, to those who buy me, to those who keep and protect me, to those who ship me, to those who manufacture me into splendid fabrics—to all of these I bring wealth, and to every living creature that uses me I bring comfort, contentment, and happiness.

I am the fabled Atlantis, the long-sought-for Eldorado, the Golden Fleece, the modern Aladdin's lamp! Men of every nation and clime seek me out in order to become rich and happy. I make every man that wears me comfortable. I make every woman that clothes herself with me both comfortable and beautiful. All men are my worshipers and all women are my subjects.

Peace and Prosperity and Happiness are my friends. They go hand in hand with me through every land and on every sea. When they are with me my joy is complete. When they leave me I am undone and miserable. I have but two enemies, and they are sordid Poverty and awful War. To-day these enemies greatly oppress me. They have desolated my peaceful dominions; they have usurped my market places; they have destroyed my ships; they have taken away my Prosperity and Happiness!

My annual revenue is greater than that of any other king or potentate, however rich or powerful. My name is on the lips of every civilized person, directly or indirectly, on every day. There is no electric wire in existence that does not carry daily report of me. There is no great newspaper that does not advertise me. When my price is low, the years are lean. When my price is high, the years are fat. I am the first aid to the sick and wounded. I am the last resting place of the dead. I dwell in the palace of the rich. I am ever at home in the humble cottage of the poor. I am used in battle, in murder, for the purposes of wounding and killing, and then my glossy folds are the first to wrap the bodies of the killed or maimed. I am the best freight of railroads and the most fruitful cargo of ships.

I sail under every flag and am the flag itself; but I love best the flag that I make for my country. Paraphrasing the words of another: Go to the uttermost limits of the earth, follow the remotest waves of the sea, stand on any spot in the vast expanse of sea or land, and look up and behold the flag of your Republic, and the starry banner that streams above your head will recall at the dawn's early light and the twilight's last gleaming the genius and soul of my wonderful fabric, which shines from every star and glistens from every stripe.

To-night, therefore, I have called together all my loyal subjects to listen to words of wisdom spoken by our Royal Counsel, Senator HOKE SMITH. He will deliver to you words of skill and craftiness, touching how we may recover our lost dominions and forever put an end to our enemies, evil Poverty and horrid War. Hear ye him!

Sales of Arms and Munitions of War to Belligerents.

EXTENSION OF REMARKS
OF
HON. STEPHEN G. PORTER.
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915.

Mr. PORTER. Mr. Speaker, the deep interest which our people are taking in promoting the passage of the resolutions pending before the Foreign Affairs Committee of the House of Representatives prohibiting the shipment of arms and munitions of war to the belligerent nations of Europe and Asia is most gratifying. I know of no better evidence of the lofty moral standards of our people, who believe with the lamented McKinley, that "there must be a constant movement toward a higher and nobler civilization" than the efforts being made to stop the shipment of murderous instruments of war to these unfortunate countries.

I hold no brief for any of the contending nations, and if my recital of historical facts may appear to favor one nation over another such is not my purpose. My sole object in the use of these facts being to support my contention in favor of the establishment by our country of a higher standard of morality by stopping the shipment of the "things which kill" to the warring nations of Europe and Asia.

The pioneer, in clearing the land, gathers all the stumps, brush, and débris into a great pile, and after it is thoroughly dried it takes but a single match to start the conflagration. The political conditions in Europe and Asia for the last two decades have been very much like the pioneer's brush pile—it required but a match to start a conflagration which has appalled mankind and caused civilization to perish among the belligerent nations.

Nearly all the wars of the past were commercial. While their commercial nature may not appear at the first glance, a careful analysis of the causes leads the mind to the inevitable conclusion that it was the desire for gain which brought them about. There is no difference between the wars of conquest of ancient times and the wars for commercial supremacy of modern times; they both sought the same end, money, the love of which Holy Writ tells us is "the root of all evil." Certainly it is the foundation of all wars. Civilization, or so-called civilization, throughout the centuries has never been able to resist the "metallic voice of the Goddess of Commercialism" which, with racial prejudice and religious intolerance, has always stood in the way of human progress. They have been the enemies of civilization. Some great thinkers contend that we should measure our civilization by the extent of war. If this rule be correct, then this is the most uncivilized era in the world's history.

Our recent War with Spain is a splendid exception to this statement, in which, actuated by the purest motives, solely in the interests of humanity, and guided by the gentle McKinley, we reached out the hand of brotherhood to crushed and bleeding Cuba, bade her arise and be free and take her proper place among the nations of the earth. The return by the Government to China of our share of the indemnity arising out of the Boxer insurrection, and other beneficent acts which I have not the time to enumerate, have established for this Nation in the eyes of the world a moral standard of the highest order. Why not apply the same noble morality to the shipment of arms and munitions of war to Europe and not allow the desire for gold to make us a party to the carnage which is now going on in those stricken countries? If we could remove the powerful opposition of the commercial side of these transactions, there is no question in my mind but that these shipments would stop and stop at once. I am a firm believer in retributive justice, and every dollar we receive from the sales of instruments of war will do us more harm than good, as they are bathed in the blood of our fellow men and the tears of widows and orphans. A humane and just neutrality in this war, founded upon the eternal principles of justice and right, will be of more value to this Nation than all the wealth of Europe.

For many years we have heard talk, in season and out, of universal peace. Where are these peace advocates in the present crisis, at least those who are not busily engaged in keeping The Hague Peace Palace out of the range of cannon balls? With the exception of Dr. BARTHOLDT and a few of his associates, they are all conspicuous by their silence.

There is only one practical way to prevent war, to some extent at least, and that is by the absolute refusal by all neutral nations to supply the belligerents with supplies of any kind. This international policy would at least shorten wars. If Russia had known when she declared war against Japan that she could not secure arms and ammunition from Germany, or Japan had known that she could not secure similar material from England, they both would have hesitated before entering the contest. If Russia had known before the beginning of this war that she could not buy cannon from her recent enemy, Japan, or if England and France had known they could not depend upon this vast storehouse of ours for even food for their people, the sword would have remained much longer in its scabbard. To those who look upon these shipments solely through the eyes of "Mammon" I call their attention to the fact that almost every line of business in this country is affected by the war. Thousands and tens of thousands are out of employment; abnormal conditions are arising even in regard to our own food supply, and the quicker this war is ended the better it will be for the commercial life of this Nation. Take a sordid view of the transaction if you desire—are we helping ourselves commercially by aiding and abetting the prolongation of the war? That our assistance to the belligerent nations will prolong it is a conceded fact; even the Secretary of State admits it in his official interview of two weeks ago.

The immediate profits from this unrighteous trade may be considerable; and brushing aside all considerations of humanity, have you ever considered how costly they may be to us in the future? A friend of mine has a relative fighting in the German trenches in northern France. She received a letter from him recently, and it, no doubt, represents the sentiment of the German soldiers. Translated, it reads as follows:

The part which your country plays in this war has indeed changed. Wilson's fine proclamation at the beginning of the war was received here with great interest and joy. It breathed sincere neutrality. We had not expected more, and we remembered the saying in the Bible that "the letter killeth, the spirit giveth life," for it was a neutrality even of the thoughts that the President called for. Months have gone by in the field, and now we are confronted by the fact that we are assailed by American-made shells and shrapnel, perhaps also by bullets, bombs, and other death-dealing instruments of the same origin. The letter of the law may be on your side, but where now is the spirit of neutrality? Our statesmen may yet succeed in preventing animosity between Germany and the United States; that may satisfy statesmen,

but in the place where the heart of the German people beats now—that is, here at the front—opinion is different. We German soldiers can make no distinction between those who shoot at us with shells and those who prepare and sell them with the definite knowledge of their ghastly use. One is just as much our enemy as the other. After the war it will be hard for us to remember the actions of your world of trade.

The duty of the American people in this situation is plain and simple—maintain not only a strict but an honest neutrality. Ours should be the cold neutrality of an impartial judge, not only because it is right but because it is likely this Nation will be called upon to act as judge or arbiter in the final settlement of the war. We should be, as President Wilson so well put it in his neutrality proclamation—

Neutral in fact as well as in name, and we must put a curb on every transaction which might give a preference to one party in the struggle over another.

Webster defines neutrality as "lending no active assistance to either or any belligerent." Are we neutral when our factories for the manufacture of munitions of war are working night and day, many of them building extensions to their plants, so as to take care of the increased business, and all sending shiploads of deadly implements to aid the allies in carrying on the warfare? Can any reasonable human being suggest anything that would be more unneutral or more inhuman or more in violation of the traditions of our country than this?

The only answer which the opponents of this movement to stop these shipments make is the very remarkable one that unless we do so we violate our neutrality, and base their arguments on the customs of nations. This world, to an extent at least, is ungoverned, and while we call the diplomatic notes exchanged between Governments, the treaties between nations, and international customs, international law, there is no forum for their enforcement except the battlefield. These precedents of international law were created, in most instances, by the power of the sword and are not founded upon right and justice which should govern the affairs of men as well as nations. It is a case where "might makes right." A noted English author once said, "That which is boldly asserted and plausibly maintained is law." This certainly is true of international law, especially when it is asserted at the cannon's mouth. If the warring nations had equal opportunity to buy from us our positions would not be so untenable, but ever since the defeat of the Spanish Armada England has been mistress of the seas, and no specious argument can convince a reasonable man that we are not directly aiding and abetting the allies in carrying on this war by these shipments.

The Secretary of State, in an official interview, carefully refrains from defending these shipments on their merits, but declines to interfere solely on the ground that we are within the rules of international law in permitting them. Conceding our merchants and manufacturers have a right under a flimsy and immoral rule of international law to do so, and in making these unholy sales they are "within the law," were not many of the grave crimes of history committed "within the law"? It is an amazing defense of a moral crime for a public official to make who has delighted tens of thousands of our citizens with his lofty ideals and purity of thought and action. He goes further and says we are bound to do so, otherwise we violate our neutrality. In this contention he is without the support of a single precedent or tradition of our national history. On the contrary, Congress, on May 22, 1794, prohibited for one year the shipment of munitions of war. In 1807 it passed a general embargo on all shipments, on the recommendation of President Jefferson. On April 12, 1812, on request from President Madison, it again passed a general embargo. Even as late as 1905 President Roosevelt issued a proclamation forbidding the export of arms to the Dominican Republic. All of these embargoes violated our neutrality if the opinion of the present Secretary of State is correct, but diplomatic history does not disclose a single protest from any of the nations affected thereby.

If these three great Presidents—Mr. Jefferson, Mr. Madison, and Mr. Roosevelt—were right in recommending embargoes—and the fact that they were right is conclusively proven by the failure of the nations affected to protest—then the present Secretary of State is wrong in his conclusions. It is contended by those who are friendly to these shipments that these former embargo acts were passed to prevent the draining of our country of supplies and causing hardships upon our own people. This is true; but we have the legal right to do it without giving any reason, and surely the principle involved is the same, whether we stop the shipments through necessity or in the interest of humanity. Even the courts have no right to inquire into the motives of a legislative body in making a law, as no two legislative minds are moved by exactly the same reasons. In this very instance, I have no doubt, many Members of Congress would vote for an embargo on the "things which kill" on humanitarian grounds and many others would vote for it solely as a protection against what they believe to be our "unpreparedness for war" and the necessity of retaining a large proportion of these instruments of destruction for our own protection, as it is remotely possible that they might be used on us before this strife is over. Congress has had, throughout our national existence, an undoubted right to legislate upon such matters, and it is absurd to say that if it did so it would be an unneutral act toward the belligerent nations. Judge Storey, the greatest of all writers on the Constitution and whose textbook on international law is supplied to every captain in the English Navy, says:

No one can reasonably doubt that the laying of an embargo suspending commerce for a limited period is within the scope of the Constitution.

It is urged by the Secretary of State that Great Britain is entitled to all the advantages which accrue by reason of her absolute control of the sea, such as freedom to purchase the necessities of life for her people and arms with which to carry on this war. It is also urged by others closely connected with the present administration, as an excuse for these shipments, that Germany was fully prepared for war and the allies were not. That if we do not help the allies we place a premium on preparedness for war; truly, a most extraordinary neutrality. If Great Britain is entitled to all the advantages accruing to her by reason of her preparedness at sea, Germany is certainly entitled to the same advantages by reason of her preparedness on land, and common sense undoubtedly ordains that to aid either of the nations wherein they are unprepared is a flagrant violation of neutrality.

I am satisfied that all of you agree with me that these shipments are morally wrong, and if you have any lingering doubts of our legal right to refuse to make them the message of President Wilson to Congress on August 27, 1913, on the Mexican affairs ought remove them. He said:

For the rest I deem it my duty to exercise the authority conferred upon me by the law of March 14, 1912, to see to it that neither side to the struggle now going on in Mexico receive any assistance from this side the border. I shall follow the best practice of nations in the matter of neutrality by forbidding the exportation of arms or munitions of war of any kind from the United States to any part of the Republic of Mexico—a policy suggested by several interesting precedents and certainly dictated by many manifest considerations of practical expediency. We can not in the circumstances be the partisans of either party to the contest that now distracts Mexico or constitute ourselves the virtual umpire between them.

President Wilson has had more perplexing problems to solve than any other President of recent years. As my constituency well knows, I have voted with him when I believed him to be right, and against him when I believed him to be wrong, in harmony with the policy which I have always followed of placing the welfare of our common country above that of the party to which I belong. But there is no escape from the proposition that if it was right to forbid the shipment of arms to Mexico it is right to forbid the shipments to the nations across the Atlantic. It is idle for the friends of the President to contend that there is a distinction between the selling of arms and munitions of war to a nation engaged in internal warfare and a nation engaged in war with another nation. It certainly is a distinction without a difference.

It is a strange proposition, to my mind, that our Nation, to comply with the rules of international law, which Blackstone defines as, "A system of rules deducible from natural reason, etc," must commit a great moral wrong against nations which have always been friendly to us, against nations which have helped, materially helped, to build up this wonderful Nation of ours. There are in this country to-day upward of 20,000,000 people of German and Austrian blood. That they are citizens of the highest type no one will deny. The fact that the German Government has made the home country so attractive to the German people during the last two decades that emigration to this country has practically ceased I regard as a distinct misfortune to this Nation. Many thousands of them have relatives in the German and Austrian armies, and there are, no doubt, many men and women citizens of this country who have had brothers or others of their own flesh and blood killed on the battle fields of Europe with bullets made in American factories, propelled on their deadly errand by American powder, and hurled from American-made guns. For this reason alone this nefarious trade should be stopped.

The Secretary of State, in his official interview two weeks ago, states in defense of his position that Germany shipped munitions of war to Japan and Russia during their conflict. Probably she did; but that is no argument against our con-

tention for a higher standard of international morality so far as this Nation is concerned. Because Germany and other nations have done wrong in this respect, from a moral standpoint, is no reason why we should do likewise.

The Secretary of State, in making the above statement concerning Germany's conduct in the Russian-Japanese War, probably overlooked the fact that Germany did not permit her citizens to sell arms or munitions of war to Spain during our war with that nation. That she acted in this humane and friendly way toward us in that struggle is not open to question.

Our ambassador to Germany during the Spanish-American War was the distinguished statesman and scholar, Hon. Andrew D. White, who fully confirms my assertion in his autobiography (1905), volume 2, page 167, where he says:

> As to the conduct of Germany during our war with Spain—the course of the Imperial (German) Government, especially of the foreign office, under the Count von Bülow and Baron von Richthofen—was all that could be desired. Indeed, they went so far on one occasion as almost to alarm us. The American consul at Hamburg having notified me by telephone that a Spanish vessel supposed to be loaded with arms for use against us in Cuba was about to leave that port, I hastened to the foreign office and urged that vigorous steps be taken, with the result that the vessel, which in the meantime had left Hamburg, was overhauled and searched at the mouth of the Elbe. The German Government might easily have pleaded in answer to my request that the American Government had shown itself opposed to such interference with the shipments of small arms to belligerents and had contended that it was not expected to search vessels to find such contrabands of war, but that this duty was incumbent upon the belligerent nation concerned. This evidence of the fairness of Germany I took pains to make known in my address at the American celebration in Leipzig on the Fourth of July.

Later, on page 169, he says:

> Of one thing I then, and always, reminded my hearers, namely, that during the Civil War, when our national existence was trembling in the balance and our foreign friends were few, the German press and people were steadily on our side.

And again, on page 170, he says:

> As the War with Spain progressed various causes of difference arose between Germany and the United States, but I feel bound to say that the German Government continued to act toward us with justice.

While I hold no brief for Germany or any other nation engaged in this titanic struggle, I believe it but right and proper that Germany's attitude toward the shipment of arms during the Spanish-American War should be fully known, and that our people should not be left under the false impression that Germany had a fixed policy of allowing such shipments, as she certainly made an exception in our favor, as stated by Ambassador White.

Our population is composed of former citizens of all the belligerent nations and our position in the matter of these shipments is entirely different from that of any other country. They can sell these deadly materials to other nations without being a party to the death or wounding of those who are kin to their own people. Many a bullet made in an American factory, by an American workman, has found its deadly resting place in the body of that workman's brother, nephew, cousin, or even his father or son—the mere thought of which is horrible to contemplate.

The President set aside October 4, 1914, as a day of prayer for peace in Europe, which was responded to and approved by the American people. Later, when the cry of distress occurred, the masses of our people rushed to the relief of the afflicted, and when Christmas season arrived—which is dear to us all—while our manufacturers and merchants were shipping the deadly implements of war with which these people were to forget the teachings of humanity and murder each other, we sent toys to the little children—dolls to flaxen-haired little girls, miniature horses and ponies to little boys, whose fathers had been killed with bullets and shrapnel made in American factories. If this is not the Alpha and Omega of national hypocrisy, pray tell me what is!

It is not my purpose to discuss the causes which led up to this frightful catastrophe, whose reverberations are felt at every fireside of the civilized world. In fact, I believe it our duty, as lovers of right and justice, to suspend judgment until all the facts are fully understood and comprehended and let the future historian lay the fault at the door of the wrongdoer.

The American citizen who was formerly a citizen of Great Britian, France, Germany, or any other of the belligerent nations naturally sympathizes with the land of his birth. In many cases this sympathy is accentuated by the fact that his kinsfolk are now engaged in this bloody struggle of the former home country to retain a national existence. That they are patriotic Americans the pages of our history fully demonstrates.

The place where one is ushered into this world, "pulsating with life and energy," is always dear to the human heart. The farmhouse in Columbiana County, Ohio, in which I was born, with its sweet associations of parental love and childhood's joys and sorrows, is the most cherished of all the fading memories of the long ago.

To criticize these American citizens of foreign birth by referring to them as hyphenated American, and so forth, as some of our newspapers and citizens do, for their red-blooded sympathy for the land where they first saw the light of day, is unwarranted, unjustifiable, and cruel. It is a natural sympathy that all of us would display under similar circumstances.

A great deal has been said about the unpreparedness of the United States for war. When our forefathers took possession of this virgin country it was filled with an unlimited supply of natural resources and protected from hostile invasion from Europe by the Atlantic Ocean and from Asia by the Pacific Ocean. These two great bodies of water are worth more to us as a protection than all the armies and navies of the world. From this terrible war we may draw a very comforting military lesson; in fact, we had an indication of it during the Russo-Japanese War, i. e., that the day of forts and fortifications, no matter how strongly built and carefully concealed, is over. The destruction of the forts of Liege and Namur, forts which the engineering minds thought would resist for months, has demonstrated the fact that the man in the trench, armed with a rapid-fire rifle, is supreme in modern warfare. We have in this country a colossal latent strength of sixteen millions of men of military age. We have the men and the picks and shovels to dig the trenches, and we need nothing more, except to do as the Swiss have done—make marksmanship at Government expense one of our national sports. We should have in every community a shooting range maintained at national expense, where the youth of the Nation could go and practice shooting. It is a clean and manly sport, and our men by the thousands would take advantage of the opportunity. The expense to the Government would be small compared with the benefits derived from such a policy. I have always believed that the integrity of the Swiss Republic was due to the wholesome fear that other nations in Europe have of the Swiss marksman shooting him from his native mountain crags.

Much has been said in this country of the menace to us from German militarism, but little, if anything, has been said of the menace of British navalism. Napoleon was the world's greatest military strategist, but he was unable to cross the 22 miles of water between Calais, France, and Dover, England, and no German militarism will ever succeed in crossing the Atlantic Ocean. Germany has always been, from necessity, a military nation. She has never bothered us; in fact, our relations with the German Empire throughout our national existence have always been of the most friendly kind. But what about British navalism? It has controlled the common waters for several centuries. In 48 hours, in combination with Japan, it could block every port of our Nation. It could exercise drastic and unwarranted searches and seizures of our vessels and seamen, as it did in 1812. It could interfere by vexatious annoyances with our shipping—in fact, control it—in case we have a war with any other nation, as it did in the Civil War. Its unwarranted examination of our vessels at the present time is delaying and injuring our commerce to such an extent that the State Department has notified England in diplomatic language that such flagrant abuses of our rights at sea will not be permitted any longer by the United States. It is indeed strange—and I desire to emphasize this statement—that if German militarism is such a menace, that all our clashes have been with English navalism.

In obedience to the mandate of Washington, which has the force of law with the American people, we have made no "entangling alliances with foreign nations," and therefore have been at peace throughout our national existence with all of the belligerents except Great Britain. We as a nation owe much to the men who were formerly citizens of the belligerent nations and founded this Republic. Our "melting pot," which makes racial prejudice—one of the greatest curses of mankind—impossible, has produced a distinct race of liberty-loving people. We should and do feel kindly toward all of them. We remember, with deep affection, the Frenchman, Lafayette, whom we have honored by placing his portrait beside that of Washington in the House of Representatives, who with his associates so materially aided us in becoming a nation. We remember with gratitude the Czar of Russia, who struck the shackles from Russia's slaves a few years before we did from ours, who sent to President Lincoln during the Civil War a portion of his navy and authorized that immortal man to use it as a protection against the flagrant abuse of our rights at sea by Great Britain. I have often thought that this was the turning point in the War between the States. We remember with pleasure the German, Von Steuben, in whose memory we have erected a

magnificent monument in the Capital of our Nation, who trained Washington's raw recruits at Valley Forge for their successful siege of Yorktown, and the German, De Kalb, whose life paid the price of our victory at Camden, Va., and we never should forget the men who fought "mit" Siegel. We feel kindly toward England, the mother country of many of us, and forget the hiring of the savage Indians to murder and pillage the peaceful citizens of the Mohawk Valley and elsewhere during the Revolutionary War. We have forgotten her abuse of our rights at sea, which brought about the War of 1812. We have forgotten the Mason and Slidell affair, when one of our warships took Mason and Slidell, traitors to our country, from an English vessel, and how England, by force of might and not right, compelled our troubled country to apologize for this affront to the mistress of the seas. We want to be patient with her at the present time, as she and all other warring nations are fighting to maintain their existence, even though she has laid down rules and regulations for the sea that have practically destroyed our commerce; but I certainly resent the claim that England, or any other nation, has the right to compel us, Secretary Bryan to the contrary notwithstanding, to ship her firearms. No nation ever had, no nation ever will have, as long as we maintain our integrity as a Republic, the power to compel the American people to do a thing which they know is everlastingly and eternally wrong.

Last week an English vessel, as a protection against German submarines, hoisted the American flag for the purpose of deceiving England's enemies. There is no justification for this abuse of our flag. It has always stood for everything noble and good. Under it we have grown from a Nation of 3,000,000 to 100,000,000 of people. "Upon it you will find neither beast nor bird of prey." The stars, which awaken the night from darkness, and the red bars of light, which give notice of the awakening day, are alone upon its folds. As it swishes over the public buildings and public schoolhouses of our Nation, beckoning the downtrodden of the world to our shores, it should not be debased by using it to deceive, by England or any other nation.

I am told that there hangs in the State Department at Washington a painting which shows a man, dressed in the garb of a soldier, bidding good-by to his wife, who, it is needless to say, is in tears; his little boy of 4 or 5 years and a little girl of about 10 are clinging to his knees. The little girl is saying, "Daddy, are you going out to kill some other little girl's daddy?" This painting, my friends, tells its own story. It is as great an argument against the ravages of war as Uncle Tom's Cabin was against human slavery. I have often wondered, since the question has arisen about these shipments, if Mr. Bryan, the Secretary of State, who has lectured on The Prince of Peace from almost every platform of the Nation, has not awakened from his dreams of the Presidency long enough to appreciate the fundamental teaching of that immortal spiritual adviser and withdrawn his unwarranted and uncalled-for opposition to the pending resolutions, so that Congress may stop the killing of thousands of "little girls' daddies" with American bullets across the seas?

At this point I believe a portion of Washington's Farewell Address is peculiarly appropriate. It is marvelous how this greatest of all Americans, 119 years ago, could point out with such unerring accuracy our duty to-day. In reading it one can hardly escape the thought that it was written on yesterday. He says:

Observe good faith and justice toward all nations. Cultivate peace and harmony with all. Religion and morality enjoin this conduct; and can it be that good policy does not equally enjoin it? It will be worthy of a free, enlightened, and, at no distant period, a great nation, to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence. Who can doubt that in the course of time and things the fruits of such a plan would richly repay any temporary advantages, which might be lost by a steady adherence to it? Can it be that Providence has not connected the permanent felicity of a nation with its virtue? The experiment, at least, is recommended by every sentiment which ennobles human nature.

The great rule of conduct for us, in regard to foreign nations, is, in extending our commercial relations, to have with them as little political connection as possible. So far as we have already formed engagements, let them be fulfilled with perfect good faith. Here let us stop.

Europe has a set of primary interests, which to us have none, or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves, by artificial ties, in the ordinary vicissitudes of her politics or the ordinary combinations and collisions of her friendships or enmities.

Our detached and distant situation invites and enables us to pursue a different course. If we remain one people, under an efficient government, the period is not far off when we may defy material injury from external annoyance; when we may take such an attitude as will cause the neutrality we may at any time resolve upon to be scrupulously respected; when belligerent nations, under the impossibility of making acquisitions upon us, will not lightly hazard the giving us provocation; when we may choose peace or war, as our interest, guided by justice, shall counsel.

Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, humor, or caprice.

'Tis our true policy to steer clear of permanent alliances with any portion of the foreign world.

Let me, in conclusion, express the hope that the opposition of the executive branch of our Government to these resolutions will cease and that Congress may put an end to the shipment of "things which kill," and stop a traffic which shocks the sense of justice of the masses of the American people; and that when next Christmas arrives we can, without hypocrisy, send Christmas gifts to homes in Europe and Asia, in which we have materially aided to preserve happiness and sunshine. No one can predict with any degree of certainty the length of this war; but I know it is the wish and hope and prayer of every fireside in Christendom that on next Christmas eve we can truthfully say, "Peace on earth, good will toward men."

And that the day will soon arrive—

When the war drums throb no longer,
And the battle flags are furled
In the parliament of man—
The federation of the world.

For an Effieient Investigation of Personal Rural Credits Bills as Distinguished from Land Loan Bills.

EXTENSION OF REMARKS

OF

HON. DUDLEY DOOLITTLE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 2, 1915.

Mr. DOOLITTLE. Mr. Speaker, I wish to incorporate herein House Joint Resolution 417, which reads as follows:

Joint resolution (H. J. Res. 417) to authorize the Committees on Agriculture of the Senate and House to investigate a system of rural personal credit.

Whereas none of the several rural credit investigating bodies appointed by Congress within the past few years has drafted a personal rural credit bill; and

Whereas nearly every highly civilized country has in successful operation a personal rural credit system through which the farmers of those countries obtain credit for productive purposes at low rates of interest and in sufficient amounts to enable them to produce agricultural products more economically than is done in this country, even though our farmers possess many natural advantages not enjoyed by them; and

Whereas the great European war now being waged is wasting capital at a rate never before approached, which condition is bound to result in materially affecting the world's capital and credit markets; and the American farmers having no organized credit machinery it naturally follows that their interests will suffer more than any other interests in the country and make it more difficult for them to obtain credit in the future than it has been in the past: Therefore be it

Resolved, etc., That the Committees on Agriculture of the Senate and House of Representatives are hereby authorized, through a subcommittee, to investigate and hold hearings on such personal rural credit bills as may be presented to them, in the manner hereinafter more specifically set forth, and make a report thereof not later than the 10th day of December next.

SEC. 2. That such subcommittee or investigating body, which is hereinafter referred to as the commission, shall hold its hearings and investigations in such manner that will permit persons who, in the commission's opinion, have sufficient authoritative backing, to present bills for a personal rural credit system in the United States to the commission and appear before them by experts of their own selection to establish the merits of their respective bills and to disprove any provisions contained in bills not presented by themselves. The commission shall notify at least one leading representative of every interest affected by such bills, including the president of the American Bankers' Association, of his privilege to appear before the commission by an expert of his own selection and to advocate or oppose any bill presented, who shall enjoy the same rights and privileges before the commission as the experts of the proponents.

SEC. 3. That it shall be the further duty of the commission to send for persons and papers; to administer oaths; to summon and compel the attendance of witnesses and have the same examined by themselves or by the representatives of the parties at interest appearing before them, or both; to adopt rules of procedure and the same to amend; and to employ such secretaries, experts, stenographers, and other assistants as shall be necessary to carry out the purposes for which the commission was created.

SEC. 4. That the members of the commission shall receive no compensation for their services on the commission, except traveling expenses incurred outside of the District of Columbia while attending to the duties imposed under this act.

SEC. 5. That the sum of $9,000, or so much thereof as may be necessary to carry out the purposes of this act and to defray the expense of the commission, is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated. Such appropriation shall be immediately available and shall be paid out on the audit and order of the chairman or acting chairman of said commission, which audit and order shall be conclusive and binding upon all departments as to the correctness of the accounts of said commission.

House joint resolution No. 417, introduced by me, provides for the creation of a commission before which groups of farmers may appear by experts with bills for the establishment of a personal rural-credit system in the United States, and introduce evidence to show the merits of the bills presented by themselves and the faults of bills not presented by themselves.

This principle of an open court investigation of this important subject has received the indorsement of the largest farm journals of the country, namely, The Copper Farm Papers, Successful Farming, Farm and Fireside, and The Farm Journal, also by the legislative committee of the National Grange and prominent members of the Farmers' Union. The appropriation called for to make this investigation is only $9,000.

The farmers have everything to gain by an open investigation and presentation by their own experts. Under the method of investigation provided by this resolution, one group of farmers could employ an expert presenting a bill embodying the Raiffeisen system of Germany, another the Belgian system, another the French system; and the experts could present evidence and arguments for the systems provided for by their respective bills, so that Congress would have the benefit of the knowledge of each of those farmers' experts.

It is quite unlikely that this resolution can pass at this session, owing to the press of business at the close of this Congress, and if it fails of passage, the press, especially the rural press, should take it up during recess and acquaint the public concerning it.

Looking Back Over Four Years of Congress.

EXTENSION OF REMARKS

OF

HON. J. CHARLES LINTHICUM,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915.

Mr. LINTHICUM. Mr. Speaker, in looking back over the record of Congress for the past four years we can not help but realize the arduous and immense task which that body has struggled with in the interest of the American people. The history of the world, as well as that of the American Congress, during this period of four years has embraced so many different subjects and has been so constantly in the minds of the public, when dealing with these numerous and perplexing matters, that unless we devote some time to study and research or one has an extremely retentive memory the whole proceeding appears to have a kaleidoscopic effect upon the mind.

When I came to Congress four years ago the great question before the American people was that of tariff reduction, the revision of the tariff downward. We heard this expression on all sides. The people had been so misled by the previous Republican Congress that they were anxious to take the matter in hand and bring about a change. The Republicans had in 1910 promised the people a revision of the tariff, but when they won the election the people found that a revision of the tariff did not necessarily mean a revision downward, as they had supposed, but might mean a revision upward, as the Republicans had interpreted the same and enacted it into law. The great cry was, therefore, for a reduction of the tariff, and Congress immediately grappled with this situation and began to formulate laws to carry out the will of the people. At that session, while the Democratic House of Representatives passed tariff laws which would have given relief to our people, the Senate was in the hands of the Republicans, and, although certain laws finally reached President Taft, he promptly affixed his veto and rendered valueless the legislation upon which Congress had been so long engaged.

The election of 1912, however, restored the Presidency and Congress to the people by the election of a Democratic President and a Democratic Senate and House of Representatives. Real work in the revision downward of the tariff then began, and from that time on constructive legislation for the relief of the people and the upbuilding of the business interests of the country began at a rapid pace.

It would be impossible for me to enter upon a discussion of the great measures which have engaged the attention of Congress since the election of Woodrow Wilson and his inauguration on the 4th of March, 1913. To do so would require more time than this House would be willing to grant me and occupy more space than the people would be willing to read.

It might be well, however, to mention a few of the more important, which I shall proceed to do.

THE NEW TARIFF.

The tariff act was the first piece of important legislation which occupied the attention of the Sixty-third Congress. When it was reported into the House it was generally recognized that this great measure unfettered industry and commerce and deprived monopolies of their control over production, distribution, and prices; that it was the redemption of the Democratic promise to revise the tariff downward. It was admitted to be the first tariff law of a generation which neither special interests nor lobbies helped to formulate. I believe that this measure will prove a solution of the tariff question—the most vexatious question which has disturbed the country. I believe the press and all persons interested in the development and prosperity of our land will agree that this tariff measure should remain as the great foundation stone of tariff legislation. It materially reduced the customs taxation and in consequence lowered the price of food, clothing, glass and metal utensils used in the homes of the land until that great calamity, the war in Europe, upset all calculations as to revenue and prices, an event which the wildest imagination could never have foreseen nor its effect be calculated.

FEDERAL RESERVE ACT.

The great question which occupied the attention of the business and financial interests of the country was the improvement of the currency and banking laws, which were recognized as insufficient, antiquated, and to be the cause of much of the unrest in the financial world, and perhaps the breeder of panics and trouble for many years. Congress had for years been deliberating upon and formulating currency and banking laws which some believed would be satisfactory, but each Congress refused to enact a law. This state of affairs continued, and it was not until a Democratic President and a Democratic Congress took over the reins of Government that there was any apparent prospect for the passage of currency and banking legislation. It was not long before a bill was formulated which placed before the people a financial system second to none in the world, the great financial bulwark upon which we might safely rely. This law made it impossible for monopolies to control the great wealth of the country to determine the prosperity of the bankers, and destroy values. Many persons were apparently much opposed to the law when it passed Congress, but so well has it demonstrated its soundness that nowhere can complaint now be heard. The system has shown itself to be capable of the greatest strength. Had this law not been enacted when it was, the financial strain caused by the war in Europe would no doubt have created a tremendous panic in our country. That this has not happened, and that we are financially strong, is due entirely to the Federal reserve act; that it withstood the test demonstrates its soundness.

TWO AMENDMENTS.

The Democrats had long contended that Senators, as well as Representatives, should be elected by the direct vote of the people, and although the House had on several occasions passed resolutions to this effect, these had failed in the Senate. This amendment has now been passed by Congress and ratified by the States, and to-day the Senate is brought in closer touch and is more responsive to the people by the direct election of its Members.

Congress likewise submitted an amendment to the Constitution providing for an income tax. This was submitted to the States and ratified. The income-tax feature of the tariff bill, based upon the ratification of this amendment, will provide nearly $100,000,000 and make up for the loss caused by the reduction in tariff duties. This income-tax feature takes the burden from the shoulders of the small owners having incomes of less than $3,000 and places it upon the revenues of the wealthier who can more readily contribute their just proportion of taxation for the protection to themselves and their large property interests.

ALASKAN RAILWAY ACT.

We have not been satisfied to limit our legislation to the bounds of the original country, but have gone beyond to that great storehouse of natural resources, Alaska, and have unlocked its doors and released it from the shackles of the syndicate which controlled it. We are endeavoring not alone to conserve its great resources, so that they may not be wasted and despoiled, but are endeavoring to develop and to bring those resources to the people who need them. For that reason the constructive Wilson administration has begun to open up Alaska and develop this country of the great Northwest. The President has been authorized to build 1,000 miles of trunk line, and Congress has approved an expenditure of $35,000,000 for the

work. Engineers are busy, and it will not be long before that region will become a great wealth producer in the interest of the Nation, with its harbors and interior open to the world for development and expansion.

FEDERAL TRADE COMMISSION.

We have noticed for many years the concentration of the commercial interests of the country into the hands of large capitalists and large corporations having unlimited resources at their back. This concentration of the activities of life has converted many former proprietors into employees of these large interests. It was possible before the advent of trusts and monopolies to conduct business on a small scale, and many men earned their living in this manner; but monopolies and combines have so excluded the small man that thousands have become employees instead of proprietors. It has been recognized that much of this was brought about by unfair methods of competition—by discriminating rates, by underselling the small dealer, by offering special inducements, and many other systems which had a tendency to put the small dealer out of business, being unable to compete.

Congress has therefore placed upon the statute books an act creating a Federal Trade Commission, composed of five commissioners, appointed by the President, whose duty it shall be to prevent persons, partnerships, and corporations—not including banks and common carriers, who come under the acts to regulate commerce—from using unfair methods of competition in commerce. It is believed that this act will be a tremendous lever in so regulating commerce as to prevent unfair treatment of the man doing a small business and to place commerce and business upon a higher and more substantial plane.

PARCEL POST.

I would be neglecting perhaps one of the greatest measures if I did not bring to your attention the parcel post—the express system of the people—the system by which the mere attachment of the stamp and delivery in the proper receptacle guarantees the carrying of the parcel to any part of our country. It is a great advantage over the express system proper in that the parcel post makes every post office a Government express office and makes every carrier an expressman to bring goods to your door. It would be impossible for me to say too much in praise of this great measure, and it gives me even more pleasure by being able to say that it was a Marylander who brought it into effect.

AGRICULTURAL EXTENSION.

Farm-extension work has been in force among European nations for many years and has produced splendid results, increasing the yield per acre and the quality. When we recollect that the farmers produced nine billions of wealth last year, the importance of farm demonstration and experimental work can not be doubted. Congress has, therefore, enacted into law the Lever agricultural extension act and has appropriated about a million dollars to carry on experimental and demonstration work throughout the land, especially farm and home demonstration work. It is believed that in a few years the production of the American farms can be doubled. When we recognize that the population of the country is increasing by leaps and bounds, we can readily see that an increase of production is highly necessary if we wish to keep down the cost of living. I believe this measure will prove of inestimable benefit to the farmers, and what benefits the farmers is bound to benefit those who live in the city, because the farmer produces that upon which we live.

And so, Mr. Speaker, I might continue to enumerate these splendid achievements. I have not the time nor the space, however, to do that, and can only mention a few of those additional acts which are of inestimable benefit to the people.

Hog cholera is being fought in every State in the Union under an act appropriating half a million dollars. It is estimated that in one year this disease has wiped out 6,000,000 head, worth $65,000,000. If we can but destroy this dread disease, it is bound to decrease the cost of pork by increasing the supply.

Old soldiers drawing pensions are now paid directly by check from the National Government, saving them at least $1,000,000.

Conservation measures have been passed to conserve the natural resources of the country.

A million dollars has been saved to the country by demanding interest on Government deposits.

International peace treaties have been negotiated and ratified.

Our commerce has been fostered and developed at home and abroad by the appointment of commercial attachés to the various countries of the world, and so I should like to continue to greater length, but must refrain.

BALTIMORE INTERESTS.

These great achievements which I have noted and for which I have worked and voted have not thwarted work of special interest to Baltimore and through it our splendid Commonwealth of Maryland.

While in Congress I have introduced bills for a survey and the widening and deepening of York Spit Channel, leading to our city; the erection of an immigration station for Baltimore; the allotment of a site for the station at Fort McHenry; the transfer of Fort McHenry to Baltimore as a public park; the erection of a memorial to Francis Scott Key; the appropriation of $50,000 for the restoration and exhibition of the warship *Constellation;* the relief of hospitals from the technical violation of alcohol-tax laws, saving them in Baltimore alone nearly $100,000 in fines; the resolution authorizing the President to invite diplomats to the Star-Spangled Banner celebration; the placing of our extract manufactures on the same basis as perfume manufactures; the recording of Government liens in the jurisdiction where the property lies, thus avoiding title mistakes; the survey of Baltimore Harbor and approaches thereto; the survey of Patapsco River from Spring Gardens to Elkridge, both preparatory to appropriations for dredging the whole or parts thereof; and various other bills which I do not just now recollect.

All these measures have now been enacted into law.

Fort McHenry, sacred to us for the writing of the Star-Spangled Banner, has been transferred to Baltimore, and under the guidance of our city authorities will be made a most beautiful water-front park, and become interesting not alone to our people, but also to visitors from far and wide.

In one corner will stand the beautiful buildings forming the new immigration station and costing $550,000, the most modern and complete station in the country. They will be one of the sights as we enter the harbor, and thousands of immigrants who, no doubt, will land at that station in years to come will behold Old Glory floating from the same place where our banner floated in 1812 and inspired Francis Scott Key to write the national anthem which gave to a people courage and determination and united them into one great Union.

Arising from another point on the old fort grounds will be seen the $75,000 monument erected in honor of Francis Scott Key and the soldiers and sailors who fought in the War of 1812, as provided by a Senate amendment.

York Spit Channel, that dangerous portion of the 35-foot channel which leads from the ocean to Baltimore, has now been widened to 1,000 feet by an appropriation obtained from Congress of $326,000.

The Star-Spangled Banner celebration, which was held in Baltimore last year, was attended by the diplomats from other countries under the invitation mentioned, and old *Constellation,* built in 1797, proved a great feature. All this work in the interest of our city and State has been accomplished by the constant effort and energy of Maryland's united representation in the Senate and House and with the assistance of the mayor of Baltimore city and the representatives of the progressive business organizations of our city. The courtesy of those men in the House of Representatives and Senate who have given us such able support must likewise be recognized and appreciated to the highest extent.

WORK NOT COMPLETE.

That there is much more to do not alone from a national standpoint but from the standpoint of our city and State is evident. Baltimore must have a channel leading from the ocean to the city of 40 feet if she wishes to keep abreast of the times. She can not afford to await the coming of deeper draft boats, but must be ready when they do come. Curtis Bay must be deepened to 35 feet to accommodate Government colliers and other boats requiring more than the present 30-foot channel.

The comprehensive survey provided for the harbor of Baltimore and the approaches thereto should be made, looking forward to a great increase of commerce and business at the port of Baltimore in the years to come.

The Patapsco River, leading to Elkridge Landing, will be surveyed and its availability for docks and piers ascertained. I believe a portion thereof should be prepared at the earliest time possible, so that wharf facilities may be afforded for the transshipment of goods and for those manufactures which require water-front facilities. Not alone would we acquire more wharf facilities, but by filling in would likewise eliminate some of the marshlands and thereby remove a menace to the health of Baltimore.

That Baltimore is destined for a great future can not be denied; that her commerce and business will increase from year to year by rapid strides is certain; that her location for business and transportation facilities are ideal is admitted; that we must prepare for the future upon broad and comprehensive lines with an eye single to the welfare of our great metropolis on the banks of the Patapsco is recognized by all.

I called the attention of this House on February 8, the anniversary of Baltimore's great fire, to the fact that, aside from Baltimore's close proximity to the Central West and her splendid port facilities, she is one of the best-located cities to grapple with the South American trade, which is fast increasing.

Taking San Francisco as a comparison, Baltimore is 1,369 miles closer than that city to the Panama Canal. It is 470 miles closer to the city of Valparaiso, Chile, which city is the chief seaport on the western coast of South America. It is 1,908 miles by water route to the eastern entrance of the Panama Canal, while it is 3,277 miles from San Francisco to the western entrance. After computing the 50 miles which is the length of the canal from Colon to Panama, it is only 4,670 miles from Baltimore to Valparaiso, while it is 5,140 miles from San Francisco to that city. Baltimore is closer than any of the other Atlantic seaboard cities to the cities on the east coast of South America.

Certainly with these natural advantages, with this close proximity to South America, we can not help but forge to the front. With an aggressive citizenship, an energetic and efficient administration, a city with the best possible improvements, a climate in which it is good to live, and with schools and hospitals first in the category, she is bound to increase as one of the greatest cities of the Union.

PRESIDENT WILSON.

I can not close without expressing my deep appreciation and that of my people to the great President of the American Republic. It seems that our country is wonderfully fortunate in that Providence has bestowed upon us men of honesty and integrity, of ability and firmness to master serious conditions. In our fight for independence George Washington came to the front and made us a free people. In the great Civil War Abraham Lincoln sprung from the body of the people and made us a united people, and to-day, when war menaces us on every side, when bloodshed and death permeates the great civilized nations of the globe, when devastation and ruin and colossal debt so staggers these people that they know not where to turn, Woodrow Wilson, the people's friend, a member of that party of the people, occupies the Presidency of the Union, and while others are suffering the ruin I have mentioned the United States of America, that great empire of the West, continues on in prosperity and peace. Not to honor him, not to thank him, not to place every confidence in him would be ungrateful, unmindful, indeed. Let us wish him Godspeed in his great work. In the language of that great American poet, Longfellow, let us say:

Thou, too, sail on, O Ship of State!
Sail on, O Union, strong and great!
  Humanity with all its fears,
  With all the hopes of future years,
Is hanging breathless on thy fate!
  We know what Master laid thy keel,
  What workmen wrought thy ribs of steel,
Who made each mast, and sail, and rope;
  What anvils rang, what hammers beat,
Were shaped the anchors of thy hope!
  Fear not each sudden sound and shock,
  'Tis of the wave and not the rock;
'Tis but the flapping of the sail,
And not a rent made by the gale!
  In spite of rock and tempest's roar,
  In spite of false lights on the shore,
Sail on, nor fear to breast the sea!
Our hearts, our hopes, are all with thee.
  Our hearts, our hopes, our prayers, our tears,
  Our faith triumphant o'er our fears,
Are all with thee—are all with thee.

The Purchase of the "Dacia."

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MacDONALD,
OF MICHIGAN,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 2, 1915.

Mr. MacDONALD. Mr. Speaker, I desire to insert a letter and a statement of Mr. E. N. Breitung, a resident of my district, containing a narrative as to the purchase of the *Dacia*.

The letter and statement are as follows:

NEW YORK, *March 2, 1915.*

Hon. WILLIAM J. MacDONALD,
Washington, D. C.

MY DEAR CONGRESSMAN: I take great pleasure in inclosing herewith copy of a statement which I have prepared for my lawyers in the *Dacia* matter.

Since certain parties opposed to the welfare of our country have done their utmost to discredit the *Dacia* purchase, and have succeeded in poisoning a great many of our newspapers and prejudicing the reading public, I consider it a duty to my country, as well as myself, to make known the motives and facts in the matter.

I appeal to you to make as much use of my statement as you think beneficial to the best interests of our country.

Yours, sincerely,

E. N. BREITUNG.

I was born in Negaunee, Mich., November 1, 1871. I have always been a citizen of the State of Michigan, where I have paid my personal taxes, and my present address is Marquette, Mich.

My father was a member of the State legislature, and of the Congress of the United States from Michigan, and served his country in those capacities for several years. At my father's death the House of Representatives of the State of Michigan passed in regard to him the following resolution:

"*Resolved*, That in the death of Hon. Edward Breitung the State of Michigan sustains the loss of an eminent citizen, whose skill, intelligence, and industry promoted the discovery of vast portions of the mineral wealth of the State, whose business activity aided in the development of the mines and the building up of prosperous communities in the Upper Peninsula; one whose patriotism conduced in many ways to the welfare of his fellow citizens—a well-deserving, honest man, whose good and faithful services as a member of the legislature are worthy of public recognition.

"DANIEL P. MACKEY,
"*Speaker of the House of Representatives.*"

I inherited from my father mining and lumber interests, and since my father's death I have engaged in enterprises in various parts of the United States, Canada, and of South America. It has been my policy to investigate and become interested in any propositions of a commercial or financial character that appealed to me as having merit.

I first became interested in an American-owned merchant marine about 10 years ago in this way:

In looking over the fields of South America for mining properties I discussed with my associates and friends the expediency of having a merchant marine of our own, but found the conditions not ready. At that time I wrote a pamphlet on the subject and became keenly interested in the whole matter. About three years ago I first met H. O. Schundler. I think he was introduced to me by Mr. William A. Hamilton, of my office. We were introduced because we were both interested in mining, timber, and railroad matters. Upon this occasion we discussed a proposition relative to dock and terminal improvements on the Pacific coast, but nothing came of our negotiations. The other parties in this venture were English interests. About a year and a half ago Mr. Schundler and I had another conference in regard to the building in the Province of Quebec, Canada, of a railroad. About May 1, 1914, I sent for Mr. Schundler in order to get his advice on a contract which had been brought to me for the irrigation and colonization of certain lands of the Peruvian Government. I had many consultations with Mr. Schundler about this matter, because I had great faith in his judgment. Our conferences resulted in my requesting Judge Howard, who was formerly American minister to Peru, to take charge of the matter and advise me about it, and he is now in Peru on this matter. Mr. Schundler at that time advised that it would be good policy to have a working agreement with the Peruvian Steamship Co. and perhaps with other steamship lines in regard to carrying colonists to Peru; and, further, Mr. Schundler also thought that it might be still better to own some vessels to facilitate the export of products from these irrigated lands. At this time we both gave serious consideration to the possibility of obtaining ships. I also discussed at this time—that is, in May, 1914—the possibility of our going into the steamship business in general.

I had no further conference with Mr. Schundler in regard to ships until November of 1914. In the meantime, and in August, 1914, I realized that there would be a famine in tonnage and a continual increase in freight rates. I detailed Mr. M. J. O'Shaughnessy, of my office, to study the trade and shipping situation between this country, the West Indies, and South America. At the same time the Hon. Robert Seton Beresford, who at that time made his headquarters in my office, put before me contracts providing for the transportation of horses and supplies to England, and discussed the question of carrying coal to South America.

Therefore, I again started out to investigate the possibility of acquiring ships. In August, 1914, I made an effort to obtain for ocean service boats which were plying on the Great Lakes.

On August 6, 1914, in this connection, I wrote to Capt. Mitchell, of the Cleveland Steamship Co., Rockefeller Building, Cleveland, inquiring as to whether it would be possible to bring lake boats through the Welland Canal to the sea. A true copy of this letter is hereto annexed, together with copies of the correspondence had with Capt. Mitchell on this subject. I also wrote on the same day to Pickands, Mather & Co., of Cleveland, Ohio, and I received from them a letter dated August 7, 1914. I am annexing hereto a copy of my letter and their reply, in which they inform me that their boats were too long or too wide to go through the Welland Canal, and were therefore not available for the purpose. They called my attention to the boats of the Great Lakes & St. Lawrence Steamship Co., which might be suitable for our purposes. I telegraphed on September 2, 1914, to Mr. D. Sullivan, the manager of that company, and received three letters in reply, dated, respectively, September 3, 8, and 12, which are annexed hereto; also copy of my letters of September 4 and 10.

As appears from this correspondence, I could not obtain suitable boats here.

I am annexing hereto copies of telegrams and letters which passed between M. J. O'Shaughnessy, of my New York office; R. C. Dutton, of my Cleveland office, and myself, in regard to my efforts to obtain ships for ocean trade between August 31 and September 9, 1914; also letter on this subject dated February 8, 1915.

I received a letter from the Hon. Robert Seton Beresford, dated August 28, 1914, urging me to buy an English vessel, in regard to which we had some discussion, a description of which was inclosed in his letter. The letter of the Hon. Robert Seton Beresford and the description is hereto annexed, also a letter written by this gentleman on this subject, dated September 13, 1914. An examination of this vessel disclosed that the price was altogether out of proportion, and therefore I did not purchase this boat.

After all of these negotiations it seemed impossible to purchase any vessels for the South American or the Atlantic trade at a reasonable figure, and I took no further active steps in trying to obtain vessels. Toward the end of November, 1914, Mr. Schundler called at my office

and had a conference with me in regard to the shipping situation then prevailing. Mr. Schundler told me he thought there were some American boats, some French and a few English boats, and possibly some German boats that could be obtained at reasonable prices, and that in consequence of the very high rate of freight, especially on cotton, he considered it would be good business to purchase vessels and carry cotton on them to Europe.

In going over the figures with Mr. Schundler and examining the freight rates and the cost of the vessels, it appeared that the first freight money earned would practically pay for the cost of the boats and so the vessels would be standing on my books at a very low cash investment. I told Mr. Schundler that if he would put before me some concrete cases as to both vessels and possible freight contracts, I would give the matter serious consideration. Thereafter, and on or about December 3, 1914, Mr. Schundler submitted to me a written report, which I am annexing hereto. In this report he outlined the prevailing freight rates on cotton to Gottenberg, Copenhagen, Rotterdam, Bremen, and Liverpool. He also reported to me on the grain rates. He stated that the boat mentioned in his report No. 1 was an American boat, the steamer *Mae;* that No. 2 was a German boat, the steamer *Dacia;* and that No. 3 was a British boat, the steamer *Clement,* but that the British boat had been reported sold that day.

I had a long conference with Mr. Schundler in regard to his report. He submitted to me an opinion written by Hon. Cone Johnson, Solicitor to the State Department, on my right to buy the vessels of belligerents. After hearing this opinion I directed Mr. Schundler to negotiate for boats at the prices named in his report or at a less figure. Shortly after this conference Mr. Schundler reported to me that it had not been possible to purchase the American boat, as other parties had bought her. At this conference Mr. Schundler suggested the possibility of buying three French boats of 12,200 tons each, which were then building, and one of which had just been completed at Rouen, France. Mr. Schundler showed me a photograph of one of these French boats. I authorized Mr. Schundler to bid for these French boats and at the same time to continue his negotiations for the German boat mentioned in his report, which was the steamship *Dacia.* At this hearing Mr. Schundler submitted to me details in regard to the purchase of several English boats, and we spent some time discussing the possibility of these purchases, and I authorized Mr. Schundler to negotiate for the British boats and also for two of the largest American freight boats, the *Atlantic* and the *Pacific.* I am annexing hereto a copy of my letter to Mr. Schundler dated December 7, 1914, authorizing him to purchase these vessels.

I thereupon took Mr. Schundler to the law office of Messrs. Carter, Ledyard & Milburn, in company with Mr. M. Breitung, the manager of my New York office, and we had a consultation with a member of that firm. After this consultation I instructed Mr. Schundler to purchase the German boat, the *Dacia,* upon the terms set out in his report, and any of the British or French vessels which he could obtain at the figures discussed by us. About the middle of December, 1914, I provided funds and I instructed my office manager to proceed in my absence with the purchase of any of these vessels, as I was about to leave for Chicago. I also instructed him to consult with the law firm of Marvin, Hooker & Roosevelt in case any legal formalities were necessary in transferring title and in carrying out the provisions of the law known as the amendment of August 18, 1914, to the Panama Canal act, which relates to the American registry of foreign-built vessels.

I thereupon left for Chicago. While in Chicago I received from my office a form of affidavit, on a form prepared by the United States Government, which had been issued by them for such a case as this. I examined the affidavit carefully, signed it, and returned it, so that it would be received when title was to pass in New York. The first payment of $16,500 had been made to the Hamburg-American Line on December 16, and the deed thereupon prepared and dated December 17.

The final payment of $148,500, as I am informed by my office manager, was made on December 21, 1914, on which day the deed was signed, acknowledged, and delivered, and title passed, subject to the vessel being granted American registry. True copies of the certified checks, drawn on the Guaranty Trust Co. of New York, with which payment was made, are hereto annexed. The affidavit which I signed stated that the transfer of the vessel was bona fide, was intended to and did convey complete and unconditional ownership to me; that there was no agreement or understanding reserving to the vendor, or for his benefit, any interest in the vessel or its operations, or right or voice of control therein; that the transfer was intended to be permanent and not temporary, and that no right to repurchase the vessel was reserved to the vendor, and that there was no understanding for its retransfer; that the transfer was not made during the voyage of the vessel or while it was in a blockaded port; and that I was a citizen of the United States. All of these statements in the affidavit are the exact truth.

Upon going into the shipping business I arranged with Mr. Schundler, who is an American citizen, to take charge of the marine department of my office. He is now directing the management of my shipping business.

I have recently purchased the American steamship *Seguranca* and also agreed to purchase the two British ships *Ocamo* and *Oruro,* and have made the first payment on account. The latter two vessels were obtained by Mr. Schundler for me through Samuel Holmes, a British citizen in New York. Shortly after I had bought the *Dacia* Mr. Schundler bought for me, through the same Samuel Holmes, the British boat *Horatius,* but the owners failed to deliver it according to contract and Mr. Holmes is now suing for the delivery of this vessel. The correspondence on this subject is hereto annexed. I also annex hereto a list of the British, French, and American vessels which Mr. Schundler tried to buy for me during December, 1914, and January, 1915, and which I was unable to obtain. I am annexing copies of the cables and letters having to do with this subject covering negotiations and bids made in my behalf.

AUGUST 6, 1914.

CLEVELAND STEAMSHIP CO.,
Rockefeller Building, Cleveland, Ohio.

Capt. MITCHELL.

DEAR FRIEND: I understand there is to be quite a call for a tonnage at sea, and write you to find out if it would be practicable to bring lake boats through the Welland Canal to the sea, even if they had to be cut in two and reriveted in some parts.

I think I could arrange profitable cargoes between England and the United States.

Please reply and let me know what you think of the idea—whether it is practicable, and also whether it could be accomplished, and at what cost.

I presume some of the smaller boats could be brought through all right.

Yours, very truly,
E. N. BREITUNG.

P. S.: You will remember meeting me in Cleveland, as I am senior member of the firm of E. N. Breitung & Co., who have an office in your building.

—

THE CLEVELAND STEAMSHIP CO.,
Cleveland, Ohio, August 1¼, 1914.

Attention, Mr. RALPH D. MITCHELL.

MY DEAR MR. MITCHELL: On my return I find your letter of the 8th instant, and note what you say, that the cost will be too great to cut the vessels in two to go through the canal.

I thank you for referring me to Mr. Sullivan, who has a fleet of bulk freighters that are probably ready for ocean navigation.

I am much obliged to you for your advice, and if there is anything further you have to say I would be glad to hear from you.

Yours, very truly,
E. N. BREITUNG.

—

CLEVELAND, OHIO, *August 1¼, 1914.*

Mr. E. N. BREITUNG,
11 Pine Street, New York City.

MY DEAR MR. BREITUNG: As per my letter to you a few days ago, I have looked into the matter of what suitable and available lake boats there are for ocean navigation.

There is a fleet of nine boats here that are already equipped and that could be put in the ocean trade at once. Their dimensions are: Length of keel, 241 feet; beam, 41 feet; depth, 18 feet.

They have six hatches, 12 feet wide fore and aft, with 24-foot centers. They will carry on the Atlantic about 85,000 bushels of wheat or about 2,600 net tons of coal. They have three compartments, each of about equal size. These boats were built in 1903 and are of steel construction. The price asked for each vessel is $150,000.

Yours, very truly,
JOHN MITCHELL.

—

THE CLEVELAND STEAMSHIP CO.,
THE BUFFALO STEAMSHIP CO.,
Cleveland, Ohio, August 15, 1914.

Mr. E. N. BREITUNG,
Care of Breitung & Co., 11 Pine Street, New York City.

MY DEAR MR. BREITUNG: I beg to acknowledge receipt of your favor of the 14th relative to lake vessels for ocean service. I yesterday wrote you fully about this matter.

Yours, very truly,
RALPH D. MITCHELL.

—

AUGUST 17, 1914.

Mr. RALPH D. MITCHELL,
960 Rockefeller Building, Cleveland, Ohio.

MY DEAR MR. MITCHELL: I have your good letter of the 14th. I will take up the question here in regard to the ships, and you will hear further from me.

What would have to be done, in your opinion, about these to make them ocean-going vessels, or would they be ready for it in their present condition?

Please let me hear from you in regard to this.

Yours, very truly,
E. N. BREITUNG.

—

THE CLEVELAND STEAMSHIP CO.,
THE BUFFALO STEAMSHIP CO.,
Cleveland, Ohio, August 18, 1914.

Mr. E. N. BREITUNG,
11 Pine Street, New York City.

MY DEAR MR. BREITUNG: Answering your favor of the 17th relative to the nine boats about which I wrote you, I am given to understand that they are now ready for ocean service.

Yours, very truly,
RALPH D. MITCHELL.

—

BREITUNG & CO. (LTD.),
EXECUTIVE DEPARTMENT,
11 Pine Street, New York, August 6, 1914.

GENTLEMEN: I understand that there will be a large call for tonnage on the sea, and want to get into communication with you to see if it is practicable to bring a number of lake vessels through the Welland Canal to the sea, as I believe I could get good cargoes for them to and from England, at a good-paying price.

Please acknowledge receipt of this and give me what information you can in regard to it.

Yours, very truly,
E. N. BREITUNG.

P. S.—Some of the different members of your firm know who I am, as I am the Mr. Breitung who is senior partner in E. N. Breitung & Co., who have an office in your city.

E. N. B.

PICKANDS, MATHER & CO.,
Cleveland, Ohio.

—

PICKANDS, MATHER & CO.,
Cleveland, Ohio, August 7, 1914.

DEAR SIR: We have your esteemed favor of the 6th instant, and regret that we are not in a position to offer you any definite information in regard to the matter in question. Our own boats are all too long and too wide to go through the Welland Canal, and are therefore unavailable for the purpose. Offhand, we know of only one fleet of reasonably good vessels that might be worth looking into, and that is the Great Lakes & St. Lawrence Steamship Co.'s boats. They are managed by a Mr. D. Sullivan, Western Union Building, Chicago, Ill. Whether they are suitable for ocean carrying trade or not we do not know, but you could communicate with Mr. Sullivan and he could tell you, and inasmuch as he is familiar with any other boats that might be suitable for this business, we believe that you can get more reliable information from him than anyone on the Lakes that we know of.

Regretting our inability to serve you ourselves, we remain,

Sincerely, yours,
PICKANDS, MATHER & CO.

E. N. BREITUNG, Esq.,
11 Pine Street, New York City.

BREITUNG & CO. (LTD.), EXECUTIVE DEPARTMENT,
New York, August 14, 1914.

Messrs. PICKANDS, MATHER & CO.,
Cleveland, Ohio.

GENTLEMEN: On my return I find your letter and wish to thank you for the same. I am much obliged to you for referring me to Mr. D. Sullivan, of Chicago.

Yours, very truly,

E. N. BREITUNG.

MARQUETTE, MICH., *September 2, 1914.*

Mr. D. SULLIVAN,
Manager Great Lakes & St. Lawrence Steamship Co.,
Western Union Telegraph Building, Chicago, Ill.:

Let me know by mail right away what boats you have or know of that are fit for ocean service or at small expense could be made fit for ocean service quickly. Send as full particulars as you can to me to Marquette, Mich., and I could either come to Chicago or you could come up here or we could have some representative act for us, as I have an opportunity to use such boats if I can get the right boats at the right price and terms. You will find me quoted personally in R. G. Dun's Mercantile Agency and in Bradstreets under Breitung & Co. (Ltd.), of which I am senior partner. Refer you in Chicago to City National Bank, where you ask for Mr. Perkins, assistant cashier; Continental & Commercial National Bank, where you ask for Mr. Reynolds, president.

E. N. BREITUNG.

GREAT LAKES & ST. LAWRENCE TRANSPORTATION CO.
(ST. LAWRENCE ROUTE),
Chicago, September 3, 1914.

Mr. E. N. BREITUNG,
Marquette, Mich.

DEAR SIR: I have for acknowledgment your night letter of the 2d instant, and all carefully noted. I represent nine (9) steamers, fitted with surface condensers, and they are regular canal size. Their deadweight capacity is about 2,500 net tons.

I could not give you a price on the boats or any definite offer of sale without calling the board of directors together, putting the matter before them, and having their authority. The vessels are 10 years old, but are in good condition and could be fitted for Atlantic coast service for very little money. They have contracts for both coal and grain up to the 1st of November, but I suppose that those contracts could possibly be canceled if the inducements were sufficient to warrant that.

Yours, very truly,

D. SULLIVAN,
President and General Manager.

BREITUNG & CO., LTD.,
Marquette, Mich., September 4, 1914.

Mr. D. SULLIVAN,
President and General Manager Great Lakes & St. Lawrence Transportation Co., Chicago, Ill.

DEAR MR. SULLIVAN: I have your letter of the 3d, and would you let me know whether these vessels are fit for the South American freight service; that is, the one I have in mind to use them in?

Please let me know this just as soon as you can by mail to Marquette.

Yours, very truly,

E. N. BREITUNG.

GREAT LAKES & ST. LAWRENCE TRANSPORTATION CO.,
Chicago, September 8, 1914.

Mr. E. N. BREITUNG, *Marquette, Mich.*

DEAR SIR: I have for acknowledgment your letter of the 4th, and all noted. You ask if the Great Lakes & St. Lawrence steamers are fit for the South American freight service, as that is the one you have in mind to use them in. I can not answer this question intelligently. I don't know what the distance is and the bunker capacity you would require. If the route was not too long, they would be very desirous little ships, but if it was over 18 or 20 days of a voyage, they would have to be provided with fuel and their bunker capacity would have to be enlarged if they went into the trade.

Yours, very truly,

D. SULLIVAN,
President and General Manager.

MARQUETTE, MICH., *September 10, 1914.*

Mr. D. SULLIVAN,
Great Lakes & St. Lawrence,
208 South La Salle Street, Chicago, Ill.

DEAR SIR: I have your letter of the 8th, and I am sending copies of it to New York to find out the question you ask and get more full particulars.

Acknowledge receipt of this and keep me informed.

Yours, very truly,

E. N. BREITUNG.

GREAT LAKES & ST. LAWRENCE TRANSPORTATION CO.
(St. Lawrence Route),
Chicago, September 12, 1914.

Mr. E. N. BREITUNG,
Marquette, Mich.

DEAR SIR: I am in receipt of your letter of the 10th instant, and will await to hear further particulars from you after you get the necessary information from New York.

Very truly, yours,

D. SULLIVAN,
President and General Manager.

NEW YORK, *August 31, 1914.*

Mr. E. N. BREITUNG,
Care of Breitung & Co. (Ltd.), Marquette, Mich.:

Telegraph me quickly as possible full particulars of ten 10,000-ton Lake boats you told me could be brought through Welland Canal for service in South American trade. Had long conference this morning with National City people. They are interested, and I believe on proper basis would cooperate in a company to be composed largely of shippers in this country and South America to operate such a fleet as the above. Would like information quickly as possible so as to push matter. Looks like very profitable piece of business can be done. Very important not to mention name party we are dealing with or disclose any information whatever for present.

M. J. O'SHAUGHNESSY.

MARQUETTE, MICH., *September 2, 1914.*

M. J. O'SHAUGHNESSY,
Care Breitung & Co. (Ltd.), 11 Pine Street, New York.

Your night lettergram received. Will get particulars as soon as I can. I am in doubt whether 10,000-ton boats built on the Lakes would be fit for ocean service, because they would be too long and narrow, but there are a number of smaller boats that are. Let me know what your people wish to do, as I must have some information so when I approach the ship people for a deal I can tell them something as near definite as possible. Believe I can obtain ships for a large tonnage, but they would be smaller ships and many of them, but they can be run cheaply, so that the effect would be the same.

E. N. BREITUNG.

BREITUNG & CO. (LTD.),
Marquette, Mich., September 4, 1914.

Mr. M. J. O'SHAUGHNESSY,
Care Breitung & Co. (Ltd.), 11 Pine Street, New York City.

DEAR SIR: Inclosed find copy of letter from Mr. Sullivan, and also my reply to the same.

I am also on track of several other lines of steamers and several separate ones.

I want to suggest to you that one of the best lines of steamers for this service available is the Panama Line, which belongs to the United States Government. I believe I could arrange, through myself and friends, to acquire this on bonds, as it would be good for the trade of the United States.

Let me hear from you fully as to how things are progressing.

Very truly, yours,

E. N. BREITUNG.

P. S.—Get full particulars in regard to the Panama Co. of the United States Government.

E. N. B.

BREITUNG & CO. (LTD.),
SALES DEPARTMENT,
New York, September 8, 1914.

Mr. E. N. BREITUNG,
Care of E. N. Breitung Offices, Marquette, Mich.

MY DEAR MR. BREITUNG: Your telegram of the 2d and letters of the 2d and 4th instant came to hand while I was away, which accounts for my not having answered before this. I regret that I can not at this writing give you any very definite lines to work upon, as the whole idea of our taking advantage of the opportunities offered by South American trade is as yet so indefinite that no real plan has been devised. I am working this matter with some important people, and as soon as I can form any definite plans I will advise you. In the meantime, if you hear of any ship suitable to this service, you might get in touch with the owners, so that when some plan is adopted suitable bottoms will be available.

I found among your files a description of the nine ships which you mentioned in your letter of the 4th, and I have been advised that they would not be suitable for ocean traffic. It would be difficult to secure the necessary insurance on these bottoms to South America.

I will investigate the Panama matter which you suggest. This may offer a very interesting situation.

I will keep you posted, and I hope that I can very shortly be more specific.

Yours, very truly,

M. J. O'SHAUGHNESSY.

BREITUNG & CO. (LTD.).
Marquette, Mich., September 2, 1914.

Mr. M. J. O'SHAUGHNESSY,
Care of Breitung & Co., 11 Pine Street,
New York City.

DEAR MR. O'SHAUGHNESSY: I received your wire, and answered as follows:

"Your night lettergram received. Will get particulars as soon as I can. I am in doubt whether 10,000-ton boats built on the Lakes would be fit for ocean service, because they would be too long and narrow; but there are a number of smaller boats that are.

"Let me know what your people wish to do, as I must have some information so when I approach the ship people for a deal I can tell them something as near definite as possible. Believe I can obtain ships for a large tonnage, but they would be smaller ships and many of them, but they can be run cheaply, so that the effect would be the same."

I note that you say your people are largely composed of shippers who will cooperate and who have good ships, and also that probably the City National Bank might cooperate or take an interest, or some of the people interested in the City National. I will certainly not mention anything about the City National, as I note that you want it kept quiet.

Now, there are a good many boats on the Lakes that can be got for ocean trade, and I am afraid the large boats on the Lakes—10,000 tons and more tonnage—are not fit for ocean service, as they are too long and narrow; also they could not be brought through the Welland Canal without first cutting them in two. But a fleet of medium-sized boats can be got that can be operated cheaply, so that the actual cost of carrying freight would be about the same, and these smaller boats can be purchased reasonably, if gone about in the right way. At one time they would have almost given them to us, but now they may foresee the trade that they could get, although they have not said so to me, and we might be able to get bargains.

I am taking this up thoroughly with them and will do everything possible to find out just what we should do.

Very truly, yours,

E. N. BREITUNG.

BREITUNG & CO. (LTD.),
Marquette, Mich., September 2, 1914.

Mr. R. C. DUTTON,
901 Rockefeller Building, Cleveland, Ohio.

DEAR SIR: Inclosed find copy of letter to Mr. O'Shaughnessy in answer to his telegram reading as follows:

"Telegraph me quickly as possible full particulars of ten 10,000-ton Lake boats you told me could be brought through Welland Canal for service in South American trade. Had long conference this morning with National City people; they are interested, and I believe on proper basis would cooperate in a company to be composed largely of shippers in this country and South America to operate such a fleet as the above. Would like information quickly as possible so as to push matters; looks like very profitable piece of business can be done. Very important not to mention name party we are dealing with or disclose any information whatever for present."

From the letter and this telegram and also telegram sent him (which you will find in copy of letter inclosed) you will see just what I want. I want to find out if there are any ships in Cleveland, Buffalo, Toledo, or in that vicinity that are fit for ocean trade that we could get. You, of course, understand that we are to keep the connections of the City National Bank secret.

Also do not write or interfere with any deal that Mr. D. Sullivan, of the Great Lakes & St. Lawrence Steamship Co., of Western Union Telegraph Building, Chicago, has on, because we are taking it up direct with him.

Very truly, yours,

E. N. BREITUNG.

—

CLEVELAND, *Monday, February 8, 1915.*

BREITUNG & CO. (LTD.),
11 Pine Street, New York, N. Y.

Attention of Mr. Max Breitung.

GENTLEMEN: In compliance with your favor of the 5th, we are pleased to hand you herewith letter under date of September 2, 1914, from Mr. Breitung to the writer, relative to the Lake vessels for ocean service.

We sent you, on December 22, a copy of my reply to the above-mentioned letter; also a letter written by our Mr. Carey on December 22, on the same subject, in reply to Mr. E. N. Breitung's letter of December 17 and your letter of December 19.

We might say, in connection with this matter, that we heard several days ago that the New York Central people had sold the steamships *Arlington* and *Rutland* out of their Lake freight line for coastwise service. This leads us to think that possibly the Erie Railroad might be induced to part with some of their older and small boats. These vessels would very likely serve all right for coast trade, but we do not believe that they would be of any use in the over-sea service. We were very much surprised to hear that any owner would part with packet-freight boats, as this trade has been almost uniformly profitable, no matter what the state of the bulk-freight market.

Yours, very truly,

E. N. BREITUNG & CO.,
By R. C. DUTTON.

—

CLEVELAND, *Wednesday, September 9, 1914.*

Mr. E. N. BREITUNG,
Marquette, Mich.

DEAR SIR: In compliance with yours of the 2d instant, I have been making a number of inquiries relative to Lake ships suitable for the ocean trade, having discussed the subject guardedly with several vessel owners, and also with my friend, Mr. George A. Marr, secretary of the Lake Carriers' Association.

From all I am thus far able to find out, there are only some 22 vessels on the Lakes which, in their present condition, could be gotten through the Welland Canal Locks; 9 of those, it appears, are controlled by the Great Lakes & St. Lawrence Navigation Co., which is Mr. D. Sullivan's concern, leaving 13 as possibilities. All of these are old, small, steel vessels, without sufficient bunker capacity for fuel for ocean voyages. They are at present engaged in a reasonably profitable Lake trade and could hardly be secured at any reasonable figure, considering their age and the expense necessary to fit them for the work desired.

The Steel Corporation has a few of the 3,000-ton class of steel steamers, built in 1888 to 1892, but even these boats are too large to get through the canal, as no vessel broader than 42 feet, at the very outside, or longer than 259 feet can be taken through the locks. It is entirely impossible to take a 10,000-ton ship to the coast, as these vessels are about 525 feet long and average 54 feet broad; hence, even if cut in two, which is a very expensive operation, they would be much too broad for the locks. It is also pointed out that these vessels, by reason of having their machinery all in the stern, and being of much lighter draft than ocean designs call for, are unfit for the ocean trade.

Brokers in the East have been very busy seeking to obtain options on vessels suitable for this purpose, but without any success whatever. This may be due to the fact that they had no particular financial standing and were not willing to put down real money for the options.

This whole subject was very exhaustively taken up before Congress about the time the European war broke out, and particular inquiries were made of vessel owners and others by Senator T. E. BURTON, of this State, who is himself considerable of an authority on the subject. So far as I could judge from the press reports, it was finally decided that the Lakes offered no material which would help out with the ocean merchant marine.

In addition to the few small vessels mentioned above, there are a number of British-built vessels, ranging from 1,800 to 2,500 tons capacity, plying on the Lakes, but they are owned by the British and sail under that flag. They come to the Lakes during the depression of the ocean freight markets, and some of them, at least, return to the ocean when business there picks up. I think no one has taken any account of the few remaining wooden steamers of Welland Canal size, as they are hardly fit to take outside of a lake harbor, being antiquated and in very poor repair.

I trust that the foregoing gives you the information desired, and if there is anything further you would like to have me do in this connection, would be very happy to serve you.

Yours, very truly,

E. N. BREITUNG & CO.,
By R. C. DUTTON.

THE BILTMORE, *New York, August 28.*

DEAR ED: I hope you and Louis had a good journey and are well.

I inclose description of the English ship, new, first voyage; owners need money.

She could carry 8,000 tons, at $3. I am cabling Buenos Aires to see if credit good, demand as represented, etc. There are numerous things we could ship. Now German export is closed, and in a year we could have several ships, if you care to take it up. I shall be very pleased. It is a business we can do.

I will see Puiola when I get your letter.

I can get coal, insurance, etc., and will find out re payments, etc.

With kind regards,

Sincerely, yours,

SETON.

—

AUGUST 25, 1914.

Mr. GEORGE D. MACKAY,
27 Pine Street, New York City.

DEAR SIR: I herewith inclose description of steamer, as promised: New steamer, one deck, poop 38 feet, bridge 126 feet, forecastle 37 feet, double bottom for water ballast. Steel. Length over all, 400 feet. Breadth, 52 feet. Depth of hold, 29 feet 6 inches. Class, 100–A–1, Lloyds. Dead weight capacity, 8,000 tons. Gross tonnage, 4,735 tons. Engine, triple expansion, 25′ 40′ 68″. Length of stroke, 48″. Three boilers, 180 pounds. Price, $350,000.

Yours, very truly,

———— ————.

—

SEPTEMBER 13, 1914.

DEAR ED: Those boats of which you write are no good.

I can get all the boats required, but there is no freight being carried at present.

I am working on a plan that may go through; if so, we could buy one or two ships and be assured of a freight contract. It would be very, very attractive. The ship I spoke of is not a great bargain as regards value and price, but it would be a very good buy under certain conditions that I may be able to create and on which I am working. I think the present moment most opportune for various propositions.

I inclose cutting that will interest you. I should have liked to have taken this up with you some time ago. I do not think Mr. Buckwalter can interest the right people.

Sincerely,

SETON.

—

NEW YORK, U. S. A., *December 3, 1914.*

Present approximate prevailing freight rates for cotton, which has been declared immune—that is, as noncontraband of war—by all nations at war, and that is at present obtainable at almost any quantities desired for freighting to European ports:

Gothenburg or Copenhagen, $1.25 has been paid for per 100 pounds, there being 500 pounds in a compressed bale of cotton; $1.50 is price now asked, and even higher rates are expected.

Rotterdam, about $1.75 to $2.50.

Bremen and Hamburg, $3 per 100 pounds has been done, and no surprise will be felt if higher price will be obtained.

Liverpool, $1 upwards.

Liverpool would probably mean coming back to the United States in ballast. Copenhagen probably can give fair cargo for return trip. Return cargo from Rotterdam can be practically engaged for before starting on voyage. Return cargo of very high-class rates can be obtained from Bremen or Hamburg.

Our Government covers war risk insurance on American bottoms.

The present grain rates and general cargo rates are also so that large returns can be obtained on any boat. Carrying contraband, of course, is done at still considerable better prices, but it is somewhat risky.

On the next page I have cited what could be done at this moment with certain definite vessels.

Boat No. 1. American-built boat, 15 years old, has been in Atlantic coast service. In good condition. Gross tonnage, 2,100 tons; net tonnage, 1,300 tons.

Would not need registering, since she is outright an American boat. Would carry about 4,500 and upwards bales of cotton.

To Bremen: 4,500 tons at $15, $67,500 in prepaid freight, collected after loading, upon signing of bill of lading. Expense, including mine and war risk on the vessel itself, would not exceed $27,000 for the round trip, the limit lengths of which should be not exceeding 80 days. The returns from outvoyage, therefore, would leave about $40,000 net and expenses of home-bound voyage paid for. We can obtain freight from Bremen to the United States that will at least net us $21,000 net cash. Thus, our first round trip would net us about $61,000; second trip would pay for the boat on basis of price at which I am offered the boat for for prompt purchase.

The second trip, if present condition would still prevail, would clear us about $30,000 over and above the purchase price of boat.

This boat would be a good nucleus for becoming American shipowners.

Boat No. 2: German boat, about 14 years old, but modern outfittings; always been in trans-Atlantic service; extra well suited for cotton trade; now in cotton port; about 3,500 tons gross, 2,200 tons net; has carried about 12,000 bales of compressed cotton; would need registering under American flag; is a boat that is operating very economically.

To Bremen, at 3 cents per pound—that is, $15 per bale—would have outward bound prepaid freight of $180,000. Less the expense of round voyage, including special mine risk and war risk, and allowing a maximum of 80 days, calculating expense at maximum of $50,000, would net $130,000, and having expense of home-bound trip paid for. The cargo that can be obtained at Bremen for shipment to the United States would net us exceeding $35,000. Thus we would have a net return of over $165,000 on first round trip. The second trip, if same conditions prevail, would duplicate the first trip in returns. This boat can be obtained by me on a basis so that first round-trip's returns pay total purchase price of boat within about 20 per cent.

Boat No. 3, *The T:* This boat was under offer to me on December 3, but was sold on same date. She is British, about 6,000 tons, and sold at price that would have allowed our clearing purchase price in two voyages of cotton to Bremen, or four trips, that could now be contracted for, in grain to England. I will, or rather am, promised similar option.

—

BREITUNG & Co. (LTD.),
New York, December 7, 1914.

Mr. H. O. SCHUNDLER,
24 Stone Street, New York City.

DEAR MR. SCHUNDLER: We have provided for the $50,000, of which we have been talking, to be used in the purchase of the two steam freight vessels, namely, the *Atlantic* and *Pacific*, which are under the American flag and have been recently built in America, leaving no doubt that they are American bottoms; but the whole arrangement must be subject to my approval as well as that of my firm.

Very truly, yours,

E. N. BREITUNG.

—

SAMUEL HOLMES STEAMSHIP OFFICE,
New York, January 9, 1915.

Messrs. E. N. BREITUNG & Co.,
11 Pine Street, New York City.

DEAR SIRS: The S. S. *Horatius* arrived in Boston yesterday.

After our interview with you yesterday we cabled to London that you accept this steamer at £30,000, subject to inspection when notified steamer is ready for inspection, and asked 48 hours time to make the inspection.

My judgment is that the S. S. *Horatius*, having come from Buenos Aires, will have cargo aboard, which must be discharged, and, as I stated in my cable, we required to be notified at what time the steamer would be ready for inspection, it seems common sense that the owners will cable the captain to notify me or tell them that they can notify me when the ship will be ready for inspection, which my judgment tells me should be about Tuesday the 12th instant.

Very truly, yours,

SAMUEL HOLMES.

SAMUEL HOLMES STEAMSHIP OFFICES,
SELLING DEPARTMENT,
New York, January 14, 1915.

Messrs. BREITUNG & Co., LTD.,
11 Pine Streete, New York City.

GENTLEMEN: Confirming interview with you this morning, I herewith give you copy of the cable I received this morning (dated last night, 6.40 p. m., arriving after the close of the office), which cable I showed you when I was in your office this morning, respecting the sale of the S. S. *Horatius.*"

LONDON, *January 13—6.40 p. m.*

HOLMES, NYK. *Horatius* withdrawn, having now loaded part outward cargo. *Andreas, Tennyson,* withdrawn. *Tunstall, Potomac,* sold. Telegraph reply, Winnfield; will buyers take delivery steamer *Kingdom? Hemisphere* obtainable, safe-arrival maintenance class only, delivery discharging port Holland or England about March, 28,000 pounds. *Rhodesian,* 21,000; delivery London, about end January; others close treaty; suggest forming limited company now in readiness for steamer purchased.

ASHDOCOMP.

On the 8th instant were received an offer of the *Horatius* for sale at £30,000, which cable I showed you, and on the same day, the 8th, you accepted the steamer and we cabled your acceptance and requested to be notified when the ship could be inspected, in accordance with your request, as she was in Boston with a cargo on board.

Every condition has been fulfilled that can be required by the owners, even down to the point that the ship need not be transferred to a foreign flag, but would be taken and kept under the British flag.

I herewith confirm conversation with you this forenoon and quite agree with you that you are fully entitled to this boat, and note that your inspector is waiting to inspect, and that you insist on the bargain being carried out, and that you are ready to furnish the money.

I am cabling to-day that I have fulfilled my duties as a broker and earned my commission on the sale of this ship to yourselves. I regard the withdrawal of the *Horatius*, as this morning's cable states, to be high handed and unbusiness like on the part of the owners.

I inclose you herewith a copy of the cable I am sending to-day.

Yours, truly,

SAMUEL HOLMES.

—

[Western Union Cablegram.]

JANUARY 14, 1915.

ASHDOCOMP, *London:*

Horatius's purchasers have fulfilled every condition promptly; insist bargain closed; establishing sale and commission on same. No outward cargo known yesterday; if any, purchasers will protect it.

HOLMES.

Above copy sent to Messrs. Breitung & Co. (Ltd.), 11 Pine Street, New York City.

STEAMSHIP "HORATIUS,"
January 15, 1915.

Messrs. C. C. ASHDOWN & Co.,
56 Leadenhall Street, London, England.

DEAR SIRS: We were astonished yesterday morning to receive cable announcing that the owners of the *Horatius* had withdrawn the *Horatius* from sale. Of course there will be a suit, because no business man will put up with such high-handed conduct as this. The *Horatius* was offered us at £30,000 for examination in Boston, with New York delivery, no docking, and we accepted the offer the same day as received.

We cabled you requesting to be notified when the ship was ready for inspection, and we were prepared to go on to Boston immediately we received said word, as we have no right to go on board a steamer without the captain being notified and our clients properly notified.

You never replied to this. Instead of immediately sending us authority to go to Boston to examine the ship and having the owners cable the captain to notify us to come on to inspect the ship in Boston (which is only five hours away from New York, with plenty of trains, or if a train did not suit we were prepared to go by automobile, as it is only 240 miles) you cabled us that the steamer was withdrawn.

The idea of telling us that the boat is withdrawn after our prompt reply on the same day that you offered us the steamer, and we have always replied promptly to every offer you have made, whether on this ship or any other.

You could never come in contact with any correspondents who are more active than we are, and we have always been prompt and directly to the point. Our offers have been abundant, straight, and quick, and we are not disposed to be treated like school children. To be told after accepting an offer for the boat that the ship is withdrawn is high-handed conduct. She can not be withdrawn without a great deal of trouble to those attempting to do it.

You have the purchaser's answer, and you have my answers that I require my commission, and we await your reply.

Yours, very truly,

(Signed) SAMUEL HOLMES.

P. S.—If the owners say you hadn't authority, it will be up to you.

Above copy given to Messrs. Breitung & Co.

—

PARTICULARS OF STEAMSHIP "HEMISPHERE."

SAMUEL HOLMES, CONSULTING IRON SHIPBUILDER,
New York, January 16, 1915.

Messrs. BREITUNG & Co.,
11 Pine Street, New York City.

Description: Two decks, spar deck; between decks, 8 feet; poop, 40 feet; bridge, 102 feet; forecastle, 36 feet; double bottom for water ballast; 1,039 tons; 5 hatches; 5 steam winches.

Of what material built, steel; length, 350 feet; breadth, 46 feet 5 inches; depth molded, 26 feet 9 inches; class, 100 A. L. (Lloyd's); when built, 1897; cubic capacity, 316,823; total gross tonnage, 3,486; net tonnage, 2,230; dead-weight capacity, 5,690 tons; bunker capacity, 424 tons; draft, loaded, 22 feet 2¾ inches; draft, light; speed, 9 knots rig.; passenger accommodations; engines, triple expansion; horsepower; diameter of cylinders, 24 inches, 39½ inches, 65 inches; length of stroke, 42 inches; boilers, 2 Scotch boilers; working pressure, 180 pounds; consumption of fuel per 24 hours, 22 tons; to be seen; price, £28,000, subject prior sale or other disposition.

Printed on the margin as follows: "These particulars are presumed to be correct, but are not guaranteed.

—

SAMUEL HOLMES, STEAMSHIP OFFICES,
New York, January 18, 1915.

Messrs. BREITUNG & Co.,
11 Pine Street, City.

DEAR SIRS: We confirm the offer made us by your Mr. Schundler on Saturday afternoon in your office to purchase steamship *Hemisphere* at £28,000 and steamship *Rhodesian* at £21,000.

We give you herewith a copy of cable we sent on Saturday evening on this business after leaving your office, as follows:

"JANUARY 16, 1915.

"ASHDOCOMP, *London:*

"*Hemisphere* accepted twenty-eight thousand, British Government consenting. American registry require privilege accepting without registry; delivery, Holland, England, latest March 10. Bankers guarantee payment until delivery class. Maintenance, balance year. *Rhodesian* accepted, twenty-one thousand; delivery, London, January; other conditions similar.

"HOLMES."

Yours, very truly,

SAMUEL HOLMES.

—

SAMUEL HOLMES, STEAMSHIP OFFICES,
New York, January 19, 1915.

Messrs. BREITUNG & Co.,
11 Pine Street, City.

DEAR SIRS: Respecting steamers *Hemisphere* and *Rhodesian*, we are this morning in receipt of two cable replies, of which we give you copies herewith; one is dated January 18, 1915, 7.07 p. m., and the other is dated January 19, 1915, 7.08 a. m. You have copies of the cable referred to sent January 16 (Saturday).

Yours, very truly,

SAMUEL HOLMES.

I inclose particulars of *Southfield.*

—

[Cablegram.]

LONDON, *January 19, 1915.*

HOLMES, *New York:*

Rhodesian; due London end week; owners decline pass survey; say necessary for buyers pass survey by April to maintain class, subject unsold arranging conditions contract; owners accept £21,000, buyers taking delivery when discharged; London paying cash whole purchase money.

ASHBORNE.

SELLING DEPARTMENT, SAMUEL HOLMES
STEAMSHIP OFFICES,
New York, January 20, 1915.

Messrs. BREITUNG & Co.,
11 Pine Street, New York City.

ATTENTION OF MR. SCHUNDLER.

DEAR SIRS: I herewith inclose you copy of cable I have to-day sent my agents in London, in reference to steamer *Horatius*, as you requested.

Yours, very truly,

SAMUEL HOLMES.

[Cablegram.]

JANUARY 20, 1915.

ASHDOCOMP, *London:*

Notify owners *Horatius* purchasers prepared pay for steamer; hold owners responsible; good management vessel.

HOLMES.

SAMUEL HOLMES STEAMSHIP OFFICES,
New York, February 9, 1915.

Messrs. BREITUNG & CO.,
11 Pine Street, New York City.

DEAR SIRS: On the 6th instant I submitted your offer for the *St. Fillans* by cable, and for your information I cabled as follows:

FEBRUARY 6, 1915.

ASHDOCOMP, *London:*

Breitung Co. will accept *St. Fillans*, £42,500, if can transfer to American register within 10 days. If impossible to do this, will endeavor to have Breitung consent to British liability company.

HOLMES.

To which I am in receipt of cable reply this morning, dated February 8, 1915, reading as follows:

LONDON, *February 8, 1915.*

HOLMES, *New York:*

St. Fillans practically ready; impossible to arrange transfer. Only chance arranging sale is to British buyers. Try authorize this basis, advising who acting here buyer's behalf.

ASHDOWN.

You will gather from the cable reply above quoted that the ship is practically ready, and that the only way to negotiate this vessel will be through organizing a limited liability company, as we have previously discussed.

Yours, very truly, SAMUEL HOLMES.

SAMUEL HOLMES STEAMSHIP OFFICES,
New York, February 19, 1915.

Messrs. BREITUNG & CO.,
11 Pine Street, New York City.

DEAR SIRS: In accordance with agreement of sale of the steamers *Ocamo* and *Oruro* at Halifax, have you sent your representative to take charge of the *Oruro*, and pay the balance of the purchase price on this steamer, and bring her to New York, and arrange the company? It will have to be somebody with authority.

You were going to write Pickford & Black giving them the details of your wishes regarding the forming of the company, which they would have their lawyer attend to at your expense. I presume you have written them to this effect, although I have not heard that you have done so positively.

Mr. Black, of Pickford & Black, was with me to-day, but is leaving for Halifax to-night.

Yours, very truly, SAMUEL HOLMES.

Address of Ex-President William H. Taft.

EXTENSION OF REMARKS
OF
HON. DAN V. STEPHENS,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915.

Mr. STEPHENS of Nebraska. Mr. Speaker, I ask unanimous consent to insert in the RECORD the splendid address delivered by ex-President William H. Taft before the Washington Association at Morristown, N. J., on February 22, on a subject bearing principally upon our international relations toward the belligerent nations of Europe. It is an able discussion of our national policy that should have the widest possible circulation at this time.

I also ask unanimous consent to insert in the RECORD a letter written by Prof. Kuno Francke, of Howard University, discussing the subject of neutrality, which will be of great interest at the present time.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

ADDRESS OF WILLIAM H. TAFT, EX-PRESIDENT OF THE UNITED STATES, BEFORE THE WASHINGTON ASSOCIATION OF NEW JERSEY, AT MORRISTOWN, N. J., FEBRUARY 22, 1915.

Gentlemen of the Washington Association of New Jersey:

Washington's life and service related to many phases and problems in our national life, and his views, set forth in his correspondence, in his message and expressed in his Executive acts, are broad and comprehensive. No issue or problem of national importance presses on a birthday of his, the solution of which may not be greatly aided by a recurrence to principles which he practiced and sought to inculcate in his fellow countrymen.

I do not intend to-day to dwell on the indispensable character of the service that he rendered to the country in winning independence and in the framing and ratification of the Constitution. Under the inspiration of these historic surroundings where Washington lived many trying days and weeks and months of the Revolutionary struggle, you have familiarized yourselves with his life. It would be a work of supererogation for anyone, though much more a student of his career than I am, to review it.

After independence was won and the Constitution was adopted, there still remained to this country a fateful period in which the ship of state was to be launched, national sovereignty was to be enforced, and that independence, which had been nominally granted and secured, was to be, in fact, established among the nations of the world.

I pass by the achievement of national organization under the guidance of Washington, assisted by the genius of Hamilton and Madison, before Jefferson entered the Cabinet. I do not discuss the birth of national credit under the financial measures pressed upon Congress by Hamilton and secured ultimately through the cooperation of Jefferson. This 183d anniversary of Washington's birth, in view of the present critical condition in our international relations, should bring to our minds the third great achievement of his presidential term, the maintenance of a policy of neutrality through a general European war. He insisted upon it as necessary before he became President; he maintained it throughout his official life as President against mighty odds and under conditions that tried his soul, and in his Farewell Address he restated it and reenforced it as a legacy to the American people.

He began his first administration at the time of the outbreak of the French Revolution. The progress of that great popular uprising, with all its excesses and the wars that grew out of it, was reflected in American politics of that day in a way that makes the currents in our popular opinion to-day, due to the existing European war, seem negligible. France had been our friend when we needed a friend—in the Revolutionary War. The French people were engaged in destroying the divine right of kings, and substituting therefor popular rule. They were encountering monarchial intervention to restore the old system. Nothing was better calculated to awaken the patriotic and friendly sympathy of this country, in whose memory the struggles of the Revolution were still fresh. The appeals which the French Republic, through the ministers which it had sent here—Genet, Fauchet, and Adet—fell upon grateful and responsive hearts and aroused an anxiety to help this struggle of our friend for liberty in Europe. Moreover, our obligations to France under the treaty of 1778 seemed to require us to favor her as a belligerent in her war with England. The intriguing and plotting of the French ministers to use the United States as a basis of operations against England greatly complicated the problem which Washington had to face in avoiding an English war. On the other hand, the utter fatuousness of much of the English policy in seizing American merchantmen without warning and in stirring up Indian outrages against our western settlers roused American feeling against that country to the highest pitch.

In the teeth of this British insolence, Washington sent Jay to England to make the treaty which bore his name. The flamboyant blundering and partisanship of Monroe as minister to France while the treaty was being negotiated in England, leading to his recall, and the apparent desertion of Washington by Federalists as well as Republicans when he signed the treaty, and the subsequent change of public opinion when the foreign French intrigue against the treaty became known, and when, in spite of its many defects, the benefits of the treaty were seen by the country, constitute a train of events in the successful maintenance of neutrality which proves it to be more completely and exclusively Washington's own, and more fully due to his personal foresight, his personal courage, and his personal influence than any other achievement of his career.

In the Revolutionary War, of course, he was the leader, but there were many others who shared with him the responsibility. In the framing of the Constitution, in the organization of our Government, and in our financial policy, Hamilton and Madison and others played a large part. Washington sat as an arbitrator in many of these issues, which were presented to him in the opposing arguments of his associates. As Jefferson said:

"During the administration of our first President, his Cabinet of four members were equally divided by as marked an opposition of principle as monarchism and republicanism could bring into conflict. Had that Cabinet been a French directory, like positive and negative quantities in algebra, the opposing wills would have balanced each other and produced a state of absolute inaction. But the President heard with calmness the opinion and reasons of each, decided the course to be pursued, and kept the Government steadily in it, unaffected by the agitation. The public knew well the dissensions of the Cabinet, but never had an uneasy thought on their account, because they knew also they had provided a regulating power which would keep the machine in steady movement."

But the policy of neutrality was Washington's alone. He initiated it. He enforced it. He bequeathed it to his countrymen. Before he had been chosen President he wrote to a friend as follows:

"I hope the United States of America will be able to keep disengaged from the labyrinth of European politics and wars; and that before long they will, by the adoption of a good National Government, have become respectable in the eyes of the world. * * * It should be the policy of the United States to administer to their wants without being engaged in their quarrels."

A year after he went into the Presidency he wrote to Lafayette that we were—

"Gradually recovering from the distresses in which the war left us, patiently advancing in our task of civil government, unentangled in the crooked politics of Europe."

In March, 1793, Washington said:

"All our late accounts from Europe hold up the expectation of a general war in that quarter. For the sake of humanity, I hope that such an event will not take place. But if it should, I trust that we shall have too just a sense of our own interest to originate any cause that may involve us in it."

Again, on March 12, 1793, he wrote to Jefferson:

"War having actually commenced between France and Great Britain, it behooves the Government of this country to use every means in its power to prevent the citizens thereof from embroiling us with either of those powers by endeavoring to maintain a strict neutrality. I therefore require that you will give the subject mature consideration, that such measures as shall be deemed most likely to effect this desirable purpose may be adopted without delay."

On the 2d of April, 1793, he issued a proclamation of neutrality. It must be realized too that this proclamation of neutrality was very difficult to reconcile with the engagements of the United States in the treaty of France made during the Revolutionary War, and it was possible only to escape them on the plea that they were not binding on the United States in the case of an offensive war such as France was waging against England. Finally, after his course of neutrality had been vindicated and he came to lay his office down, he appealed to the American people not to depart from it. He said:

"The great rule of conduct for us in regard to foreign nations is, in extending our commercial relations, to have with them as little political connection as possible. So far as we have already formed engagements, let them be fulfilled with perfect good faith. Here let us stop.

"Europe has a set of primary interests which to us have none or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns.

Hence, therefore, it must be unwise in us to implicate ourselves by artificial ties in the ordinary vicissitudes of her politics or the ordinary combinations and collisions of her friendships or enmities.

"Our detached and distant situation invites and enables us to pursue a different course.

"Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?"

It seems to me that this is a good text from which to preach a sermon and draw a lesson on this Washington's birthday, for most of the great powers of Europe are again at war.

We have among our citizens many who look back to the country of one or the other of the belligerents as their native land. The natural result has followed that the bitterness of the contest is reflected in the conflicting sympathies of our people. The newspapers of no other country have been as full of details of the war and of the circumstances leading to it as our own press. This has stimulated public interest and created partisans who attack President Wilson because he has been faithfully following the example set, and the admonitions given, by our first President. No better evidence of this could be had than that, from time to time, first one side and then the other criticizes the administration for its partiality, its lame acquiescence, or its unfair protests. So extreme have some of these partisans become that they propose to organize a political party and take political action, to be based on issues arising out of the present war; to ignore altogether the questions germane to American domestic politics, and to visit all candidates in future elections who do not subscribe to their factional international views with political punishment. I am far from saying that an unwise or an unpatriotic course in our foreign relations may not justify criticism of an administration and may not require its condemnation at the appropriate election, but in such a case the reasons must be found in injury to the interests of the United States and not in the merits of the issues being fought out by European nations in an European arena.

I was asked in Canada whether the war would affect our politics, so as to divide parties on European lines. I answered unhesitatingly in the negative. I said that to inject European issues into American politics had uniformly meant the defeat of those who attempted it. There is no better proof of this than the revulsion of feeling against the Republican Party in the latter part of Washington's second term, when the people suspected it of making the cause of the French revolution more important than the safety and prosperity of the United States. The country rallied to Washington's support and his maintenance of American interests only a short time after he had signed the most unpopular treaty ever negotiated in our history.

Legislation is pressed to forbid the sale of arms and ammunition by our merchants in trade to belligerents. It happens that one party to the war is fully prepared with ammunition and arms. It happens that the other party is not. It happens that the party which is prepared with ammunition and arms is excluded from the seas by the navies of their opponents. It happens therefore that the only sale of ammunition and arms that can take place is to one side. Therefore it is said that, as the side to which we are selling arms and ammunition is dependent on our sales, we should place an embargo on that trade, force that side to peace, and bring the war to an end. It has always been a rule of international law that neutral countries may sell arms and ammunition to either belligerent but that they are absolute contraband and liable to confiscation on board a neutral vessel. We have proceeded on this assumption, and our manufacturers have sold arms and ammunition to those belligerents who would buy. We do not discriminate between the belligerents in the matter of furnishing war material. It is only that the fortune of war and the circumstances over which we have no control prevent one side from purchasing in our markets, which are open to all who can reach them. Nor is it possible to see why the doing of that which neutrals in all wars have been permitted to do should be made unneutral by such circumstances. The change of the well-established rule, however, where such a change would inure only to the benefit of one of the parties, might well be regarded as unneutral, as has been pointed out by the President. Neutrality leagues, therefore, that are organized to press legislation in the nature of an embargo on the sale of arms and ammunition do not seem to be rightly named.

But my chief objection to giving up the lawful and usual course of a neutral to sell arms and ammunition to belligerents is based on the highest national interest. We are a country which is never likely to be fully prepared for war. We must have the means of preparing as rapidly as possible after war is imminent and inevitable. We would be most foolish to adopt a policy of refusing to sell arms and ammunition to belligerent powers which, if it was pursued against us when we were driven into war, would leave us helpless.

In our Spanish War we were obliged to purchase ships and other equipments for war from foreign countries, and in any future war we would be in the same position.

More than this, if we were to place an embargo on the sale of arms and ammunition to belligerents, we would discourage the industry in this country and reduce substantially our possible domestic means of preparing for future wars. It has long been the policy—and the wise policy—of the War Department not to be dependent for its supplies on Government factories alone, but to encourage private enterprise in this line of manufacture, in order that, should national exigency arise, we could depend on aid from private sources. To deny to the owners of such investments the opportunities of trade with belligerents would be to discourage them and make our preparedness to resist unjust aggression even less than it now is.

Finally, the general adoption of a course by neutrals not to sell arms to the belligerents in a war would greatly stimulate the tendency to increase armaments in time of peace to be ready for war. Such a stimulus to greater armaments we shall all deplore, because of their burden upon the peoples of the countries affected, and because of the temptation to war involved in their maintenance.

Another criticism against the administration comes not only from those whose predilections are based on their European origin, but also from native Americans who are aroused by what they conceive to be the possible evil world consequences of this war and the merits of its issues. They complain of the administration because it did not protest against every violation of international law committed by one set of the belligerents against the other. This view was made to depend at first upon what was thought to be a treaty obligation on the part of the United States to protest, growing out of the provisions of The Hague treaties, to which most of the belligerents, together with the United States, have been signatories. Further examination, I think, showed that most of these treaties were by their own terms inoperative, because they had not been signed by all the belligerents. While the people of the United States might well maintain the wisdom and righteousness of such provisions, or deplore their violation, their Government was not under any treaty obligation to take part in the controversy, to express an opinion, or to register a protest.

It must be noted that in every war one side must be wrong, and frequently both sides are wrong. Frequently both sides violate international law and the laws of war against each other. It is most difficult for a neutral to learn all the facts in such a way as to reach a safe and certain judgment on the merits. Moreover, even if this is possible, it has been the policy of our Government since its establishment to decline to enter the European arena of war in any capacity, and our obligation to take sides and enter a protest must be exceedingly clear before we should permit ourselves to do so. Where an issue made is being fought by millions of men on one side and by millions of men on another, a neutral nation which fails to protest against violations of the laws of war as between belligerents can not be said to acquiesce in those violations or to recognize them in any way as a precedent which will embarrass it. We must realize that in a controversy like this, where the whole lifeblood of each contestant is being poured out, and in which its very existence as a nation is at stake, protests like those proposed in respect of issues in which a neutral is not directly interested, may well seem to the highly sensitive peoples engaged a formal declaration of sympathy in the war with one side or the other. This must inevitably and materially injure our attitude of neutrality without accomplishing any good. Therefore, while I sympathize with the Belgians in this war, whose country, without any fault of theirs, has been made its bloody center, I approve and commend to the full the attitude of President Wilson in declining to consider the evidence brought before him in respect to alleged atrocities in Belgium, and to express an opinion on the issues presented. A similar decision with respect to the application of the German Government to have him investigate the evidence of the use of dum-dum bullets was equally sound. We are not sitting as judges of issues between countries in Europe in this great war; we are seeking to maintain strict neutrality, and until our decision is invoked, with an agreement to abide by our judgment and recommendation for settlement, we need not embroil ourselves by official expressions of criticism or approval of the acts of the participants in the war. This is not only the wisest course for us to pursue in maintaining an attitude that may give us influence in promoting mediation when mediation is possible; but it will help us to avoid being drawn into the war.

It is said that we show ourselves utterly selfish and commercial when we refuse to protest against a breach of the laws of war by one belligerent against another and yet register protest against the violation of our neutral trade rights. Thus our critics say we exalt our pockets above principle. This is a confusion of ideas. When the action of a belligerent directly affects our commercial interests, then we must protest or acquiesce in the wrong. When the wrong is not committed against us but against a European nation in a European quarrel, absence of protest by us is not acquiescence by us but only consistent maintenance of our national policy to avoid European quarrels. Not only was this the rule laid down by Washington but it has found authoritative expression in the reservation made in the treaty between the United States, Germany, Austria-Hungary, Belgium, Spain, France, Great Britain, Italy, the Netherlands, Portugal, Russia, and Sweden, known as the treaty of Algeciras, proclaimed January 22, 1907. The reservation was as follows:

"As a part of this act of ratification, the Senate understands that the participation of the United States in the Algeciras conference, and in the formulation and adoption of the general act and protocol which resulted therefrom, was with the sole purpose of preserving and increasing its commerce in Morocco, the protection as to life, liberty, and property of its citizens residing or traveling therein, and of aiding by its friendly offices and efforts in removing friction and controversy which seemed to menace the peace between the powers signatory with the United States to the treaty of 1880, all of which are on terms of amity with this Government, and without purpose to depart from the traditional American foreign policy which forbid participation by the United States in the settlement of political questions which are entirely European in their scope."

It is noteworthy that this authoritative declaration of our traditional policy was made pending the second Hague peace conference, and was made by the same President and same Senate which ratified The Hague peace treaties, in so far as they were ratified. We may, therefore, infer that nothing in The Hague treaties was intended to involve us in purely European controversies. Protests of the kind urged would do this.

Our interest in the present war, therefore, under the conditions that exist, should be limited, as set forth in this reservation, to wit, to—

"Preserving and increasing the commerce of the United States with the belligerents, to the protection as to life, liberty, and property of our citizens residing or traveling in their countries, and to the aiding by our friendly offices and efforts in bringing those countries to peace."

Our efforts for peace have been made as complete as possible, for the President has already tendered his good offices by way of mediation between the powers, and they have not been accepted.

In preserving the commerce of the United States with the belligerents, however, we are face to face with a crisis. We are threatened with a serious invasion of our rights as neutrals in trading with the belligerent countries. What certainly is an innovation upon previous rules in respect to neutral commerce and contraband of war has been initiated by belligerents of both sides. The planting of mines in the open sea and the use of submarines to send neutral vessels to the bottom without inquiry as to their neutrality when found in a so-called war zone of the open sea are all of them a variation from the rules of international law governing the action of belligerents toward neutral trade. When their violation results in the destruction of the lives of American citizens or of American property a grave issue will arise as to what the duty of this Government is. The responsibility of the President and Congress in meeting the critical issue thus presented in maintaining our national rights, and our national honor on the one hand, with due regard to the awful consequences to our 90,000,000 of people of engaging in this horrible world war on the other, will be very great. It involves on their part a judgment so momentous in its consequences that we should earnestly pray that the necessity for it may be averted. If, however, the occasion arises, we can be confident that those in authority will be actuated by the highest patriotic motives and by the deepest concern for our national welfare. We must not allow our pride or momentary passion to influence our judgment.

We must exercise the deliberation that the fateful consequences in the loss of our best blood and enormous waste of treasure would necessarily impose upon us. We must allow no jingo spirit to prevail. We must abide the judgment of those in whom we have intrusted the authority, and when the President shall act we must stand by him to the end. In this determination we may be sure that all will join, no matter what their previous views, no matter what their European origin. All will forget their differences in self-sacrificing loyalty to our common flag and our common country.

PROF. KUNO FRANCKE TO CONGRESSMAN BARTHOLDT.

To the editor of the Transcript:

As I was one of the persons invited to take part in the conference held at Washington on January 30 for the purpose of forming a national organization to "reestablish genuine American neutrality and to uphold it free from commercial, financial, and political subservience to foreign powers," and as my staying away from this conference might be interpreted as evincing lack of sympathy with Germany's cause, I wish to make public the reasons why I declined to take part in it. My reasons are contained in the subjoined letter to Mr. BARTHOLDT, written on January 28.

KUNO FRANCKE.

Hon. RICHARD BARTHOLDT,
Committee on Foreign Affairs, Washington, D. C.

MY DEAR MR. BARTHOLDT: I am sorry that I must decline taking part in the conference on January 30 to which you were good enough to invite me. I would beg, however, that the following remarks be read at the conference, so that my position with regard to the questions raised by your circular note be clearly understood by those present. And in case there are to be newspaper reports of the transactions of the conference, I would beg that this letter of mine also be published.

I fully believe in the righteousness of the German cause in the present world conflict, and I shall avail myself of every opportunity, as I have done before, to express publicly my fervent hope that Germany and her Austro-Hungarian ally will remain victorious in a struggle forced upon them by the aggression of a most unnatural coalition of powers, held together by nothing but irrational fear of German ascendancy. I believe that the prominent part taken by England in this coalition is a crime against civilization. For, if successful, it would lead to the ruin of a country which for the last 50 years has excelled all other countries in every kind of public service, social organization, and peaceful enterprise, and which is a shining illustration of the beneficial effects of good government upon the development of civic virtue, personal worth, and popular prosperity. I deeply deplore, therefore, the gross and ignorant misrepresentations of German achievements and German aspirations of which a large part of the American press has made itself guilty. That none of these misrepresentations is more deliberately ignorant than the assertion that the present war is a war for popular freedom against German autocracy should be clear to everyone who remembers that the most formidable member of the anti-German coalition is Russia.

My sympathies, therefore, in this war are wholly and fervently on the German side. But my German sympathies can not make me forget what seem to me my duties as an American citizen.

I believe it would be against my duties as an American citizen if I were to take part in a propaganda the purpose of which will be thought to be to force our Government into a hostile attitude toward England. Your circular letter speaks of England as "America's arch-enemy." It calls for a "New Declaration of Independence" which is to "eliminate all undue English influence from our American life." And it protests "against the continued traffic in arms and ammunitions of war which practically arrays our country on the side of England." I do not wish to emphasize the fact that the proclamation of an embargo on arms and ammunitions of war would be an altogether illusory thing. Arms and other implements of war would, if our Government established an embargo on them, be shipped from this country to Habana, or to Vigo, or to some other neutral port, and would reach their destination from there without any hindrance. What I do wish to emphasize is that the establishment of such an embargo would inevitably bring our Government into conflict with England and might drive us into war with England. As a man of German blood I might welcome the help which would accrue to Germany by such a conflict between the United States and England. But as an American citizen I can not possibly support a policy which would bring the terrors of war to our own country. What I feel bound to support, as an American citizen, is a policy which holds itself strictly within the now accepted rules of neutrality, although, to my regret, this policy, through circumstances over which the United States has no control, practically turns out to the advantage of England and to the detriment of Germany.

There is another point in your circular letter in which, as an American citizen, I feel bound to disagree with you. You say that "an emphatic protest should be entered against every attempted discrimination against the many millions of our citizens who happen to bear non-English names." If by these many millions you mean citizens of German descent, I fail to see what you mean by attempted discrimination against them. That there is a strong anti-German feeling in this country at the present moment can not be denied. I believe this feeling to be rooted in a wrong and short-sighted view of the issues at stake in the European war. The necessity of combating short-sighted views of the majority makes the situation for us German-Americans for the moment far from pleasant. But of discriminations proposed or attempted against German-American citizens I am unaware. Nothing, it seems to me, is more prejudicial to our position as American citizens than the clamor for recognition which is so often heard at German mass meetings. Nothing would be more fatal to our standing in the community than the insistence on racial contrasts and demands. We have every opportunity in this country to make felt what is best in German character and life. Let us continue to do so; let us continue to have a prominent part in all endeavors for political, civic, and industrial progress; let us stand for the German ideals of honesty, loyalty, truthfulness, devotion to work; let us cultivate our language, our literature, and our art; let us fearlessly defend the cause of our mother country against prejudices and aspersions. But let us refrain from political organizations which would set Germans in this country apart as a class by themselves. Such an attempt would lead not to the raising but to the degradation of the German name in this country. It would foster hatred instead of sympathy, and only by gaining the sympathy of the majority of the American people can we German-Americans help the cause of our mother country.

Very truly, yours,

KUNO FRANCKE.

CAMBRIDGE, *January 28, 1915.*

The Late Senator Bacon.

MEMORIAL ADDRESS

OF

HON. THOMAS M. BELL,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, February 21, 1915,

On House resolution 740, as follows:

"*Resolved*, That as a mark of respect to the memory of the Hon. AUGUSTUS O. BACON, late a Senator from the State of Georgia, the business of the House be now suspended, to enable his associates to pay proper tribute to his high character and distinguished public services.

"*Resolved*, That as a further mark of respect to the memory of the deceased the House, at the conclusion of the exercises of this day, stand adjourned.

"*Resolved*, That the Clerk of the House communicate these resolutions to the Senate.

"*Resolved*, That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. BELL of Georgia. Mr. Speaker, Senator A. O. BACON was born October 20, 1839, and was therefore nearly 75 years of age. He had served continuously in the United States Senate almost 20 years, during which time he made a national reputation. He was regarded by thousands of people as being the strongest representative Georgia has sent to the Senate, and I share with them in this opinion. I had the pleasure of knowing Senator BACON for almost 35 years, and in all my relations with him I always found him sincere and firm in his convictions. He made but few promises, but he kept them. He was absolutely reliable in word and deed. He would not compromise himself nor would he embarrass anyone, friend or foe, even though he might gain temporary advantage by it. He was a student, a lawyer, a statesman, a gentleman. Few men of his day were better posted on the great questions which confronted this Nation than he. His powerful mind was active at all times, and he was able and always ready to defend his State, his people, and the Nation. He had a clear conception of legislation which affected his own country at home and abroad. He had in fact elements of greatness, and would have made an ideal Chief Executive of this great Nation. He studied carefully the minor questions which often present themselves to a legislator, and was equal to any emergency which required brain, thought, statesmanship, and active endeavor. He never shirked responsibility, nor did he unload his burdens or cares on his neighbors or friends. He was possessed of a resolute will, a determined purpose, lofty ideals, a cherished ambition, and back of it all a giant mind. He did great good during his long service to his country, and his name will go down in history as one of the great men of to-day.

I attended his funeral at Macon, Ga., and the throng of people of all classes who paid tribute to him on the occasion bore eloquent testimony of the high esteem in which he was held by those who knew him best and loved him most. His counsel was good and his judgment was safe. As chairman of the Committee on Foreign Affairs of the Senate he was consulted by the President and those who served with him on this important committee, because they knew his ability and his strength as a debater could be depended upon when the services of a great man were needed. He was a stanch believer in the principles of the Monroe doctrine, and his defense of it was masterful, and he could be relied upon to present his views upon any question which affected our country in this doctrine which he firmly believed was correct and imperative to the welfare of our country. We mourn his loss. The country mourns his loss. He has gone from our presence, but his goodness and greatness still linger with us. We will see his face and form no more on earth, but the light of his life and his influence will remain with us. The world is better because of his life, and like a rare perfume whose fragrance lingers, so his memory will be cherished by all. His work on earth is done, and he is at rest. Peace to his memory.

There is no death! The stars go down
To rise upon some fairer shore,
And bright in heaven's jeweled crown
They shine forevermore.

There is no death! The leaves may fall,
And flowers may fade and pass away.
They only wait through wintry hours
The coming of the May.

There is no death! An angel form
Walks o'er the earth with silent tread;
He bears our best-loved things away,
And then—we call them dead.

Rural Credits.

EXTENSION OF REMARKS
OF
HON. CALEB POWERS,
OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 2, 1915.

Mr. POWERS. Mr. Speaker, no opportunity has been given the House to discuss and consider this bill—only two hours of debate on what many of us believe one of the most important pieces of legislation that has come before Congress for years. Both of the great political parties in their national platforms have indorsed and demanded rural credits legislation.

The Democratic Party at Baltimore in national convention assembled said in its national platform this as to rural credits:

RURAL CREDITS.

Of equal importance with the question of currency reform is the question of rural credits or agricultural finance. * * * We favor legislation permitting national banks to loan a reasonable proportion of their funds on real estate security.

In that declaration in their national platform in the interest of the farmer the Democratic Party went before the country in 1912. The farmers realized the need of such legislation. They believed, or must have believed, that the Democratic Party, if elected, would comply with its promises to them and give them rural credits legislation. I can not refrain from quoting from a speech I made on the floor of the House on February 4 of this year, not quite one month ago. I said at that time:

"The Democratic Party promised the farmer that if elected and given power to legislate, this law should be passed. The farmer, among others, did help to put the Democratic Party in power. They thought that they were going to get some genuine rural credits legislation, but they have not gotten it. The President says he favors such legislation. He said on December 2, 1913, in his message to Congress:

"I present to you, in addition, the urgent necessity that special provision be made also for facilitating the credits needed by the farmers of the country; what they need and should obtain is legislation which will make their own abundant and substantial credit resources available as a foundation for joint, concerted local action in their own behalf in getting the capital they must use. It is to this we should now address ourselves. We must add the means by which the farmer may make his credit constantly and easily available and command when he will the capital by which to support and expand his business. We lag behind many other great countries of the modern world in attempting to do this. Systems of rural credit have been studied and developed on the other side of the water while we left our farmers to shift for themselves in the ordinary money market. You have but to look about you in any rural district to see the result—the handicap and embarrassment which have been put upon those who produce our food.

"And at the very time the Federal reserve bill was being perfected by the House Committee on Banking and Currency did not certain members of it—particularly Representatives NEELEY of Kansas, WINGO of Arkansas, and RAGSDALE of South Carolina—insist that a provision be inserted in the Federal reserve bill carrying out the pledge in the Democratic platform as to rural credits, and did not the President send the majority leader, the gentleman from Alabama, OSCAR W. UNDERWOOD, to those men to assure them that if they would not insist on incorporating rural credits legislation in the Federal reserve bill that he would help them and those interested in the question to pass it in a separate bill? So far it has not been passed, and I see no prospect of early action. Everyone here says and knows that the President is now opposed to putting the Government back of rural credits and will not approve a bill that puts the Government back of freeing and making available the farmers' credit to the same extent that the Federal reserve act puts the Government back of the business man's and banker's credit.

"The Democrats passed the currency law, and in their platform they said:

"Of equal importance with the question of currency reform is the question of rural credits or agricultural finance.

"But the farmers have to wait. They have waited for about two years, and how much longer they will have to wait no one knows."

To-day's debate, Mr. Speaker, has vindicated the truth of all I said on the floor of this House less than one month ago. I then charged that the Democrat President of these United States had changed front on rural-credits legislation. Notwithstanding the fact that the Democratic platform upon which President Wilson was elected, and notwithstanding all he said in his message to Congress on December 2, 1913, I then charged that the President was now opposed to putting the Federal Government back of rural credits. It was not the purpose of the Democratic Party to enact any rural credits legislation at this session of Congress, if at all. But thanks are due to that stalwart Republican, Senator MCCUMBER, who put one over on his Democratic colleagues in the Senate a few days ago and attached a rider to the Agricultural bill the House had passed and sent over there. The rider of Senator MCCUMBER provided for putting the Government back of rural credits in the interest of the American farmers.

The Agricultural bill is now back before the House with the McCumber rider providing for rural credits to legislation in the interest of the farmer. But how did Senator MCCUMBER ever put his rural-credits rider over a Democratic Senate? Did not Mr. WINGO, a Democratic Representative from Arkansas, a few minutes ago, in a speech here, explain all that? Did not he tell you that out of the 52 Democratic Senators in the United States Senate only 6 were on the floor of the Senate at the time, and that 5 of that number were "asleep," and that the one who happened to be awake did not know what to do? And did not another Democratic Member, Mr. NEELEY of Kansas, tell us also how those Democratic Senators were asleep and how the Democratic Party had stifled this legislation?

I will insert as part of my remarks some of the things he has said:

"Mr. NEELEY of Kansas. Mr. Chairman and gentlemen, I want to indorse the most of what my good friend from Arkansas [Mr. WINGO] has said, but I also desire to both congratulate and apologize, to congratulate the Republican Party that one of its Senators found six Senators so sleepy that he was able to startle the Senate and attract the attention of this House and the country to an unfulfilled Democratic promise and to felicitate that party upon the fact that it has thrown into this House six or eight undigested farm-loan bills and has forced an issue of rural credits upon the country. [Applause.] A year ago last August we held a prolonged Democratic caucus in this very room, and I then offered a motion to open the doors of that caucus so that every man or woman who wanted to hear the proceedings could do so and might know exactly what took place. [Applause.] That motion was voted down. I said then that I thought it was bad politics, that the bill should be framed in the white light of public criticism, and the situation confronting us to-night is additional proof of the fact. We made a fight in that caucus to secure the adoption of certain amendments which, if adopted, would have laid a deep foundation for rural-credit legislation, and which we believed should be incorporated in the currency bill, and finally, after we had been here three weeks, lacking one day, a compromise was effected and certain gentlemen came upon the floor of that caucus and stated that they were authorized to state that if this rural-credits proposition that was then ready to be offered was withheld that the subject would be taken up in due time and in regular order, so that it might be given the consideration which the importance of legislation of this character demanded that it should receive before being enacted into law. The advocates of rural credits legislation believed that pledge was offered in good faith, and they accepted the offer in that spirit and kept their part of the pact. The President of the United States came out in a newspaper interview, in which he stated that rural credits was the next great project to be taken up, and he stated that at the proper time he would call the attention of Congress to this most important matter and urge its enactment.

"A motion was made by the gentleman from Oklahoma [Mr. MURRAY] that a committee be appointed to take up this matter and to report before the end of this Congress. I offered an amendment to that motion that this committee be instructed to report before the beginning of the last session of the present Congress, and the motion as amended was adopted. A subcommittee of the Banking and Currency Committee was appointed. It began its deliberations in the fall of 1913, and finally, in May, 1914, a bill, supposed to embody the result of the deliberations of that subcommittee, was introduced in the House. There has never been any action on the part of that committee from that day to this looking to the enactment of rural credits legislation, and six weeks ago the gentleman from Arkansas [Mr. WINGO], in an open session of the Banking and Currency Committee, made a motion that the committee immediately proceed to take up and consider the question of rural credits, with a view of reporting a bill to this House for passage, but that motion was voted down.

"I am glad that Senator MCCUMBER has put this amendment on this bill. [Applause.] I know that it is not perfect. It looks to me as though its author had simply called in a stenographer and dictated it in an hour or so without giving

the matter very serious consideration. But with all of its faults, with all of its failures, and with all of its shortcomings I am ready to vote for it and really start the ball of rural credits to rolling. [Applause.] And if you Democrats do not like that kind of hit-and-miss legislation, why, in the name of heaven, do you not help us to get a committee organized for business and get a bill that is decent? [Applause.]"

This is the language of a Democrat. He shows us how the Democratic Party has played football with rural-credits legislation; how they have blown hot and cold to the farmer. Mr. Speaker, it has been freely stated, both in the public press, in the corridors of these halls, and on the floor of this House, that the President would veto the Agricultural bill if it contained the McCumber amendment when it reached his desk. It has been freely stated here that he would veto this measure if it contained the so-called Bulkley bill, or any other bill that puts the Federal Government back of rural credits.

It is openly stated here that the President wants the Hollis amendment substituted for the McCumber amendment, and that he will veto this bill if it comes to him in any other way. It has been freely stated that it is the purpose of the Democratic leadership of this House to so amend, before adjournment today, the McCumber amendment that the conferees on both the part of the House and the Senate can never reach an agreement, and that in that deadlocked condition they will finally agree to leave all rural-credits legislation out of the bill. I now make that prediction. The future will determine whether I am right or wrong. And even if the Hollis bill should be agreed upon, what will it amount to? The real friends of rural-credits legislation say it is not worth the paper it is written on. I have no time in which to discuss either the McCumber rider, the Bulkley or Hollis bill, or any other bill dealing with this subject. This House has a membership of 435 Members, and yet we are given but two hours in which to discuss this important measure. It can not be done in that length of time. I do know, however, that there is no better class of securities than that on good farms, and there ought to be some way for the farmer to borrow money from the banks of the country on at least a reasonable low rate of interest and to pledge his farm and other good farm securities to the payment of same, should he desire to do so.

The Merchant Marine.

SPEECH

OF

HON. LAWRENCE Y. SHERMAN,

OF ILLINOIS,

IN THE SENATE OF THE UNITED STATES,

Thursday, January 28, 1915 (legislative day of Tuesday, January 26, 1915).

The Senate had under consideration the bill (S. 6856) to authorize the United States, acting through a shipping board, to subscribe to the capital stock of a corporation to be organized under the laws of the United States, or of a State thereof, or of the District of Columbia to purchase, construct, equip, maintain, and operate merchant vessels in the foreign trade of the United States, and for other purposes.

Mr. SHERMAN. Mr. President, I have sat with considerable pleasure for some days under the kindly admonitions of the majority party and have enjoyed the jewels of wisdom that have adorned from time to time the earnest exhortations of the senior Senator from Missouri [Mr. STONE]. I note with considerable satisfaction that at last he and the editor of the esteemed Globe-Democrat are in accord upon one subject. I trust that upon many other subjects they may hereafter be found dwelling together in brotherly love and harmony. It has long and faithfully sought to inculcate among those of his party sound doctrines of government, and I hail this as evidence that its labors have not been in vain. The Globe-Democrat article, which has been read to the Senate, is an editorial, if I correctly understood it, which expresses the view of the editor in chief, and if not written by him, has very likely passed under his blue pencil. The editorial means nothing more and says no more than that no change shall be made at this time in the rules that have generally governed nations in their intercourse with each other during a time of war. This is a neutral Nation. The editorial treats of this Nation as a neutral. If I understand correctly, a neutral nation has the right, or rather its citizens, of whom this editorial treats, have the right, to sell any article, either contraband or otherwise, taking the chances of capture before it is delivered. That has been the rule for many years. Beginning some centuries ago, before the implements of destruction had been so highly elaborated and made so comprehensive, the rule was laid down for the government of nations not at war with each other that their subjects or citizens might, at their own risk, deal with articles of merchandise which the Government itself might not directly sell or deliver to a belligerent power.

This has been the rule for many hundreds of years, dating probably from the first collection of the rules in an early work on that subject for the guidance of those concerned. This editorial means that no change shall now be made in this rule. If by the action of the legislative department of this Government a change should be made at this time in the existing rule on that subject, it would, to a greater or less degree, dependent upon the physical power to capture on the high seas, interfere with the rights of citizens of belligerent nations as heretofore defined and observed by the various neutral nations of the world.

Any power that can control the seas will, to a very large degree, keep supplies, either warlike or neutral, contraband or otherwise, from being delivered to Germany or to any of her allies. England is recognized as the principal naval power, with the largest merchant-going ships, the most extensively distributed in the world. Because of her naval power, she has the advantage, and exercises it. She has to a very large degree deprived Germany and Austria-Hungary of their ability to receive supplies. This may not affect her so much—and probably this is what the editorial in part considers—on the subject of implements of war, what are universally recognized under the ancient as well as the modern rules of international law as contraband, but it is more particularly on articles of food, the meats, the breadstuffs, the articles that eventually are more important to one or more of the warring nations than the supplies of explosives, guns, and such articles as are universally recognized as being warlike implements. This editorial, if I heard it aright, commends the stand of the administration on that subject.

The senior Senator from Nebraska [Mr. HITCHCOCK] has pending a resolution which, if passed on favorably by this body and concurred in by the other House, would change the ancient rule. It would give to some of the warring powers, at least, advantages they do not now possess. It might, if the rule were changed, be an unneutral act, for in necessary effect, whatever the motive might be, it would interfere with some of the advantages some of the belligerent nations now have.

Some criticism has been made of the attitude of this administration toward the allies. For myself, I could cheerfully concur in the sentiments expressed by this editorial. I myself, so far as I might have opportunity to pass upon that question by vote or otherwise, would be in accord with the conduct of the administration on that subject at this time. If any change be made, it ought to come from the Congress rather than the President.

I think I am in receipt of some 5,000 or 6,000 letters from those who originally were of a certain country in Europe or were born in this country of parents who were of that country. They protest universally, and in the strongest terms, against the conduct of the citizens of this country in furnishing the allies with warlike supplies. They ask that the rule be changed so that this country shall no longer furnish those supplies. This desire, naturally, has its origin in the inability of one or more of the belligerent powers to control the sea, to open up ports that are virtually under blockade, to have access to the supplies of meats and breadstuffs of which they probably are now in sore need. These letters I have not answered, and I wish to place in the CONGRESSIONAL RECORD at this time an explanation of my failure to respond to them. I have not a stenographic force adequate to meet this influx of correspondence without neglecting other urgent matters that come to my office.

These great numbers of protests that have come from my German constituents and from those of German extraction are prompted by their love for their native country. With that sentiment I have no controversy; that spirit I can understand; and if I were one of them I know how I would feel. Here, however, we are all Americans first. Our first duty, therefore, is to act for our country, whether we be of native or alien birth. I am glad to have this correspondence, and do not at this time undertake to say what would be the proper course upon the resolution of the senior Senator from Nebraska. That can be reached in due time and disposed of. I only say that the editorial referred to in substance commends the stand of the administration on this principle. It leaves the rights of the warring nations of the Old World where they now are, as fixed by the rules of international law, which have been operative

for many years. No change being made, this country does observe, both in letter and in spirit, an actual neutrality. If, however, we change the rule, it might be taken as an unkindly act, as an intimation of the sentiments of this country or of her private sympathies in the outcome of the pending struggle. In any event, however, Congress, and not the President, is the authority to change the established rule.

The printing presses seem to have their due part in molding public opinion upon the pending shipping bill. The freedom of the press is illustrated by the extreme liberality with which they criticize those who are either for or against the bill. In no other country in the world is there a press that could criticize the Chief Magistrate of the country with as little fear of unpleasant results as here. The two editorials read this morning illustrate that, especially the one read from the Philadelphia Inquirer. The criticism may or may not be just. Both of the editorials come from Republican papers. That of the Globe-Democrat is limited exclusively to approving the course of the administration in connection with the one principle I have noticed. That of the other proceeds on the general idea of the folly of the abrupt departure of this country's Government as it enters upon the territory covered by the pending bill.

I have listened with considerable pleasure to the Senator from Montana [Mr. WALSH] on the aspects of the governing principles that he discussed. So far as he seeks to convey to the Senate an answer to the principles that seem, so far as they have any authority, to rest upon the affirmative acts of nations, as stated by the senior Senator from New York [Mr. ROOT], I do not regard the position of the latter as seriously shaken by the argument presented this morning. We have passed the stage of philosophic theorizing; we are no longer following the abstraction of mere legal principles that are to lose us in a labyrinth where we will end in no practical results.

I have noticed, so far as the nations at war have acted on this question, that action was taken prior to engaging in hostilities, which broke out in August, 1914. Of what avail is the London declaration? How binding is the Second Hague Conference? What does the First Hague Conference mean? All the nations which to-day are grappling each other's throats signed the First Hague Convention.

In 1899 there expired a humane section in a convention signed by all of the nations now at war. It provided that explosives destructive to human kind should not be dropped from air craft. When that convention was signed that was recognized as a humane principle. It was in accord with the principle which civilized nations have by common consent observed for many years, that an unfortified town should not be bombarded without notice, to the end that noncombatants might be removed, that the aged, the sick, the women, and the children might be taken beyond the zone of fire, in order that they might be saved from the destruction that might fall upon the strong and the able-bodied. Even this humane provision has been ignored, not by one belligerent power, but by many of them. The article that bound the nations signing it from dropping explosives upon a helpless population expired in 1909, but the principle contained in that article is as humane without a convention, without a treaty between nations, without a scrap of paper to bind any nation in its warfare with others, as it was before it expired.

General Order No. 100, issued during the Civil War, was a very great advance in humanizing war. It was written by Francis Lieber under the direction of Abraham Lincoln. General Order No. 100 marked a distinct advance in civilized warfare and in preserving the rights of a conquered enemy. It prohibited the poisoning of water supplies, the poisoning of food, the use of poisoned missiles, bullets, or anything intended for the destruction of the enemy. It provided against pitfalls, arms, projectiles, or other means causing useless injury, and against cruel and unusual methods of destroying an enemy. It humanized warfare and was in line many, many years ago with the later humane provisions which have characterized the negotiations and the conventions signed between nations both in the New and the Old World.

At this time, however, it is well to remember that all the treaties in about half the world seem practically at an end. The neutrality of Belgium was invaded, and whether in earnest or in jest, the answer was made, the treaty guaranteeing that neutrality was a "scrap of paper." Every treaty that binds this country, every moral sense that has been gathered up by this Nation in treaties with foreign countries, any conventions to which she has become a signatory party, do no more than put upon paper the gathered wisdom of the international morality of that age.

So, if treaties have become mere scraps of paper, if territorial rights are forgotten, if the neutrality of a sovereign country can be invaded, how may we expect that an unsigned Declaration of London, that Hague conferences, either the first or the second, that any negotiation that has been made, will be binding upon any of the countries of the Old World now at war? How can we hope, by any illusory inferences drawn from the London declaration, to escape from the natural results of embarking, through buying ships from any nation now at war, this country into the ocean carriage business? As it is, by the settled law for many years, the subjects or citizens of this country, either individual or corporate, may at their own risk handle articles contraband or otherwise. If the latter are captured, they are condemned by the captor nation in a prize court. Both vessel and cargo are condemned as a prize of war. While it has the semblance of a judicial proceeding, it nevertheless is in effect an *ex parte* one. It is tried in the admiralty courts of the sovereignty that makes the capture. It must be, indeed, a very strong case made that would release a proposed prize of war when brought into port and subjected to the jurisdiction of that court.

So, if we depend here simply upon our rights of purchase, such as may be gathered from somewhat fleeting authority, we probably will face graver diplomatic troubles than we have had up to this time, either with Europe or with the neighboring Republic across the Rio Grande.

I do not see the difference between ships owned, under this bill, by a corporation to be created under the laws of the District of Columbia, and those owned directly by the Government. Things are measured by their results, not by mere forms; by the substance of the transaction, and not by the outward shell. It is admitted here that the Government authorizes the creation of this corporation and its control by the shipping board provided in the bill for the purpose of avoiding these complications. I wish to read into the RECORD the evidence that, in any prize court, in any admiralty court of the United States, in any admiralty court of the Kingdom of Great Britain, would be offered and admitted as to our motives.

In the condition in which about half the world now is, it is no time to contemplate mere idle forms. It is not a time when the nations at war would be bound by mere technicalities. They would be no more than cobwebs in the way in the settlement of whose ships these would be. In order to remove any possible question as to the motive of the Government, the Secretary of the Treasury, before the Committee on the Merchant Marine and Fisheries in the House on the 1st day of September, 1914, himself furnished conclusive evidence of that governmental motive. He says, in response to a question:

> The idea in having the Government take the controlling interest in the company instead of operating these ships directly as a Government operation is, of course, to avoid any possible complication resulting from the Government itself going into the shipping business. I do not think it is worth while for me to expatiate upon that phase of the question. Mr. Lansing, counselor of the State Department, was before the Naval Affairs Committee the other day, and he gave a very clear exposition of the laws of neutrality and the rights and responsibilities of a government owning and operating ships.

I shall refer to Mr. Lansing's testimony and his opinions upon the controverted questions at some later time. Here, however, is furnished the evidence for any offended nation to offer against us. The corporation created with a capital stock of $10,000,000 is to have 51 per cent of it owned by the United States. The other 49 per cent of the shares is to be offered to the investing public. If, from private sources, those shares are not subscribed, the United States, through the shipping board, shall take all the remaining unsubscribed portions of the 49 per cent. For reasons that will appear in the progress of this discussion, I believe the Government, by the end of the operation, and before a single ship shall have been either built, purchased, or launched by this corporation, will find itself the holder of 100 per cent of the shares. Even if this were not the case, it is universally recognized that a majority of the shares of capital stock controls. It is the express declaration of this bill that the Government shall at all times control through that 51 per cent. Whether the $10,000,000 worth of the original stock shall remain, whether $10,000,000 worth additional shall be had, or whether $30,000,000 worth additional shall be had, in any event, whatever it may be, whether by the approval of the President or by subsequent action of Congress, 51 per cent of the shares of this corporation shall be held by the United States.

This makes ownership. The corporation is at best but a subterfuge. What are mere articles of incorporation in facing a question of this kind? When solemn treaties signed by nations, when conventions ratified in due form by many powerful nations now at war, have been set aside and broken, of what avail will be the paltry paper of the mere articles of incorporation? What will they signify? How much of a defense is it to the United States Government to hold up the articles of incorporation under the laws of the District of Columbia, with a

seal and a ribbon or two and a few words, and invoke that as a conclusive answer in the international law of the world against this country's ownership of the ships that are proposed to be had under this bill?

The nations that are concerned in this matter will look quite through any formalities. Things will be measured by their necessary effect. The substance of things will be weighed. No mere formalities will keep from us the responsibility of our acts.

When I think of the initial $10,000,000, I involuntarily recur to the price of an average freight boat. In such meager evidence as is presented, it appears that an average boat will cost all the way from $600,000 to a million dollars. We would have from 10 to 15 boats held under this precarious title, with this uncertain ownership, held in such a way that it is hoped by the authors and friends of this bill that it would absolve the Government from any responsibility.

I wish to note here a difference between a Government boat and a boat owned and sailed by a private owner. A Government vessel carries the flag. It flies the Navy pennant. It is the property of the United States. It is a principle of our law, it is a principle of the law of the United Kingdom of Great Britain, and I believe of every one of the warring nations of the Old World, that a vessel owned by and carrying the flag of the United States is the territory of this country, wherever it is found. It is similar to a territorial boundary line. Whenever it shall have passed beyond the 3-mile limit and is on the high seas or in any of the ports of the world it is the floating territory of the United States. I assume here for these purposes that the boats owned by this corporation, so controlled and so sailed, are the boats of the United States. The mere formalities that I have briefly sketched will not operate in the prize courts of foreign nations to deprive the captor nation of its prize or to divest the United States from the ownership of a captured vessel owned under the provisions of this bill.

As it is, under the law of nations that has been in force since the time of Grotius, the citizens of this country can engage in the transportation and sale of articles not contraband. This is a neutral nation. The private ships owned and sailed by our citizens are neutral. If, however, they take on merchandise of a contraband character, they carry the risk. The shipowner takes the chances of capture and confiscation by other nations that are at war. If this is done, it does not in any way involve, under the rules stated, this Government. It is recognized that contraband or conditional contraband, when taken, has been transported and the business engaged in with a view to the profits, the margin of which would compensate for the risk incurred. So when the private citizen takes that chance for the enormous profits involved, if he loses it is his loss. The Government is not concerned in it, and by the rules that have been in force for many years it in nowise involves the neutrality of the United States. A sovereign may not, however, engage in such commerce.

So we are safe as long as we remain on our present ground. I am assuming for my purposes at present, without further analysis of this bill, that the nations concerned would regard it as a mere subterfuge, and that the United States, having 51 per cent of the shares of the capital stock, would be regarded as the real owner of the vessel.

I think it is proper to consider the effect this would have in a prize court. If I am correct in thinking that this is a vessel of the United States, if it be loaded with contraband merchandise, with a destination, say, to any one of the nations now at war, and an adverse power should seize or capture one of the boats operated under this bill, what is the status of it? I think it is well enough, before we proceed any further, to work out what the condition or status of these water craft probably would be in a prize court. As a private citizen, it is the loss of the individual or the corporation that is operating it. As a Government boat, or as a boat owned by a corporation that is in turn controlled by the Government by a 51 per cent or more ownership of the shares of stock, it seems to me the status of the vessel is entirely changed.

First, when a captor nation puts its marines on its deck, when it stops the vessel and changes its course from its destination to one of the ports of the captor nation, what is that? What is the necessary effect of it? The boat owned by the United States under this corporation proposed to be created is United States territory. It is an invasion of that territory. It is as much an invasion of the territory of the United States as if a foreign power were to land a military force upon our shores or bombard one of our coast cities.

The War of 1812 was caused by the alleged right of search and seizure asserted by Great Britain. This was universally supposed to be an invasion of the sovereign right of the United States. For that we went to war. One of these boats loaded with merchandise—suppose it to be conditional contraband—would involve us in a controversy. Conditional contraband is a continually fluctuating line. Nobody in the Senate Chamber this afternoon can define conditional contraband for to-morrow in the theater of war. Nobody can say what conditional contraband will be next week.

Let me explain that. In view of the action of the authority in Germany taken on the 26th day of January, 1915, the belligerent nations comprised as the allies in our description might properly, upon this proclamation, have advanced the definition of conditional contraband in such a way as to destroy the greater part of our export trade. Contraband now covers shrapnel, shells, guns of whatever caliber, saddles, harness, cavalry equipment, every form of saddles and saddlery; it embraces the vehicles of transportation, motor trucks, bobsleds to be used where the snow makes that the proper form of transportation; and many million dollars' worth of actual contraband of war have been manufactured by our citizens and shipped abroad subject to the risk of capture by a nation concerned. As to these admittedly contraband articles, we could have no controversy with another country at this time if they were taken from a private citizen's ship. If, however, they were taken from a boat owned under the provisions of this bill, it immediately raises another question. If the captor nation looked through the transaction and put aside the mere articles of incorporation as being of no consequence, then, instead of settling in a prize court the question of the condemnation of the vessel carrying the contraband or conditional contraband, it would be settled between the nation making the capture and this Government. That provokes an entirely different dispute.

The proclamation of the German authority goes upon the idea that the Government takes possession of all the supplies of the kind designated. This appears from the following news item:

Assumption by the German Government of control over all the food supplies of the Empire, as announced from Berlin yesterday, is expected by officials here to result in a refusal by the British to permit any vessels to carry foodstuffs to German ports. It is believed the British will take advantage of this action by the Imperial Government to claim that under the conditions all foodstuffs consigned to Germany must be regarded as destined to the Government of Germany and therefore of hostile destination.

It is thought probable this ruling will be invoked in the case of the American steamship *Wilhelmina*, now on the seas en route to Hamburg, Germany, with a cargo of American foodstuffs. The *Wilhelmina* sailed last week from New York, and it was announced by those interested in the venture that they were determined to demonstrate, if possible, the feasibility of sending foodstuffs direct to Germany.

In its note of protest to the British Government of last month regarding interference with American shipments of foodstuffs consigned to neutral countries the United States Government held that the British had no right to hold up such cargoes unless they possessed evidence that such goods were actually designed for the armed forces of an enemy country. To this view the British in their reply assented, thus placing them in the position of being compelled to produce such evidence with regard to seizure of such cargoes. The action of the German Government, however, relieves the British Government of this necessity.

In other words, before this edict of the German Government the burden of proof was upon Great Britain or on the captor nation to prove the conditions that would justify the seizure of the ship and cargo. This edict, however, has shifted the burden of proof, and has put upon us or upon the citizens of our country the burden of proof of proving the contrary, so as to release the vessel from the condemnation in a prize court.

A cablegram from Berlin, dated January 26, 1915, says:

BERLIN, *January 26, 1915.*

Regulations for the maintenance of Germany's food supply, adopted by the federal council two weeks ago, went into effect to-day. These regulations provide for the seizure of all stocks of corn, wheat, and flour by February 1. All business transacted in these commodities is forbidden. All municipalities are charged with the duty of setting aside necessary quantities of preserved meats. A price has been fixed for the corn which the Government is taking over.

Commenting upon this, a great many editors have expressed their views. It is not my purpose to unduly burden the RECORD with editorial comment nor to give any particularly significant approval to the editors who are responsible for these utterances. Some of them, however, have already been placed in the RECORD, two this morning, and I will add at least a third, from the Washington Post of January 26. Commenting on this order of the German Government, it says:

GERMANY FACING A SHORTAGE OF FOOD.

More significant than all the fighting along the battle fronts is the action of the German Government in taking over the food supplies of the empire and virtually placing all the people on war rations. Corn, wheat, and flour are to be dispensed hereafter to the people through Government stores. Communities will receive food supplies according to their population. Communies are called upon to conserve their supplies of preserved meat. Cattle and hogs are to be slaughtered for the sake of saving grain. Every effort is to be made, under the iron hand of the Government, to carry the population through to the next harvest. The crops were not up to normal last year, and the stoppage of exports

has brought the country face to face with the greatest of all problems—the warding off of famine.

Thus Great Britain tightens its deadly grip upon its enemy by preventing it from importing food. Cargoes slip through occasionally from the United States and other neutral countries, either directly or indirectly; but the supply thus received is so small as to be insignificant. Speaking largely, Germany must find means to feed itself on its present supplies. If they are inadequate, the British Navy must be beaten off or Germany must sue for peace. The people must eat, war or no war.

The taking over of foodstuffs by the Government will be effective February 1. From that date it will be unlawful for private parties to buy or sell corn, wheat, or flour. Inevitably this order will lead Great Britain to declare the articles in question to be absolute contraband of war, since they will not be destined to noncombatants, but to an enemy Government. Vessels from this country laden with foodstuffs are sure to be seized, and it is expected that the steamer *Wilhelmina*, which left New York a few days ago for Rotterdam with foodstuffs destined for Germany, will be held up and diverted to England.

The German Government has given assurances that cargoes of foodstuffs consigned to noncombatants will not be seized for military purposes, but this will have no effect upon the British policy of shutting off supplies that might be useful to the German Army or Navy.

Thus the food question assumes an importance exceeding that of the movements of armies. Germany's isolation and her inability up to this time to produce sufficient foodstuff for her own population are factors operating more powerfully for the success of her enemies than the gathering of new forces in the field.

It is apparent that the bold operations of the German Navy are not mere acts of bravado intended to frighten England. They are rather preliminary tests of a forthcoming death grapple between the fleets, which Germany must seek sooner or later, in a desperate effort to provide food for the people of the empire.

The difficulty is that the march of events is much more rapid than the pen of the bill writers of the Chief Magistrate of this Republic. While we lag on amendments, while we discuss in this Senate Chamber the question of contraband and conditional contraband and the effect on the ownership of vessels to be acquired under the corporation proposed in this bill, while we seek to shield this Government behind mere paper articles of incorporation, the warring nations in the Old World are with measured tread of their armies giving the answer to our puny and futile arguments in this Chamber. By their own operation, by the imperial edicts of Germany, by the blockade of her ports by Great Britain, and by every battle fought in the trenches between the warring nations they are marching faster than any legislation we can enact.

No definitions framed by any convention, no principle found in any treaty, nothing that we may declare by resolution will stay for a moment the iron hand of necessity. All conventions and treaties, all international law, all mere resolutions or statutes will be swept away in the whirlwind of war. We may talk here, we may pursue our alluring theories, we will talk in vain of arbitration and peace. It reminds me of the experience of my friends from Chicago last August and September. They were the most sincere of the many sincere advocates of universal peace. Pursuant to and guided by their profound convictions on that subject they attended an international peace conference in Europe. Unfortunately the date fell upon a time when hostilities had already seized the area in the grasp of military forces in the field. The last I knew of my distinguished friends they were trying to get a ship for home. They were seeking for enough gold to buy a passage ticket. Their pockets were filled with peace resolutions, but they could not get even steerage passage back to the United States. That is how much theories are worth, how much resolutions are worth, how much lawyers' opinions are worth when the sword is the only arbiter and military force the only law.

If I were to describe the Secretary of the Treasury and the Secretary of Commerce I would say that they were two types of the most optimistic men I ever knew in public life. One can see prosperity every place; and in the language of our Chief Magistrate we are literally bursting our jackets with plenty, and they are the advance agents of that plenty. When the Secretary of the Treasury was giving his testimony before the committee he dwelt greatly upon what diplomacy could do to adjust the character of these ships. Our diplomat, I presume, charged with this pleasant duty would arm himself for the fray something after this fashion: He would put in his pocket the articles of incorporation of this going concern organized under the laws of the District of Columbia, with divers ribbons and seals thereto attached. He would take the name of the shipyard if built here, or the ships themselves if bought already built, the bill of sale, and other evidences of the private character of the ship. He would present them to the Admiralty authority or the naval authority of Great Britain, for instance, and seek by some definite declaration procured from Great Britain's official to fix the status of these ships. It is always well to have advice before you get into trouble. So this man, taking time by the forelock, would seek to adjust our difficulties before they occurred. Taking out his evidences of the private ownership he would present them to the sturdy Briton who would pass upon this question for the Empire. I fancy I can see the somewhat cold-blooded and indifferent Englishman who refuses to be caught in the cobwebs of technicality. Looking over his eyeglasses he would peer into the articles of incorporation. They would have some kind of a name. It would not make any difference what we would call it, whether we gave it a private name or a public one, because names are of no consequence. A rose by any other name would smell just as sweet to that ambassador or naval authority. So he looks at the articles of incorporation. The first thing he would ask is who controls the boat? Who has the stock? Who has the voting power? Has not every lawyer in this country in the last 20 years been through litigation for private corporations? This is declared to be a private corporation. If it is a private corporation then let us test it by the rules which apply to private corporations.

Minority stockholders have rights. I do not to-day intend to enter upon an examination of that territory. That will properly be taken up at some later occasion; but the majority of the shares control. The majority in this instance is the shipping board. They are the visible representatives of this Government. They own the shares. They sit at every stockholders' meeting. They name the directors. The directors buy, build, lease, charter. They spend the initial $10,000,000. They are the ones who fix rates, who mark out the lines on the ocean from port to port. They are the ones who control, and they in turn are named by the visible representatives of the United States. So I think I can see when we undertake to fix the status of this boat that our friends across the sea might be somewhat skeptical about the articles of incorporation and the changing of this boat into merely private ownership by the processes proposed.

The next thing after the articles of incorporation have been examined would be the source from which these boats came. Naturally that would involve the question of whose money pays for them. It is like a bill of discovery; you will get at the truth after a while. This being a public matter the truth will be known from the beginning without any especial investigation. When it is found that the Government has at least 51 per cent of the shares, when it names the board of directors at the stockholders' meeting, when it controls the board of directors, when the money that bought a boat or built or chartered or leased a boat comes from the Government Treasury, when it is Government money, Government owned, Government controlled, then I think I can see a somewhat sarcastic smile steal over the face of my diplomatic friend abroad when we seek to convince him that a vessel so owned and operated is a mere private ownership. If it be loaded with the articles intended to relieve our supposed congested market in view of the conditions prevailing under the imperial decree of the German Government, I fail to see that any relief will be had. It is a Government ship, and if in the course of war a blockade be established and food products declared contraband, our markets are closed or we face grave troubles abroad.

The Secretary of the Treasury and the President, in his message, both say that we must reach foreign markets by increasing our transportation facilities on the ocean through the agency of this bill. The more we reach foreign markets the less breadstuffs we have here. So passing for the present from the other feature of the bill already considered I take up another one. As we send meat and breadstuffs abroad we decrease the supply here. The necessary effect of that decrease of supply is to increase the price. So the more we ship out of this country the higher the already high cost of living.

There is a peculiar condition prevailing in official circles at this time, and has been for some months. I do not know but I ought to be charitable and describe it as a state of mind. It is a state of mind, however, that is somewhat inconsistent at different intervals. It acts one way to-day and another way to-morrow.

I noticed not long ago that an order went out to the United States attorney for the district in which Chicago is situated to investigate the grain market down at the foot of La Salle Street. The Government investigators are doing so. What are they investigating for? What offense have the gentlemen who are on the market committed? Why are they to be indicted? Because the price of wheat has gone up. They seem oblivious to the fact that wheat is an article of merchandise, that its price rises and falls on the market in obedience to universal laws that are beyond the reach of any political party or any administration.

To explain why prices fluctuate and why the general tendency is upward I have been watching the market for some weeks. I take several quotations on different days. A market is a peculiar thing. A market is made up of wind and rain, and sun and frost, and soil, and sickness and health, world-

wide conditions, crops and consumption, and surplus, and exports, with a thousand things aside from peace and war. When into the multitudinous things that enter into the market price of merchandise in this country there is suddenly thrown hostility between nations that cover half the globe, that run from the Cape of Good Hope to the Baltic Sea and from Tokyo to Quebec, that carry in the grasp of the warring nations the markets that most vitally affect prices in this country, we can understand why there will be some fluctuation, why some increase.

This market report is written by as good a market reporter as there is in the western country, and it is gathered on La Salle Street from actual conditions, not only in the pit or on the board of trade but from the commission men, and from the information gathered by scores of commission men and grain handlers throughout the great northwest area. He starts out as follows:

Housewives will soon have to pay $1 a bag for flour they formerly purchased at 70 cents. The 5-cent loaf of bread may disappear from bakeshops, according to predictions of millers.

The prophecy was based on wheat and flour quotations. May wheat jumped 2⅛ cents and for a while sold on the board of trade for 1.43⅜ a bushel. The flour quotation was $7.20 a barrel. Both are record prices.

And this is on January 15, 1915, in Chicago:

CLYNE PUSHES INQUIRY.

Meanwhile United States Attorney Clyne announced that he would "invite" several of the board speculators to discuss the situation. The Government's general food inquiry now centers almost entirely on the imminent rise in the cost of bread.

It is a very grave question, Mr. President, when the price of bread goes up. If any gentleman here has attended the morning bread line on the west side or down on the south side in the city of Chicago, he can fully appreciate what a rise in the price of a bun means.

The last time I was in the city of Chicago for such purposes I went down on the south side about daylight to see just how many men were fed at a given point. Down at Thirty-third and Michigan Boulevard 1,700 men came in and got their breakfast. They were not mere idlers. They were not men who are chronically out of a job, because the job is a little ways ahead of them all the time. Some of them were freight handlers from the yards not far distant; some were lake sailors; some were trainmen whose trains had been annulled; some were shopmen, repairs in the shops having fallen off; some were on the construction pay roll, and but little construction work is done; some were from the pay rolls of the steel mills, whose only orders now beyond the ordinary are for war supplies, a most precarious source for a pay roll; and some were from woolen and cotton factories. From various enterprises in that city and others in the country this great army of unemployed came. So the price of bread means something, because every time the price of bread goes up the charity fund is depleted by that much.

I have been somewhat intimately attached for four years or more of my life to the charity service in that State. I think charity is sometimes abused, but generally it goes to the right place. It is an index of conditions. Instead of giving charity I would rather any time do something to give an able-bodied man a chance to earn his living without having recourse to charity. But that is not the question now.

To resume this quotation:

Federal officials in all parts of the country are checking closely on wheat exports. They estimate that 200,000,000 bushels have been purchased by Europe within the last six months. This is the largest movement on record.

And still because the price of wheat is going up the Government wants to indict somebody!

The United States requires for consumption 618,000,000 bushels. The supply for the season last July was 897,000,000 bushels.

The gravity of the situation was shown in reports from many markets. In Duluth, 1,750,000 bushels of spring wheat were sold for export during the last 48 hours. It was estimated that foreigners had purchased 6,000,000 bushels at all markets within the last few days.

Do you think that the Duluth grain operators and those handling the export trade for the northern spring wheat, those in Chicago handling either the grain or the flour trade, would contract for foreign delivery when there was no capacity in the boats? The best answer in the world is that on January 15, 1915, in the actual markets of the country there was carrying capacity in the over-sea trade sufficient to take the breadstuffs named in this market report.

ITALY LARGE BUYER.

A Chicago miller yesterday sold 40,000 barrels of flour, part of which was for export. And at Duluth 40,000 bushels of durum wheat were sold to Italian manufacturers of macaroni. From all markets came reports that foreign buyers of wheat and flour were purchasing all they could get, some offering advances on market quotations.

A Chicago grain dealer estimated that 25 per cent of the 1914 crop is still in the hands of the farmers. They are "hanging on" for $2 a a bushel. Another rise toward that figure and the smaller bakers assert that they will have to get more money for their bread or quit making it.

Where will our bread line go to with wheat at $2 a bushel? If anybody fancies the farmer needs a conservator or is impressed with the idea he is not looking out for himself and is not abundantly competent to do so, dismiss the thought at once. You are squandering your sympathy on the desert air. The farmer in Illinois is just about as competent to take care of himself to-day as anybody in the wide world. He stood the foot-and-mouth disease. More than a million of the two and a half million dollars of appropriation signed day before yesterday by the President will go into that State alone. Five million dollars' worth of cattle are underground and, save for the pittance paid one-half by the Government and one-half by the State, there is a total loss on all the remainder.

Still the farmer is taking care of himself. He will pay his note at the bank where he invested five or ten thousand dollars in live stock preparing them for the January or February market. He will take care of it. He complains, of course. He criticizes sometimes the action of the State and sometimes that of the Government in slaughtering his stock. It may be mistakes have been made. He sees only the result. His cattle are destroyed but his notes are on top of the ground and still at the bank and drawing interest at the usual rate.

So you can to some degree at least sympathize with the farmer in his misfortune. I might go a little further here and say that there has really been just a little offhand advice given by the Government officials to the farmer not to be in any great hurry about selling his wheat; that, to use the phrase of this market report, if he will just hang on to it, he will get a good price.

That leads me now on this subject to quote from the Chief Magistrate's address at Indianapolis on January 8, 1915. That was on a most celebrated occasion; it was on Jackson Day, a time that makes every Democratic heart glad, and it should, because Jackson was not only a great Democrat, but he was a great President. I have been so uncharitable at times as to wish that we had Jackson on earth now, for two reasons: One is, he was not afraid to fight; and the other is, he believed in a protective tariff. Either of them is a good quality in peace or in war. The President said:

Do you know, gentlemen, that the ocean freight rates have gone up in some instances to ten times their ordinary figure, and that the farmers of the United States—those who raise grain and those who raise cotton, these things that are absolutely necessary to the world as well as to ourselves—can not get any profit out of the great prices that they are willing to pay for these things on the other side of the sea because the whole profit is eaten up by the extortionate charges for ocean carriage?

That sounded kind of odd to me. I will tell you why. I have been corresponding with some of my constituents who live out on the prairie in the south end of the State of Illinois, the wheat belt, to ascertain whether the prices named in the market reports here were Chicago prices and whether they were selling wheat at 67 cents a bushel, as they did last August. That was a time that I was pestering those gentlemen a good deal, and was very solicitous about the price of wheat and of the welfare of themselves and of their families. So I have every reason to remember the conditions of the market at that time. We who have ambitions to stay in this body all get solicitous on these things every six years.

It costs from 8 to 11 cents a bushel to transport wheat from the farmers' bin and to put in on the track in Chicago. When the President said on the 8th of January that the farmer could not get any of the great prices on things because all the profits were eaten up by the extortionate carriage charges, it would have been well for him to have gone among the grain raising constitutents of some of the Senators. Wheat was quoted on the 15th of January, 1915, at $1.43 and the farmers are getting in that same country $1.33 and $1.34 a bushel for wheat. If it was $1.34, then it was double what it was last August, when the price was 67 cents. Wheat, therefore, to the farmer represents $1.34 for every bushel—a hundred per cent advance compared with the price of last August. Still the President says the farmer is getting no benefit of it. The farmer is not letting go of his wheat now to any very alarming extent, unless he must have money to pay up his bills for the slaughter of cattle. The Government has been reasonably expeditious; very possibly it will help him out; and he may not sell wheat for some time yet. A price of $2 per bushel may be coming, because I notice the rising price this morning.

Before going further, so as not to be too excursive—I want to keep these points together—I wish to say that the price of wheat in Chicago yesterday was as follows: No. 2 red, $1.46¼ to $1.48⅛; July wheat, $1.31¼. At New York No. 2 wheat was

from $1.57½ to $1.58, cost, insurance, and freight. No. 1 Duluth northern wheat, 31.51; Manitoba wheat, $1.55 c. i. f.

If the freight be subtracted between the points of production and of destination in New York City or Chicago, you will get the price to the producer. I respectfully submit that the President is in error when he insists that the grain grower of the West and the Northwest needs a Government shipping bill in order to get any of the rises of the market into his pocket.

The singular thing is that because wheat is going up the Government insists on indicting somebody. Some ferocious and predatory speculator, who is selling July futures on a margin, has been gambling, or somebody is going to run a corner and the Government is to prosecute him.

Here is another market report to explain why the farmer is getting 100 per cent advance, and why nobody has committed a crime:

May wheat went to a new high level yesterday, the day's gain being 2⅛ cents. July finished easy and the same as Wednesday. Corn acted heavy and closed unchanged to ⅛ cent higher. Oats gained ¼ to ⅜ cent.

An easy tone prevailed in provisions and the close was at net losses of 10 to 12½ cents on pork and lard and 5 to 15 cents on short ribs.

AFTER SPRING WHEAT.

Urgent buying of domestic spring wheat by the United Kingdom and large sales of Manitobas, combined with persistent buying of May by cash, export and commission houses, lifted values into new ground on the crop. At no time was there any great selling pressure. May at the high point showed 2⅝ cents over Wednesday's close at $1.43⅜ and 9⅞ cents over Monday's low and finished within ⅛ cent of the top, with a net gain of 2⅛ cents. July was sold by houses with southwestern and northwestern connections and by local bears and finished unchanged.

Export sales in all positions exceeded 1,500,000 bushels. Millers were good buyers of spring and winters, but found offerings of the latter scarce, although the prices paid were the highest on the crop.

Here is the world-wide reach of the market that I want to insert at this point, to show that it is not necessary to rob anybody or to indict anybody in order to show that justice is done, nor is it necessary to enact a shipping bill of this kind in order to give transportation to afford better prices to the producer.

HEAVY RAINS IN ARGENTINA.

Argentine news was bullish, heavy rains and a cyclone being reported, which promises to delay the movement. Buenos Aires is up 3⅝ cents in three days, while Rosario opened 1⅛ to 2 cents higher. In Liverpool spot values advanced 1 to 1⅛ pence.

Outside markets were strong, the southwest gaining 1⅛ to 2⅜ cents, new crop futures showing the least appreciation. The northwest gained 1⅛ to 1⅜ cents, and Winnipeg ⅝ cent. Movement statistics were ignored. Primary points had 1,120,000 bushels and shipped 941,000 bushels. Receipts of 609,000 bushels, compared with 371,000 bushels last year. Export clearances were 878,000 bushels, all domestic, compared with 658,000 bushels last year, which included considerable Manitobas.

I have read this to show the world-wide character of every market which is a primary market for the collection and distribution of grain for domestic and foreign purposes. Now I wish to read from an article by Henry M. Hyde on the grain conditions. He says:

If the ordinary business man was asked to quote prices on 500,000 bushels of durum wheat "c. i. f." Genoa, Italy, he might be excused for appearing somewhat puzzled. For the matter of that, when an order something like that was filled on the Chicago Board of Trade the other day it made even the experts scratch their heads.

"C. i. f.," when translated into English, means commission, insurance, and freight—

I think he is a little in error there. It does not mean "commission" alone, but it means cost, insurance, and freight—

and to quote a price "c. i. f." Genoa is to name a figure which will cover the cost, the 1 cent a bushel commission on cash wheat sales, the insurance, and the freight charges for transporting the wheat from a Chicago warehouse to the seaport and thence across the ocean to Italy. In the export trade it is used as is "f. o. b."—free on board cars—by manufacturers and jobbers in domestic trade.

HIGH PRICE IS PAID.

The fact that $2.07 a bushel was paid for this durum wheat—durum wheat being an especially hard variety, fit to be used in the manufacture of Italian spaghetti—did not make the contract any easier to fill, since the price had to cover all the risk of moving the stuff across the Atlantic, which is more or less filled with the battle cruisers of the warring powers ready to fire a shot across the bows of anything that looks suspicious.

If bread costs 6 cents a loaf in Chicago, with wheat at $1.40 a bushel, what would be the price in Italy, with wheat delivered at the docks in Genoa at $2.07 a bushel?

FEEDING EUROPE BIG PROBLEM.

Taken on the whole, this matter of feeding all Europe, which is the principal business of the Chicago Board of Trade at the present, is complicated and more or less unpleasant.

With the Governments of Great Britain, France, Italy, and other European powers bidding against each other, as they are at the present, board of trade people feel that they should not be blamed for the high price of wheat and other cereals. They point to the enormously increased exports of wheat since the war began as compared with the same period last year, and ask if that is not sufficient explanation of the increased price.

6,000,000 BUSHELS WEEKLY EXPORT GAIN.

Last week, for instance, there were exported from the seaports on both coasts of the United States a total of 8,000,000 bushels of wheat. During the same week one year ago the total exports were only 2,000,000 bushels. The demand from abroad has multiplied by four. Why should not the price be expected to jump?

Day after day the amount of wheat sold for export is more than double that of the same day last year. On Tuesday of this week the total export sales were 917,000 bushels. The same day in 1914 they were only 407,000.

So far as speculation is concerned authorities say the tremendous rise in prices and the great fluctuations have made the gamblers rather timid. Soon after the war broke out commission houses began to insist that their customers who dealt in "futures" should put up margins of from 10 to 20 cents a bushel. That was in itself enough to discourage speculation. People who have been accustomed to "scalp" a trade for a sixteenth or, at best, an eighth of a cent change over night have been afraid to take a chance. They were asked to put up 15 cents a bushel margin instead of 3 or 5 cents.

HARD ON WEAK TRADERS.

Last week, Thursday, for instance, wheat sold at $1.41⅜ a bushel. On Saturday it was down to $1.33½—drop enough to wipe out any but strongly intrenched financiers.

Tuesday wheat closed at $1.38⅛. Yesterday it touched $1.41, and yet an even 1,000,000 bushels of cash wheat was sold for export.

Board of trade people insist that such sales on a rising market are proof that nothing but the law of supply and demand is responsible for the rising prices.

And yet the board of trade is proud of the fact that in the world-wide convulsion of commerce caused by the war it is almost the only great trading exchange which has remained open for business.

HAS WORLD DISTINCTION.

Stock exchanges all over the world shut up tight with the firing of the first gun. Except to an extremely limited extent they are still closed. The English and continental cereal and produce exchanges are still closed as far as dealing in futures is concerned.

The Chicago Board of Trade has been open daily as usual. And it has been remarked that a considerable number of men formerly dealers on the New York Stock Exchange have since the war began removed to Chicago and are now regularly dealing on the board.

If they confine their attention only to cash sales of actual wheat they will find plenty to encourage them. In 1913, for instance, the actual wheat received in Chicago totaled 50,000,000 bushels.

In 1914 it was double that amount, the figure being almost 100,000,000 bushels.

I wish to comment on these quotations from the market abroad, particularly on the ability of the shipper to find abundant tonnage to land his grain in a foreign port. Not a bushel of grain is sold on the Chicago Board of Trade, either for spot cash, instant delivery, or for future delivery, if the purchaser does not know at the time the contract is closed that vessels of sufficient carrying capacity can then be had to accommodate the trade; in order words, as in the case of the 500,000 bushels of durum wheat for export to Italy, which was an actual transaction, before it was closed on the board at least the buyer knew that delivery could be made in Italy and that the ocean carriage could be covered. The markets are continually in operation. The board of trade is never closed. Prices have fluctuated since the war to a most remarkable degree, but in all that fluctuation and all the risk attached to ocean carriage as a link in transit from Chicago there has not been yet a single trade reported when there was a lack of carrying capacity on the ocean.

I now come to the delivery of another commodity. In August, when the war broke out in the Old World, the cotton exports stopped instantly; practically it amounted to an embargo. For various reasons that I need not enter into at this time, the demand for export cotton ceased. What was the natural result? The cotton grower was in distress; the cotton brokers, those who handled it in large quantities, found it accumulating in their warehouses; the cotton raiser, who had his bills to meet, needed the money; the cotton broker, who might have been carrying a considerable stock somewhat beyond his own means, had recourse to borrowed money. He, too, was in distress. What was the first thing we heard? Relief for the cotton grower. A bill was even introduced in the Senate designed to provide that relief by the Government. It proposed that the Government issue bonds in a large sum of money, $250,000,000 or $300,000,000—I have forgotten which now, but running up to a considerable sum—and that the money thereby raised should be loaned to those who were affected by the stoppage of the export trade in cotton until relief could be had, either by the cotton finding other outlets or awaiting the issue of the war, when the return of peace and normal conditions would again create a market.

I am strongly tempted, although I will not fall a victim to that temptation to any great degree, to remind my Democratic brethren that for a great many years their platforms have contained planks on the reserved rights of the States. Invariably in such planks there has been a criticism of the increasing tendency to the centralization of power in Washington. To a very considerable degree I sympathize with that plank. I came to mature years after the Civil War, and I believe I am as reasonably free from any prejudices growing out of that unhappy controversy as any member of the party with which I am identified. I believe in a stalwart exercise of the reserved rights of the States. I have given expression at many times to my view. I have been criticized by members of my own

party for doing so. I believe that the State in matters of local self-government, in the things in which it is sovereign and which have not to do with the enumerated or implied or incidental powers of the General Government, ought to exercise its powers, and that not a single one of them ought to be dormant. It ought to exercise those powers in order that the States may be a great training ground of government; not a single reserved power of a State ought to be permitted to suffer from governmental atrophy. If I had my way about it, if I were a benevolent despot, I do not think I would ever create another governmental bureau—not for a quarter of a century at least.

Mr. MARTINE of New Jersey. Mr. President, will the Senator yield for an observation?

The VICE PRESIDENT. Does the Senator from Illinois yield to the Senator from New Jersey?

Mr. MARTINE of New Jersey. I merely desire to call attention to a remarkable fact which is being demonstrated. At this moment there are but one or two Republican Senators present listening to the potent argument of the Senator from Illinois; and the remarkable thing to me is that even the Senator from Utah [Mr. SMOOT], the chief priest and high scribe of the Republican Party, has absented himself while this proposition is being discussed and is serious and sad to-day. Pray what is to become of the Republic; pray what can be hoped for from the Republican Party when its members absent themselves when there is being discussed this great question so vital to the American Republic?

Mr. SHERMAN. I reply to the interrogatory of the Senator from New Jersey by saying that all of the Republicans are already converted and they do not need any of the gospel. [Laughter.]

Mr. MARTINE of New Jersey. That is very clever, but evidences, general in their light, do not bear testimony to the position the Senator takes.

Mr. SHERMAN. They may not sympathize with me, I may say to the Senator from New Jersey, in regard to the particular plank of the Democratic Party to which I have been referring, and, like wise members of a family who desire domestic peace, they waive any differences on this question and remit them to the several States, as they did the tariff in the time of Greeley.

I want to add further in response to the interrogatory of the Senator from New Jersey, Mr. President, that probably the Republicans are now refreshing themselves in anticipation of the strenuous times that are promised for the future when night sessions are likely to ensue and their physical resources will be seriously taxed. So I observe their absence with considerble composure. I feel that they will be better prepared to perform their full duty from time to time, whether it be in the saving of time by useful discussion, such as we have been having for some days, or whether it be the further task of legislation by physical exhaustion.

Mr. President, notwithstanding the planks in Democratic platforms with which, as I have said, I greatly sympathize in every reasonable way, and notwithstanding the opposition to the creation of new bureaus, I find a very great tendency in the case of the present administration to assume and exercise new powers. This is evidenced by the bills intended to provide for a bond issue to relieve the cotton situation; it is indicated in the $35,000,000 bill for the construction of a railway in Alaska; and it is further disclosed in the pending shipping bill, which contemplates an expenditure of some forty, possibly fifty, million dollars as the initial outlay in procuring a line of Government boats. Notwithstanding these views of the majority party in days past, as expressed in their platforms, they have now left that safe ground and have returned to the centralized power proposed in the shipping bill, together with other bills of like kind to which I have referred.

I want to read in connection with the market reports, before leaving entirely that feature of the question, the market in Chicago on January 27, 1915, as seen by the market reporter of the Chicago Tribune.

> The chief feature in the wheat trade yesterday was the sudden development of a big demand for July wheat. It has been a practice for some time past to sell the July whenever the market was weak and there has been a good deal of spreading, buying of May, and selling of July. Yesterday the offerings tightened up and there was a big scramble to cover on the part of the shorts. The May advanced only three-fourths cent, while the July at the close was 4 to 4⅛ cents higher than the previous day.
>
> The back spreading caused the May to lag and there was also less demand reported for the cash wheat. Prices here relatively were about one-half cent lower for the No. 2 grades, although there was no material increase in country offerings, except in the spring wheat country, where some increase was reported in the selling.
>
> INDIAN CROP MODERATE.
>
> The sharp advances in corn and oats helped encourage buying of wheat, and commission houses were good buyers on all the dips. Receipts here were fair and the primary movement continues quite liberal, so that with the slower shipping demand there was some hesitancy among buyers at times. However, the general tone of the market was strong and there was nothing in the news especially to change the bullish views of the majority of traders.
>
> Although the Indian acreage has been reported much larger than a year ago, the crop is estimated at only 343,000,000 bushels, compared to 376,000,000 bushels a year ago. The Italian Government, it is reported, has commandeered a large number of merchant vessels for the purpose of facilitating shipment of grain bought in South America.
>
> RUSSIA CAN NOT EXPORT SURPLUS.
>
> Russia, acording to latest reports, has a surplus stock of 152,000,000 bushels of wheat for export, but at the present time this does not cut much of a figure, as the country is in no position to ship it. War risks on shipments of grain to Europe and elsewhere were said to show a sharp decline, indicating safer ocean conditions.
>
> World's stock showed a decrease of 8,750,000 bushels for the day, compared to a decrease of 3,857,000 bushels a year ago. Clearances were 832,000 bushels of wheat and flour. Primary receipts were heavy at 899,000 bushels, or 282,000 bushels less than a year ago. Receipts of wheat were 195 cars here, with 104 cars inspected yesterday. Northwest receipts were 441 cars, against 257 cars a year ago, and Winnipeg had 176 cars, against 213 cars a year ago. Kansas City stocks decreased 150,000 bushels for one day. Minneapolis stocks decreased 145,000 bushels for three days.

This completes the testimony of the last few days on market conditions, and shows that the Government could have no well-grounded objections to any of the grain operations in the markets in the Northwest. I might remark here, before leaving this point, that I am utterly unable to appreciate the threatened indictment of persons when grain goes up and a proposed bond issue of $300,000,000 when cotton goes down. I am further unable to understand why such vigorous protests go up on an advance in freight rates for steam railways, why such universal objections are made to increases in any of the charges of any of the common carriers of this country. When the price goes up somebody is sought to be brought before the courts or the Interstate Commerce Commission or the various public utility commissions of the several States. When, however, the prices on money go up, there is an investigation and a control of the money supply by the Government in order to bring the prices down, or there is a proposal to seize the business, commandeer it, so to speak, by the Government, and run it as a public enterprise. So it seems that whatever the conditions may be, different remedies are applied where the result ordinarily would be expected to be the same.

A problem the answer to which I can not see in connection with this bill is where the money is to be obtained. I have looked for some time at the Government Treasury reports with a view of ascertaining whether there was any surplus on hand. I have examined with some solicitude the people's cash account to find out how our receipts compare with our expenditures. I have been unable at any time recently to find that there is any surplus remaining from month to month. Immediately after the collection of the individual and corporation taxes there was a surplus in the Treasury. I think this surplus lasted about two months. Ever since that time each succeeding monthly report from the Treasury showed an increasing deficit. Between fifteen and sixteen million dollars is the deficit now existing in the Public Treasury. I think that condition is recognized here in this bill. It is changed by that much from the original draft of the bill, in section 11:

> That for the purpose of carrying out the provisions of this act there is hereby appropriated, out of any money in the Treasury of the United States not otherwise appropriated, the sum of $10,000,000, or, in lieu of such appropriation, the Secretary of the Treasury may sell Panama Canal bonds to the amount of $10,000,000 in addition to those provided for in section 3, and on the same terms, and set apart and use the proceeds thereof for such purposes.

Section 3 is that providing for the $30,000,000 bond issue which is to be used for purchasing or chartering or leasing vessels to this private corporation, which shall return to the United States under section 4 a like sum of its bonds, secured by a mortgage lien on the vessels. It is hoped that this will ultimately avoid the permanent withdrawal of the $30,000,000 from the Public Treasury; but in section 11 it is contemplated that $10,000,000 of a bond issue shall be had at once to procure the money. I think I need not depart from the realms of fact and enter on the domain of prophecy to say that section 11 will require the issue of $10,000,000 in bonds under the Panama Canal act in order to procure the initial $10,000,000. In no other way can it be obtained. I can not, for my part, figure out from any surplus in the Treasury any money not otherwise appropriated.

This is especially true if I keep in mind the appropriation bills which are either pending in this body or are on their way from the House. I looked over the estimates of the various departments of the Government for the different branches, both civil and military, the judicial, legislative, and executive; and I find that those estimates will increase our appropriations over those made for the fiscal year ending June 30, 1915, probably some twelve or fourteen million dollars. This does not promise any very hopeful surplus in the Treasury. I take it

that section 11 is so written for the purpose of indulging in a bond issue at once. So we are entering here upon a scheme of Government ownership, with the Treasury in its present condition, at the expense of an initial bond issue. We are starting out on a new departure, something in which the Government has not heretofore engaged.

It is sought to excuse this movement by saying that the Government already owns the Panama Railway and operates certain steamships that are a part of that ownership. We did not acquire the Panama Railway and the steamships as an original undertaking. I am led here to compare a good many things that the Government has gotten into otherwise than as matters of original undertaking.

In the Spanish-American War primarily there was in people's minds but one intent; that was to relieve the menace to our shores of conditions in Cuba that had passed beyond the limit of endurance. There was further connected with this the humanitarian instinct of bettering the conditions of a suffering people. Primarily, that was the cause. It was immediately provoked largely by the destruction of one of our warships lying in a presumably friendly harbor. There was a declaration of purpose on our part that we did not seek foreign territory. It was subsequently embodied in the Platt amendment. In substance, we went into that war with one motive—not to acquire territory, but to end the intolerable conditions named. I know if I had had a vote on it, if the question had been presented to me whether we would have taken the Philippine Islands as an original undertaking, I would have voted against it. If it had been an enterprise in view at the time the war began I would have voted against it.

It is one of the inevitable incidents of war that when engaged in by any civilized country no man is seer or prophet enough to tell what the ultimate results will be. Many may engage in that unprofitable undertaking, and yet not one has ever been able to forecast the final results. Not even in the Napoleonic wars was his overthrow fully foreseen. Not in the Civil War, at the time it began, was the ultimate result fully foreseen. In the Spanish-American War we did not fully foresee the results. The Philippine Islands came as an incident of the war. The sovereignty that then prevailed in those islands and in Porto Rico was vanquished. It withdrew, and when the treaty of peace was concluded we were left as the only sovereign power in those islands. We had our choice to abandon our duty, to let them return to the devices of the several warring tribes with a greater or less capacity for self-government or remain. We had our choice to leave every European resident in the islands, including our own citizens, their families and their property, subject to the vicissitudes of an unstable government by the people of those islands or protect them. I think it is to the credit of the country that we assumed the burden. It is a burden. As a matter of original choice few of us would have undertaken it. Yet, as a matter of duty, I think there has been no substantial discord in the various shades of political thought in this country. So that is one of the incidents of war that we did not foresee.

For many years the Panama Canal was discussed. The various routes were investigated. The Nicaragua route had a thorough examination by those charged with that responsibility. For a time it was uncertain whether it would be selected or the Panama country. At last, however, the Panama country was selected. A treaty made with England relieved us from certain limitations that theretofore had barred us from constructing the canal. Certain events happened leading up to the independence of Panama. It is said that we were a little precipitate in our action. The administration then in power has been criticized. I shall not undertake to discuss that, because it is a story for another day. It is a subject for another vote, and in due time, I presume, will be before this body for action. Still, when we started to construct the Panama Canal, after embarrassing treaties and limitations were removed, after the Republic of Colombia no longer blockaded the way, after the concession or treaty had been arranged with the new Republic of Panama, we paid the old French company the stipulated sum and took possession of the remaining assets of the bankrupt concern, with no thought of the Government ownership of railways and steamship lines. Among the different items of property we acquired was all the capital stock of the Panama Railroad Co. It had not only the railway, with all its equipment, but it had the ships that were operated by the same going concern. The acquisition of all the shares necessarily carried with it the ownership, not only of the railway, but of the ships as well. At no time when the general public were discussing the question were these two points the main issue. At no place in the public press, at no place in the platforms of any great political party, at no place in a campaign, was there any discussion about the ownership and operation of steam railroads or steamship lines by the Government.

Still, in the acquisition of the assets of the old French company we acquired both items of property on land and sea. Both of these items are now sought to be made a precedent for this bill. They were quoted as a precedent in the case of the Alaska railway, which the Government has undertaken in the sum of $35,000,000, which is a continuing liability on any cash in the Treasury. I understand—I am quoting now from memory only—that but $1,000,000 has been set aside or in any manner drawn on in the prosecution of the railway in Alaska; so that practically the entire $35,000,000 is a continuing liability charged against the Public Treasury.

These two items are now sought to be used as a precedent for Government ownership, not only of railways, but of steamships. The Government and the people, the press and those who have examined this question, have never, in months past, until this bill in some form made its appearance, either here or in the House, considered the subject of Government ownership and operation of a steamship line. It was not a material part of the acquisition of the Panama Canal. It was a mere unnoticed incident. It came with the rest of the resources we acquired on the payment of the stipulated sum. Like the unknown and unforeseen results of the Spanish-American War, we accepted the responsibilities, but we did not thereby commit ourselves on independent propositions in which these would be unanswerable precedents. If they be a precedent in the one case, they ought to be in the other. Then we ought to be committed to what has been criticized as the policy of imperialism when we took the Philippine Islands. Still, none of the political parties of this country believes in waging war for conquest, for territorial aggression. It did not make a precedent in war; why should it make a precedent in peace that we have acquired steamships as a mere incident to the construction of the Panama Canal?

So I say we are entering upon a radical departure in governmental policy. When other Senators of the minority party have described it as an unprecedented departure, it is replied, citing the illustration I have given, that we have already entered upon it, and that it is not a question of a new departure, but of continuing to travel upon the way we have already started. I answer it in this way, then, that we have not considered, as a matter of original undertaking that has been submitted to the people of this country for any sufficient time to crystallize the public opinion, the question of adopting such measures as are written in this bill.

If I were simply to look at this bill without the light of extrinsic proof, without any of the circumstances that have attended its progress up to this time, without knowing who are the responsible supporters, and that it has received the indorsement of the Chief Magistrate, for whom ordinarily I have the greatest respect, and on whose judgment I rely, and with whom I have voted on several occasions in this Chamber on matters wherein my individual judgment agreed with him, and I would do so again, except upon matters in which I am irrevocably bound by my party creed or platform—I repeat, if I did not know of these circumstances I would think that this bill might have been prepared out of the teeming and prolific mind of Eugene Debs; or if Carl Marx could be brought back from the grave, the great father and sponsor of socialism in this country, I would think that it had sprung full-born from his brain, and voiced his belief in this Government's indulging in the management of many lines of private undertaking.

I am not opposed to the Government ownership or municipal ownership of certain things that are essentially governmental in character. These things, such as the post office, that from the beginning of the Government was committed by constitutional power to it; the Army and the Navy; the public schools; those things that are essentially and inextricably interwoven with what, from immemorial times, have been Government powers—those no one would seek to put in private hands. The line between private ownership and operation and Government or municipal ownership and operation is not a fixed one. It advances or recedes. It changes from one generation to another. I do not know how long we may remain with the present line of demarcation. The tendency of this bill, the tendency of the Alaska railway bill, the tendency of the recommendation by the Postmaster General that the Government take and operate the telephone lines as a means of communication, and necessarily along with it, by parity of reasoning, the telegraph lines as an equally important instrument of communicating intelligence—to find out how long, under the guise of public necessity, we will add here to those public undertakings, or take up something else, is the reason why we are discussing this bill; to know whether we may not find some place where stakes can

be driven down and where lines can be drawn, beyond which this Government shall not in our generation pledge itself and its resources, which are nothing more at last than the taxing power exercised upon the people of this country.

The shipping bill, with its initial expenditure of $10,000,000, if stopped there, or $30,000,000, would not necessarily of itself bankrupt anything. The precedent made by an undertaking of this kind is largely what causes the protest on this side of the Chamber.

I have an idea that this is but the prelude to a number of other similar undertakings. It is sought to justify this because ocean freights are high, because capacity, it is said, is limited, and some evidence has lately been presented that shippers are unable to obtain carrying facilities. If this were the only thing it would not be a serious affair, since even a sum of money equal to that contemplated to be expended in this bill would not be a serious draft upon the Government's resources. But if we remember that this will be made simply the opening wedge for a number of other undertakings which can be as much or more abundantly justified, then it is well enough to take the time in this Senate to discuss it.

I think I ought to say here, while I am not a member of the committee having charge of such matters, I believe I am correct in saying that no hearing of any consequence at least was had upon this bill by the committee of the Senate. I do not know where the bill was written. It may have been written by a Senator. It may have been written elsewhere. I will make no charge on that because I have no proof. I have a suspicion, but that is not evidence. I have an idea, however, that some rather precipitate haste has been shown for a legislative matter of this consequence involving a departure from the established ground that we have heretofore occupied in this country.

The President said in his message last December:

> Hence the pending shipping bill, discussed at the last session but as yet passed by neither House. In my judgment such legislation is imperatively needed and can not wisely be postponed. The Government must open these gates of trade, and open them wide; open them before it is altogether profitable to open them, or altogether reasonable to ask private capital to open them at a venture. It is not a question of the Government monopolizing the field. It should take action to make it certain that transportation at reasonable rates will be promptly provided, even where the carriage is not at first profitable; and then, when the carriage has become sufficiently profitable to attract and engage private capital, and engage it in abundance, the Government ought to withdraw. I very earnestly hope that the Congress will be of this opinion, and that both Houses will adopt this exceedingly important bill.

I now turn to the committee hearings that have been had in the House. I find that on "this exceedingly important bill," to use the language of the Chief Magistrate, there was a three-day hearing given to a bill, while not similar in all respects in the text, yet in the moving purpose practically the same. Befor the Committee on Merchant Marine and Fisheries in the House there were given three days. I turn to the special subcommittee of the Committee on Naval Affairs of the House, where practically the whole ground that is opened by the pending bill in the Senate and in this controversy was covered. Several men acquainted with marine affairs and with the United States Navy—some shipbuilders, one or more, and several who were somewhat skilled in ocean transportation as well as in the capacity of our shipyards—were heard on "this exceedingly important bill," to continue the quotation from the President. In this subcommittee there were six days of hearings, making a total altogether of nine days of time devoted to this bill in committees.

If it be said that the minority side is invoking its right under the ancient rules of this body for an open discussion, we reply that it is necessary because no open discussion has been had in either body. In addition, if we note that this matter has not been discussed by the general public, from whom at last must be drawn the taxes to pay the operation at a loss which is conceded in the beginning at least must occur, if we remember that the newspapers have just begun to devote their news columns and editorial mention to the subject, we can then still further reply that whatever time we take on this side of the Chamber is well spent.

I am somewhat skeptical on the reasons alleged for the presentation of this bill in the message, by the Secretary of the Treasury and by the Secretary of Commerce. They say the rates are high, that tonnage is limited. The President in his message at Indianapolis said that we are literally bursting our jackets, that we had no way of sending abroad a surplus that was causing this plethora, that rates had gone up many fold.

In this connection I want to read a reported interview with Secretary Redfield on rates at Galveston, Tex., where he calls attention to the excessive ocean freights and says that the owners of the steamships ought to be prosecuted, and says that if railroad men had raised rates as the steamship owners have they would be in the penitentiary. This language is somewhat severe, but I am not reading it in a critical mood, because possibly the offense in some degree may exist, I do not know; I am not now at this branch of the discussion undertaking to settle that. What I wish to illustrate is that whenever rates go up it is said the remedy is a Government steamship line owned and operated by the Government.

If this be conceded as a good reason there are a dozen which occur to me offhand that could be equally relieved by governmental action. Wheat has doubled in price. Oats are more than twice what they were. Barley has nearly doubled. Corn is maintaining a higher average. The general level has increased about one-third at least. As to bread, either the loaf must be diminished or it must be increased in price. All the cereal products from any of the great food-producing grains have shown decidedly upward movements in the last two or three months.

Why does not the Government engage in wheat raising? It might reduce the price. It might furnish an occupation for some of the idle. It might raise some millions of bushels not now produced by the farmer, who is engaged in that private enterprise. Why not engage in the milling business? Flour has gone to $7.20 a barrel. The usual 5-cent loaf will go to 7 and 8 cents in Chicago and New York. Why does not the Government start a flouring mill? Then hard on the heels of that, why does it not start a bakeshop? There is an embargo on wool. Some of my friends may be disappointed in free exports of wool from Australia. Possibly we may raise enough in time of our own, although the prospects are not very flattering. Why does not the Government start a sheep ranch, and then having taken the clip from the sheep, why does it not start a woolen mill? Clothes are high. Then start a tailoring establishment or go to manufacturing clothes ready-made. Food and clothing are of infinitely more importance to the people of this country than transportation over the seas. If we do not sell a bushel of grain to be delivered in Europe or any place in the world, all the effect of it will be to reduce the price in the hands of the holder and ultimately to the producer. It would cause no universal suffering because the price of flour would go down, and a corresponding reduction would be made in the price of bread and all the flour products. The inevitable result of this bill, if it accomplishes any relief at all, will be to increase the exports and send the surplus food, both meats and breadstuffs, out of our country to the people abroad. The greater the export the less the quantity remaining. The less the quantity remaining the more the prices of those necessary articles go up, and it will be many fold more of an injury than the increase in ocean freight rates. Even now there is talk of an embargo on grain, so the home prices may be lowered to our people.

Why does not the Government go to producing food and clothing and then enlarge municipal lodging houses and give us the other, the third necessary of life? Let the Government furnish food and clothing and shelter while it is going into the business. When you get that far along you will find a great many of my socialistic friends who will rise up and bid you Godspeed in your undertaking. I know what they think and what they want. There is not one of them who is not to-day watching the movements of the lawmaking bodies at both ends of this Capitol. No criticism comes from them for bills of this kind. They know what it means. Practically they believe the Government ought to control all these things, every undertaking; that we ought to work in common, throw what we make in a common warehouse, have a meal ticket and a place to sleep and a suit of clothes and that is the end of your possessions. Nobody will have too much and nobody too little. That will be a condition in which the rich will not grow richer nor will the poor grow any poorer. If we admit the soundness of the principle of this bill then we admit the soundness of the Government's undertaking any other enterprises in which the product or the service goes up. Whenever the service or the commodity goes to a point where the governmental authority thinks it is unreasonable, all they need to do is to start a Government undertaking of that kind in order to bring it down. The principle of competition is dead. It is forgotten by the majority party. It ceases to be operative in governmental affairs. All that is proposed to be done is simply to start the Government as an unrestricted competitor in the open field of human effort.

These undertakings heretofore have always been carried on by private means and by private undertaking. This bill in practice stifles the individual initiative that belongs to the system of regulated individualism under which we have lived with our progenitors in Europe, of the English, the Saxon, and the Germanic races, for a thousand years. All the Germanic

element that is in us, all the Anglo-Saxon that is in us, is based upon the regulated individualism of the person and at war with socialism. The collectivism of socialism has no attraction for men of this type. It is only those who have thrown to the four winds of the earth all the experience of the ages and see here upon the earth an economic heaven who are allured by these dreams and seek to put them into practice.

Now, I want to read one thing that has been commented on at some length here, that the private corporation promoted by the Government must operate its boats first at a loss. I read from Secretary McAdoo's evidence given before the Committee on Merchant Marine and Fisheries on September 1, 1914:

It is not only a question of establishing these routes, many of which will undoubtedly have to be operated at a loss for a time in order to establish the necessary trade relationships, but the Government will also have the power to establish rates that will be advantageous to American commerce.

* * * * * * *

And then again the fact that any private corporation which undertook to do this would want to operate those lines only which it could clearly operate at a profit from the outset affords another reason why the Government should operate the vessels.

* * * * * * *

The idea in having the Government take the controlling interest in the company instead of operating these ships directly as a Government operation is, of course, to avoid any possible complication resulting from the Government itself going into the shipping business.

* * * * * * *

And not only that, but the time required to organize—even if the capital could be obtained—companies to engage in these enterprises might be very long. What we need is prompt and effective action. Then, again, as I said before, private corporations might operate these ships upon routes only which were profitable from the outset. Some of these lines undoubtedly will have to be operated at a loss for a time, until trade relations can be built up and established. One of the great objects here is to open up to this country some of these new markets. Those markets are obtainable now because their relations with some of the European countries have, of course, been completely disturbed by the war, and they must look to this country or some other neutral country for commodities. We are in a better position to furnish them than any other nation, if we provide the means of transportation.

I do not mean to say that every line that the Government might operate would be an unprofitable line. I do not think that is true at all. But I say that some of the most important lines, for instance, some of those to South American ports, would have to be operated for the time being at a loss.

I read from pages 17, 18, and the last, page 24:

I was going to say as to some of the lines, undoubtedly in view of the object we have in view here, that they will be operated for a time at a loss. To attain the objects of this bill it is necessary, as quickly as possible, to put these lines in operation, in order to enlarge our commerce. Some of these lines may be, and undoubtedly will be, operated at the outset at a loss, but the operation of others may be at a profit.

By very many of the witnesses who appeared before the committee during the somewhat limited hearing the same opinion was given. They reached the same conclusion in every instance. It is evident that that can not be escaped. If the boats that are now engaged in ocean carriage are charging exorbitant rates, it is evident that we must buy our boats elsewhere. We can not buy the boats that are now earning high rates, unless at a greatly enhanced price. There will be no bargain counter for boats that are able to sail the seas. If, as Secretary Redfield says, they have multiplied their charges manyfold, why should they want to sell their boats when they are earning in a few voyages the whole cost of the boat? It is extremely unlikely. So we must either build in our own shipyards, the Government must take the labor and material into hand and itself build, or it must buy elsewhere.

If we buy boats that have been tied up because of the military operations in the Old World, we will at once raise the question of grave complications abroad that has been somewhat extensively discussed here. At this particular time I do not wish to add anything to what has been said; I reserve that for some discussion later on. There are certain phases of that subject that I believe require further elaboration.

After the money shall have been spent, lines established, certain sailings become known, acquaintance with the shipping public secured, docks, wharves, and the facilities required to receive and discharge cargoes shall have been provided for, the way blazed to a successful and profitable operation of the line, then, following the recommendation of the President, the Government ought to withdraw. The method by which the Government shall cease to own and operate the line is contemplated in the bill. It seems to be by the sale of the Government's shareholding, whether it be 51 per cent or more. The Government when it sells is required by the terms of the bill to sell all of the shares which it possesses, so that it will entirely divest itself of every vestige of interest which it has in the corporation.

The query, I think, is pertinent here, To whom would these shares go? Who would buy them? Will they be put up at auction and offered to the highest bidder or will the shipping board sell them at private sale? Will that be in the discretion of the administration? Will the President say when the Government shall withdraw, and to whom its shares shall be sold, giving the control either by a majority of the shares or by holding an entirety? There are no provisions in the bill safeguarding that; it is left to the unbridled discretion of the administration or of the shipping board, which is only an instrument in the hands of the Chief Magistrate.

It does not require any very active imagination to suppose, after a shipping line shall have been promoted by the Government and made profitable, that when it sells out a great opportunity is given for some one to acquire a going concern which is making money from the beginning. Whoever may acquire it, it is evident will have a bargain. It is not contemplated that the Government shall continue permanently in this business; and I think I know the reason why. I think even the President and the dominant party now in control of Congress would shrink from the permanent ownership and operation of steamship lines. That smacks too strongly of a socialistic undertaking to receive the serious consideration of the majority party or of its President.

When the line shall be sold, therefore, is entirely within the discretion of the persons then holding public office and charged with the duties of managing these lines. When they are bought, they will continue to be operated, as I have said, as a going concern, running at a profit.

Let me figure out the forty million dollars that is in direct contemplation of expenditure. That will all have been spent either for ships engaging in this trade or for docks, wharves, permanent facilities and the necessary employees required as freight and passenger solicitors, accounting, operating, and other employees. I do not anticipate that the Government engaging in this enterprise will be able to conduct it on any different bases than any other steamship company. It will require a corps of trained men; people will not impulsively, with one accord, flock to the offices of a Government shipping line proffering their frieght and their money for its carriage. The Government must compete; it must go out and appeal to the general shipping public for its business. To do this will require the same organization, the same equipment, the same class of men, those skilled in that line, that every undertaking of a like kind requires.

So when that is done, this enterprise, with all its equipment, with all its docks and wharves, with all the machinery that is incidental to those facilities, with all of the army of trained men that have been assembled for the prosecution of the undertaking, is turned over at last to some private concern. Will they benefit from it? It seems so. It seems there will be some actual financial gain to those who shall be so fortunate as to be able to purchase the Government owned and operated line.

Now, I wish to proceed a little further. It has been said that a subsidy has been condemned by the Democratic Party for many years. That is the traditional attitude of the party. Mr. McAdoo refers to that in his testimony. Something is said about a direct subsidy. Mr. McAdoo, when he is confronted with that question, says: "But the Democratic party platform forbids that."

I understood that the operation of the steamship line was to be justified upon a business ground. If a subsidy is a better way of reaching the result, why invoke the ban of a party platform to prevent it? The party platform has for a great many years condemned subsidies; and Mr. McAdoo says:

Secretary McADOO. This is not a question of subsidy. This is a question of the Government doing directly for the people of this country what private capital can not do, and especially to meet a sudden emergency of a most extraordinay character, and from which our commerce has undoubtedly suffered already, and will suffer still more unless we deal with it energetically and vigorously.

Then, further on, again he says:

Mr. EDMONDS. Do you not believe that if W. R. Grace & Co. were given a subsidy they could establish lines to South America in 30 days and have them running to any points you want to?

Secretary McADOO. Oh, perhaps, but the Democratic platform declares against ship subsidy.

It seems to me as if we are sticking in the bark. We want the results, but we condemn the means by which we can attain those results. We are haggling on terms or definitions; we are halting by the wayside trying to define a subsidy. I look at that as I look at the articles of incorporation of this private company, that it is a matter of form, and that nothing is either gained or lost by juggling with words or phrases. It is not doubted here in either the question or answer that a subsidy would within 30 days result in the establishment of a line running to South American ports and that such a line would be in successful operation.

It is further said in the partial hearings that a subsidy can not regulate rates; that the shipping public is suffering from exorbitant rates; and that subsidies would give no relief.

That, it seems to me, is no reply. It is the simplest operation in the world, if a subsidy be granted in express terms, to annex to it conditions that will fix the rates for freight carried by the boat that receives the benefit of the subsidy; and, if it be a mere matter of regulation, it is entirely within the power of Congress to attach such conditions to a grant of money direct to a private line as would insure a proper reduction and a permanent level of rates.

I wish to read, when we are talking about establishing steamship lines in competition with the world, from a report of the United States Bureau of Navigation of 1910:

The aggregate amount paid by foreign nations in the form of subsidies, ocean mail pay, navigation and construction bounties, Admiralty subventions, naval reserve appropriations, fisheries, bounties, refund of Suez Canal tolls, and other forms of contribution which directly or indirectly add to the volume of business under their respective national flags, is upward of $46,000,000 a year.

In the short time since the bill generally known as the Frye-Hanna-Payne bill failed to pass the House of Representatives, there has been a general revision of the subsidies of nations. During the interval of our halt Great Britain has executed a new Cunard contract and put an all-British clause into her other principal mail contracts; Germany has increased the North German Lloyd subsidy; Japan has passed the law of April, 1909; Spain the law of June, 1909; Austria the law of February, 1907; and Italy is now revising her laws and mail subsidy contracts. Holland in 1907 subsidized for 15 years a line to South America, and Norway is contemplating a subsidized line to the United States.

A line is in operation now running between the United States and the Scandinavian countries, and is furnishing adequate carriage for the food products of the Northwest. Recently some four or five ships, laden with meats from the Chicago packing houses, were taken by the British, and ultimately will be converted to Government use and paid for. No serious trouble will probably result from this. It only shows that the shipping facilities exist, and that the embarrassments that obstruct these facilities also exist. The stockholders in the private company of the Scandinavian line, some of whom are my constituents living in Chicago, appealed to me for help in the matter. The best that this Government has been able to do in the settlement of this controversy is to see that the packers receive the market price for their products, which will not reach their destination in Norway, Denmark, or Sweden. These ships were so laden that the manifests showed that they were consigned to order. This, however, when I read the proceedings of the British Government, seems to be rather an excuse than a cause. It is simply that they do not wish these meats to enter a market where by any possibility any of the nations with whom they are at war may draw from such supplies. It is a part of the allies' policy to blockade the ports at which food might be entered, and so enforce a policy of starvation rather than of destruction on the field of battle.

I continue to read from the report:

In France revision of subsidies, bounties, laws, and contracts is almost incessant.

The following table and pages of explanation, with the statements in Appendix N, are a short review of recent subsidy legislation abroad. The laws, regulations, contracts, and reports on which they are based were obtained by our embassies and legations abroad and are on file in the bureau. They comprise over 1,000 pages in various languages, and only the briefest summary is possible within the limits of this report. Generally speaking, the nations of continental Europe own their railway systems, and Governments, which fix freight and fares ashore, also fix maximum rates on their subsidized steamship lines. Military features, of course, are contained in nearly all the great foreign ocean mail contracts, as in our law of 1891. Comparison of aggregate payments by nations and aggregate tonnage is not useful, for, in the last analysis, natural conditions are, of course, more effective in securing results than is legislation. Large expenditures under unfavorable conditions produce less results than less expenditures applied to natural advantages. The essential fact remains that every nation actually expends sums in proportion to its resources much in excess of the expenditures of the United States, in order to secure under its own flag efficient means of communication by sea with other countries.

Japan carries the mails of the United States from San Francisco west over the Pacific Ocean. She carries them because, on the bids submitted, she was able to submit cheaper rates for the carriage of the United States mails than were any of the vessels flying the American flag or registered under our laws.

I wish to offer here some of the subsidies paid by the principal competitors that the corporation created under this bill will meet in the ocean carriage. The loss in operating this line will not only be an initial loss on the $10,000,000 or the $30,000,000 thereafter invested, but, if the line is to be kept in operation, it must be a continuing loss. It competes, it is admitted, with the world. It is admitted that it competes at a loss at the beginning. If it does not differ from other publicly managed enterprises that heretofore have been private undertakings, it will run either at a loss or, at most, can but hope to keep even.

The subsidies granted by the various competitive nations in the carrying trade are as follows:

Great Britain and her colonies: Not only the home country subsidizes, but Canada, Australia, New Zealand, Cape Colony, and Jamaica. She gives a total to all of her lines equivalent in our money to $9,689,384 annually.

France gives in subsidies, in fisheries bounties, in subventions, and various forms of advantages a total annually of $13,423,000.

Italy gives in subsidies and in kindred undertakings a total annually of $3,872,000.

Spain gives in subsidies and the like a total of $3,150,000 annually.

Austria-Hungary gives in subsidies, mail contracts, shipbuilding bounties, and refunds of Suez Canal tolls a total of $2,984,000 annually.

Germany in subsidies gives $2,301,000 annually.

Russia gives subsidies of $1,878,000 annually.

Norway, $1,102,000 annually.

The Netherlands, either as mail subsidies or directly as payments to naval reserves, annually $880,000.

Sweden, in subsidies and the like, $277,000.

Denmark, $145,000.

Belgium, $55,000.

Portugal, $50,000.

Making a total of nearly $46,000,000 annually in the countries enumerated.

Outside of Europe and Japan subsidies and mail payments have been reported for 1908 to the bureau as follows: Chile, $253,195; Mexico, $75,000; Egypt, $54,512; Brazil, $1,300,000; in all, $1,682,707, making, with the above, a total of $46,907,220. In 1908 the United States spent $43,588,012 for transporting mails on railroads and $34,355,209 for rural delivery.

One difficulty that we will face instantly upon the institution of this line is the question of a joint rate, of a rail rate and an ocean rate quoted to a shipper. In both England and Germany a joint rate for the export trade is allowed to be made covering a part of the rail haul at a lower schedule than for domestic transportation for a like rail distance. This is prohibited under our laws. Many rulings of the Interstate Commerce Commission have been had, several fines have been paid, for a joint rate made not only on a rate to Canada covering a part of the haul inside of the United States, but the rest of it in the Dominion of Canada. Some investigations have been had of a joint rate quoted for the rail haul inside of our country compared with the rate by a steamship to a foreign market. No power exists under the present law to make any reduced rate. Still, in reaching a foreign market it becomes indispensable that a steam-railroad carrier shall be permitted to quote a rate which, joined with the ocean rate, would be a less rate than for a like distance by rail if inside of the United States. This rate must be quoted in order to be attractive to a shipper. In order to produce any advantage of an export rate, it is necessary for some modification of that kind to be had. The Chicago, Burlington & Quincy Railroad Co. was fined, not many years ago, for making a discrimination. It was made for the purpose of encouraging a shipper in this country to build up an export trade in Canada. Still, heavy penalties were visited upon the railway for an attempt of that kind, although the rate was made in good faith and with no thought at that time that it was a violation of law. So we face that in the first instance here as something that requires a material modification if any attractive rate shall be quoted to a shipper seeking to reach a foreign market.

The total expenditure last year for the British Navy, including £7,545,202 for new construction, was estimated in this year's Admiralty statement at £32,319,500 ($157,072,770), including $1,783,620 voted for the training and maintenance of seamen on merchant steamships as naval reserves. The total expenditure by the British Empire, so far as ascertained, for subsidies, ocean mail contracts, and Admiralty subventions (not including payments for merchant seaman as naval reserves, just referred to) was $7,905,764. The item for merchant seamen may be viewed from two points, but for the present purpose it is retained in place as a naval appropriation. The Empire accordingly devotes in fact a sum for its merchant marine equal to about 5 per cent of its naval appropriations. Here it may be noted that Japan's naval appropriations for the current year are $35,870,061, while her subsidies to the merchant marine are $4,416,000, not including shipbuilding bounties, and Italy's naval appropriations for the current year are $30,229,754 and her ocean mail contracts, navigation, and shipbuilding bounties amount to $3,872,917, or in each case equal to over 10 per cent of naval appropriations. The sums comprising the British totals above are:

1. For foreign and colonial mail service to British ships, $3,320,454, reported by the British postmaster general, excluding £4,293 paid to the American Line. (Report of British Postmaster General, 1908.)
2. Subsidies and mail payments of the Dominion of Canada, aggregating $1,581,800.
3. Subsidies and mail payments of the Commonwealth of Australia and New Zealand, $1,263,600.
4. Mail subsidy of Cape Colony, $656,910.
5. Trade subsidy of Jamaica, $194,400.
6. Cunard admiralty subvention, $729,000.
7. Canadian fisheries bounties, $160,000.

Other small mail and trade subsidies are paid by British colonies, such as the annual payment of £5,000 ($24,300) for steam communication between Australia and the Fiji Islands, but in the aggregate doubtless such items would not add more than $150,000 or $175,000 to the total.

When we enter the field in competition with the carriers of the world, we face competition of this kind—a competition backed by sums paid out of the public treasuries of several of the principal ocean carrying nations of the world. We expect to make headway with a puny $40,000,000, building an original line or buying boats and starting the line, so as to make it profitable! We hope, with that $40,000,000, to enter into successful competition with these nations! It seems to me that it is undertaking the task with impotent implements. It is undertaking a task that could be well put in the hands of a giant with a straw, with pigmy instruments that can do no more than emphasize their utter insignificance for the purpose intended.

I read from the hearings before the special subcommittee of the Committee on Naval Affairs, page 120, from some documents that are submitted:

To sum up, therefore, it may be said that every nation possessing a deep-sea merchant fleet of any real importance encourages and supports this interest to the degree and in the way which its judgment approves or its national resources make possible. The most frequent form of this national assistance is the mail subvention to regular lines. Great Britain is the pioneer and chief exemplar in the policy of mail subventions. She began this practice on a large scale with the Cunard Line in 1839–40, and since then has expended between two hundred and fifty and three hundred million dollars in creating and sustaining her mail lines to every great port and market on this planet.

It is sometimes urged by those who desire to believe that a consistent free-trade policy has been maintained by the British Government that these enormous British subventions were bestowed merely to carry the colonial mails, with no purpose whatever to encourage British ocean trade or navigation. But that this academic view is wholly superficial and untenable is demonstrated by the British Government itself. A report of the parliamentary committee on contract packets in 1853 on the Cunard and other subsidies thus speaks with authority as to the actual purpose of these generous subventions:

"The objects which appear to have led to the formation of these contracts, and to the larger expenditures involved, were to afford us rapid, frequent, and punctual communications with distant ports which feed the main arteries of British commerce, and with the most important of our foreign possessions, to foster maritime enterprise, and to encourage the production of a superior class of vessels, which would promote the convenience and wealth of the country in time of peace and assist in defending its shores against hostile aggression."

TO NON-BRITISH PORTS.

Indeed, some of the heaviest British expenditures were not in the colonial service at all, but for lines not only to the United States, but to Colon, Brazil, and Argentina—in other words, to absolutely foreign lands. At least one of the British subsidized companies—the Pacific Steam Navigation—touched at no British port, but traversed the west coast of South America. Lindsay, the historian of British shipping, says of this enterprise, that was established by an American merchant who first sought aid unsuccessfully at Washington:

"The extension of British influence and British commerce was doubtless the chief inducement for supporting this communication between the Republics of New Granada, Bolivia, Peru, and Chile, the nature and extent of that traffic rendering it necessary for the English to maintain mercantile establishments in the chief ports and towns of the western coast of the Pacific, and thus justifying the Government in incurring this expense." (W. S. Lindsay, History of Merchant Shipping, Vol. IV, p. 317.)

I read this particularly in view of the testimony of Secretary McAdoo and others on that question, who seek to establish a line, by this corporation that is to be promoted or subsidized in the manner indicated, between the United States and South America. Instantly this corporation becomes competitive, upon a return of peace in the Old World, with the shipping lines that have built up their business through many, many years.

They have in addition to that received this substantial encouragement from the Government of their country. This competition we meet in the establishment of this infant line. This certainly is an infant industry with the United States. It enters on the undertaking as a new enterprise, under very unfavorable conditions, and with competitors which undoubtedly on the return of peace will again resume the traffic in the triangle, as it is called by a good many of the witnesses. It is that which keeps the freight away from some of our own vessels, and we will meet that competition.

The ships of this line under this corporation of the District of Columbia will load and travel two ways. They leave a United States port bound for either coast of South America. I shall assume that when the Panama Canal is in operation some will reach the west coast and bid for the traffic in that quarter of the world. But they travel two ways. Assume that they are loaded both ways. It is the horror of every transportation man either on land or sea to travel with empty capacity. No road wants to haul empty cars, and no shipowner wants to sail with empty tonnage. The competition we meet when Britain resumes her traffic will be the boats that leave some English port loaded with merchandise for a South American market. She has access to the Panama Canal by paying the same tolls that any other boat does. She travels loaded. She loads with the products of South America, coffee, rubber, minerals, nitrates from the west coast. She makes the United States port and unloads, and it is natural if we meet her rates for all carriage of grain we will cut to a very much lower rate than we now anticipate, because those boats intend to carry on the return to England grain from this country or something that is partly raw material.

These contracts that are to be made for the export trade on grain or meats or breadstuffs in manufactured forms will be made with these boats that furnish an attractive rate. There is no matter of patriotism in that. While possibly for a time higher rates might be paid, yet the operation of economic laws is inevitable. The more attractive rate will get the business. The shipper will finally seek the lowest level of a freight rate, and that unerring and irrepealable law of competition will make this Government come to the level of the carrier lines of the Old World.

I am not assuming in this discussion that war in Europe will last indefinitely. It must end. All the wars that have reddened the fields of this earth have ended. It may be said that the vanquished will lose her strength, that her boats will be off the sea, that her merchantmen will be captured or destroyed, that her financial resources will be drained, that the battle field will engulf the best of her seafaring men, or that they will be lost in naval engagements. Some one evidently will be weakened. In the nature of things somebody will lose. Some nation will pay an indemnity, will lose its territory, boundary lines will advance or recede, but that there will be a vanquished nation also implies that there will be a victor nation. Some conquering hero at last will end the war and the future Waterloo will see another exiled captive of nations when peace comes. The conquering nation or nations will again enter upon a new era of shipping. They can rebuild whatever navy they have lost; their merchant shipping again will crowd the seas and visit distant ports.

Let us, for instance, suppose, not because I have any sympathy in that direction, because I will remain neutral upon the subject, that England should emerge from this struggle with her territorial integrity unimpaired, with her power on the seas still dominant. She has a world-wide commerce. It is not the first war in which she has been engaged. From the time Nelson fought in an earlier age, from the time of the battle of the Nile, from the time that her scattered navy in all the seas of the world contended with her enemies, she has at times faced annihilation. But she has emerged with her naval sovereignty unimpaired. She has still kept her power on the sea. She to-day is leading all the naval powers of the world.

What lies back of the tremendous correspondence that comes to many of us? All that is implied in the resolution of the senior Senator from Nebraska [Mr. HITCHCOCK] is that England, having the power on the sea, is interfering with the commerce of the enemies with whom she is at war. It is the grip of her navy that is producing the protest. It is the sealing of her enemy ports to food supplies that is likely to become the dominant element in ending the European war.

Suppose the allies emerge victors, suppose Germany emerges the victor, they will again start their merchant lines. They will keep their territorial strength; they will still be nations. New shipyards will supply those that have been lost. When war ends the nations always turn their energies to pursuits of peace. They will fill their shipyards with the clangor of their workmen. Their merchant shipping will again be seen as of old. Their carrying capacity will return.

Instead of having the temporary conditions that exist now for a few fateful months, when peace is resumed the same ocean carrying trade, the same subsidized lines, the same competition, the same freight level must be met by us with this corporation we propose to institute as if war had never occurred. In truth, it is admitted all the way through these fragmentary reports, through all the discussion that has been had, that the emergency of war is the sole reason for the appearance of this bill in this Chamber. So when it is over we again reach the point of competitive conditions with the world. Then we must continue to draw from the resources of the United States Treasury if we would compete with the lines which upon the return of peace will again carry freight as in the years past.

It is said that it is not a subsidy to promote a $10,000,000 corporation in its initial subscription and later to give it $30,000,000 more in a roundabout way; that is in all $40,000,000. Let us take some of the principal nations and notice a minute to see how much they give annually, by way of comparison. Great Britain paid annually in 1909 and 1910 less than $10,000,000—$9,600,000. Forty million dollars would pay a subsidy of $10,000,000 annually, with restrictive features on reason-

able freight rates attached to the grant. It would pay for each year a subsidy equal to that given by the Japanese Government annually. It would pay for a period of 13 years nearly all given annually by Italy; for nearly 13 years all given by Spain; and for nearly 20 years all given by the German Empire.

Still it is said this is not a subsidy. It is in effect. It gives the money to a private corporation in which the Government has the majority holding, possibly with a potential holding in entirety.

The $30,000,000 are to be disposed of in a somewhat devious way, evidently designed to escape the consequences if the ships were owned by the Government direct. I use the word "devious" in no evil sense but meaning in an indirect way. The $30,000,000 are to be raised in the first instance by the Government issuing bonds under a power contained in the Panama Canal act, which has been availed of several times. The $30,000,000 will constitute in that bond issue an indebtedness of the United States. The issue will be given to those who subscribe for the bonds. The bonds will continue to be an existing liability of the Government until paid. There is no provision here by which the Government will ever get its money back save by taking the $30,000,000 of the bonds of the corporation secured by a mortgage on the vessels and endeavoring to market the $30,000,000 with the general investing public.

The Government bonds, however, are an actual indebtedness. With that $30,000,000 the shipping board buys or builds or leases or charters a given number of boats, and out of it provides for such facilities, with wharves, docks, machinery, and the like, as are required at the points where cargoes are received or discharged. When this shall have been done, these vessels shall be transferred to the corporation created under the laws of the District of Columbia, receiving in exchange $30,000,000 of bonds of the private corporation in which the Government owns a majority or possibly all the stock. The Government then must either hold those bonds, which in effect only gives the Government a chattel mortgage on itself, on the ships, or dispose of them on the general market to such investors as can be induced to purchase.

It is well enough to examine at this point just what the investing public is likely to do. What view will they take of the $30,000,000 of the private corporation bonds secured by a mortgage lien upon the vessels?

First, among the investing public it is not regarded that a loan which equals the cost price of the article on which the lien exists is a very good margin for security. There is not an officer who is at the head of the investing department of any trust company in New York, Philadelphia, or Chicago who would regard such security as ample so as to justify the investment of a client's funds in that bond issue.

The vessels themselves with the equipment, with the wharves and docks, etc., that must necessarily be acquired to operate this line, will absorb the whole of the $30,000,000. Then on that property is given a mortgage for $30,000,000 to secure a like issue of bonds.

Now, what kind of security is it? It is worse than any chattel mortgage that can be conceived under the laws of any State. It is portable property, as Sam Weller says in Dickens; it is property that can be easily converted; it is portable, and the purpose of it is to sail in peace and war as merchant shipping. Now, where goes your lien? To South America; to the ports of the Old World. There is your security traveling on the high seas.

It is said you can take an ocean risk or you can take a war risk. That is true. Then the Government insures itself and who "pays the freight," or the premium? The Government. You run in a circle. You get nowhere. You begin at the Treasury and you finish at the Treasury. The Government pays the premium for a risk that it owns itself and when it loses it loses the vessel and it collects from whom? From itself, the indemnity in the contract that gives the war risk insurance. So when we figure out the character of the security it is not of a very satisfactory kind.

Now, let us apply the bond issue secured by a mortgage on the ships to existing events. There has been enough said in the discussion here in this Chamber to show that there is very grave doubt on the rights of the Government in the event one of these ships is seized by a belligerent nation. There is a difference of opinion among the lawyers, but that is not unusual. I have spent about 30 years of my life around court rooms, and I never saw two lawyers who represented different clients who could not settle their affair without the intervention of lawyers and courts, who did not differ from each other on what the law was. It is not, therefore, surprising that statesmen who have temporarily shed the character of the lawyer should still differ in this body. It would be an exception if there were not differences of opinion. Very often where there were differences of opinion in the clash of litigation and the usual destruction that results from a long drawn out litigation, I have advised my client to take to the woods and compromise, and, many times, to stay out of the courts.

The security for this bond issue is a mortgage on a lawsuit. There is not even the poor boon of an impartial tribunal with the ordinary hazards of litigation, with the ordinary rights of both parties, but it is taken into a prize court in England, an ex parte proceeding. I have an idea that this Government would not be, under the conditions, a very favored suitor. It is the history of English prize courts, as the captor nation—whether it is the rule of law or not, it is the practice in admiralty courts, and it is the history of England for 400 years of her supremacy on the high seas—to put the burden of proof on the vessel to be condemned; and you must get out from under that presumption. From the time that Francis Drake and Raleigh and the navigators who were sometimes the freebooters of that ancient time sailed the seas, England has developed the law of her prize courts. We follow it in our admiralty courts on the Great Lakes and in all the maritime States of this country with practically very little change, except here and there in matters of practice to conform in certain procedure that is incident to the jurisdiction.

So our security is on a ship that is laden with a neutral cargo. Omit contraband and conditional contraband for the present. Where does it go? Well, our jacket is bursting, for instance, with wheat, or with bread, and packing-house products. The relief, to follow the message of the President's address at Indianapolis, is through the vessels of this corporation. One vessel is laden with meat; it starts from port loaded, as these Scandinavian ships were, with Chicago packing-house products. It starts across to its destination. England, through her proper authorities, views the imperial decree of Germany appropriating all the foodstuffs that enter the Kingdom. In her policy of shutting out food supplies, whatever the declaration of London may be, whatever The Hague conferences may have done, whatever friendly understanding there is between that country and this, the first thing England will do will not to be to ask questions, but to take the ship of this private corporation and its food supplies, as they took those of the Scandinavian steamship line laden with the Chicago packing-house products, and impound them in her prize court. There they will remain. Whether or not she will, after the proclamation of Germany, consider them as prizes to be condemned and forfeited is the question. Possibly if nothing had been done to take over the food supply of Germany by that Government we could have obtained pay for the cargoes, as in the case of the Scandinavian ships; we may anyhow; but with changed conditions we have no assurance that a ship laden with breadstuffs and meat may not within 24 hours from this day be conditional contraband.

Conditional contraband assumes a great many forms and guises. Bread and meat may be contraband; clothing may be contraband; cotton was declared to be contraband by Russia in the Russo-Japanese War, though on a somewhat slender ground, it is true. They said cotton was used in making a certain high character of explosive and, therefore, was contraband. In view of the existing condition of the manufacture of explosives it might be so declared again. Water might become contraband in case of siege. If an enemy State besieged a town or a fortified post, if, instead of battering down the walls with heavy artillery or risking taking it by storm, they undertook to sit down in front of its walls and reduce it by the slower but surer processes of starvation, then water in casks or any method of introducing it into the beleaguered fortress would be contraband, and while conditional contraband for the purpose of that besieged place would be as absolutely contraband under the laws of nations in that war as would a 13-inch gun or a battleship that should be fitted out for an enemy nation.

So, in view of this imperial decree of Germany put forth by her council two days ago, that substantially makes Germany the owner of all the food products within her borders, the allies may well declare food products to be contraband or conditional contraband, and the effect on us would be the same.

Where, then, will our freight be carried? What point in the Old World will furnish an outlet for the plethora of merchandise from which we are suffering? Nowhere, unless we take the risk of capture. In that event, if a vessel is taken by any of the allies if it be destined to a German port, or vice versa by the Germans if destined to the allies' ports, it will not be with a release of the vessel and payment for the cargo, but it will be a confiscation of the vessel and its cargo. And on that vessel is the only mortgage lien on which this Government or a buyer of these bonds has any recourse for its security. Then we submit to the confiscation in an English

prize court of the only security we have, and lose our stock, lose our interest in the $30,000,000 issue so far as it is represented proportionately by the single vessel that I have in mind. We lose that or we demand reparation from the English Government; and what will that amount to? If we do not get any more reparation from the English Government than we are getting from Mexico, I would not give 30 cents for the $30,000,000 represented by the mortgage if the vessels keep going one after the other to a prize court of one of the allies or even of Germany, because we can not tell how soon the situation may change around; it depends upon the fortunes of war. Again, one or all of the ships of this corporation may be sunk by submarines in the new and destructive warfare created for the first time in this struggle.

Now, to return, not only are we to meet competition from subsidized lines, not only do we risk the security for the $30,000,000 drawn from the Treasury or procured by a bond issue, and for which we have as security a mortgage on the ships to indemnify us—we not only take all this risk, but we take the additional risk of running the business at a loss.

I do not know of any Government undertaking that is making any money. Primarily the Government ought not to engage in business for money making. It is a mistake to think that dividends ever ought to be earned on a public undertaking. It ought to be run at best at cost. If any profit accrue after the physical plant has been taken care of, after the maintenance has been provided for, it ought to be distributed in the way of a decreased cost of the commodity or for the service. I do not know, as I have said, of a Government undertaking, either in cities or elsewhere, that is making any money. I know of some that claim that they are making money, but they have a peculiar system of bookkeeping. If they would make provision for the depreciation of the physical plant, keep their property in good repair, keep it physically fit, make the usual allowances at the end of each year by writing something off and figure interest on the original cost, I do not know of a single one of them that would be making anything. It always costs more to run anything by the Government than it does by a private undertaking. I do not know of a private undertaking that can not discount everything the Government has undertaken, even in the case of the United States, and the same thing is true of every State and of every municipal undertaking of which I have any knowledge.

I think I am safe in saying that it is very difficult to get the same service out of a public employee that is rendered by an employee in private life. Some years ago, as an illustration, a man on a public pay roll came to me—I sent for him; that is the way he happened to come; I had not seen him for a good many moons—and I said, "You are on the pay roll, and it is reported to me that you have not worked any. Do you expect to work any?" He said, "No." I said. "How do you reconcile your remaining on the pay roll with your indisposition to render service?" He said, "I worked hard enough to get the job, and I ought not to be required to work any now that I have got it." There is a general feeling, manifested by a good many public employees, that they earned the job a long time before they got it, and that, after having gotten it, they can sit down and while away the hours in ignoble ease until pay day comes. There is a constant struggle of that kind. I do not know of a public undertaking of any kind that has any resemblance to a business undertaking that does not go up against this inevitable trait of human nature.

This condition is as old as the hills. I want to read an extract—I would quote it from memory, but it would sound more authentic if I read it. Many years ago—it will soon be three hundred years ago—Samuel Pepys, an old Englishman, kept a diary. It is a very entertaining diary; it has everything in it from the difficulties of wash day to the infamous taxes the English then had to pay, from plain graft in the English Navy to just ordinary everyday stealing. He was clerk of the Admiralty. This was in the time of Charles II, during the Restoration; it was during the opposite swing of the pendulum. Cromwell had just gone out and Charles II had just come in. Cromwell and the Ironsides had been somewhat abstemious in their habits; they were more given to prayer and fasting than to riotous living; and so when Cromwell died and the Presbyterians were not in power, Charles II and Nell Gwyn came back. I hope the suggestion about "coming back" will not be regarded as invidious, or as having any relation to the division of the Republican Party in years past. [Laughter.] We welcome them all. One objected during the last campaign to coming back, and he said he did not like the idea; that it seemed unprogressive. I said the most celebrated character in history was the Biblical one who came back—the Prodigal Son. He had his choice between living among the hogs on husks, or coming back to his father to live; and so he came. The only thing I do not want them to do is to run their sire out of the house. All of them are welcome, on condition that they come in on an equality.

That is the condition that Samuel Pepys found things when he was writing his diary. This is somewhat of a digression, but it is indispensable to a proper understanding of this bill. He had to spend the money and keep the accounts. He was a very great friend of the Duke of York, who afterwards became James II, and the Duke of York was continually bothering him about making up his accounts so that he might know how the Admiralty stood, whether they had enough money to victual and put crews on the ships. They were continually fighting in those days around the North Sea; when they were not fighting with Holland they were fighting the French; and when they were not fighting the French they would sail around on the other side of the globe and fight the Fiji Islanders; anyhow, there was general, all-around good fighting all the time. He was very much concerned about the financial condition. The Admiralty was building ships, and, like the Treasury in a Democratic administration, was always short. [Laughter.] Pepys was out of money; and he began to search diligently to find some reason why the pounds, shillings, and pence faded away so rapidly after they were extorted from the unwilling taxpayers. He hit upon this that is material in this debate, and it has in it such an element of government and such an undying trait of human nature that it ought to be emblazoned on the walls of this Chamber and cut down here on the post-office building in the unyielding granite of its walls, that there is not anybody who ever yet saw a Government undertaking that was conducted with the same degree of economy and efficiency as a private business. Mr. Pepys found it so, and I quote his language. This is in January, 1622:

> I observe that it cost Charles II, my King, more to get anything done than anyone in private life.

That is found in the second volume of Pepys' Diary, on page 268. I wish to leave that in the CONGRESSIONAL RECORD as an ancient and indubitable proof that this shipping bill, when it is full grown and in operation, will be subject to the same rule of economics and human nature that the ships of Charles II were, 300 years ago. That is what will happen.

Well, somebody says that we are going to make it so much cheaper. Now, how are we going to do it? Let me refer to the Post Office Department. We are not without information on this subject. We are making no reckless plunge into the gulf of experiment, without any knowledge to guide us.

The Government says, through a report of the Postmaster General, that the Post Office Department is not only self-sustaining but is piling up a surplus. That is most gratifying news. It is the only thing so far that has been heard from that manifests those tendencies, and so it ought to be put down as a red-letter day when that information percolated into this body. "Piling up a surplus each year!" Well, where does that surplus come from? "Oh, it comes from the earnings."

We will have up here some day a problem that will vex the understanding and try the patience of the Senate probably as much as the shipping bill. That will be the question of railway mail pay. If we get to the point where we pay the steam railroads for the service they are actually performing, we will have no surplus in the Post Office Department. In order to stop that, and to stop part of the cost of the Rural Free Delivery Service—the estimate for which was $52,000,000 in the aggregate, but the appropriation several years ago was about $40,000,000—they propose, when they come to that, to economize. How? By star-routing all of the rural free delivery, by substituting a system by which it shall be let out to a contractor.

Do you know why that is proposed? Yes; it is to effect economy. The direct employment of labor always results in a more expensive operation. The whole question of municipal ownership, of Government ownership, revolves about the one simple, pivotal point, whether labor shall be employed directly by the governmental body or whether it shall let out to a contractor the performance of that service or the furnishing of that commodity. So, when I come to that, I find in the report of the Postmaster General that he recommends that the rural free delivery be changed from the present system of the direct employment of rural free-delivery carriers to the contract system, or what is practically summed up in the words of star-routing the rural free delivery.

Why is that? He estimates that he can save about $17,000,000 a year in that way. He goes on to show that the cost of maintaining the rural free delivery has steadily increased. The compensation of a rural free-delivery carrier has run up year by year. No great comment is made, probably none, in that report upon the very great improvement of the Rural Free De-

livery Service in that time, upon the better kind of employee, who renders more efficiently and promptly the service required of him—a very great improvement all along the line, better understanding, quicker, better, more competent service. No account of that is taken in the increase in compensation.

I want to read something on that subject.

[Subsequently, Mr. SHERMAN continued his speech, as follows:]

Mr. SHERMAN. Mr. President——

Mr. STONE. Mr. President, I yield the floor to the Senator from Illinois.

Mr. SHERMAN. Mr. President——

The PRESIDING OFFICER. The Senator from Illinois.

Mr. SHERMAN. I am very glad to be able to resume, Mr. President, the remarks that I prematurely concluded on the 28th day of January, 1915. I am more than gratified that I will be afforded some time for completing those remarks. Upon the occasion of the last remarks I made, I had approached the alleged success with which the Government had handled the Post Office Department. I was then searching for a letter which I was unable to find, and which follows, in the ordinary course, the remarks which I concluded on the date named. This letter is important in that it refers to the success of the Postmaster General in creating a surplus out of the revenues of the Post Office Department. It implies that there are economies in the management of the department; that there have been some reforms increasing the efficiency of the service, and economizing so that that surplus has been produced. I am interested in the report of the Postmaster General dated December, 1914. That report, in substance, recommends that the rural free-delivery method of taking care of that branch of the service be discontinued, and in place of the present method, there be the star route or contract method substituted. I find that in the report for the fiscal year ended June 30, 1914, it in several particulars calls attention to the success that has attended the development of the rural free-delivery system, and to several tables which give the statistics, and it indicates what might be done to economize on the service. I read as follows:

In the light of the experience gained it is easy now to see that it would have been better in 1896, when Rural Free Delivery Service was established by law, to have enlarged the function of the "star-route" service, which at that time was employed only for transporting mail between post offices, so that it might have been extended to all the territory now served by rural delivery carriers. This was recognized in 1899 by changing advertisements for "star routes" so as to provide for box-delivery and collection service. From a digest of numerous replies to inquiries made by the department in 1902 it was found that the service was generally satisfactory to the people who were availing themselves of it. This system of box-delivery and collection service in connection with "star routes" has now been extended to practically all of the 12,000 "star routes" in existence.

After continuing at considerable length on this subject he in substance recommends that the rural free system of delivery by which employees of the Government are now performing that service be discontinued, and that in place of that system there be a contract method instituted, claiming that it will economize the service. Whether it will economize the service or not is doubtful. Whether the Post Office Department has any surplus to its credit at this time, if placed on a business basis, is doubtful. Whether there would be any increase in the efficiency of the service is doubtful. I do not believe, if a system of auditing or accounting for the income of the Post Office Department were had, and a fair basis of computation for the service rendered, taking the cost of it, were found, that it would be discovered the Post Office Department was earning anything equal to or above the cost of operation.

There have been a good many suggestions made on the question of the railway mail pay. A good deal of correspondence and a good deal of a hearing has been had, for several years past, with the view of a readjustment of the railway mail pay, so that we may be able to find whether the common carriers are now receiving fair compensation for that service; whether the rural free delivery will admit of further expansion; whether the parcel post is in that condition that it is paying the expenses of the operation. We have not remained, as the chairman of the Committee on Post Offices and Post Roads said some months ago in this body, long enough on one basis of zones and rates and weights to find out whether that branch of the Postal Service is self-sustaining or, much less, to say whether it is earning any profits. When this is considered, altogether, it is very doubtful whether this branch of the public service is paying expenses. The Postal Department is urged by a good many gentlemen, some of the public press, as an instance of the profitable and successful operation of a Government undertaking, making it efficient and inexpensive.

Taking this as one of the methods of demonstrating whether Government management would be profitable or not, I think it would be fair to find what the suggestion made by the Postmaster General in his report is, when it is carried out, and I find it is executed by a special order issued by the Post Office Department. This post-office order was sent out in circular form to a number of post offices in order that they might avail themselves of it in the management of the rural free delivery going out of those respective offices. It shows the shrinkage of receipts and, as usual with this administration, lays it on the European war. If peace should be fortunately concluded, it would take away the Democratic Party's scapegoat. The results of every mistake it has made are promptly charged to the war. It seems to be able to survive only by the war. I wish to read from this order, being as briefly considerate in my reading as I can:

The decrease in postal revenues since August 1, 1914, caused by unsettled business conditions created by the European war, makes it imperative that expenditures be reduced as far as possible consistent with satisfactory and adequate service, as they are now in excess of receipts.

That this condition is not due to internal causes for which the service is responsible, but to external wars, is shown by the fact that the increase in revenues for the month of July, 1914, over the corresponding month of the preceding year was above normal.

It is believed that with the hearty cooperation of all postmasters and careful and thorough supervision expenditures may be adjusted on the basis of receipts. No curtailment must be made which will affect the prompt movement and delivery of mails and an efficient service to the people.

Every feature of the Postal Service must be carefully considered, and in every case where experience suggests the possibility of reducing cost, the plan by which such reduction may be effected and all that it involves will be clearly set forth by the postmaster in communicating with the department.

It provides further that hereafter no rural route less than 10 miles in length will be considered unless at least six families to the mile are served.

That people within a mile of existing routes must use the existing route rather than become patrons of a new one, except in very exceptional cases.

That a new route must not be started until the entire route, roads, bridges, etc., are in proper condition.

Next it forbids in effect "establishment of new routes with more than three services a week."

And "routes on which for six consecutive months the mail collected and delivered has averaged less than 75 pieces per month per mile shall not be continued unless they can be rearranged to come within these requirements."

Again, in circular letter No. 16 the continued decrease in postal revenues in city post offices is charged to the European war. Paragraph C suggests that unused time of carriers may be taken up by having them walk and save car fare.

It will be noted, too, that the department says in one of the concluding paragraphs that "The service is confronted with a real emergency due to the fact that expenditures are greatly in excess of receipts."

The documents are as follows:

[Confidential.]

CIRCULAR LETTER NO. 16.—REDUCING EXPENDITURES.

POST OFFICE DEPARTMENT,
FIRST ASSISTANT POSTMASTER GENERAL,
Washington, January 30, 1915.

POSTMASTER:

You are requested to give this letter your immediate personal attention.

The continued decrease in postal revenues caused by unsettled business conditions created by the European war makes it imperative that expenditures be reduced as far as possible consistent with satisfactory and adequate service. It is believed that with the hearty cooperation of all postmasters and careful and thorough supervision expenditures may be materially reduced.

No curtailment should be made which will affect the prompt movement and delivery of the mails and an efficient service must be given.

Every feature of the Postal Service should be carefully considered, and in any case where your experience suggests the possibility of reducing its cost the plan by which such reduction may be effected and all that it involves should be clearly set forth in a communication addressed to the officer having jurisdiction over the branch of the service affected, and this bureau advised accordingly.

Until business conditions again become normal the employment of regular clerks and carriers overtime or the employment of auxiliary clerks and carriers to assist the regular forces does not appear to be justified and should be discontinued unless absolutely necessary because of the volume and importance of the mails. The spare time of clerks assigned to any part of your office should be fully used elsewhere when needed, and the number of hours substitutes are employed under auxiliary allowances should vary with the daily volume of business, as less service is required on days when the mail is light.

The department should be advised in all cases of allowances now in force which may be canceled in whole or in part. If, on account of the reduction of the work of your office, it is possible to maintain the service with fewer clerks or carriers, the force should be reduced until such time as their services are again required. When a regular clerk is absent without pay avoid employing a substitute if possible or employ him for only the number of hours he is actually needed.

No request should be made at this time for additional contract stations unless this is imperative for the proper accommodation of the patrons of your office.

The efficiency of the employees should be maintained at the highest possible standard and this can not be done by retaining inefficient employees, so those who have had a fair trial and have demonstrated their inability to perform satisfactory service should not be retained.

Reductions in the force of regular employees following readjustments of schedules so as to take up the unused time should be made by reducing to the substitute rolls the employees last appointed. Vacancies occurring in the clerical, and as far as practicable in the carrier, force should not be filled until the number of employees is reduced to the lowest number with which the work of the office may be maintained.

In the larger cities immediate consideration should be given to concentrating the deposits of collections at centrally located stations so as to consolidate clerical forces at these centralized points, thereby reducing the cost of supervision and clerical service. In some cases it will be found practicable in this manner to discontinue small classified stations and substitute therefor, if necessary, contract stations for the sale of stamps and money orders, the registration of mail, and the deposit of parcels.

In the delivery service the following features should have special attention with a view to reducing expenditures to the minimum:

(*a*) The cost of equipment employed in the delivery of heavy and bulky parcels should be reduced to the lowest possible figure, all parcels not too heavy or bulky to be handled by footmen being delivered by regular carriers.

(*b*) Where mounted collection service is employed an effort should be made to reduce the equipment used in the delivery of heavy and bulky parcels by utilizing the collection equipment. Careful study should be made of the feasibility of consolidating these two features of the service with a view to effecting not only a temporary but permanent economy.

(*c*) The unused time of carriers should be taken up and utilized to the fullest extent. If, in order to do this, a readjustment of the routes is necessary, such action should be taken and regular carriers whose services are not needed by reason of the readjustments should be assigned to substitute or auxiliary duty if they can be profitably employed 8 hours daily within a period of 10 hours. If not, the carrier last appointed should be temporarily reduced to the substitute roll. It may be possible to take up unused time on routes on which car fare is allowed by having the carriers walk and reduce the allowance for car fare.

(*d*) Unimportant delivery trips or delivery trips rendered unimportant by the falling off in the volume of first-class mail should be eliminated and the time saved taken up in a readjustment of routes. The regular carriers available as the result of such readjustment should be employed or reduced as indicated above.

(*e*) Unimportant collection trips should be eliminated and collection routes consolidated, readjusted, and arranged so as to take up the time gained.

The service is confronted with a real emergency, due to the fact that expenditures are greatly in excess of the receipts. This condition, which is critical, is not due to internal causes, for which the service is responsible, but to external wars, and the promptness and effectiveness with which postmasters respond to this letter and at the same time maintain the efficiency of the service will be accepted by the department as reflecting their administrative capacity and ability.

On February 20, in separate letters, report to this office, Division of Salaries and Allowances, on clerk hire and stations, and to Division of City Delivery on carrier service, what reductions may be made in your regular force (forwarding recommendations on proper forms) and state what allowances can be canceled.

DANIEL C. ROPER,
First Assistant.

—

JANUARY 30, 1915.

The suggestions in this letter are approved. I confidently believe that postmasters will make effective responses to this appeal to meet the service emergency which confronts us.

A. S. BURLESON,
Postmaster General.

—

[Personal.]

POST OFFICE DEPARTMENT,
FIRST ASSISTANT POSTMASTER GENERAL,
Washington, February 4, 1915.

POSTMASTER:

The work of carriers collecting mail is less exacting and important than that performed by carriers in effecting deliveries of mail. It is, therefore, desired that in the future the maximum salary of letter carriers assigned to the collection of mail be fixed at $1,000 per annum. You will proceed in accordance with this policy to make the necessary assignments of the higher salaried carriers to delivery work, and you will not in the future give to any letter carrier receiving a salary in excess of $1,000 an assignment as collector.

Carriers now acting as collectors and receiving salaries in excess of $1,000 per annum, who are incompetent to perform delivery service, should be reduced in salary. Proper notice should be given to them in conformity with the Postal Laws and Regulations unless, by explaining to them the manifest difference in importance and responsibility of the two assignments, they voluntarily submit written consent to salary reduction.

It is desired that you charge yourself with an immediate application to this matter and make the assignments as rapidly as possible from time to time so that by July 1, 1915, your collection and delivery service may be adjusted to the basis indicated. In applying this regulation a carrier who is performing both collection and delivery service should be regarded as a collector or carrier in accordance with the preponderance of work done in either line.

DANIEL C. ROPER,
First Assistant.

I wish to state here, outside of the matter from which I am quoting, that I believe the postmasters in all of the principal cities of the United States have been communicated with directly, or have been called to Washington in person to consult with the Postmaster General on the conditions existing in the several offices. I believe the city of Philadelphia has found in its postal service something that requires urgent action. I believe the city of New York finds its postal service in that condition. I believe the city of Chicago finds, too, its service in that condition.

I think, generally speaking, that this condition prevails, that the service has extended, the work of the post office has increased, the number of pieces handled out of the principal post offices of these cities has increased, the weight has increased, and the work incident to handling this increase in the volume of business has required additional service. While the work in every branch of the Post Office Department in these cities has increased, the income, or the receipts, of the several post offices have not proportionately increased. Some of them may show a proportional increase, but some of them, I can state—not from official knowledge and not from sources that I am at liberty to give—show a decrease in the receipts. All will show no increase commensurate with the increased volume of business. It indicates that the Government, in managing the Post Office Department, makes no money, that it is conducting this business for less than cost, that if the railways were paid for the service rendered there would be no surplus in the Postal Service at this time, that the parcels post is in a condition now where it is not self-sustaining. Both the in and out mail from several large western cities that are distributing points indicate that while the service has increased, the receipts have proportionately decreased, and it will show that the Government has not managed the post offices in the cities in such a way as to make them self-sustaining, that after awhile the United States Treasury must be drawn on if such conditions continue. It furnishes a parallel of a Government department now that will be duplicated when the proposed steamship line or lines contemplated in this bill shall have been put into operation.

In order to keep the post office at least partially self-sustaining, it has been necessary to send out the special orders from the Post Office Department, already referred to.

The House is the authority for money. In that body all money bills originate. After the recommendation by the Postmaster General of an appropriation of about $35,000,000 for the Rural Free Delivery Service, the House saw fit, in the exercise of its constitutional powers as the source of money bills, to provide an appropriation of over $52,000,000, an increase over the Postmaster General's recommendation of $17,000,000 for this branch of the service. In order to furnish the service in the rural free delivery with the reduced sum asked by the department, it was proposed to abolish the present system of carriers. The economies necessary to keep within the $35,000,000 made it obligatory on the Postmaster General to use some different method of accomplishing this service. So we find in his report of December, 1914, that he recommends the contract system mentioned, that the carriers are to be discharged, legislated out of existence. As one of the arguments to sustain this he quotes at some length the original salaries paid the rural free delivery carriers, the compensation as it has increased from year to year, and tracing that increase in such a way as to indicate that the service has now grown too expensive to be further maintained in that way. The suggestion is implied, if not expressed in words, that the pay of $1,200 a year for the carriers in the Rural Free Delivery Service is too much, that it is too expensive for the Government to maintain, and that the economies which can be effected by discontinuing the salary system and substituting for it in his plan of the contract system justifies the change.

I do not know whether a large department like the Post Office Department knows what its several branches are doing. If the contract system is advantageous, if it is an economical way of rendering the service, it might be a good thing, like charity and taking care of the heathen, to start at home. Washington is the home of the Post Office Department; its headquarters are here; its chief officer is found in the Capital.

In the city of Washington there is a man who had a contract, whose name is Harry Beasley. If I have his number correct, he lives at 208–210 Eleventh Street NW., in this city. The contract he had was for furnishing the horses and wagons for delivery and collection of the city mail. This was a contract system of rendering the service. The postmaster has discontinued four of Beasley's routes, substituting in place of these wagons White motor cars, which have been purchased. I understand these have been bought at a cost to the Government of $2,750 each. It is now costing approximately 15 cents a mile to operate these motors to give this service. Beasley was furnishing the horse and wagon for the same service at a cost to the Government of a trifle less than 8 cents a mile.

The Post Office appropriation bill is now in the Senate. The Postmaster General's recommendation, made last December, is in the hands of all the Senators. It recommends the contract system on the rural free delivery, but on the delivery and collection of city mail in the city of Washington the contract system has, in part, been abandoned. It has been abandoned in the interest of economy. It may be more efficient; it may be that the mail is collected in less time and more

promptly; but the fact remains that the average cost per mile of collecting with motor cars is 15 cents, against 8 cents collected under the contract system. With the motor cars the Government does the work direct; the employee, the driver of the wagon, those who collect the mail, are Government employees. They are the same as the rural free-delivery employees. It is the direct system of employment rather than the contract system.

It seems that the Postmaster General, if there was any economy in this way of transacting business, could very properly retain the contract system here, in this city, as a shining illustration of the economy, costing about double the amount per mile. If the direct employment of rural carriers is to be abandoned, why does the department here return to the system under which the rural free delivery is now operated?

The recommendations made by the Postmaster General for paring down the Rural Free Delivery Service, the cutting of salaries and other changes, indicate that the fear is growing that an enormous deficit will result from the department's invasion of the package express business on an inadequate charge for that service.

I will read now from an editorial in the Washington Post on this subject:

As the time goes on the parcel post will be found more and more expensive. The express companies had the business on a fairly remunerative basis, but the competition from the Government was so severe that it was inevitable that several of them should be forced out of business. That result has been accomplished. The public is getting a cheaper service. That, too, is clear. Parcels can be sent long distances at cheaper rates than ever before in the history of the country. The public is getting the service, but if this cheapening of the service is being accomplished by a large deficit, however, the advantage that has come to the public will be of doubtful value.

No one need search for proof that the Government usually transacts business more expensively than private corporations. Most business men who are appointed to office are amazed, but they find that politics interferes with economy. If it costs the Government more to operate the parcel post than it costs the express companies, there is not the slightest doubt that the public eventually will lose. The Government is not a philanthropic concern, but it is the trustee for the money of the people, and if the parcel post costs the Government more than the people pay for the service, the people themselves must pay the difference in the form of taxation. It would be regrettable to find a large deficit as a result of the increased activities of the Post Office Department. It would be even more deplorable if the general service had been impaired to prevent a deficit. It would be evident that a government had bitten off more than it could chew. Certainly there ought to be no talk about the Government-owned telegraph and telephone lines when the Post Office Department is facing a deficit.

I know it was suggested here last spring or summer, when we opposed increasing the weights, that every person who opposed the recommendation of the Postmaster General was in league with the express companies. It was insinuated here that they were the real persons that opposed the recommendations of the department. I voted in accordance with the report made by the Senator from Alabama, of the Post Office and Post Roads Committee. We were defeated in that committee report. The press at large, in a good many places, and with more or less vehemence, insisted that all who voted in favor of the Post Office and Post Roads Committee report were voting for the express companies. I went through a campaign on that. I think I was charged a great many times——

Mr. HUGHES. Mr. President——

The PRESIDING OFFICER (Mr. JAMES in the chair). Does the Senator from Illinois yield to the Senator from New Jersey?

Mr. SHERMAN. I decline to yield.

Mr. HUGHES. I desire to make a point of order.

The PRESIDING OFFICER. The Senator will state his point of order.

Mr. HUGHES. The point I make is that the Senator is not discussing the subject matter of the bill before the Senate.

Mr. SMOOT. He is discussing Government operation.

Mr. GALLINGER. The Senator from Illinois is discussing the bill.

Mr. HUGHES. I have listened as carefully as I could, and I am absolutely unable to discover any connection between what the Senator is saying and the subject matter of the bill before the Senate. If the Senator says he is discussing the bill——

Mr. GALLINGER. The Senator is discussing the operations of Government ownership, as showing that under the Government operation of the Post Office Department they are running behind, and he will apply it to the operation of ships.

Mr. HUGHES. I will withdraw the point of order if the Senator himself will say he is discussing the bill before the Senate.

The PRESIDING OFFICER. Does the Senator from Illinois claim he is discussing the bill now before the Senate?

Mr. SHERMAN. I do.

Mr. GALLINGER. I would make the further suggestion that we have no rule as to relevancy except as to appropriation bills. The point would not hold on that.

Mr. SHERMAN. I would like to be heard on the point of order.

Mr. KERN. Mr. President, the absence of a rule is suggested by the Senator from New Hampshire. In the absence of a rule, general parliamentary law prevails, and under every principle of parliamentary law, a speaker must address himself to the question before the house.

Mr. GALLINGER. Mr. President, the Senator from Missouri a little while ago talked an hour, and he did not discuss the shipping bill at all.

The PRESIDING OFFICER. The Senator from Indiana is stating a point of order.

Mr. KERN. One breach of the rule does not excuse another breach.

The PRESIDING OFFICER. I will hear what the Senator from Illinois has to say. Is he discussing the bill?

Mr. SHERMAN. Yes, Mr. President. The question is on the Government ownership and operation of steamship lines. I wish to show by the analysis of some facts I have that the Government can not even operate the Post Office Department, which is simply a great carrier system on land of postal matter of various kinds, without running at a loss; that, in fact, there is a deficit, and that it is not successfully managed.

The PRESIDING OFFICER. Does the Senator from New Jersey insist upon his point of order?

Mr. HUGHES of New Jersey. No. If the Senator says he is discussing the shipping bill I will withdraw the point of order.

Mr. GALLINGER. Go ahead.

The PRESIDING OFFICER. The Chair will hear the Senator.

Mr. SHERMAN. It was suggested——

Mr. KERN. Does the Chair overrule the point of order?

The PRESIDING OFFICER. No. The Senator from New Jersey withdrew his point of order. The Chair will see, as the Senator proceeds, whether he is discussing the bill or not.

Mr. KERN. I will raise the point of order a little later if the Senator does not confine his remarks to the bill, and I shall appeal from the decision of the Chair, and take the sense of the Senate on it.

The PRESIDING OFFICER. Of course the Chair has made no decision. The point of order has been withdrawn.

Mr. KERN. I understand that.

The PRESIDING OFFICER. If the point of order is made, however, then the Chair will decide it.

Mr. KERN. I take no appeal now because there is nothing to appeal from.

The PRESIDING OFFICER. As there is no point of order made the Chair has made no decision.

Mr. SHERMAN. I understood the Senator from Indiana was simply serving notice that he expected at some time hereafter to make another point. I will accept the notice; in fact, it would not be necessary, for I know whenever a point of order occurs to him he will make it in due season and present it in his very forceful manner. I recur to the criticisms of us who voted as indicated. We replied it was our purpose to protect the rural free-delivery system. This was the sole motive. When the truth is known of the Post Office Department we will be justified in supporting the committee report mentioned.

Some of the express companies when the parcel post was extended were unable to operate at a profit. At least one large company has liquidated. The parcel post took so much of the business that had heretofore been done by the express companies that they found it inexpedient to continue. The parcel post, if it were analyzed on the present basis of doing business, would be found to be operating at a loss. There have been some advantages, but it has been at the expense of the self-sustaining other features of the service.

Considerable profits have accrued to some of the business lines in the cities. The mail-order houses have profited greatly. Their business has increased in the larger cities. A very considerable part of this increase in the volume of the postal matter handled grows out of the mail-order houses. One of them, to illustrate, in the city of Chicago has recently shown the largest earnings in the history of its operation. I know from the method of sending out bulky matter to their customers that they have made material gains, for catalogues that used to cost 32 cents to send out can be sent out under the parcel post for 8 cents. They send out many tons of those catalogues in a year. The saving alone to the large mail-order houses in their catalogues aggregates an immense sum of money. This profit made by the larger business houses is no profit to the general public. It does not lower prices or give any benefit to the purchaser. The profit itself comes as a result of the cheaper handling of the parcel post under the new regulation

or the expansion made by recent act of Congress. I believe, if it could be found who was getting the benefit of this branch of the service, it would be indicated that the large mail-order houses are the principal beneficiaries in the cities. On all the outgoing mail that they send to their customers they get a reduction. This is one illustration of how the Government operates in handling a line of business.

It is of a public character. It is very similar, except that it is on land, to steamship carriage. There is no particular difference except that the Post Office Department does not furnish the motive power, the track and the vehicles that carry the parcels from place to place. The Government in reality, through the Post Office Department, does the least of the service. It only furnishes the men who collect and distribute the matter carried. The real part of the service is done by the common carriers of the country. The railways are the ones that furnish the most expensive part of the service; the railways are the ones that really carry the mails. The employees at the different post offices collect and distribute rural free delivery with the parcel-post collections and with the post-office distribution.

If the Government can not operate the Postal Service so as to be self-sustaining, then it seems as if a steamship line, where all the branches of the service are to be taken care of by the Government, would work under a great many more embarrassments with much less probability of being successful or self-sustaining.

The President says that the line or lines established might be expected to work at a loss for a time, but that eventually the public good would compensate for whatever shortage might occur. It contemplates that whatever the loss, it will be paid out of the Public Treasury. I think it is fair to infer that if they can make no money he thinks that the steamship lines would be operated permanently at a loss.

The postal branch of the United States Government is as old as the Government itself. It began with the first of the departments, and its head was one of the first of the members of the President's Cabinet. Having been tried for all these years, if it can not be run so as to be self-sustaining there is but little hope for Government steamship lines.

I can understand, in view of this legislation, in view of the charge that is made that eventually it would be run at a loss and that the taxpayers must make good on it, why the department is now putting forth such strenuous efforts to show that the Post Office Department is self-sustaining or is earning a surplus. I believe that that effort is made for the purpose of furnishing an argument for Government ownership such as is contemplated in this bill.

The cutting down of expenses in the Post Office Department is illustrated in the Chicago post office. I wish to read what action has been taken in this department. Under date of February 3, 1915, I have a resolution of the Chicago Federation of Labor, as follows:

HEADQUARTERS CHICAGO FEDERATION OF LABOR,
166 WEST WASHINGTON STREET,
Chicago, Ill., February 3, 1915.

HON. LAWRENCE Y. SHERMAN,
United States Senator, Washington, D. C.

MY DEAR SENATOR:

Whereas it is only recently that an official in the Post Office Department, assuming authority equal to that of Congress, issued an order taking catalogues out of the classification of third-class matter and granting them the parcel-post rate, resulting in a loss to the Government of over $4,000,000, with the mail-order concerns as beneficiaries, such action, together with the fact that no attempt has been made to reduce the salaries of high-priced officials or to reduce the unnecessarily large force of post-office inspectors, leads us to believe that a congressional investigation into the administration of the Post Office Department is badly needed: Therefore be it

Whereas Postmaster D. A. Campbell, acting under orders of the Post Office Department to reduce the pay roll of the Chicago office about $176,000, has within the last few days reduced the salaries of a large number of mail clerks and letter carriers from $1,200 to $1,100 per annum, and in many cases from $1,200 to $1,000 per annum; and

Whereas such orders and action of the Post Office Department are not only unjust and unfair, resulting in hardship and suffering to the poorest paid of our Federal employees, but in direct violation of the law regulating the salaries of such employees; and

Whereas it is evident by such action that the Post Office Department has no regard for statutory law and no regard for the service that is due the public, as was evidenced particularly at the last holiday season when post cards and other mailing matter were delayed four and five days in delivery; and

Resolved, That we, the executive committee of the Chicago Federation of Labor, directly representing 300,000 organized workingmen and indirectly speaking for all workingmen and women of this great city, do most emphatically and vigorously protest against penny economy at the expense of underpaid employees and dollar extravagance, with the large mail-order houses as beneficiaries, and the disregard for statutory law by the Post Office Department, and that we therefore request the Illinois delegation in Congress and the officers of the American Federation of Labor to have introduced in the Senate and the House of Representatives a resolution providing for a congressional investigation into the administration of the Post Office Department, and that such congressional committee shall have the power to subpœna witnesses, administer oaths; and be it further

Resolved, That a copy of these resolutions be sent to the Illinois delegation in Congress and officers of the American Federation of Labor.

Respectfully submitted.

CHICAGO FEDERATION OF LABOR,
By E. N. NOCKELS, *Secretary*.

Mr. KERN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Indiana?

Mr. KERN. Will the Senator yield for a statement?

Mr. SHERMAN. For what purpose?

The PRESIDING OFFICER. Does the Senator from Illinois yield?

Mr. SHERMAN. For what purpose?

Mr. KERN. For a statement.

Mr. SHERMAN. For a question only. I have no objection to a question. I do not yield the floor.

Mr. KERN. I will ask if the Illinois delegation in Congress paid any attention to the resolution?

Mr. SHERMAN. I am paying attention to it now as best I can.

Mr. KERN. I ask the Senator whether any affirmative action has been taken by any member of the Illinois delegation?

Mr. SHERMAN. I can not speak for the House. Their proceedings have been somewhat voluminous; I have not read them at length, and I am unable to say.

Mr. KERN. Has the Senator in any way responded until this moment to the request of the laboring men of Chicago?

Mr. SHERMAN. I have not. The resolution, as I stated, is dated February 3, and this is only the 10th.

Mr. KERN. This is the first opportunity the Senator has had?

Mr. SHERMAN. It is the first opportunity I have had.

Mr. KERN. Were not similar resolutions passed six or eight months ago?

Mr. SHERMAN. I think not. Probably there was not as much information because the post office at that time, Mr. President, had not attempted the sweeping reduction in the force or the decrease in the compensation of the employees.

Mr. KERN. Were not similar complaints made by similar resolutions six or eight months ago?

Mr. SHERMAN. The complaints were not of the kind that are embodied in this resolution, because the complaints could not have been made at that time. The present facts had not occurred. These developments that have taken place since then are in response to the strenuous effort of the department to economize. In doing so they have cut salaries as indicated here of the employees—$1,200 employee from one to two hundred dollars per annum. That has been done recently in the Chicago post office. The effort to economize in the Chicago post office has been more marked in the last 30 days than in any former time, because the Postmaster General finds a very singular condition prevailing in that city. The work of the Post Office Department has increased in Chicago. The number of pieces handled and the weight has increased; the service rendered by the employees is much more burdensome than formerly, especially in the branches of the service among the more poorly paid or the ones who are doing the labor that more nearly answers to manual service. Their number has been so reduced of late that this resolution was the result. It has been reduced for the purpose of economizing. I think they have found that in order to make the post-office expenses proportionately equal receipts it is necessary to cut, as they find here, at least $176,000 off the operating expenses of one branch of the service alone. It is a peculiar hardship on those men who are not paid a very large sum to meet this reduction in midwinter. Their families must feel it. Their life insurance, home-building payments, and other wise precautions must suffer. If there were not such a morbid desire by the Post Office Department to extend the parcel post without paying for it the shrinkage in receipts would not impose this hardship on the employees. This is the real cause, and not the European war.

Mr. KERN. Does the Senator argue from all that that the Government should not encourage a merchant marine in some other way than by a subsidy?

Mr. SHERMAN. If the Post Office Department, which has been in existence for over 100 years and which has been very often held up as a shining example of what Government operation can do, finds that in the second largest city in the United States and the second largest city in the Western Hemisphere to-day it is doing more work than ever and taking in less money than it ever did for a corresponding amount of work, then Government ownership and operation of the Post Office Department is a financial failure, and at last, as in the steamship proposition, if we operate it under this bill, it will be a charge on the taxpayers and the Public Treasury.

Mr. KERN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Indiana?

Mr. SHERMAN. I yield for a question only.

Mr. KERN. Does the Senator argue from all that that the Post Office Department ought to be placed in private hands for operation?

Mr. SHERMAN. No, sir; I do not. The Post Office Department is like the public school; it is like the Navy; it is like the Army; it is like coast defenses; it is like fortifications—like all the branches of the military service on land or sea. These are a part of the Nation's police power, the most advanced and civilized form of the police power. It is a governmental undertaking. Nobody ever expects to earn dividends on a battleship. Nobody ever expects to earn dividends on a public-school system. Nobody ever expects to earn anything in dollars and cents on the strictly admitted province of Government undertakings.

There are things that are universally recognized to be Government undertakings. The line that divides a public undertaking from a private one as already suggested is not a fixed line. It advances or recedes with a generation, with a century, with what is public, or what in our Government the people can well do. I do not set any artificial line in my private judgment where it ought to begin or end. I can only say that from the beginning of things as we understand it, with our ideals, running back to the source from which we borrowed our law, unisersally certain things have been admitted to be governmental in their character. Others have been impressed with a public interest; others have been strictly private, in which the Government had no part and even had no right to regulate. The Government has no right to regulate my potato patch. The Government has no business regulating the method in which I serve, if I am a hired hand on a farm. All the Government can do with a strictly private business is to regulate it that it do not hurt others, that it act in such way as to not interfere with the public peace. The private undertakings are universally recognized. It is much easier to recognize them than it is to furnish an adequate definition that would be good now and 100 years from now. Private undertakings are such, ordinarily, as the Government can not regulate save as it regulates you or me, to keep us from doing damage with our persons or property to the rights of others, or creating breaches of the public peace, or something that will be injurious to the public welfare. The undertakings that are impressed with a public interest are of an entirely different character. I would not go into this of myself, but the Senator made the inquiry. I have no desire to needlessly consume time. I am economical by nature. I want, so far as possible, to get, within the time allotted here, as much as I can that belongs to the legitimate discussion of this bill; but so long as the Senator has asked the question and gotten it into the CONGRESSIONAL RECORD—and it is pertinent, too—I am justified in giving my views, of however little concern they may be to this Senate or to the public. We may not expect the Postoffice Department to earn a surplus or pay dividends. We may reasonably ask it to be self-supporting.

The public undertakings that are governmental in character are distinguished from those that are simply impressed with a public interest. I have been through both legislation and litigation in some of the Western States of the undertakings of the latter character with the common carriers, with the great warehouses that stand at the gateway of the northwestern market. The question arose a good many years ago. It has been worked out in great detail, with a great wealth of litigation, with many animated controversies in the legislatures of the Western States, with some constitutional provisions and with great differences of opinion. Mr. President, this legislation has only served to emphasize the necessity of regulation, not that the Government is to take over these undertakings, these pursuits that are impressed with the public interest, and administer them itself. The regulation consists in fixing the price for service or for the commodity. It is subject to the constitutional limitation that it can not be fixed so low as to destroy the compensation of the concerns engaged in that business. The result has been, when the regulation failed, a widespread clamor for Government ownership and operation. If I thought these different public utilities, like the carriers, the warehouses, the steamship lines, whether they operate inland, on lakes and rivers or by sea, on the coasts, or the deep-water shipping—if I thought there was no way to regulate these public utilities other than by taking them over by the Government and operating them, I would be in favor of it. If I thought they would burst all the restraints that could be placed on them by the hand of government, and become greater than their creators, I would not have any question in my mind about what my public duty ought to be, if I held any office where it became a part of that duty to vote on the question. But I am not satisfied of that. I think the Government can regulate—either State or National Government—according to the jurisdiction in which the attempt is being made.

I have not despaired of the Government, like some of my friends. I have not turned Populist, much less Socialist. I remember the time when the agitation began for the control of the carrier systems and the warehouses. It was said it would be a failure; that the Government could not regulate them. The Populists came. They swept over the western country. They wanted Government warehouses, Government ownership of railways. They wanted the Government to loan money on certificates showing the storage of grain and other agricultural products. They were only a little ways ahead of propositions that have been made on this floor in this Chamber. They were 25 years in advance, is all. Of course, none of those bills have ripened into legislation; none of them have reached the Treasury; none of them have yet been urged, through the authorities and those who are sponsors for them, powerfully enough to reach the form of law or appropriations. But when we speak of Government ownership and operation, it is always with the idea that those who believe that the individual ought to be left to do something, that Government ownership is the last resort, that nothing remains, that nothing more can be done, because the Government ought first to regulate. The Government regulates the railroads; it has regulated warehouses; it has regulated every form of public utility that the legislative branch of the State or National Government has undertaken. I do not think there has been a failure on the part of the Government to regulate anything it has constitutionally undertaken. It has proceeded along reasonably safe ground, and to-day it is not a question of more regulation, it is not a question of new law; it is a question of whether the enterprises are able to do business under the excessive form that that regulation has assumed.

I have heard in some places, not with any degree of satisfaction, that the railroads of the country were to be regulated to the point that their stocks would depreciate, that the service would be made so burdensome that it would be unprofitable for them to longer continue in business as privately owned instrumentalities of the carrying trade of this country. I do not think that possesses the remotest elements of governmental morality. The idea that the Government may harass, may destroy values, that it may beat down the compensation, that it may by restrictive legislation make operation so burdensome that the carrier can no longer engage in it, has in it no element of governmental honesty.

I have heard it suggested by some, even some in public office, that when railway stocks were depreciated to the point where it would be no longer profitable to hold them in private ownership then would be a good time for the Government to acquire that ownership and thereafter to operate them as publicly owned lines. That is not regulation; that is confiscation, whatever form it may assume, whatever euphonious name may be given it. Whatever may be said, it amounts in substance to the confiscation of the private rights of property.

I hold no brief for railroads nor for warehouses. I represent none of them, and have not for some years. The private steamship lines are denounced here as railways were denounced 25 years ago, as they are denounced now in certain quarters, as I heard them denounced in Western States, in my own State, Illinois, and in Iowa and Nebraska and Kansas, in the days when the Populistic excitement ran high, in the days when Peffer came to the Senate, when "sockless Simpson" lived his cycle, obtained his notoriety, represented his constituency, and passed off the stage. That excitement has subsided. It reminds me a good deal of what is now occurring. The Populist of that day has his counterpart in the Government-ownership man, in an advanced stage, and high frenzy of the present day. The only difference between the Populist of 25 years ago and the Socialist of to-day, or the advanced form of Government ownership of to-day, is in a hairdresser and a tailor. The Kansas Populists shaved less frequently and cut their hair at uncertain intervals. A great many times their whiskers were badges of honor and the precious jewels of their possession, and they kept them as the insignia of the order. These latter-day people sometimes wear silk hats and better clothes, but their creed and what they are trying to do is practically the same thing.

I have not in me an ounce of Government ownership for anything that is essentially a private undertaking, unless it has been demonstrated that the Government can not, in the public utilities of that class, longer regulate them so as to protect the public they serve. If the commodity or service can not be

made reasonable, if the regulation has been demonstrated to be a failure or to be beyond the then powers of Government, then I believe in advancing one step further the line of demarcation of which I spoke awhile ago and increasing the activity of the Government in that particular. Unless that has been demonstrated, I prefer to leave it in private hands.

I have not anything of the Socialist in me. I think a socialistic government is a failure. It is destined to be a failure. It has been tried, and the attempts are all failures. When they tell us that socialism has never had an experiment made that demonstrated whether it could succeed or fail, I reply that more than a thousand well-recognized attempts have been made, many of them in our own country, some of them in the western country.

I remember one in particular, a French community, started with as fair an opportunity for the government to do everything it assumed as could be desired. It began nearly 50 years ago with a clean slate. Everything was left to the government—the public ownership of what everybody now recognizes as a private undertaking. They labored in common, they lived in common, they worked in common, they lodged in common, they educated their children in common. A child belonged to the community, not to the parents. The family relation in substance was destroyed. You had a place to sleep, a suit of clothes, a meal ticket, a job every day, and still human nature was not satisfied with all that attainment. Mr. Cabet, who was the head of this community in Hancock County, Ill., on the banks of the Mississippi River, where the city of Nauvoo now is, found that government ownership did not satisfy the aspirations of human nature, that the government could not manage everything, that something had to be left to private initiative. In that country one time, after a hard afternoon's work with an outdoor crowd under the oak trees, I went out to another corner of the park and found there living the sole surviving member of the Icarian community, as it was called—a Frenchman up in 80 years. Here is where Government ownership and operation of steamship lines go. They undertook no more than this bill. Their experiment is the path we are traveling. It is the inevitable tendency in every bill of this kind when there is no necessity save that rates have gone up, owing to conditions over which we have no control, temporary in their character, that in the nature of things must end, to offer that as the remedy for a transient evil. It is tending in the same direction described by this survivor of a communistic society.

I asked him why it failed. He was a charter member. I had a copy of the charter, and we read it over—the articles of agreement, the civil compact that the law books talk about, the original agreement that society is supposed to make, but seldom ever does, except in these theoretical cases where they start societies of this kind. I asked him why it was that it failed, and he said, after looking at me a long time, that all these undertakings would continue to fail until the Almighty made human nature different from what it is.

These governmental undertakings, all of them of the character contemplated in this bill, are tending in the same direction, taking away from the initiative of persons in private life and absorbing it by the Government. The President sees well enough, in his message, this danger. I do not think, at heart, the President is socialistic. His motive may be far from it. It is manifest, on reading that message, what he feared. He says that after the lines shall have been put into operation, after they have been made successful, even by operating them at a loss, after the shipping public has been given the service at a reasonable price, with regular sailings and in adequate capacity, and the concern has been put on a going basis, as the phrase is, the Government shall then withdraw from the service. This admits, in substance, that as a permanent undertaking it is inadvisable. It must be for some reason; and very likely, if the President's motives could be searched, it would be found that he is opposed to the Government's taking over permanently a private enterprise of this character. So he limits it in time. Whether it is entirely satisfactory to the advanced type of Government-ownership believers remains to be seen. If the temporary provision be stricken out of the bill, or such amendments be had as to indicate that the bill is to be permanent in its character, it would be much more satisfactory to that type of believer in such Government undertakings, and the price of their support is likely to assume the elimination of that feature of the bill.

It has been suggested a good many times, to show the tendency of all bills of this character, that the Government take the telephone lines and the telegraphs of the country and administer them as an annex of the Post Office Department. I do not know that there is any more justification for this than there is for the operation of the steamship lines. The European Governments operate the telegraph as a part of the post-office department. They make the sender pay for every word in the address and pay for the signature, an average of fourteen words.

Here, under our service in private management, the companies give the signature and the address free. It makes no difference how long the name is or the address; there is no charge. In Europe, where there is a Government ownership of these lines, the service requires you to take your telegrams to the office yourself. There is no free messenger service. In our country, under private ownership, with Government regulation, either actual or regulative that can be had because their service is impressed with a public interest, as in these other utilities mentioned, the companies furnish the messenger service free. In Europe you run no account with the post-office department or the telegraph department. You pay for all your telegrams in cash. Here, especially since there is some similarity of interests between some of the telegraph companies and the telephone systems, every person who has a telephone number has credit at the telegraph station, and your account is rendered at stated intervals. In some Governments of Europe, to show the advantages and the disadvantages, you pay even for the blank telegrams you use. Here the blank telegrams are free, but the companies are managed by private owners, and are soliciting business, and two of them in the country are competitive with each other.

The Government puts no telegraph offices in hotels or other public places in Europe. This, however, is a matter of great public convenience. Here they are found at every place. Under private ownership they put them wherever there is a probability of their doing any business, in localities that will make the office self-sustaining, or sometimes it is run at a loss for the purpose of getting the business in that part of the community.

Under Government ownership there is no legal liability for negligence, either in sending the message or for personal injuries to those engaged in rendering service for the common employer. Here there is a liability, when the companies are in private hands, that is enforceable in the courts by suit. Under our system of getting anything from the Government for negligence or for any liability, it would be indispensable that we should go to the Court of Claims. The Court of Claims, after rendering judgment, has no means of enforcing its payment. That must be done by an appropriation from Congress or by the legislative branch of the State government. The Government service is inferior to that of the telegraph companies or telephone companies in private hands. The Government employees are not as attentive to the public as they are in private hands.

The British post office, for instance, recently made a report as to its operations for the year ending March 31, 1914. A telegraph service is a public undertaking, rendering service to a great number of people, and is as much a public undertaking and as much a test of what would be done under this bill as anything that has been tried.

The British post office estimates a loss on its telegraph service for the year ending March 31, 1914, of 1,230,956 pounds sterling, which is something like $6,000,000, and is a greater deficit than in the previous year. If the American Government ever acquired the American telegraph lines, what would the loss likely be? If it acquired the telephone lines of the country, local and general, those that are continental in their mileage, we can have some idea of what the loss would likely be.

A steamship line is a carrier. It can be tested in the same way that other carriers are. If others operated by the Government have not increased the value of the service, have not been self-sustaining, have called on the taxpayers and the National Treasury to make good a deficit, their experience is of some value in determining whether we ought to embark upon Government ownership and operation of steamship lines.

There is a constant tendency in all Government operations to increase the cost of operation and decrease the cost of the service. That is manifested on every hand. It is shown more particularly by the abuse of the service, by getting it too cheaply, by having the Government render its service or give a commodity at less than cost. The inevitable result of this is a raid, finally, on the Public Treasury. An illustration is seen in the abuse of the parcel post.

The Boston Advertiser cites a case:

Certain incongruities in the parcel-post regulations are brought to light by the fact that a California farmer recently succeeded in shipping a considerable amount of wheat through the parcel post at a less cost than he could have shipped it by railroad freight. He divided the entire shipment into 50-pound sacks, and delivered them at the post office. Then the force of post clerks were obliged to handle the many sacks, whereupon the parcels were delivered to the railroad company. The railroad company then carried them at a distinct loss and delivered them to another post office. Here the clerks again handled the

matter, and the proper persons were forced to deliver the sacks at the place of business of the consignee. Hence the Government and the railroad company both lost money on this transaction. In the first place it was a flagrant abuse of the system; but if the regulations are so loose one can not blame the farmer if he stands ready to ship his product at the least possible expense. The remedy should be provided by the postal officials at Washington. Judging from the Government pay roll they are there in sufficient numbers to handle such a situation intelligently.

Another item I cut from an exchange:

The extent of which the parcel post is being used in the shipment of agricultural products was shown at Gallup, N. Mex., a few days ago when a ton of oats arrived for delivery at Ganado.

These things only show that the parcel post will rapidly develop into a freight-carrying line; that its purpose as interpreted and applied by the Post Office Department evidently is to increase from time to time the weights and zones, regardless of the cost of their transportation. When it is increased, it will be like the steamship line; it will operate at a loss. The steamship line may start in even. As it grows older naturally the pressure will be to decrease the charge. After this decrease the income will naturally decrease. It will be like the other undertakings of the Government; it will be operated at a loss.

This means a further charge on the Public Treasury. There are already enough of those charges. The Public Treasury now has about all it can carry. It is contemplated here in both the original subscription to the capital stock, as well as other expenditures made in the sum of $10,000,000, or $30,000,000, that the Government will be out of money, because bond issues are provided for. There is a Government bond issue foreshadowed now by the condition of the Treasury.

The appropriations were never larger in the history of the country than now. Even with the new taxes, the deficit of revenues is around $80,000,000 annually, as compared with about $38,000,000 this time a year ago. The deficit is now growing at the rate of about $12,500,000 a month. This is so even with the income arising from the additional revenue from the special taxes. If the Treasury is in this condition now, the time is at hand for retrenchment and economy, rather than imposing additional burdens upon it.

The receipts of the Government are not in a satisfactory condition. The revenues collected by the Government in January, 1915, failed by $8,116,427 to meet the expenditures of the same month. Receipts usually are low at this time of the year. Last January the excess of expenditures was only $4,512,000. Neither the customs nor internal revenue brought in the expected revenue. The customs receipts amounted to $16,588,000, compared with $23,890,000 a year ago.

Another feature that ought to be taken into account is that ordinary internal-revenue receipts were $27,096,000 in December, 1914, or less by $5,000,000 than in December of the previous year, and only about $2,000,000 more than the receipts from the same source in January, 1914. If the average be kept up, it would indicate that for the fiscal year ending June 30, 1915, there will be a deficit of nearly $90,000,000. This deficit might be increased because proposed expenditures are not taken into account by me when I figure it this way.

There are appropriations made for the Alaska Railway, referred to here several times in the course of this discussion. The appropriation bill only provides for setting apart from the Treasury $2,000,000. The remaining $33,000,000 or $32,000,000, if $1,000,000 has already before this appropriation bill been set apart—the remainder of at least $32,000,000 is a continuing charge upon the Treasury.

A very large river and harbor bill has made its appearance. Whether it will eventually pass both Houses and be signed by the President we can only conjecture. It might meet with some difficulty. It might be reduced by striking out some of its items, but it must be conceded that a considerable sum will at last be provided by that bill.

There is a tentative charge or some $25,000,000 pending in the Committee on Foreign Relations. It depends upon the ratification of the Colombian treaty. It is understood that the Department of State of the present administration is favorable to the ratification of this treaty. Outside of certain objectionable things that it commits this Government to do by way of apology and regrets that need not be discussed here now, there is the charge of $25,000,000 against the Treasury. This is at a time when the Treasury is in no condition to bear it.

Some $10,000,000 in increase of salaries I find in the estimates presented by the various departments, and in the creation of new offices provided for. The increase in salaries, while perhaps agreeable to the occupants of the offices and possibly just, comes at a time when the Government can ill afford in its financial condition to make those increases.

It is proposed to extend the deficit tax, or the more euphonious term, "the war tax," some time in the future; to increase the income tax or to reduce the exemption limit, so that those who pay will be more numerous, because of lowering the $3,000 exemption.

When our public officials are seeking to recover more money, searching out new places for taxation, devising new methods to reach the taxpayer, when our revenues are less than our expenditures, when a threatened deficit of nearly $90,000,000 at the end of the fiscal year is facing us, it is a poor time to enter upon the Government ownership and operation of a steamship line that involves an initial expenditure of at least $40,000,000.

I want to take up one other branch of the United States public service, in order to compare what it has done with what the Government ownership and operation of this line would likely do. The plan proposed in this bill is an experiment. We can profitably use whatever our experience has been in other public undertakings managed by the Government to find whether we ought to engage in this. It is one of the best ways of ascertaining the folly or the wisdom of the venture.

One of the curios of departmental work I ought to cite. Certainly this bill could not have been in contemplation when it was written, although it was written by one of the most hopeful, optimistic public officials there is in the country. He is a gentleman who can see prosperity on every hand, who never sees or hears of the bread line. He never knew of anybody being out of work unless it was wiilful idleness. I allude to Secretary Redfield, of the Department of Commerce. He certainly is the court jester of this administration. He can not at times be taken seriously. He must be trying to devote some of his efforts to enlighten the somber places of departmental service. I wish to allude briefly to his report.

It is literally true that he devotes page after page to describing the utter inefficiency and inadequacy of accommodations for a branch of the public service administered by his department. It is the Coast and Geodetic Survey. I am somewhat familiar with its operation in various parts of the central Mississippi Valley, and it is doing a very useful work. It ought not to be hampered. It ought not for a moment to be denied liberal appropriations for the purposes in view. On the coast they are doing the most useful service now known. In our insular possessions they are furnishing maps, taking soundings, charting reefs, making navigation safer, furnishing records that are indispensable to the Bureau of Navigation and to general naval operations, either in peace or war.

It was somewhat humiliating to this country during the Spanish-American War to undergo an experience this Government had. It became necessary for us to have charts for use in navigation in a certain part of the world. Some of our ships in the exigency of war found it necessary, in the execution of their orders, to pass waters that were unknown to any of our naval officers. No charts had been furnished to navigate in the place desired. So the Government was reduced to the humiliating necessity of borrowing from the English naval department their charts temporarily for use.

The Secretary, in referring to this branch, says:

No private business run under conditions that have been forced upon this service could long exist.

He shows that the offices and workrooms, even in the city of Washington, under the very eye of Congress and the department, are badly arranged, not fireproof, and are insanitary. The Public Health Service even has condemned them. From his report I quote. He gives an elaborate description and condemnation of the public service in this branch.

He speaks of the three ships used in the survey work as, which he picturesquely calls them—

"this trinity of weaklings." They are the *Endeavor*, the *Gedney*, and the *McArthur*, respectively, 52, 39, and 38 years old, and are single-screw, single-cylinder, and single-boiler coal-burning vessels, without electricity for wireless or for lighting, without refrigerating plants, and without fit quarters or any modern conveniences.

He says in the concluding paragraph of this report:

It is a shameful thing to send officers of the United States to sea in such ships. He for the second time pleads with Congress for relief. He also complains that modern apparatus for soundings has not been provided.

Yet, while this critic in this department in writing his reports furnishes ample testimony about the inability and the inadequacy and the failure of the Government to provide even the simple craft for the officers engaged in the Coast and Geodetic Survey, this same public officer and the majority side of the Senate in large part, and the administration and Cabinet, want to engage in the public ownership and operation of steamship lines, where speed, efficiency, promptness, adequacy of service are all required; and it must be not like this Government's undertakings, where there is no competition, but it must be in the face of competition with the ocean carrying commercial trade of all the world.

Right now, if there was a going concern, it would be admitted that the Government would have plenty of tonnage, shippers would come under present conditions in this country, and there would be no outward-bound vessel not loaded to the limit of its capacity. Those conditions are abnormal; they are ones that may last six months or a year or they may close in 30 days. We know but little of the actual condition in the theater of war in the Old World; we know what we read in the press; but even our Government officials have only limited information. What we read is all censored news. No news is permitted to escape the censor, except such as the military authorities see proper. They are giving us only what they think proper.

There is another Government undertaking that is of some value in considering this matter. Not long ago we heard a good deal of the cotton pool. Along through last summer, during the fall and winter, it was feared that the cotton producers would suffer, especially after the European war broke out and the foreign market had closed. It was supposed that some Government help was necessary or that great suffering would result. The cotton planters, large and small, owed more or less money in many cases. So the cotton pool was devised. It seems hardly to have been a success.

A dispatch says:

According to reports from Washington the total amount for which the $100,000,000 loan fund has been tapped by cotton borrowers is $10,000.

I correct that by a later item that has been produced in the circular of this morning, showing a total borrowing from the fund of $28,000.

The news does not surprise anyone who has been following the course of the cotton pool, but the actual failure of the pool to accomplish anything contains some valuable information on the statutory undertaking of the Government proposed in this bill for the ownership and operation of a steamship line.

The cotton-loan fund was an extraordinary undertaking involving the control of private credit. It put private credit under governmental direction. It put on the Federal Reserve Board the work which was expressly forbidden by the very law which created it. An article in the Chicago Economist properly says:

Banking support was given to the McAdoo cotton pool on account of Washington—

And the administration influence—

and not on account of the real necessities of the cotton situation. It did not express banking judgment that the pool was practical or required from a business standpoint. It represented, so far as bankers were concerned, a somewhat compulsory concession to the political considerations which were assumed to be influencing the Treasury, but it is doubtful if the subscribers believed that it would ever be a real factor in the restoration and recovery of the cotton market.

It was predicted at the time that with the reopening of the cotton exchange an ample supply of credits for cotton would be provided in the customary fashion, and the explanation of the failure of the cotton pool is that the restoration of normal market facilities has led to a movement of cotton at rising prices from the grower to the consumer. To financing this movement the inauguration of the Federal reserve banking system has contributed, but this also was foreseen when Mr. McAdoo was rounding up banking subscriptions for the pool.

It is not to the point to review all the remarkable circumstances of this episode in Treasury history. It suffices to say that it denoted yielding by the administration to just such a "pressure of what appears to be necessity" as President Wilson deprecated in his admirable little speech to the delegation of the cotton growers who called at the White House in September to urge direct Government loans on cotton.

Following all that pressure, the Senate will recall that a bill was introduced authorizing the loan of Government funds to the sum of $300,000,000, as I now recall, and a similar bill, but for a less amount, was introduced in the House of Representatives. The purposes of both the bills were the same. They undertook to lend Government credit and Government funds to finance private pursuits. The cotton pool was the administration compromise in the matter. They did not wish entirely to reject the plea of those who brought this pressure to bear. The administration did not feel justified in entering upon a scheme of Government credit that would beggar the proposal in the steamship bill even. So out of these two forces or these two extremes there came the resultant scheme of that cotton pool. It was an unwise departure from sound economic principle, and in practice is what the President had told the cotton growers should be avoided.

To-day an apparent necessity for the hasty extemporization of an American mechant marine is asserted as an argument for setting up the Government in the shipping trade. Precisely as in the case of the cotton pool, the whole administration argument is one of apparent necessity. Yet precisely as in the case of the cotton pool, the weight of economic evidence and business experience is overwhelmingly against the experiment.

The matter I have last read is taken from an editorial in the New York Sun, and correctly states the tendency not only of the cotton-pool movement, but of the bill for the Government ownership and operation of steamships.

Another thing that it is proper to consider now in connection with this bill is the present industrial condition of the country. It is not argued that the unemployed owe their idleness to the lack of ocean shipping facilities. Various persons attribute different reasons for the idleness. I suppose our economic beliefs or disbeliefs have something to do with our conclusions. The unemployed, from whatever cause, are found in every large center of population. It is difficult to see how they will be relieved in any way by the passage of the shipping bill. What will it do? Send more merchandise out of the country? Certainly it will send more meats and more breadstuffs abroad. Will it give more work to the unemployed? Hardly. Save for the longshoremen and those who are immediately connected with the handling of shipping, there will be no increase in the employment furnished. Rather it will be a detriment. This country now, with the vast quantity of meats and breadstuffs that have been exported, is suffering from a continually increasing cost of the necessities of life. So, generally, there will be no relief furnished to the unemployed by the shipping bill.

Something has been said—it has been both stated and denied—in regard to the unemployed:

In an appeal issued on Saturday by the industrial commission authorized by the city council—

That is a commission local in character created by the city council of Chicago. It held its first meeting last Friday—

it was announced that more than 100,000 persons in Chicago are out of work.

These are the investigations made by a nonpolitical, local industrial commission. They have no politics in what they find; they are interested solely in finding what the conditions of the unemployed are.

The commission pleads that all those employing labor do what they can to give at least part-time work to men seeking jobs.

The commission report that from what they have gathered from employers, trade-unions, and other well-informed sources, it is—

Indicated there must be over 100,000 persons who are unable to secure employment, whose income ceases, and many of them, because of inadequate food and shelter, are liable to sickness, weakness, and industrial shiftlessness or are obliged to resort to charity.

Records of the United Charities and other agencies of relief show an unusually large number of persons are compelled to resort to charity because they can not find work, people who are not accustomed to receive such relief.

APPALLING INCREASE IN CHARITY.

The United Charities assisted the following number of families:

December, 1912	4,200
December, 1913	5,400
December, 1914	7,500

An appalling increase.

The county agent also reports serious increase in the number of dependent families. This enforced idleness is one of the most depressing and demoralizing conditions of existence. The efficiency of labor is greatly reduced, some are driven to crime, and many are humiliated and depressed by resorting to public and private charity.

PLEA TO EMPLOYERS.

The municipal industrial commission therefore makes this appeal to employers of labor in the city to consider what they can do individually and through organizations to open at least part-time work for these tens of thousands of able-bodied and industrious men.

Many householders and employers of small numbers can help by offering jobs or having work done now which they might postpone to a later date.

Those who are thinking of building next summer might with some additional effort begin now, since many building operations can be continued even during frosty weather.

The Illinois free employment offices will act for the commission in receiving applications and in giving information to those who are willing to take on a larger force or are ready to give temporary employment of any kind. These offices are at 732 South Wabash Avenue, 826 North Clark Street, and 558 West Randolph Street.

A telegram from New York, dated in January, is along the same line. I fail to see how the unemployed in the city of New York could be helped by this bill. It is insisted that the public welfare demands its passage. That is suggested, if not in express words stated, in the President's message. By all those who favor this bill it is given as a moving cause. The telegram from New York says:

According to figures compiled for the Public Forum of the Church of the Ascension, in Fifth Avenue, of which the Rev. Percy Stickney Grant is rector, a partial list of the unemployed in Greater New York totals 562,700.

The number of homeless persons in the city who have not the price of shelter is estimated at 60,000.

The figures were obtained by Samuel A. Strodel, of 350 Broadway, who was assigned to the task of counting the unemployed in the city by a committee of the Public Forum. Arrangements were made to turn over the report to City Chamberlain Bruere, who agreed to consider it in an official capacity. He will receive the report in full in a few days.

FIGURES NOT EXAGGERATED.

Strodel began the work on December 15, and finished the compilation last Saturday. The figures include organized and unorganized labor, but do not cover all the branches of industry. This is pointed out for the benefit of those who may think them extravagant.

Many of the figures were taken from employers, and where such information was refused they were based on inquiries among the em-

ployees of various concerns as to the number of persons dependent upon the business they were engaged in.

In this way 125,000 clothing workers in all branches of the garment industry were found to be idle. The Thirteenth Census gives the total number of persons engaged in that industry in this city as 188,110.

125,000 WOMEN AMONG THEM.

One hundred thousand general unskilled laborers were reported out of work. Seventy-five thousand building mechanics in 32 trades were said to be idle, as were 75,000 store and office workers, including bookkeepers, clerical workers, and stenographers.

Strodel said he also found that about 125,000 of the total 562,700 unemployed were women, and in ascertaining conditions, which was part of his work, he found that immorality was greatly on the increase.

This was admitted by resort keepers and shown by the many new faces in the back rooms of saloons and on the streets at night.

The investigator also learned that 60,000 men, women, and boys are being kept in employment by firms reluctant to discharge them despite the fact that business would warrant their so doing.

Strodel found one woman who told him that for two months she had been getting up early and stealing a bottle of milk from her neighbors for her children. Several children in Brownsville were seen stealing plain bread from bakers' wagons.

Several bakeshop proprietors in the Bronx, Brooklyn, and the East Side said they probably would close up on account of the high price of flour rather than operate at a loss or incur the disfavor of their customers by either cutting down the size of the loaf of bread or raising the price. With these shops closed, 2,000 more persons will be thrown out of employment.

HOMELESS SLEEPING ON DOCKS.

The report states that the homeless were found in numbers in the Mott Haven and other freight yards, along the docks, around places of building operation, where there were fires, in saloons, and other public places.

Strodel was asked by the committee which engaged him for the work to make recommendations based upon conditions as he found them. In his report he states:

"I would suggest that all available buildings that could be heated and put in a sanitary condition be placed at the disposal of the homeless army; that some fund be created for furnishing nourishing food for the unfortunates; that all red tape be discarded, and that sociological experts be kept far removed from interference.

He does not seem to think that the sociological experts are of very great value when a man is hungry, and it is useless to talk about the causes of these things when they really need the remedy of some food rather than theory.

I now wish to take up more in detail the cotton pool.

One of the principal arguments for this bill is the condition of the cotton trade. This year, as I remember, approximately, there were produced about 16,000,000 bales of cotton as against something over 14,000,000 bales last year. Of our total domestic production, roughly speaking, two-thirds is export cotton, one-third of which is manufactured or used in this country. Because of inability to reach the foreign markets, incident upon the war, great distress has been occasioned among the cotton growers and those who handle cotton—brokers and shippers. Because of this condition it is urged that relief be given by Government ownership and operation of these steamship lines. It is urged because the carrying capacity of vessels is either exhausted or none has been offered. A large part of it, it is said, has either been withdrawn to be employed in the military operations of the war, or the merchant shipping has been driven from the sea, the risks in large part having made it impracticable or unprofitable to engage further in that business.

Every once in a while something of this kind happens. It is a misfortune. No one views it with anything but regret. I have seen the time when crops in many parts of the United States sold at a very low price. Some of us in the western country have seen corn at too low a price to pay for its shucking and the cost of transportation to any of the primary markets of the country. I have seen corn sell at 10, 12, and 14 cents a bushel. I have seen oats sell at 9 cents, and wheat at 38 cents. Transportation facilities were limited in those days. The export trade was small. There was a surplus in our country. There was no need for much of that surplus, and because, in many cases, the railroad transportation was lacking the farmer had but little to pay for his year's work. That never gave rise, however, to any claim on the Government. There was no corn, wheat, oats, rye, barley, or flax pool. Nobody thought for a moment that the Government ought to interfere and relieve those who were the victims of the condition at that time. Those misfortunes happen about every so often. Production and consumption do not keep pace with each other. Because cotton happened to be at this time caught with a very large production, with lack of carrying capacity and with inability to enter a part of the market on which it depended, considerable distress occurred, and it was proposed to alleviate it by this bill.

In an address made by the President, as I remember, on the 8th day of January, 1915, he uses this language:

The farmers of the United States, those who raise grain and those who raise cotton—these things that are absolutely necessary to the world as well as to ourselves—can not get any profit out of the great prices that they are willing to pay for these things on the other side of the sea, because the whole profit is eaten up by the extortionate charges for ocean carriage.

That was in his Indianapolis speech on Jackson day. I should like here to remark that the President on Jackson day was greatly exhilarated because he breathed the air of that auspicious holiday. It was a time dedicated to Democratic rejoicings, a time when every one of the faithful went out into the highways and byways and exulted in his Jacksonian Democracy. So on this occasion our beloved Chief Magistrate hied him forth to the metropolis of Indiana and there delivered himself of an address which has in it a great variety of governmental principles and some which are hardly dignified by that name.

If I were allowed to diverge somewhat from the settled line of discussion on this bill, I would suggest that the Jackson day speech on that occasion was more remarkable for believing things that Jackson did not believe in than anything else. I remember that the sturdiest protectionist of his time was Andrew Jackson. I remember when he wrote a letter to his friend Dr. Coleman, of South Carolina, as I read it, recorded by the impartial historian. Dr. Coleman was a very fast friend of Gen. Jackson. This letter was written in 1824. Possibly Jackson had some longings at that time for the presidential office. It was known to his South Carolina friend. The friend took occasion to write him a letter. The letter I will not undertake to quote in full, because I wish to be economical of time. I will give the substance of it.

Mr. SMITH of Michigan. I hope the Senator will read it all.

Mr. SHERMAN. I shall be glad to do so. It is as follows:

[Letter from Gen. Jackson to Dr. Coleman, dated at "Washington City, April 26th, 1824."]

Heaven smiled upon and gave us liberty and independence. That same Providence has blessed us with the means of national independence and national defense. If we omit or refuse to use the gifts which He has extended to us, we deserve not the continuation of His blessings. He has filled our mountains and our plains with minerals—with lead, iron, and copper—and given us a climate and soil for the growing of hemp and wool. These being the grand materials of our national defense, they ought to have extended to them adequate and fair protection, that our own manufactories and laborers may be placed on a fair competition with those of Europe, and that we may have within our own country a supply of those leading and important articles so essential to war. * * * In short, sir, we have been too long subject to the policy of the British merchants. It is time we should become a little more Americanized, and instead of feeding the paupers and laborers of Europe, feed our own, or else in a short time, by continuing our present policy, we shall be all paupers ourselves.

It is, therefore, my opinion that a careful tariff is much wanted to pay our national debt, and afford us the means of that defense within ourselves on which the safety and liberty of our country depend; and at last, though not least, give a proper distribution to our labor, which must prove beneficial to the happiness, independence, and wealth of the community.

This is a short outline of my opinions, generally, on the subject of your inquiry, and, believing them correct and calculated to further the prosperity and happiness of my country, I declare to you I would not barter them for any office or situation of temporal character that could be given me.

In 1828, if we keep time with the historian, Jackson was a candidate for President. There were only four short years from the time he received this letter until the time he replied. In his reply he said:

A careful tariff is much wanted to pay our national debt and afford us the means of that defense within ourselves on which the safety and liberty of our country depend.

Mr. SMITH of Michigan. Was that before he was nominated for the Presidency, or afterwards?

Mr. SHERMAN. Before. He continued, in closing up the letter:

I declare to you I would not barter them—

His opinions—

for any office or situation of temporal character that could be given me.

It would have been well for the Chief Magistrate, when he breathed the air of Jackson Day, and especially when he used the expression that "I, Woodrow, sat back and chuckled," if he had chuckled loud enough so that the waiting audience and those who read the widely scattered press dispatches might have heard this echo of nearly a hundred years ago from Andrew Jackson, the protectionist.

Our Chief Executive, in relation to his discussion as to benefiting the farmers, omitted to go further and show in what detailed way those benefits would result.

It is said here in an editorial from the Chicago Tribune, from which I am now quoting:

This assertion of our esteemed Chief Executive was not discussed at the time it was published, because it was so obviously a result of misinformation, combined with the mistaken zeal which has induced Mr. Wilson to make an issue of the ship-purchase project. Its chief interest was in the light it threw upon the basis of the President's determined advocacy. He is hardly less astray on other arguments for the bill than he is in this reference to the farmer. He ought, of course, to know that farmers are getting in the neighborhood of 73 cents for corn, 54 cents for oats, and $1.45 for wheat—

They are getting more than that since then—

and getting nearly these prices themselves. He ought to know this and that the middleman then takes his profit, and that it is the foreign buyer who under stress of necessity is paying the high freights and insurance rates which naturally and always go with war conditions.

An argument for the expenditure of thirty millions on ship purchase based on the theory that "those who raise grain and those who raise cotton can not get any profit" out of the present high prices because of extortionate charges is simply ridiculous, and no western Congressman will support the bill under any such delusion.

The theory is almost equally naïve as an explanation of the situation in cotton, but it may be conceded that if the purchase project were practicable at all it might be made to benefit cotton holders. This does not seem a gamble for which the country at large should be called upon to pay.

American producers virtually are making their own prices here in America, because Europe is forced to have not only our raw materials but many manufactured products. Under the same abnormal pressure the purchaser is compelled also to pay high interest and freight rates. These are not subtracted from the profits of the producer, but added to the final cost the buyer pays.

The notion that by putting thirty millions into public ships, waiving other considerations, the producer can eliminate the middle process and get the whole of the really extortionate prices sustained by war conditions is a remarkable delusion to be cherished by a statesman.

Here is another remarkable thing. Under this paragraph from the address quoted one labors under the impression that the cotton producer or the broker holding cotton and awaiting a good market is suffering great distress from unusually low prices. Out of it grew the cotton pool to which I alluded. Out of it grew the ship-purchase bill. What is the actual condition? Many an air castle has fallen in ruins about some dreamer's ears by being punctured by the facts, and it does not take many of them, because the most insubstantial thing in the world is the structures built by the economic dreamers that go to and fro upon the earth like Satan of old.

I desire now to refer to the New York cotton market on February 8, 1915. These are market reports, not essays, not the affrighted delusions of somebody who thinks he is going to lose something because war has broken out in Europe unless the Government rescues him because he can not get his cotton into the market to-morrow:

NEW YORK, *February 8.*

The cotton market was quiet to-day and prices ruled generally higher, with the close barely steady at a net gain of 3 to 4 points.

Liverpool was better than due, and the local market opened steady at a decline of 1 point to an advance of 2 points. There was very little business, and prices fluctuated within a range of 3 or 4 points until after midday, when buying became a little more active on the continued heavy exports—

"Continued heavy exports." When was that? In December? Was that long before what falls so trippingly from the tongue as to bottoms, with no loads or tonnage to carry, were accessible? Was that early in the war? No, it was only yesterday that these quotations were made—

and reports of steady southern spot markets. Active months sold about 7 to 10 points net higher on this advance, but there was enough realizing in the late trading to cause reactions of 5 to 6 points from the best.

Now, here are the quotations of cotton futures. Of course, somebody will at once stigmatize this as a gaming transaction and will say that somebody is seeking to make a wager contract, that they never intended to deliver anything, and that the whole thing is criminal; but many times a cotton spinner does not want cotton to-morrow. In his warehouse he has a number of bales that he will use up to a certain time. He wants it for the future. He is like a miller. A miller's warehouse is full of wheat to-day. The malster's house is full of barley, and he does not want grain for to-day. They are supplied; but they do want cotton and grain for the 1st day of March, or for March delivery, and so on through the months. They make their purchases for future delivery to fill the actual needs of the trade. Here are the quotations of cotton futures:

Futures.	High.	Low.	Close.
March	8.70	8.60	8.64
May	8.95	8.85	8.89
July	9.14	9.05	9.09
October	9.37	9.28	9.32
December	9.50	9.43	9.46

The following prices are quoted at primary cotton markets:

Port movement.

	Mdlg.	Receipts.	Exports.	Stock.
New Orleans	8 5/8	$10,201	$24,639	$403,178
Galveston	8½	22,675	56,807	526,067
Mobile	8	867	.....	45,266
Savannah	8⅜	12,139	41,734	314,070
Charleston	8¼	1,054	.....	137,391
Wilmington	8¼	3,059	.....	152,270
Norfolk	8¼	6,157	.....	88,022
Baltimore	8¼	.....	.....	5,234

These ports are very near the sources of production.

I have stated that the cotton production approximated for the last year, or for the picking that is now on the market, about 16,000,000 bales. It is larger than that of the preceding year. That in round numbers made about 14,000,000 bales. It fluctuates naturally like other crops. The corn crop in 1912 was 3,100,000,000 bushels. In 1913 it was 2,500,000,000. This year it advanced nearly to 3,000,000,000 bushels again; so these fluctuating quantities on the market only indicate the vicissitudes of the crop year.

And here is a significant thing. Keeping in mind these figures of cotton on the market on yesterday, in the principal cotton markets of the United States in 1893 cotton was 8.54 cents a pound; in 1894 it was 7.8 cents a pound; in 1895, 5.8 cents a pound; in 1896 it was 8.1 cents a pound.

These are signficant years. I remember those years; so do all of us. They were years of depression in prices, not because of overproduction, but because of underconsumption. They were the times when business had slackened, when imports had increased, when our exports had fallen off, when the home producer lost a part of the home market. Those were times when a Democratic administration was in power, and it is a demonstration that a Democratic administration had the same effect on cotton that the war in Europe has on it now. So that there is not much difference between the result of a war in Europe on export cotton and a free-trade tariff 20 years ago. Let me give the figures beginning with 1910. Although the price ran low between 1897 and 1899, getting as low as 5.4 cents a pound in 1899, it began to increase, reaching 7.7 in 1900, 9.4 a pound in 1901, 8.3 in 1902, and 8.9 in 1903. It went to 12 cents a pound in 1904, to 11 cents in 1906, to 10.6 in 1907, to 11.40 in 1908, to 9.40 in 1910, to 13.99 a pound or nearly 14 cents in 1911, to 14.48 a pound in 1912, and in 1913 to 11.99 cents. Then came the depression to between 8 cents and a fraction and 9 cents.

Some of the peculiar things connected with the cotton production, I think, have a relation to prices. The administration and the economic policy pursued by the Government have something to do with it, but likely the production and the quantity used at home, as well as the quantity exported, control prices. A singular thing is that in 1862 we exported 1.4 per cent of the total crop. Of course that was because of the extraordinary conditions forced upon us by the Civil War. The production of cotton necessarily fell off, and difficulty in getting it out of the port near which it was raised to the foreign market was experienced. The blockade of southern ports of course had something to do with it. But in 1862, with 1,596,000 bales of cotton, the price went to 31 cents and over per pound. In 1863, out of a total of 449,000 bales, the price went to 67 cents; in 1864, with 299,000 bales, it went to $1.01 a pound; in 1865 to 83 cents, with a production of 2,000,000 bales; in 1866 it fell to 43 cents, with 1,948,000 bales. The exports in 1865 were 62 per cent of the total production; in 1866, 71 per cent.

Here are the percentages I have worked out of the cotton produced in the United States: For instance, in 1862, during the Civil War, the United States produced 70 per cent of the entire cotton output of the world. In 1860 it produced 75 per cent; 1870, following on the close of the war, it produced 72 per cent; in 1880 it produced 88 per cent; in 1900 it produced 82 per cent; in 1910 it fell to 64 per cent, and in 1912 to 66 per cent.

These tables show that other parts of the world are becoming our competitors in cotton production, so that even with present conditions abroad we might expect some reduction in the price of cotton. Instead of producing, as we have at times, nearly 89 per cent of the total cotton production of the world, we have fallen to as low as 64 and 66 per cent, 66 being the last estimate I have been able to get from Mulhall and from the Statistical Abstract. This means that instead of the United States producing the proportion of the world's cotton we used to produce we are lagging behind somewhat, not because we are not raising in actual number of bales as much as or more than usual, but because the rest of the world is raising more. There are parts of the globe that are fitted for cotton raising, once dormant, that have been developing it in recent years. We have now reached a point where we find the foreign cotton manufacturer supplying his needs from other parts of the world. It is true in a very great degree that cotton is still king, but other parts of the world are producing enough to have an appreciable effect upon the cotton market. So in time, if nothing had happened, if no war had broken out, we would have found that the cotton market in this country would have fallen below the earlier prices of from 10 to 14 or 14½ cents a pound.

I think these figures and the conclusions that I draw from them are material in this discussion, because they show that the low price of cotton is not caused by the lack of ocean carriage. They show that, even with the European war on, the

prices now range as high as during the years from 1892 and 1893 up to 1895 or 1896.

The wheat market will serve as a better illustration. There were about 300,000,000 bushels of export wheat estimated last year before the unusual demand began abroad. Our wheat market is a well-established institution. Men know what causes the rise and fall of the market. Every time there is an increase in the price it creates suspicion. I think Government investigators are now in Chicago watching the wheat pit. Every time there is an increase of a cent or 2 cents a bushel in the pit, or a fall, something is supposed to be wrong. A conspiracy against the public welfare, cornering the market, is supposed to cause these fluctuations in the price.

Here is a trade report from the Saturday Evening Post:

For six months the situation in the wheat trade has been the most extraordinary, we believe, on record. World shipments—that is, the quantity of wheat, and of flour reckoned in its wheat equivalent, set afloat from all ports destined to a foreign country—were smaller than in the two preceding years by about one-fifth; but 80 per cent of them last year came from the United States and Canada.

Russian and Danubian ports, which sent out over 100,000,000 bushels in 1912 and 1913, shipped barely 15,000,000 bushels in 1914. Argentina, which averaged about 25,000,000 bushels in the two preceding years, supplied only 4,000,000 in 1914. Even India shipped less than half her average for the two preceding years.

From all sources other than the United States and Canada came, in fact, only 46,000,000 bushels, about 15 per cent of the quantity normally taken by importing countries in the period. Certainly one would have to go back a great many years to find a like situation. The two North American sources were left almost literally to feed the importing countries of Europe.

Naturally wheat is high; but it would have been high if there had been no war. Short crops elsewhere are a big factor in the price. Kansas, with a bumper crop worth about $1.25 a bushel, sends relief to Belgium, labeled: "From the chief gainer by the war to the chief loser by the war."

Belgium's loss is indubitable, but Kansas' gain in the long run is questionable. We suspect she would have made more money by selling her wheat at $1 a bushel to a Europe at peace and productively employed.

Another item that is of importance in finding whether there is anything unlawful in the fluctuation of prices, or whether there is anything in those prices caused by the lack of ocean shipping, is the advice given by the President and the Department of Agriculture along early in the fall of last year.

In August the President counseled American farmers, among other producers, to husband their products in anticipation of a big business arising from the European war. In September the Department of Agriculture issued a circular advising farmers to hold on to their crops for a rise in prices.

The farmers have taken this advice literally. Thanks to legislation which permits farmers to enter into combines for the restraint of trade, the horny-handed sons of toil are proving to be first-class organizers of trusts in wheat, corn, cattle, hogs, beans, honey, raisins, and other farm products. On some of these foodstuffs the prices are fixed weekly by an ironclad organization, working along exactly the same lines as those which have been made criminal conspiracies in other branches of industry and production.

The price of wheat has soared to an almost unprecedented figure. How much of the increased price is due to the demand in Europe, and how much is due to the farmers' combinations? Wheat is going to Europe in large quantities, but under careful regulation, in order that prices shall be kept up. Domestic consumers are being made to pay the increased prices, in spite of the fact that the crop of wheat last year was one of the largest in the history of the country.

The high price of wheat is ascribed to the operations of speculators in Chicago and elsewhere. Are they really responsible? Is not the farmer the real manipulator?

Has it come to the point where the United States Government makes it a crime to restrain trade in everything but farm products and favors the farmers in forming combines which are prohibited in every other avenue of business? Is this the price which the people must pay in order that politicians may curry favor with the farmers? Are farmers to be a class set apart, to receive special favors from the Government, special exemptions, and extra profits at the expense of the rest of the people?

This is an editorial in the Washington Post, dated January 27, 1915, that I have last read. I read it not because I have any sympathy with the tone of the editorial in criticism of farmers, but only to show that the farmers are not letting go of their wheat in any panic-stricken way. They know just about as much about what will help them in securing a good price as the commission man who handles the grain at the other end.

So these matters are of consequence in fixing the price of wheat. The market is a peculiar thing. The steamship carriage may affect it to some degree, but it has comparatively little to do with fixing the price on the great grain exchanges of the country.

I read from the Chicago market report of February 4 to show how a single act will affect the price of wheat:

President Wilson's speech, referring to a world's shortage of food and to his desire to promote the export trade of the United States, served as a basis to-day for renewed activity on the buying side of the wheat market. Largely as a result, there was an extreme price advance of 5¼ cents a bushel, with the close unsettled, at 3¼ to 4⅞ cents above last night. Corn gained 1¼ to 1⅝ to 1⅞ cents net, and oats, 1 to 1¼ cents. Provisions finished 2½ off to 5 cents up.

According to some leaders in the wheat trade, Mr. Wilson's address formed the strongest influence that buyers had been favored with since the recent rise in quotations began. As construed by the bulls, the speech virtually acknowledged that high prices were unavoidable because of the great European shortage of breadstuffs, and that something of a squeeze could not be escaped in supplies for home and foreign needs.

Now, right on the heels of this market report, No. 2 red spot cash wheat is quoted at $1.60¼ up to $1.66. Corn, No. 4 yellow, was quoted at 74 to 75 cents and a fraction, and oats from 59 to 59¼ cents.

This indicates what elements constitute the market. A report of an untimely frost in the Northwest in the early spring; a report of unseasonable weather in the winter-wheat belt; a report of production under the normal in Argentina; reports from the Russian wheat fields in ordinary times, or from Canada; demands abroad in the great grain exchanges of Europe; the condition of the money market; whether call money is easily obtained at reasonable rates; the demands for domestic milling—all of them enter into the market. A person who follows the wheat market from month to month and year to year knows intimately climatic conditions, the prospects for the yield, insect pests all over the world. There is not a place where wheat is grown in the civilized world that the wide-awake and successful wheat commission man does not have a line of information. Not only are the fields studied, the climate, the diseases and the insects that affect the crop, the visible supply at the central markets, but the purchases, the demand—all of them are a part of his information. He buys or sells to those who need wheat for actual conversion into flour upon his knowledge. He bids up when the circumstances justify. He includes in that governmental reports. He includes in that legislation. He includes in it everything that might affect his ability to deliver or to be delivered to if he is the purchaser.

These are some of the elements that affect the wheat market. These investigators in Chicago will find, if they pursue their investigation to the legitimate conclusion, that most of the transactions are legitimate. There are some wager contracts. It is inevitable. One would not go out and shoot every race horse in the world because there is some gambling on race horses, or burn every pack of cards or all the dice and dominoes in the country because sometimes they are made the instruments for gamesters. They are universally recognized to have a harmless and indeed a beneficial use at times. So the wheat market rises and falls in response to the immutable laws of nature and of commerce and not in response to gambling transactions.

Naturally, as the price of wheat goes up, the price of bread is likely, if the high price is sustained, to follow it; and so the complaint about the high price of bread is necessarily connected with the wheat market. In what way will the wheat market be relieved? In what way, to use the language of the Chief Magistrate, will the farmer get the benefit out of steamships owned and operated by the Government? The exports are going on now. Do we want wheat from the last crop higher than it is now? It has reached almost a prohibitive point now. Flour is up, wheat is up, everything made out of it is up. It is suggested every once in a while that the farmer does not get any benefit out of the increase in the price of wheat. I know what he is getting in the winter wheat belt, in the country where I live. Allowing, from the market in the producing areas, for red winter wheat, from 8 to 11 cents per bushel for transportation, he gets, when he sells 200 miles from Chicago or 150 miles from St. Louis, the price at the primary market less the freight and the commission, which varies not exceeding 3 cents. The farmer, instead of getting 67 cents as he did last August, as I stated here on the 28th of January last, is getting now from $1.30 to $1.45 a bushel. That price depends upon the rise and fall in the central market. He will get a better price some days than others, dependent upon conditions that those who handle the grain find in the markets abroad or in this country.

It has been suggested that the shipping bill can be justified because, quoting the language of Mr. McAdoo on the shipping bill to the Commercial Club in Chicago on January 9, 1915—

It is the duty of the Government to engage in any activities, even of a business nature, which are demanded in the interest of all the people of the country when it is impossible to engage private capital in such operations.

If this proves anything, it proves too much—"to engage in any activities, even of a business nature, which are demanded in the interest of all the people." I have some doubt about the strength of that argument, because bread is just as necessary as transportation across the sea; clothing is just as necessary; flour is just as necessary; dwelling houses are just as necessary. I do not know of anything among the necessaries of life that could not be included in this omnibus statement "any activities, even of a business nature, which are demanded in the interest of all the people."

The reason this bill is proposed is to cheapen the high cost of ocean freight, either by competition to reduce the charges of

vessels in private hands or to furnish the service direct by Government vessels. Bread has gone up—the 5-cent loaf to 6 cents a loaf and the 10-cent loaf to 12 cents. That is because, I presume, of the increased price of wheat, and which naturally has a reflex action on every wheat product.

Well, woolens have gone up, and wool. Is it not of just as much importance that the people have cheaper food and clothing as that they have cheaper ocean freights? There are more people in this country who need cheap food and clothing than need cheap ocean freights. Why does not the Government go into the wheat-raising business? Why does it not start a mill and go into the milling business? Why does it not start a bakeshop? Can you not justify its raising sheep? An embargo has been put on wool from Australia and the British colonies from which we get a large part of our supply. Why ought we not, because of the embargo—lifted, it is true, in part now, but likey to be again renewed at any time when deemed expedient in the judgment of the British Government—why ought we not have a certain supply of wool and be responsible to no country for that supply? It would be just as sensible. There is much more reason why the people ought to have clothing at moderate prices and of certain supply than that they should have cheap ocean freights; and the corollary of that is true; a tailor shop would be a very convenient annex to supply the people with one of the necessaries of life. There is no reason why the Government ought not to go into these lines of effort. Why not go into the contracting business, with a line of architects, buying the materials or producing from the public domain the building material, lumber and stone, and the structural iron and steel necessary for many business buildings? The Government might just as well do that, because I think buildings are about as necessary as ocean freights to us. The Government could just as well start a steel mill in order that structural iron and steel might be prepared and given to the people at reasonable prices.

The statement is an extraordinary one that at any time the interests of the people so demand the Government should engage in some enterprise, even if it be a private business enterprise, and that it is justified in doing so. Under this authority and based on that reason, there is no limit to what the Government might undertake.

I wish now to read from Mr. McAdoo's testimony given before the committee at a hearing in the other House. As I remember, there were no hearings in the Senate before the committee. I am not a member of the committee having jurisdiction of the matter, and I am only quoting from hearsay, but I believe there were no hearings given before the committee.

I do not find what I was looking for, but I will quote it from memory. Mr. McAdoo's testimony in substance was that the risks were so great at the beginning of the European war that a risk bureau was created which gave an insurance rate, both on ships and their cargoes, at very reasonable rates. He went on, in addition, to show that if a risk-rate bureau could be established and successfully carried on by the Government, a Government steamship line could be carried on just as well. The insurance is an indemnity against loss. It was justified at that time because few companies engaged in the business cared to write it at all, and the rates became extremely high, and because the shippers appealed to the Government the bureau was created. There is but little argument to be deduced from that, so far as I can see, to justify a steamship line. The war risk insurance bureau was intended to be purely temporary, coincident with the war, and when the war ceases the risks will again assume their normal rate, and no further occasion will exist for the Government engaging in this business. If it results as other Government schemes it will soon be drawing on the Treasury to pay losses. The hazard is not lessened merely because the Government assumes the risk.

Mr. McAdoo continues on page 13 of this address:

> Some timid people have argued that if the Government is interested as a stockholder in a shipping company, and a ship of such company should be seized by a belligerent and brought into a prize court, the sovereignty of the Government would be involved. There is no ground whatever for this view. If the Government operated ships outright, just as it operates the vessels of our Navy, an awkward situation of this character might arise; but where a nation is merely a stockholder, or the sole stockholder, in a private corporation, its sovereignty is not and can not be directly involved if the ships of such a corporation become the subjects of litigation in a prize court concerning any issue which does not involve the Government itself. The Government would stand in relation to such a corporation exactly as any individual stockholder does to a corporation in which he is interested. A suit against the corporation does not necessarily involve the shareholders.

That is a singular doctrine, that a suit against a corporation does not necessarily involve its shareholders. Suppose a corporation is worth $10,000,000 in the initial subscriptions to the shares of stock in the proposed company under this bill. Suppose that suits are pending, resulting finally in the rendition of judgments in the sum of $10,000,000. Suppose that the $10,000,000 had been invested in some kind of merchandise, or in some kind of physical property, that would be equal in value to the original stock subscribed, does anyone think for a moment that the stockholders are not concerned in the judgment rendered or in the preceding suits that result in the judgment? It can not be said that the stockholders are not interested merely because they have at some stockholders' meeting elected a board of directors and left to them the managerial part of the business. Would anyone for a moment argue in that way before any tribunal that habitually administers justice in this country?

It seems to me that the proposed corporation is a mere fiction. Its intervention changes nothing. It in no manner gives protection to this Government. If a vessel be involved in international controversy, the mere fact that a corporation is interposed does not change the real ownership. Diplomacy takes no account of such things. There is not a Government that would not look quite through the transaction as already suggested and test it by its substance, by its necessary effect. So this rather optimistic view, that is rather airily dismissed in this way, it seems to me, does not meet the question at all. It leaves open all those serious objections which have been urged by the Senator from North Dakota [Mr. McCUMBER], by the senior Senator from New York [Mr. ROOT], and by others who have considered that branch of the controversy.

I have read with considerable interest the evidence given by the Secretary of the Treasury and the Secretary of Commerce on the increased ocean transportation rates.

It is said here, in an article quoted as "Exhibit 11 B," on page 35 of the letter from the Secretary, Senate Document 673, part 2, quoting from page 38, the letter beginning on page 35:

> In every direction it will be seen that huge profits are to be made in the shipping industry. Nor are shipowners the only ones to feel the boom. The prosperity has created a demand for more ships. The price of steamers is rising daily, and shipbuilders are booking so many orders that their yards will be full for some years to come. Many shipowners also are selling off their old tonnage at prices which they never dreamed of before the outbreak of war.
>
> Investigation goes to show that the present boom has been of a much greater nature than during other wars. After the Franco-Prussian war, for instance, the boom did not set in until some 12 months after the declaration of peace. By this time the nations had time to turn around, and finance was readjusted. And then the rise in freights was more gradual. It was not until 1882 that the top of the rise appeared.
>
> It is interesting to note that the only rate approximating to present figures was paid to the *Ben Nevis*, a steamer with a carrying capacity of 7,500 quarters, or about 1,500 tons, which obtained 8s. 3d. per quarter from New Orleans to Rouen. So much have "tramp" steamers increased in size that anything nowadays with a capacity of under 25,000 quarters, or about 5,000 tons, is considered a small steamer, and a 1,500-tonner is thought to be far too small to cross the Atlantic.

This increase I read because it is significant in connection with the claim that we will be able to buy ships on the market just as if it were a task of going out and buying agricultural implements or any other article of merchandise. The average ship, what we call a small one nowadays, fitted principally for freight and with some accommodations for carrying passengers, would cost probably from $700,000 to $750,000. All of the ships that are now afloat coming to our ports, it is said, are charging extortionate prices. The part I have read here says that there is a great boom, that huge profits are made, that the price of steamers is rising daily, and that shipowners are selling off their old tonnage at prices never dreamed of before.

How will the Government, on a market of this kind, buy anything? How will we get value for the money drawn from the Treasury or procured by the sale of bonds? How do we expect to get any of these "bargains" on any of these ships that are now free to ply either ocean or any place? Are there any bargains to be had if the shipping trade is in the condition it is claimed it is here? Is it not true, rather, that when the Government goes on the market, instead of finding a bargain, instead of buying anything at a price that will be advantageous, it will be discovered that the prices of these vessels, earning enormous profits, are beyond the reach of the Government agents?

Something is said here, too, of grain prices in transportation. A table is given. Cotton and grain are shown to be higher now than last year, and it is natural that they would be higher—not only that they would be the figures we have already considered, but many times higher. If they would increase, not 100 per cent, but two or three hundred per cent, it would not be more than the increase in other lines outside of grain and other articles of merchandise considered.

He continues—I am reading now from page 18 of the same document:

> It is pertinent to ask which of these interests is entitled to the superior consideration of the Government, the farmers and producers

of the great grain States of the West and the farmers and producers of the great cotton and tobacco States of the South, the merchants, manufacturers, and business men throughout the entire country, whose combined activities represent our vast export trade, amounting for the last fiscal year to $2,047,755,872, or the owners of the comparatively few American steamships engaged in the foreign trade, whose aggregate investment is approximately only $69,000,000?

Then an argument is taken from that, that from the greater interests concerned competition that would injure to a considerable degree the private steamship lines ought to be engaged in because the lesser interests must yield to the greater. The same argument could be made on any of the articles of merchandise I have enumerated. There is no difference between the one and the other. It is just as important that the people have relief at the hands of the Government in the one case as in the other.

On page 98, to show the conditions when purchases are to be made, admitting now that it is of pressing importance, for argument's sake, as he said on page 18, that some relief should be had, see what field we approach in order to obtain the alleged relief needed:

The insurance on all of the above steamers is largely placed in British and German companies, and for ports between Eastport and Rio, to go abroad, requires arrangements made to cover extra risk, and in nearly every case inquired into large amounts have been canceled, calling for placing of risks canceled in new companies and extra premiums. To obtain new insurance to cover steamer has been almost impossible, while extra premium and war risk becomes almost prohibitive. This in one steamer now in Europe amounted to $25,000, and she went to a neutral port in North Sea. On seven of the steamers quoted in our list the extra premium and war risk on hull alone amounts to about $40,000 per ship if bound to a German port. One of our largest shipping concerns have had their representative in England for a month with orders to buy a steamer. He can find none ready and could contract for none earlier than 1916 delivery.

The market there evidently will give us no relief. This Government will fare no better than a private company, because the activity of those in private business will equal that of any public officer.

On page 100 is an offer by a telegram dated December 24, 1914:

Have a cable from London this morning offering 4 new steamers, immediate delivery, one 12,000, two 11,000, and one 8,000 tons, deadweight capacity, basis of $40 a ton and 4 guaranteed delivery within six months at same basis. All English or French built or building now, so there would be no difficulty in securing any amount of tonnage.

Here is the first positive offer of steamers, consisting of four, with an aggregate tonnage of 42,000. These are the only ones up to this time that have been found ready for delivery. The others, to be constructed, require at least six months as the time of delivery.

As to other offers: In an inquiry answered on December 23, 1914, the department is advised that the first steamer is just completed, and they say all five of them will be completed within six months. Here is the second offer received in this testimony. The five, however, will require six months before delivery.

On page 102, in Exhibit 76, there are a number of vessels offered by a marine agency said to be located at Boston, Mass. At some time before this discussion is closed some testimony will be given as to the probability of the ability to deliver those vessels. It is noted here in this volume that a part of these vessels are of German registry. Several of them are noted as follows:

The above steamers are under German registry.

This would instantly raise the question that has been discussed here more or less for some weeks. At this time I have no desire to go into that part of it.

I wish to recur now to the somewhat vague character of what is said to be evidence here urging the passage of this bill, letters from men who have written recommending, so it is said, its passage. On page 30 is a letter from W. B. Cooper & Co., of Wilmington, N. C., dated December 31, 1914, and addressed to the Secretary of the Treasury:

Please allow us to indorse the action of the administration in trying to secure boats for the movement of American products. We are frank to say that as a general proposition we are not anxious to see the United States Government get into too many lines of business—

He has some doubts. There is no very enthusiastic Government-ownership blood in the writer of this letter—

but when 3 cents per pound, or more, is to be paid freight on cotton across the water against 35 cents per 100 pounds six months ago, it is time something should be done, in our opinion.

He does not say what.

Something should be done.

On page 43 another gentleman, writing from New York under date of December 26, says:

Permit us, please, to lay before you our complaint against the scarcity of ships and the exorbitant rate of freight now being charged on shipments of our commodities to the various foreign ports, which seriously handicaps our business.

We therefore feel that something should be done by our Government to relieve the present situation, since it so seriously interferes with our foreign business.

He does not undertake to present a remedy. He simply says that something ought to be done. Well, every time there is a hardship of the kind we are suffering now something ought to be done, it is true; but the hardships grow out of conditions beyond our control. If this Government could instantly command peace in Europe, so that normal trade relations might be restored, then we would see some way by which something important, something vital, might be done.

On page 55 there is the following communication from New York under date of December 28, 1914:

We are manufacturers of caustic soda, with one of the largest electrolytic plants in this country, located at Niagara Falls, N. Y. We have been endeavoring for the past three years to build up an export business on caustic soda. Our main competitors are Brunner Mond & Co. and United Alkali Co., of England. Germany, also, just prior to the war, was exporting caustic soda. There is about 20 per cent overproduction of caustic soda in the United States which is seeking foreign markets. We have been gradually building up trade with Mexico, Cuba, Japan, and South America.

Within the past month we have found a growing impossibility to procure rates which will permit of our moving our product to foreign ports in competition with the English transportation rates. This applies especially to European ports, where rates have increased from 200 to 300 per cent since November 1, and even at these exorbitant rates it is impossible to get room for prompt shipment.

We can not urge too strongly the necessity of procuring proper tonnage to carry commodities seeking a foreign outlet, and this tonnage should be available at once in order to benefit the United States manufacturer. If we are to take a position which we have never heretofore occupied in the markets of the world, we should do so immediately, and this does not permit of delays necessary to build and construct vessels of considerable size to carry this tonnage.

It seems to us the only solution of the present difficulty would be for this Government to lease or purchase, if possible, sufficient tonnage to relieve the present situation, or it might be possible for the Government to use a number of its transports and colliers in handling commercial freight.

The last suggestion, that some of the United States naval vessels not now needed for the purpose for which they were designed might be used for commercial purposes, is the only practical suggestion he has. As to the rest of it, he says the Government "ought to lease or purchase, if possible, sufficient tonnage to relieve the present situation." How will the Government purchase or lease, if there is such a boom in shipping as is claimed by others of the witnesses? If the boats are all employed, if they are able to get cargoes at extraordinary prices—characterized by some of the Federal authorities as extortionate—if the exigencies of the service are so great as that, how will the Government, following the wish of John F. Bush, who writes this letter, go out and lease or purchase any of the vessels to relieve the situation? He makes no suggestion about Government ownership.

Again, Exhibit 31, on pages 55 and 56, says:

We appreciate your efforts along these lines and sincerely hope that you will be able to bring about some relief to exporters.

The writer makes no suggestion as to how it shall be done.

I now quote from Exhibit 32. This is addressed to the Secretary of the Treasury:

We submit the above to you, as we believe you are interested in knowing from actual shippers the rates now quoted and charged by the steamship companies, and hope that you will use your good offices in bringing about a fair ocean freight rate to the various ports of Europe, notably, of course, the neutral ports.

"Use your good offices in bringing about a fair ocean freight rate." There is nothing there to suggest Government ownership; there is nothing that would put the Government up to the private shipyards for building boats. The writer only expresses the hope that the Government will use its good offices, through the head of this department, in order to relieve the situation. In Exhibit 33 the writer says:

From our viewpoint it is hard to account for the exorbitant freight rates, which have proven such a handicap to exporters, especially to those in our line of business, and we are heartily in favor of Federal legislation which would encourage American capital to own vessels under the American flag and enable them to compete successfully with foreign owners.

This is dated at Pensacola, Fla., and is from the Tuemler Co. I think I know what this gentleman means. There is no Government ownership in it, although it, with the others I have quoted, are in this Senate document presented here to urge the reasons why this bill should be enacted—as a Government ownership bill. Rather this gentleman, in Exhibit 33, deprecates Government ownership and wishes only that the Government will—

Encourage American capital to own vessels under the American flag and enable them to compete successfully with foreign owners.

On page 59, Exhibit 34, the Walter A. Wood Mowing & Reaping Machine Co., after speaking of their foreign trade, which has been established for many years, their agencies having been

established as long as 40 years ago, discuss at some length the situation, reaching the point that I am keeping in mind in the following language:

It would appear to us that there never was a more opportune time for this country, either under legislative action or private capital, to create a merchant marine, for lack of which, in our judgment, this country has suffered for many years. We can only hope that some measures may be enacted or some policy created which will relieve the present situation, and in time to affect our business interests this year.

That does not indorse Government ownership. There is no testimony there; it is only a vague hope that the Government will discover some way to relieve the conditions complained of.

In Exhibit 45, on this branch of the subject, the writer continues:

We hope that our testimony herein contained, together with all the other from larger shippers, will be such that some measure can be taken that will relieve shippers of these unprecedented and impossible conditions.

"Some measure." He does not undertake to say what it should be any more than do the others.

In Exhibit 49 the writer states:

We should advise that all the freight rates from points on the eastern seaboard to other European ports have been advanced in proportion to the increase cited above. We feel that some relief should be arranged for the American exporters by your department.

In Exhibit 64 the writer states:

It is not our purpose to burden you with personal grievances, but the writer believes a transaction of this kind possesses elements which must commend itself to your consideration, and he hopes you may be able to offer some suggestions, not alone for our relief but to save other exporters from suffering by reason of such practice at the hands of these steamship people.

In Exhibit 70 it is stated:

I think it is of the utmost importance that the United States should acquire at the present time steamers for our trade with the neutral countries. While I am not on principle in favor of Government-owned steamship lines, I believe in the present crisis only the Government is able to acquire a sufficient amount of steamers without much difficulty, and I see no reason why, after reestablishment of peace, the Government should not resell these steamers to American companies.

Buy when they are excessively high priced, buy when every boat that can float a ton of freight is sought, when rates are high; when the value of all floating water craft is correspondingly high. It is proposed that the Government buy at high prices, and then, when the crisis is over, this gentleman wishes the Government to go out of the business and sell at what kind of a price? At bargain-counter prices. There will simply be a lot of marine junk exposed for sale at that time, when it comes.

In Exhibit 72 the writer says:

With the elimination of the German lines during the continuance of the war and the irregular sailings of the English steamers, the export trade is greatly hampered, and I believe that under present abnormal conditions only energetic measures can be of any assistance. Although I do not indorse a permanent policy of ownership by the Government, I do believe that during the present critical situation only the Government can assist the development of the business by purchasing steamers suitable for the trade.

Here, again, the same difficulty is presented. I am reading these extracts to show that the shippers who write and furnish the testimony printed in this document, or most of them, have no very definite idea what to do. Some express themselves against Government ownership; some wish the Government to embark in the steamship business temporarily, and, after the crisis shall have passed and the war is ended, they wish the Government to leave the business.

This policy once entered on, where would it end? Where would it land the Treasury? The Government going out and buying something when it is excessively dear, owing to unusual conditions, and, after the crisis has passed, after the article has lost its commercial value in the market, then the Government shall sell and retire from business! That is only another form of the proposed cotton-loan bill. It finally is at the expense of the United States; it is an inroad on the Treasury; it is a bond sale to raise money to loan directly to persons affected, who have cotton or other merchandise; it is not a grant directly from the Treasury, but it puts the Treasury in a condition where it must furnish the money, taking the risk and incurring the expenditure for the benefit of the shipper, who is engaged in private business, and then, at a considerable loss, when normal conditions prevail, to bear that loss and withdraw from the business!

Conditions are contrasted in Exhibit 78 so as to show the bad business enterprise the Government would be required to engage in under this bill:

Conditions in the steamship freight trade were at the two extremes during the year just ended. The year opened with freight business, both import and export, affected to a material degree by the internal depression in this country.

In this testimony offered by the Secretary of the Treasury is the statement that there was a depression. That has been most vigorously denied. It is said that there was not any trouble; that everything was going along at its normal gait; but in this testimony it takes note of a wonderful depression in this country:

During the first six months freight rates were easy and fluctuated within a narrow margin. The advent of the European war in August brought chaotic conditions, but out of the maelstrom there developed a period of high freight rates seldom, if ever, approximated in the annals of the shipping world.

During the early part of the year trade, both foreign and domestic, felt the heavy hand of depression.

Repeating, now, the statement of depression and untoward conditions here:

The pendency of the request for a 5 per cent advance in railroad freight rates, the assimilation of the new tariff, and the reorganization of the banking system of the country, combined to lessen the volume of trade. The steamship lines faced a dull year. Aside from the movement of old-crop grain, which furnished good freight, the lines lacked the stimulating effect of an active movement in general cargo. Exports of manufactured articles and imports of supplies from Europe, the Orient, and South America dropped to a low level under the repressive conditions that obtained.

In March there was quite a flurry in freight rates, but the upward movement was only spasmodic. Rates soon dropped back to the level effective at the beginning of the year.

Then came the European war, and rates shot upward to an astonishing degree. This again only emphasizes—and this evidence is all cumulative in the same way—the extreme difficulty the Government agents will experience when they go upon the market to buy these vessels.

A good deal of argument has been had here off and on along the line of the President's statement in Indianapolis. It goes on the theory that the farmer, either the cotton planter or the grain producer, is the one who suffers from the excessive rate; in other words, the higher the freight rate on the ocean the lower the price to the producer in this country. So if the prices keep going up, wheat ought to get down to 25 cents a bushel after a while; and as the freight rates go up on the ocean, instead of wheat going up, it ought to be selling back to 67 cents, as it was last August.

On page 75, Exhibit 54, there is an interesting contribution from Minot, Hooper & Co., of New York, in the latter part of which an explanation is given which illuminates this question materially, because what the writer says is in accordance with the actual conditions we find on the market:

What we want to know is whether there is any redress to be had for having to pay these exorbitant rates, or must we pacifically submit to such "extortion"? While we ourselves do not bear the cost of freight on our shipments, the customer assuming that burden, our export business is directly and materially affected, inasmuch as the uncertainty and increase of expense and hazard to our customer have a tendency to make him cautious and reduce or altogether terminate his orders.

So it is not the suffering farmer in this country that this bill will probably relieve. Meats and breadstuffs must be shipped all over the world. Where the food products of a locality are insufficient they must come from some place else, or starvation will ensue. So here is direct testimony that the purchaser abroad is the person who pays the ocean freight. If it be so high as to become prohibitive, or the purchaser abroad be without means to buy, the effect would be the same. In any event, it has not yet damaged the producer of this country in the price; it has materially affected the exports of meats and breadstuffs since they are continually going abroad. The grain exchanges of the country and the packing houses are sending every day cargoes abroad. The grain exchanges would not be selling to the foreign trade if it were impossible to secure the capacity for carriage.

This is the definite answer now, the answer of the market to that argument. Here is a very graphic description of why the freight rates are high. It is charged that it is the result of extortion on the part of the steamship companies, or the private owners, if they are individuals. There has been by the supporters of this measure but little said so far on anything that would legitimately increase the cost of freight. I quote now from page 110 of the same document:

During the month of August absolute disorder replaced the perfect running and intricate machinery of the steamship trade. The big lines withdrew all berth-rate quotations and would not make rates on any other than actual freight offers. Rates changed from day to day; in fact, rates on same conditions differed each hour of the day, but throughout the movement was upward, and when after a month of chaos the steamship lines recast their services to fit in with war conditions, thus enabling the quotations of berth rates, it was noticed that the freight rates were fully double those quotated immediately before the advent of the war.

This indicates that it is not a voluntary increase by the owners of the boats; it is an increase to keep pace with and be commensurate with the changed conditions under which they must operate. The risk is great; the cost of the service has increased; the insurance is higher; and every condition that enters into the operation of a freight rate has rapidly moved upward. I can see why a legitimate increase would be proper,

and that possibly no fortunes are reaped by those who receive those rates. There may be, it is true, individual cases where somebody, merely as extortion, and without any reasonable cause, exacts a rate simply because somebody is situated so that he must pay it. Those are abuses that occur in every line of undertaking. I do not know of anything in which a person engages where occasionally he is not caught in a corner.

In the actual administration of shipping laws an illustration of how they affect some of our own people is found in the so-called ship registry act approved August 18, 1914. It opened to American registry foreign-built ships. Under the authority of that act the Executive on the 4th day of September, 1914, suspended for a period of seven years the provisions requiring watch officers to be citizens of the United States, so that now an alien may be a watch officer on any of these boats and admitted, under the amendment, to the registry act. I read now copies of resolutions adopted by the National Marine Engineers' Beneficial Association on the 18th of January, 1915:

Whereas the so-called ship-registry act, approved August 18, 1914, which act provided for the admission of foreign-built ships to American registry for the foreign trade, and the issuing by the President of the United States under the authority of said act of an Executive order on the 4th day of September, 1914, suspending for a period of seven years on such ships so admitted the provisions of the law requiring watch officers to be citizens of the United States; and

Whereas the enactment of the law and the issuing of the Executive order may have been dictated by patriotic motives, but in the putting of the law and the Executive order into practical operation by the owners of foreign ships taking advantage of the law, patriotism plays a very subordinate part to and is, in fact, completely dominated by commercialism; and

Whereas by intrusting the protection and the honor of the American flag that is permitted to float over such a ship so admitted to American registry into the custody of watch officers who are citizens of a foreign country certainly can not be called patriotic; and

Whereas the Department of Commerce had on file (prior to the issuing of the Executive order suspending the law that prescribes that all watch officers on vessels of the United States engaged in foreign trade shall be citizens of the United States) reports received from collectors of customs from the principal ports on the Atlantic and Pacific, and those reports showed that there were 2,138 idle masters, mates, and engineers that were available for service on vessels engaged in the foreign trade: Therefore be it

Resolved, That the Marine Engineers' Beneficial Association of the United States in convention assembled this 22d day of January, 1915, in the city of Washington, D. C., by unanimous vote of all delegates representing the local associations on the Atlantic, Pacific, and Gulf coasts, and the inland waters of the United States, respectfully but most emphatically protest against intrusting the honor of the American flag flying over an American ship by the Government permitting of the employment of foreigners who are citizens of a foreign country as watch officers on vessels of American registry engaged in the foreign trade; be it further

Resolved, That a copy of these resolutions be sent under the seal of this association to the President and Vice President of the United States, the Speaker of the House of Representatives, and to the United States Senators and Members of the House of Representatives.

J. S. PURDIE, No. 35.
J. E. MCCAULEY, No. 35.

—

WASHINGTON, D. C., *January 22, 1915.*

To the officers and members of the National Marine Engineers' Beneficial Association:

We, your committee to whom was referred the above resolution referring to ship-registry law, beg leave to submit the following report:

We believe that the resolution voices the popular sentiment of the members of this organization; therefore we recommend that this convention indorse the resolution, and that the national secretary be instructed to forward to the officers of the United States named in the resolution a copy of same.

C. E. SHRODES,
J. S. WRIGHT,
THOS. J. KELLY,
ALBERT LAMOTHE,
GEO. H. WILLEY,
Committee.

In the city of Washington, D. C., on February 4, 1915, there was a meeting of the National Chamber of Commerce, representing the business interests of the country. There were very strenuous efforts by the friends of the administration, and even by some of the Cabinet officers, to obtain an indorsement of the shipping bill by this association. It represented a very large number of members from every quarter of the United States. It might be called fairly representative of the business interests concerned. In spite of the tremendous influence exerted by the administration upon the delegates, this convention of commercial organizations voted by 161 to 90 against indorsing this bill and referring to a referendum the chamber's alternative ship subsidy proposal. Under the by-laws, however, the affirmative vote was insufficient in numbers, and the convention finally decided to refer both the President's ship bill and the subsidy proposition to a referendum. On this subject the press says:

Earlier in the day the delegates evinced overwhelming opposition to the measure during the debate between Secretary of the Treasury McAdoo, who argued the emergency need of ships, and Senator BURTON, who pointed out the dangers of the proposed legislation.

Along the same line I wish to call the attention of the Senate to a resolution of the Illinois Manufacturers' Association, presented and found in the CONGRESSIONAL RECORD of a few days ago. The Illinois Manufacturers' Association is composed of the principal manufacturers of that State. They elect, at stated intervals, their board of directors, at a membership meeting. This membership meeting, after having selected the directors, has very little to do thereafter with the management of such affairs as resolutions. The board of directors has control of such matters. There are 12 members of the board of directors. I investigated, by writing to the 12, how many were present at the meeting of the board and what were the circumstances that led to the adoption of this resolution of indorsement. One of the directors is George D. Tower, of Mendota, Ill. He writes, in a letter dated January 27, 1915:

THE J. D. TOWER & SONS CO.,
SURFACE CULTIVATORS,
Mendota, Ill., January 27, 1915.

Hon. L. Y. SHERMAN,
Washington, D. C.

DEAR SENATOR: I have your letter of January 23, making inquiry regarding the presentation of the Illinois Manufacturers' Association urging you to support the pending shipping bill, and advising me as one of the directors of that association that you could not comply with the association's request in the support of that bill. You also make inquiry as to what the immediate causes were that led up to such an action by the board of directors.

In reply to this inquiry I beg to say that I attended the regular monthly meeting January 5, and there was nothing of this kind brought up at that meeting that I heard mention of, but the directors had a meeting on the 20th that I could not attend and it was probably at this meeting that the action was taken, but I am not in a position to say what it was that led them to take the action they did.

I may say to you in confidence that I have always been one of your warm supporters and especially in the last election. I have always been a great admirer of yourself and always had the utmost confidence in your ability and integrity, and I feel sure that you will do what you think is for the best interests of the country. I had never seen a copy of the bill in question until I received the one you sent me and, after reading it over, I do not feel that I am sufficiently posted to express any decided ideas as to what it will accomplish, but there is, I can see, some things that this proposition is bound to conflict with in international law.

I do not know how it can be overcome without the exertion of an unusual amount of diplomacy. It may be accomplished in that way and avoid drawing us into trouble, but the chances seem to be in favor of buying a great deal more than ships.

In conclusion will say that I am willing to defer to your judgment in regard to this proposition, and can appreciate your preference to being a private citizen rather than a United States Senator in the support of anything that you do not feel is for the best interests of the country.

With kindest personal regards, I am, yours, very truly,

GEORGE D. TOWER,
Vice President.

—

Elonzo Tyner, of Chicago, writes a letter dated January 25, 1915, which I will read. He is another one of the board of directors:

ELONZO TYNER,
327 WEST VAN BUREN STREET,
Chicago, January 25, 1915.

Hon. LAWRENCE Y. SHERMAN,
United States Senate, Washington, D. C.

DEAR SIR: In reply to yours of the 23d relative to the presentation made to you by the members of the Illinois Manufacturers' Association urging you to support the pending shipping bill, I was not present at the meeting of the directors when this resolution was passed. Understand every one present favored it. Had I been there I would have been opposed to it, as I agree thoroughly with the position you take in the matter with reference to same and believe that a great many of those who seem to favor the bill at the present time will, if it becomes a law, live to see the day that they will regret having indorsed it or voted for it as the case may be.

I am inclined to think the one thing that caused the Illinois Manufacturers' Association officers to favor this was due to the fact that they felt it was the shortest road toward establishing the very much needed merchant marine, which, in the writer's opinion, should be established and operated solely by private capital and encouraged by the Government to the extent of a reasonable subsidy.

Yours, very truly,

E. TYNER.

I read another letter of January 25, 1915, from H. G. Herget, of Pekin, Ill. He is another one of the directors.

PEKIN COOPERAGE CO.,
TIGHT COOPERAGE, STAVES AND HEADING,
WINE AND OIL SHOOKS FOR EXPORT,
Pekin, Ill., January 25, 1915.

DEAR MR. SHERMAN: In answer to your letter of January 23, would say I was not at the meeting of the directors of the Illinois Manufacturers' Association when they adopted the report to support the pending shipping bill.

Speaking for myself only, I am much opposed to this bill, and I think the Government goes far out of its way when it engages in shipping or transportation of any kind. In my humble opinion, the passage of this bill would be inimical to the manufacturing interests of this country. I, of course, personally appreciate and approve the stand you take in this matter, and I regret I am not able to inform you what immediate causes led to such an action on the part of the board of directors.

With kind regards, I am,
Yours, very truly,

H. G. HERGET.

Hon. L. Y. SHERMAN,
Washington, D. C.

From J. Willis Gardner, another director, I have this letter, dated January 25, 1915:

THE GARDNER GOVERNOR CO.,
Quincy, Ill., January 25, 1915.

Hon. LAWRENCE Y. SHERMAN,
United States Senate, Washington, D. C.

DEAR SIR: I am pleased to acknowledge receipt of your letter of January 23 and to tell you I am not in favor of the shipping bill and was not present at any meeting where a resolution was passed authorizing the officers to urge the passage of the bill.

I am fully in accord with the idea expressed in your letter. The bill should not be passed.

Yours, very truly,

J. WILLIS GARDNER.

Here is a letter written from another one of the directors, G. L. Avery, of Peoria, dated February 4, 1915:

AVERY CO.,
Peoria, Ill., February 4, 1915.

Hon. LAWRENCE Y. SHERMAN,
United States Senate, Washington, D. C.

MY DEAR MR. SHERMAN: Your letter of the 23d ult. was duly received and noted. Having been in and out so much of late, I have been unable to give my correspondence prompt attention.

While in Chicago recently I had intended to take up the matter with either Mr. Hurley or Mr. Glenn, of the Illinois Manufacturers' Association, but found that I would not get through my appointments in time to do so.

The facts are, the writer was not present at the meeting of the board of directors of the Illinois Manufacturers' Association at the time action was taken with reference to the pending shipping bill.

I am heartily in accord with your action in this matter and appreciate the stand that you have taken.

Very respectfully, yours,

G. L. AVERY.

I have read a great many times the statement that politicians were often off-color; that their bargains were reprehensible. I have heard it stated by gentlemen who are learned and who carry many university degrees from divers seats of learning that politicians are persons who ought to be very sedulously watched. They are accused of deals and devious ways, so that the term "politician" has become, in the opinion of many people, a term of reproach. I do not know but that among some sensitive folks it might be regarded as an epithet if one were to be called a "politician." Among the things that invite public criticism it is said that this unsavory class frequently engage in the making of bargains that lead to combinations for nominations; that they employ influences at the primaries and at the elections, not in a corrupt way, making their perpetrators amenable to the laws of the land, but influences which, while legitimate, still are regarded as most reprehensible, to use the mildest expression possible. This has been dealt with at great length by many magazines and by their editors, who exact from those in public place a very high standard of political morality.

I do not object to the test which they set for men who aspire to or who enter public life. There is nothing evil intrinsically in their level, which is above, or supposed to be above, that of the ordinary occupant of public office, especially of those offices which are essentially political in their character. These latter necessarily require political conduct that is commensurate with the importance of the politics of the office concerned. So I have learned to look for a little higher standard frequently from gentlemen of that kind. I have taken them at their word. I believe they are sincere, and I earnestly hope that they are doing some good in the world, and especially in our immediate quarter of the globe. That is where I would like to see such results follow. I do not know whether or not any of these critics themselves ever run for office. I can recall now but few of them who ever entered upon that delectable territory where only candidates and fools rush in. We have some of them in that part of the country where I live, who at intermittent intervals have become candidates for office, and who have confined themselves during that time to an indiscriminate criticism, not to say abuse, of nearly everybody in every party who was ever elected to office or had any aspirations in that direction, unless he agreed with them.

Criticisms are useful and I believe in critics. I believe the most useful critic in the world is the constructive critic, who never in a spirit of iconoclasm undertakes to tear anything down until he has something better to put in its place. If he has, he is justified in the criticism. Often when he has some improvement, and it is necessary to destroy something that cumbers the earth to furnish room to institute his improvement and make it practically operative, he has then a right to criticize. That kind of criticism and that kind of a critic are benefits to the world. For them I have nothing but the greatest commendation to give, and with them I will cheerfully join hands at any time.

The other critics are of a different kind. Michelangelo went into a great cathedral, where Raphael was frescoing the ceiling. He took a quick glance at the work and seized a crayon and on a sheet of paper drew a large head, produced it to the proper degree of proportion and contour, and filled in such details as satisfied him. A friend came in and asked him what he was doing. He said, "Raphael's work shows that for the size of the room the figures are too small." The friend said, "Well, why do you not tell the artist?" He replied, "I am telling him in the best kind of criticism I know, by creating what I believe will be the proper size in proportion to the room." That is constructive criticism. That kind of criticism we ought to have, but the indiscriminate criticism in the spirit of the iconoclast who goes out for no purpose except to destroy, for no reason except to condemn and reject, and who throws up his hands in helplessness when he is called on to suggest something for the thing criticized, is not very useful in the world. For him I have no particular admiration; of him I am compelled to say I do not think he does good in the world, certainly not to practical men, not even to candidates for office, not even to an occupant of public office, because every conscientious public officer must be creative; he can not be merely destructive. He must have in a very marked degree the creative instinct. That instinct is embodied in the framing of statutes, in the enactment of great laws that have done good and have kept pace with the progress of the hour. Such criticisms and such virtues are always of the very highest value.

Our Chief Magistrate has criticized in years past, and not always constructively. Some times he has criticized mercilessly, as in his New Freedom, in his Congressional Government, in his book The State, and here and there in his History of the American People. In the rôle of critic in the New Freedom he essays much; he criticizes without stint; he condemns the politician, his back-room conferences, his unholy alliances, his endeavor to procure results by passing favors to others, so that others may see the light and agree with him upon some subject of political action. I suppose that the cause of the effort put forth on the part of most politicians is to have others agree with them in some given line of political action.

Let me be more specific. A trade commission has been created by Congress by an act, commonly called, when it was pending, the "Covington bill." It seeks to do for the benefit of this country, to put it in a comparative way, about what the Interstate Commerce Commission does for the railroads of the country. That bill has been enacted into law. It requires the appointment of a board of five members. While it was supposed that the board would be nonpartisan, nobody who knew the conduct of public affairs ever thought seriously that it would be so. It was known that it would be bipartisan. The only nonpartisan boards in the world are the ones the members of which are all of one political party. It is idle to talk about making a nonpartisan board with a minority on it. If the minority are stalwart, the only way they can qualify is by being stalwart while they are still on the board. If they are nondescript, spineless, and with no active principles, with their political being inert or dead, then they have no business to be there, because they are only fillers; they are ciphers, used for the mere purpose of extracting compensation from the Public Treasury. So nobody expected this to be a nonpartisan board. I expected it to be bipartisan, and I have no complaint to make. The majority ought to be of the Democratic faith. The administration and both branches of Congress are of that faith, and it is entirely proper that three at least of the members of the board should be of that complexion. As to the other two it might be reasonably expected that one of them would be a Republican, and possibly the other more or less remotely related to the lamented, the late departed, the "Bull Moose," but when the appointments begin to see the sunshine on the Potomac there are three Democrats and two "Bull Moose."

I know what that is for, and so does the occupant of the chair. So does every one of the sophisticated majority, none of whom are infants in their swaddling clothes; they all arrived at the age of political puberty long before they came to this Chamber. The purpose, of course, is to keep the party alive, because at Indianapolis the President said "the Democrats are a minority party, and if we do not get the independents we can not win." That sounds to me something like a politician. If any of my associates in a burst of confidence had let escape from them sentiments of that kind I would say it was a manifestation of the usual symptom of a politician; but, coming from the gentleman in question, it might be well enough to give him the benefit of the doubt and say that no such conclusion ought to be drawn. But, nevertheless, the purpose is to keep the party alive.

Now, let us go a little further. I may appear to be wandering from the text, and that is something that I would not do for the world. I certainly want to keep to the shipping bill, and I will get to it.

On this board is Edward M. Hurley, whom I have known for some years, a manufacturer, and, like some lawyers and occasionally a doctor of divinity, he carries politics as a side line. Mr. Hurley is somewhat informed in political affairs. He is a very excellent member of the majority party. It was natural that to him the President should turn for one of the members. He comes from the Middle West, a part of the northern Mississippi Valley in which many manufacturers are found, where large banking interests do business, and a very great volume of commercial resources changes hands every 24 hours.

So Mr. Hurley will be nominated as one member. Mr. Hurley chances to be the president of the Illinois Manufacturers' Association. That is a perfectly innocent and honorable distinction, but being president of the Illinois Manufacturers' Association is one thing and being a member of the Trade Commission is another, and thereby hangs a double-headed tale, if I may be allowed the Irish bull.

Mr. Hurley as president of the Illinois Manufacturers' Association gets together the 12 directors apparently, but from the letters received it appears there were just half of them present. Five out of the six had not indorsed the shipping bill. At this meeting of the board of directors Mr. Hurley presented and had passed the resolutions which are used to justify, so far as they are evidence in this matter, the passage of this bill. Now, is that a quid pro quo? What made Mr. Hurley active? He did nothing, so far as I am informed or have been able to ascertain, until he was assured that he would be a member of the Trade Commission. I have no objection to this; I am not saying there is anything wrong in it; I am only saying that the Chief Magistrate, when he wants to get an indorsement for a pending bill, uses exactly the same means as any other politician does, and that is all this is. It is a political movement, and had no more strength and is entitled to no more strength than any other political movement of a like kind.

I quote from an editorial of the Chicago Tribune of January 21, 1915:

The White House to-night made public this message:
"At a meeting of the directors of the Illinois Manufacturers' Association held to-day the administration ship-purchase bill was unanimously indorsed. Our Senators and Representatives will be urged to support the measure.
"EDWARD N. HURLEY."

Mr. Hurley is one of the men who have been selected by President Wilson to go on the Federal Trade Commission.

This finishes the chapter on this subject. I make these remarks only in view of the many bitter criticisms that have been made of politicians, not only of the party of which I chance to be a member, but of my Democratic friends as well. I think this chapter is due to the Democratic side of this Chamber as much as it is to anybody else. If I could imprint this story, by mere word of mouth, upon the insensate wood of the desks and chairs of this Chamber, I would leave in their unresponsive material: "Remember that the Chief Magistrate in 1915 conducts himself as any other politician when he needs help on legislation he strives to enact by Executive influence."

It is proposed to lower the rates of the present steamship companies by Government competition. This will build up a rival Government line and weaken, or possibly destroy, such private lines as are now established. After this shall have been accomplished, the Government will dispose of its interest, which thereupon becomes a private line. Does not the new private line owe its existence and its ability to successfully operate to direct Government aid? It is, to all intents and purposes, a private line established by public money. What advantage does this possess over a subsidy to a private line? The answer is it controls rates by the Government. An equally cogent answer would be, if the Government grants a subsidy to an existing line on condition that certain rates are established and maintained for the shipping public, the same end would be gained and at less cost.

The same thing could be done by vesting in the Interstate Commerce Commission power to regulate rates on every vessel registered under our laws.

When Mr. McAdoo was before the committee of the House of Representatives on this subject, one of the members of the committee asked him, on page 29, whether this was not in effect a subsidy, and whether he could support a subsidy. He said:

The Democratic platform forbids subsidies.

Let us see. The Democratic platform, it is said, forbids subsidies. In the platform of 1912, which is the last authoritative utterance of our brethern, I find the following language:

We believe in fostering, by constitutional regulation of commerce, the growth of a merchant marine which shall develop and strengthen the commercial ties which bind us to our sister Republics of the South, but without imposing additional burdens upon the people and without bounties or subsidies from the Public Treasury.

We urge upon Congress the speedy enactment of laws for the greater security of life and property at sea, and favor the repeal of all laws and the abrogation of so much of our treaties with other nations as provide for the arrest and imprisonment of seamen charged with desertion or with violation of their contract of service. Such laws and treaties are un-American, and violate the spirit, if not the letter, of the Constitution of the United States.

"The Democratic platform forbids subsidies." It does in express words in 1912; and on several prior occasions when platforms were written, not in the same language, but in effect, it went on record as against subsidies. This plank declares for developing our merchant shipping without imposing additional burdens on the people. The indebtedness created by this bill is a heavy burden on a weakened Treasury. I do not know why this especial tender solicitude should be shown for this single plank, especially in view of the character of this bill and what it necessarily does. It is more a struggle over phrases and definitions than it is over the thing itself. If, because this is a platform pledge, the party is thereby to be barred from a subsidy, I can properly inquire whether it is of any more binding force than any other plank in that platform.

Why, I read there, too, that the Baltimore platform pledges itself to the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal. We remember the message which came to us in joint session on one occasion recommending the repeal of the act of August, 1912. I am not saying anything on this subject by way of criticism, because I voted in accordance with the President's recommendations for the repeal of that act.

I find in the platform written by our Republican brethren in 1912 no such solemn declaration as that. There is nothing in it that pledges the party or any of its members to free tolls. It was an act signed by President Taft, but that did not thereby commit the party to that legislation. It was not in pursuance of any previous Republican Party plank. President Taft signed many bills, making them laws, that were not part of any party creed in this country. He signed any number of bills that became laws of general operation, outside of those that were local or temporary in character, like appropriation bills; but that did not thereby, on these matters of general legislation, pledge the party to stand by those statutes as party decrees or party planks. So every Republican in this Chamber and in the House of Representative was at liberty to vote as his judgment influenced him.

I find in the same platform, likewise, in the tariff plank, this language:

We favor the ultimate attainment of the principles we advocate by legislation that will not injure or destroy legitimate industry.

Then, in the face of that, a bill was framed that free listed sugar in this country! As one of the Senators from Louisiana very cogently said, sugar is a legitimate industry according to the views of his constituents. I think he is correct. Sugar has been on the protected list for over a hundred years. It is natural that the sugar-cane growers of the States where that industry can be pursued, being good Democrats, would interpret that platform to mean that that was a legitimate industry, and that that particular phrase of the platform was for their benefit, and that they were thereby excepted from any reduction that might prove injurious.

But when the bill proceeded through the various stages, and reached alleged perfection, it was found to free list sugar, and in that form it remained and was signed. It was said that not only cane sugar but beet sugar was to be cheapened; that the high cost of living was very greatly affected by the prices prevailing prior to this downward revision. The price of sugar was not exorbitant before the reduction. It fell temporarily after the reduction. Probably up to May following the reduction the price of sugar slightly decreased. The retail price to the consumer, the price of crude cane sugar to the refiner, decreased somewhat. It is to be noted here, however, from looking at a schedule of prices of crude and refined, that the price of sugar refined to the consumer and sold left a much wider margin than the price between the cost of crude sugar to the refiner and the former prices; in other words, that they did not fall in proportion to each other, but they sometimes rose. Along in May, according to the tables from the market kept by those who follow the trade, sugar was reduced about 40 cents a hundred pounds; and when it reached this figure it reached the extreme limit of the reduction of the high cost of living. It never grew any lower, but it has grown somewhat higher.

I do not think it would be a fair way of discussing the subject to quote war prices. The prices before the breaking out of the war are the proper basis on which to estimate it.

Before the war broke out sugar had risen. After it saw the ultimate free listing, and after the first cut had been made, in March, 1914, it rose to prices equal to and subsequently greater

than the prices before the act of October 3, 1913, was signed. That, too, was before the war broke out and could not by any possibility have been affected by the war, because no one in this country at that time had any suspicion that there would be such a war.

This did two things. Outside of not reducing the price of this necessity, it fatally crippled the cane-sugar industry in Louisiana. It very materially depressed the beet-sugar industry of other States. The second result was the loss, ultimately, of some fifty to fifty-four million dollars of customs duties. It afforded a certain means of collecting revenue. It was a fixed quantity. About so much sugar came in every year. Those who watched the quantity coming through the customhouse were able, from year to year, to estimate with considerable accuracy how much revenue would be derived from that import. It was a much more certain source of revenue than the estimates made on the income tax by the Secretary of the Treasury and his advisers. He missed by some millions of dollars estimating that correctly.

Mr. BROUSSARD, who in a short time will become an honored Member of this body, has analyzed the situation on sugar. He says:

The resolution introduced by me contemplates the suspension of the free-sugar clause of the Underwood bill, which provides for free sugar after May 1, 1916. It is probable that, with the congested condition of the congressional calendars, it may not be possible to consider this resolution in this Congress.

It is fair to those upon whom rests the responsibility of reinstating a deficient Treasury, as well as to those who favor free sugar, that the efforts which I contemplate making in the next Congress should be made known to them; hence the introduction of the resolution at this time. It is my purpose to renew these efforts immediately upon the convening of the next Congress, whether in an extra or a regular session.

These efforts, if successful, will to a large extent obliterate the deficiency that confronts the United States Treasury.

I add here that the sugar schedule is intimately connected with the shipping bill. The shipping bill requires money, and there will be no money in the Treasury under existing customs duties. If the schedules of the existing law be not revised there will not be enough receipts to translate into reality the scheme dreamed of in this bill.

We are informed that there is practically an $80,000,000 deficit, despite the enactment of a war tax in time of profound peace.

The defenders of our present financial policy have ascribed the pending $80,000,000 deficiency to what they are pleased to term "pork-barrel" appropriations by Congress.

No one cognizant of the existing situation is at all disturbed over that statement. The uninformed alone are misled by this false cry. When called upon to explain what is meant by "pork-barrel" appropriations, one is referred to appropriations for the improvement of our rivers and harbors and the construction of post offices and other necessary buildings for the proper transaction of the public business.

DEFICIENCY NOT DUE TO THESE APPROPRIATIONS.

It is not true to say that this deficiency grows out of any such appropriations, because, during this administration, no public buildings have been provided for by Congress; and the appropriation for rivers and harbors was during the life of this Congress reduced from a normal appropriation of $50,000,000 to a $20,000,000 lump appropriation, to be used in the discretion of the United States Engineers in continuing projects already under way.

Even if this twenty million were charged to the legislative "pork barrel," it can not possibly account for a hole in the Treasury of eighty millions.

As a matter of fact, it can be demonstrated that this deficiency grows out of an entirely different situation, which situation precludes absolutely the use of the words "pork barrel" in connection with it.

It is not difficult to ascertain just how this deficiency occurred. In the first place, when the Underwood bill was under discussion in the House, Representative HULL, of Tennessee, was in charge of the income tax section of that bill. I have every reason to believe that the Ways and Means Committee, and Mr. HULL in particular, sought every avenue of information for the enactment of an equitable and just income tax.

Mr. HULL, in his opening address on the floor of the House, stated that the income tax provision as written in the Underwood bill would produce $70,000,000. Such was the estimate furnished him.

I wish to interpolate here that that was also the estimate of the report of the Committee on Finance of the Senate.

INTERNAL TAXES FALL FAR BELOW ESTIMATES.

The returns, however, of the income tax show a total receipt of $28,253,534.85, a deficiency from the estimate of Mr. HULL of nearly $42,000,000, which miscalculation accounts for more than half the pending Treasury deficit.

When the war-tax measure was reported to the House out of conference, Leader UNDERWOOD made the statement to the House that the information he had was to the effect that it would yield 105 millions. When it passed the Senate, it was estimated to yield 107 millions; when it came out of conference, he said it was presumed to yield more than 90 millions. Collections thus far made indicate this estimate far too high, in fact, the Secretary of the Treasury himself now estimates that the war tax will approximately yield 54 millions for the fiscal year 1915. From the collections already made, this estimate seems reasonably accurate. Therefore, taking the lowest figure for the war tax given by Mr. UNDERWOOD, that of 90 millions, and subtracting the estimate now being made by the Secretary of the Treasury, there results a deficiency of 36 millions in that item alone.

The revenues from these two sources are in no wise affected by the European war. If the termination of the war causes any increase in our customs receipts, this increase can not entirely make up the deficit, but Congress will have to look elsewhere for the most part to recoup the Treasury.

By adding these two deficiencies, the one resulting from the income tax and the other from the war tax, we have almost the exact amount of deficiency reported in the Treasury of the United States.

In other words, if the estimates furnished Congress as to these two revenue acts had been correct, there would now be no deficiency, as the shortage in the results from the estimates precisely equals the Treasury shortage.

Why look to extraneous things when, through erroneous calculation, these two new methods of taxation account for practically every dollar in the present deficiency?

Now, this is a statement of facts, and the war tax measure is soon to expire, so that the 54 millions yield for 1915 will shortly disappear, and the 80 millions deficit must, consequently, be increased by that sum in the near future.

On the 1st of May, 1916, unless my resolution shall become law, practically $52,000,000 more now derived from the sugar duty must be also added to the present deficiency.

To summarize, should the same deficiency occur in 1916 as is pending now, there will be added to the 80 millions deficiency the further deficiencies due to the expiration of the war tax law, yielding 54 millions and a still further deficiency after May, 1916, of 52 more millions, derived from the sugar duty.

AN APPALLING SITUATION THAT MUST BE MET.

This situation is appalling. It can not be shirked; it must be met! And the question is, How are we to meet it? There are several ways in which it can be done. The simplest, but probably the most obnoxious, would be to issue bonds; another would be to reenact the war tax act in times of profound peace, when possibly Europe itself will be at peace, and increase that tax; another still would be to readjust the income tax by decreasing the exemption and increasing the rate; or, again, to revert back to the old practice of collecting money from a duty on sugar.

And why should not the last-named course be followed? The refiners told Congress, and Congress believed the refiners, that if the duty on sugar was reduced, the consumer would receive the advantage of the reduction. On March 1, 1914, Congress reduced the then existing duty by 25 per cent; and for not a single moment from that day to this has the consumer paid as little money for his sugar as he paid before the reduction. He is now paying practically twice as much as he did before the reduction.

The American consumer and the United States Treasury both have suffered from the reduction; and the only beneficiary has been the refiner, commonly known as the Sugar Trust, which has absorbed the entire reduction and multiplied the price of sugar to the consumer.

Under the old rate, which went out on the 1st of March by virtue of the Underwood bill, the Treasury of the United States would have collected to date more than fifty-eight millions in duty instead of forty-three millions, so that the Sugar Trust has absorbed in the 10 months since the reduction was made nearly $15,000,000. At this rate, by the end of 12 months, as the result of this 25 per cent reduction, fully eighteen millions will have been absorbed by the trust and will have been lost to the Treasury.

SUGAR TRUST IS AGAIN ATTEMPTING TO DECEIVE THE PUBLIC.

All understand that the Sugar Trust is again engaged in its old practice of deceiving the public, and, in this instance, it asserts that the high price of sugar is due to the European war. That is not true. It is merely a subterfuge resorted to by the trust to deceive the American public while it is engaged in absorbing the tariff reduction, which it had promised the American consumer should receive.

I make this statement for the reason that at this very hour the refiners of the country are engaged, on the American market, in selling sugar to Europeans for consumption in Europe at a lower price than the same sugar is being sold by them, on the same market, to the American consumer.

The war could not lift the price of sugar in the United States, at peace with all the world, when sold to an American consumer, and not raise it equally to a European, engaged in this same war. Yet this war, far from our shores, is invoked as a reason to lift sugar prices to the American consumers beyond the price charged Europeans.

To put the question squarely to Congress and the American people: I ask, shall we indefinitely suspend all expenditures for the improvement of our rivers and harbors and the construction of necessary public buildings? And shall we reenact the war tax and increase its burdens? And shall we reduce the exemption clause of the income tax and increase the tax itself, to meet this deficiency? Or shall we issue bonds in preference to all this? Or shall we, as I suggest, return to the time-honored system of collecting taxes on articles that can bear the duty, particularly when the remission of the duty does not cheapen their price to the consumer, as is the case with sugar?

Congress must soon answer these questions.

I read this because it seems to me it is so intimately connected with the condition of our Treasury as to be very material in the consideration of the shipping bill. It is idle for the Government to talk about procuring ships unless we have money or unless we resort to a bond issue. I do not believe that anybody, even on the majority side of the Chamber, is very enthusiastic about a bond issue. We are very sensitive on that subject and have been so for some 20 years.

During the last preceding Democratic administration there was a bond issue, and much invidious criticism resulted. I do not know that anything else would have sufficed; it seemed like the Treasury for that administration was in its natural condition. During that administration, too, there was more paid out than came in; the Government's credit was somewhat impaired, and it seemed that a bond issue was the only way to maintain that credit; so the bond issue came. However, it begot considerable criticism with nearly all of us, regardless of party.

An administration that is driven to issue bonds is uniformly recognized as having financially gone wrong, and that same criticism of which I spoke is renewed. So the return to a duty on sugar seems to be one of the ways by which we can maintain the Treasury in a sufficiently solvent condition to build or buy

ships in the event the majority party is bent upon the passage of the bill.

I have the prices of sugar here in a table running along from time to time, and I desire to read from an article about sugar:

DECREASED ACREAGE PLANTED.

Many producers, feeling it useless to attempt to continue under the discouraging conditions facing them, or finding it impossible to finance their operations, since bankers were unwilling to advance money to an enterprise condemned to early extinction, abandoned the industry. Eleven of the 71 beet-sugar factories operating in 1913 closed their doors and made no contracts for beets to be grown in 1914. Growers made smaller plantings, and the area sown to beets was reduced by 135,000 acres. In Louisiana over 40 mills and plantations went out of business, many of the properties going into bankruptcy or being disposed of at forced sale. In Porto Rico half a dozen centrals were placed in the hands of receivers.

During the early months of the year the pressure of the heavy supplies of domestic and Cuban sugars coming upon the market forced prices to still lower levels. The reduction in the tariff rate on March 1 undoubtedly had an influence in this direction by causing producers to rush their product to market earlier than they otherwise would have done. During the period from the early part of March to the beginning of May refined sugar averaged 3¾ cents a pound in the New York market.

With the coming of May new influences began to make themselves felt. By that time practically all the domestic sugar of the 1913–14 crop had been sold, leaving the market entirely to Cuban sugar. This had to pass through the hands of the big seaboard refiners on its way to the consumer, thus giving the refiners control of the situation. By this time also the period for planting the new domestic crop had ended and it was known that the amount of home-grown sugar, both beet and cane, would be decidedly decreased during the ensuing season. Considerable amounts of Cuban sugar had been sold to England, thereby reducing somewhat the available Cuban supply for the United States.

RECOVERY OF PRICES.

By the middle of May the wholesale price of refined sugar in New York had returned to the same point it had occupied during the earlier part of the year, thus eliminating any difference represented by the reduction in tariff. A week later sugar was selling for the first time during the year at exactly the same level as on the corresponding date in 1913. In June the cash price of refined was 4.214 cents a pound, and it continued at this level to the end of July.

It is noteworthy that, following the reduction in the tariff, during the period from March to the end of July, the refiners' margin, which had been low during the first two months of the year, took a decided advance.

This refiners' margin is the difference between the price of raw and refined sugar on a given date, and therefore includes both the profit made by the refiner and the cost of refining. It is not absolutely exact, as the refined sugar may have been made from raws purchased perhaps two weeks earlier, so that on an advancing market the actual profit would be greater and on a declining market less than that shown by the figures for the day. Except in a violently fluctuating market, however, it is sufficiently exact to be used for purposes of comparison.

As against an average of 49.3 cents a hundred pounds during January and February, the refiners' margin increased to 81.1 cents during the period from March to August. In other words, the price of refined sugar did not decline to the same extent as the price of raws during the earlier part of this period, nor did raws advance equally with refined when the improvement in prices set in. Thus the refiners were able to increase their profits very materially. The price of refined sugar was the same as before the reduction in the tariff; consumers were paying the same for their sugar; the growers alone were receiving less for their product. This situation was exactly as had been predicted by the producers in the event of reduction or removal of the customs duty on imported sugar.

WAR TRANSFORMS SITUATION.

At the beginning of August the sugar situation was suddenly revolutionized. The outbreak of war in Europe, involving the principal sugar-producing territory of the globe, upset established relations in the sugar industry as completely as in the political world. Of the two great sugar-buying nations, Great Britain and the United States, which annually import some 2,000,000 tons of sugar each and are the only first-class powers that do not grow all their sugar from their own soil, Great Britain was completely cut off from her accustomed sources of supply in Germany and Austria-Hungary. As the refining capacity of Great Britain is not sufficient to supply the country's needs she was forced to turn to New York as the only available market for refined sugar. British purchases, both of raw and refined sugar in New York and of raw sugar from Cuba and elsewhere, quickly aggregated 900,000 tons. The immediate and unexpected withdrawal of a large proportion of this great quantity from the available supply resulted in an advance of approximately 3 cents a pound in prices both of raw and refined.

UNITED STATES CROP LOWERS PRICES.

The high level of prices established by the excited rush for sugar early in August continued well into the following month, until the new crop of home-grown beets, which in August began to be turned into sugar in California, came upon the market. At the end of the first week in September this beet sugar was offered freely in middle western cities at approximately a cent a pound below the refiners' New York prices. The American Beet Sugar Co. offered 100,000 bags in Chicago at 6.25 cents a pound, as against the New York spot price of 7.10 cents. Holders of sugar who before the war had contracted for a large proportion of the California beet-sugar outturn at low prices began reselling at the same price. The effect of this competition from the new-crop domestic sugar caused the refiners to cut down their purchases of raw sugar and sent the price of raws down from 6.27 cents a pound on September 10 to 5.89 on September 17 and 5.02 on September 24. The price of refined followed the same course, but declined somewhat more slowly.

This indicates the course of the sugar market following this reduction, which we heard on this side of the Chamber justified at great length on the ground that it would reduce by that much the cost of living. The approximate reduction, I remember from this and other figures, was about 40 cents per hundred pounds of refined sugar to the consumer. That lasted until May, or possibly the first days of June, 1914. Naturally, the sponsors for the Underwood bill are entitled to credit for that reduction; and when the Secretary of the Treasury is horrified at the idea of a subsidy because the Democratic Party platform forbids it, I could with equal horror say that I figure out, on this item, the reduced cost of living as follows:

I got a man in a laboratory where I was one time late last summer to take a teaspoonful of sugar and put it on his delicately adjusted scales and weigh it, and then figure out how many teaspoonfuls there were in a pound of sugar. On the theory that a man would drink one cup of coffee at breakfast before he went to his daily toil, I was able to find out how much the high cost of living had been reduced to this son of toil. At the rate of 40 cents per hundred pound reduction, this sufferer from the high cost of living would be obliged to drink 1,200 cups of coffee to get 5 cents reduction; and that, on this plank on the sugar schedule, is the first fruit of Democratic performance. That will not buy a boat. If the high cost of living had been so reduced to every one of a hundred million people, and his ability to pay taxes had been correspondingly increased, still the shipping bill would not have gotten any appreciable sum of money out of that saving in accordance with this plank. So I do not see why any considerable aversion ought to be expressed on the breach of the other plank.

This is a plank that pledged them not to destroy or injure any legitimate industry. I find another plank here which is certainly one of great pith and moment; and in this little eddying current of time in which we enter and perform on the stage here in the Senate, only a mere atom in the great whirlpool of eternity, let us remember that perhaps a Democratic platform might survive for awhile, and it is just as well to find out what there is in it, to see whether or not it has been kept. Let me read this, that would provoke shouts of tumultuous, derisive laughter in whatever quarter of the United States it might be read to-day. No literacy test will be needed to understand what that plank means when I read it. Why, even a man who, in the language of the immigration bill, was graded as of "constitutional psycopathic inferiority," could tell what this means. Let me read it, so that the wayfaring politician, even though he be defeated, will understand what it is:

We favor a single presidential term and to that end urge the adoption of an amendment to the Constitution making the President of the United States ineligible for reelection, and we pledge the candidate of this convention—

To what?

to this principle.

They pledged the candidate of that convention to this principle! Well, I wonder if there is any principle in politics, or is a platform written just to get through the campaign on? There may be some resolution for such a constitutional amendment pending here. I do not know. I will promise not to consume any great length of time if a majority Senator will introduce such a resolution, and I will promise to vote for it. If you would lengthen the term to about six years and then tell the occupant of the office that that was his last trial at the Executive office, I would gladly vote for it.

I have seen so many Presidents, and some of them Republicans, and governors until they pass out of my memory—I would not burden my memory with the number—who have spent more time trying to get a second term than they did in performing the duties of a first term, that I think it would be a useful change. Whenever a person is infected with the fatal malady of a second term there is no happiness or peace on earth for him or anybody else afterwards. I am reminded of that line from Dante describing the spirits of those who had not lived justly. They might have lived riotously and happily in this world, but they landed in the wrong place; and with the well-known illustrations by a great artist that went with the favorite copy of the poem there was this line, which well describes a candidate who wants a second term:

The stormy blast of hell, with restless fury, drives the spirits on—

To a second term. [Laughter.]

Ah, if the immortal poet had lived to this time, how much better he could have portrayed Gehenna and all of its tribulations if he had seen the man who is simply incurably afflicted with a desire for a second term of some executive office!

So that is another plank. If Secretary McAdoo is so horrified at a subsidy because "the Democratic platform prohibits subsidies," here is another one, a third one, about which nothing had been heard in this campaign, and I apprehend nothing will be heard from our majority friends. It is not the first time it has happened. I know of another great President who came in in the full flush of a first term and concluded that it was all that the public welfare would ever permit him to hold, and still he ran three times and was elected once afterwards.

After this there is another very suggestive plank in this platform. I want to read it, because it is about as near as I ever get in my beliefs at the present time to my Democratic brethren on matters of principle. They have here, in the Baltimore platform, a protest against the executive encroachment on the other branches of the General Government:

We believe in the preservation and maintenance in their full strength and integrity of the three coordinate branches of the Federal Government—the executive, the legislative, and the judicial—each keeping within its own bounds and not encroaching upon the just powers of either of the others.

The distinguished senior Senator from Missouri [Mr. STONE] this evening was pleased to criticize the language of some of his Republican brethren because they had intimated that the Executive had some influence with the Senate. Privately speaking, I think he has. I have no sympathy with it. If he were a Republican he would find some of us the same way. I never got along with even any Republican governor in my State who manifested the same tendency. I spent the years of my life when I ought to have known better, because I had arrived at years of understanding, in the State legislature, and a large part of my trouble grew out of the fact that some of the Republican governors of that State always wanted to tell the legislature what to do. I always thought if the governor wanted to do that he would first have to go up to my district and be nominated and elected to the place I held. I feel that way now. The State that I represent in part, with my Democratic colleague, in this Chamber, has more population than 14 other States of this Union, its manufactures are greater than those of nearly 23 other States of the Union, its agriculture equal to 16 other States, and its banking resources are second only to those of New York City, and the latter's are greater than anything else in the Western Hemisphere. New York State equals in population 17 other States; its manufacturing 29 other States; and its banking exceeds any other State in the Union. So why should a President who might be elected from Delaware or Nevada, with 80,000 people, or Wyoming with 125,000, or Rhode Island with a good many more—I do not remember exactly the population, but it is more—tell a Senator how to vote? It is enough for any President to discharge well his Executive duties, and leave other service to be performed by others chosen for that purpose.

It is the besetting vice, not only of kings but of Executives, to be continually thinking that they know more about legislation than the people who are elected to fulfill those duties. So the protest in the Democratic platform about Executive encroachment, read in the light of events that have occurred since March 4, 1913, seems like an idle jest, a supreme bit of humor.

If the shipping bill is enacted, and forty or fifty million dollars are expended as an entering wedge, in response to the Executive demand, it will cease to be humorous. I never saw a bureau in Washington or in a State capital grow any less after it was once started. They always grow larger. They are clamoring for more appropriations. They can always see more and more ahead to do. Let them alone, and after a while they spread out and cover the whole country. There will be nothing left but a bureaucratic government if you will let them alone. We have the shipping bill, the interstate commerce bill, the trade commission bill, the antitrust law, the disposition of the Executive powers through the Cabinet officers and the heads of departments to reach out and do all of these things, and so concentrate them in a single person.

I am reminded that for the first time, probably, in the Senate I will read an authority that is not recognized as orthodox. In the year 1835 there was a somewhat physically weak child born in the State of Missouri. As the neighbors said over in that country, they had a pretty hard time bringing him up; but he survived and finally landed in Hannibal. Afterwards he was known as a sort of a court jester to the American people. I refer to Mark Twain. I probably ought to apologize for reading Mark Twain in the Senate. He is not recognized as a legislative authority or statesman, as a rule; and still, as I watch executives, State or National, with their continual, steady advance, absorbing power after power that they can reach as it comes along in their way, I begin to think that maybe Mark Twain was a statesman instead of a humorist.

Quoting now from Roughing It:

Toward dawn we got underway again; and presently, as we sat with raised curtains enjoying our early morning smoke and contemplating the first splendor of the rising sun as it swept down the long array of mountain peaks, flushing and gilding crag after crag and summit after summit, as if the invisible Creator reviewed his gray veterans and they saluted with a smile, we hove in sight of South Pass City. The hotel keeper, the postmaster, the blacksmith, the mayor, the constable, the city marshal, and the principal citizen and property holder—all came out and greeted us cheerily, and we gave him good day. He gave us a little Indian news and a little Rocky Mountain news, and we gave him some Plains information in return. He then retired to his lonely grandeur, and we climbed on up among the bristling peaks and ragged clouds. South Pass City consisted of four log cabins, one of which was unfinished, and the gentleman with all those offices and titles was the chiefest of the 10 citizens of the place. Think of hotel keeper, postmaster, blacksmith, mayor, constable, city marshal, and principal citizen all condensed into one person and crammed into one skin! Bemis said he was "a perfect Allen's revolver of dignities." And he said that if he were to die as postmaster, or as blacksmith, or as postmaster and blacksmith both, the people might stand it; but if he were to die all over, it would be a frightful loss to the community.

Why, of course it would. Ah, Mark Twain, when he jested for the American people, lived because back of every jest there was an undying trait of human nature. The court jester of the early days was the wisest man in the kingdom. If he were not, he could not keep his head on his shoulders. Any court jester that sprang a chestnut on the monarchs of those days lost his head quicker than a Republican postmaster in Illinois. [Laughter.] The "consolidated inhabitant of the Rocky Mountains" was the executive of these later days, not by breaking the Constitution in terms, not by violating the statutes, not by proclaiming to the public that he favors a consolidation of power. Oh, no; none of that; but by silent influences and by processes that are a great deal more insidious than the lobby which the President thought he discovered here during the summer of 1913. He seeks practically to do these things, in fact, without giving them a name. I believe every member of a legislative body, and especially of the Senate, ought to give it a name. Let the Executive of this country stay in the place where the Constitution put him. I am not saying that as a member of the minority; I would say it just as soon and with more fervor—if I had started on this line earlier in the evening—if I were on the majority side and there were a Republican President.

Mr. McAdoo was horrified because when they told him this would be a subsidy and asked him why he could not stand for a subsidy he replied, "Oh, the Democratic platform of 1912 forbids a subsidy." What about these other planks? Yes; I have some more here, and I want to use them for a kind of reference book hereafter, and I might as well put them in here, and on the shipping bill it is especially important. If he could not break the platform on the subsidy plank, why does he break it on the others? The platform says:

We demand a return to that simplicity and economy which befits a democratic government and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

Let us see what happened? I looked over the estimates not long ago, and in those estimates for 1916, the next fiscal year, I found that increase of salaries and the creation of new offices amounted to $10,000,000. So I do not think there has been any great effort at reducing either the salaries or to keep down the creation of new offices.

There was a publicity plank on recommendations for appointments to office. What has become of it? Nobody knows. It disappeared long ago. Nobody has heard of it recently here. It has been a year and a half or two years since it was mentioned in this Chamber. I doubt whether its familiar features will ever be visible again to its best friends. The plank favors the publicity of all recommendations for appointment to public office. I remember here only two years ago that on a bill in connection with the creation of a judicial district we tried to have an amendment so that we would know who recommended the appointment of one of the judges. Do we know? Not yet, save by conjecture. If anybody knows, he has dreamed it; it is a vision.

That is another plank that is more honored in the breach than in the observance, as usual.

Then there was a plank on the rights of labor which provides:

We repeat our declarations of the platform of 1908—

So that some workman employed in the steel mills of North Chicago or in the glucose works at Peoria or over at South Bend in the Studebaker works who was on the pay roll and wanted to find out just what his rights were under the Democratic platform and what it promised, he would read:

We repeat our declarations of the platform of 1908.

Well, all of them do not carry the platforms of 1908 and of previous years in their pockets, but when he turned to the platform of 1908 he would see a signboard that referred to a bill that was passed in the Senate several years before, and would have still to keep going. Then, when it was worked out in the legislation in the amendments to the antitrust law, what did it do? I remember that the first time here that I felt constrained to vote against an amendment in a deficiency appropriation bill relative to the Attorney General's office exempting labor unions from prosecution by express terms, I received my due share of criticism. Mr. Gompers fell upon me with great vigor, but he has fallen upon so many people that his victims now aggregate more than his followers, so that his victims were able to pull through. It is not because I am at all hostile to Mr. Gompers

or anything he represents, only I prefer to do my own voting and thinking, instead of letting Mr. Gompers do them for me, and I shall continue to do that in the years to come, if the Lord favors me with the privilege of staying on earth. I may say, however, that in such places as I have been privileged to act I have done as much for union labor as any other person in the State I have the honor to represent here.

I will help them now at any time and place; I will go out of my way to do so. Everything Mr. Gompers orders, however, is not beneficial to organized labor. He has made several mistakes in his time. He has at times loudly proclaimed the innocence of men who have been convicted of crime afterwards and properly convicted and confined in the penitentiary.

What amendment to the antitrust law was made by this bill? Simply a declaration that the right to labor or that human labor should not be considered as a property right, as a thing, but as a personal attribute; that is what it means; and that men could combine in labor unions and create them without being subjected to its restraints. That is right. But they had that privilege or right before. It needed no law, no amendment to permit a labor union to do that. There never has been a time in this country when any court, State or Federal, ever forbade labor unions to exist. They have always had the right independently of the amendment to exist for any lawful purpose. But I return to the provision of the law. What does it do? It permits them to organize and their members to do anything in furtherance of legitimate purposes. Now, that is the same amendment I offered here in April, 1913, precisely. That is all that section is, and it is all, in justice, that any party ought to do. I am not criticizing the Democratic Party for doing no more. They did enough on that. That is all that can lawfully be asked by anybody in the country. This is not a country of classes; it is a country of equality of rights under the law. But the party leaders induced the representatives of labor to expect more, possibly more than ought or could have been done. I criticize it for its extravagant promises to gain votes in a campaign.

And I turn now to yet another plank. If I took a piece of charcoal and went through the Democratic platform and marked out the planks that have not been kept, there would be few left in the entire document.

There is yet another plank, and to my mind this is one—I will not say the most important, but to the gentleman of whom I was talking awhile ago it would be the most important; to the gentlemen of high standards in politics who look with horror and detestation upon the vileness and the iniquity of the practical politician—to those gentlemen civil-service laws are of the essence of their lives. They are of the breath of their nostrils. I have always been in favor of civil service, and within whatever area I have been called on to act I have acted in favor of it. I handled 2,500 employees for four years under a rigid civil-service law, and we kept the law; we observed it in letter and spirit. They, of course, were not postmasters; they were State employees. No postmasters got in under that civil service, and they did not stay in under the Government civil service either.

Now I come to the civil-service plank, and it is a thing of beauty and a joy forever, Mr. President. There is nothing like it; "Full many a gem of purest ray serene the dark unfathom'd caves" of the Democratic platform bear. But this is one of the superlative planks. It reads:

> The law pertaining to the civil service should be honestly and rightly enforced, to the end that merit and ability should be the standard of appointment and promotion rather than service rendered to a political party.

That has always been the substance of every politician's offense, that service rendered to a political party should never have any recompense. If anyone was appointed to office because he had helped the party get into power, and labored faithfully and had been a hewer of wood and a drawer of water, and had done humble things well—if he ever got any recognition that was the sum total of political crime, and so it was forbidden by this plank. No appointments were to be made for service rendered to a political party.

> We favor a reorganization of the civil service, with adequate compensation commensurate with the class of work performed, for all officers and employees; we also favor the extension to all classes of civil-service employees of the benefits of the provisions of the employers' liability act; we also recognize the right of direct petition to Congress by employees for the redress of grievances.

It is all put in one platform. There has been nothing like unto it seen lately. Why, in the short span of time that I have been about this place just think of what has happened! Civil service, yes; revision of the tariff, yes; income tax, yes; a number of new employees, certainly; and they are pretty searching kind of fellows. They get around and over the community and they interview gentlemen and they often go after men after their incomes have been listed and put them under oath around Chicago and Peoria, cities where I roam when I am not here. They examine the needy millionaires and make them come to time.

Were they put under civil service? You would think that the income-tax work would be about as nonpolitical as any you could think of. There was a good Samaritan on our side of the Chamber who offered an amendment that all of the income-tax employees should be put under the civil-service law of the United States. What happened to it? Why, it was slain without benefit of clergy. Nobody on the other side dropped an untimely tear when it died.

Later on yet other things came; a deficiency bill went through, and in the deficiency bill there was an amendment to remove the deputy internal-revenue collectors and the deputy United States marshals from the civil service. Was that required for the good of the service? Hardly. They would be no better for being taken out of the civil service, and the chances were that you would keep experienced men on the idea that originally they were fit as to their honesty and capacity, and that their term of service would make them more competent for the performance of their duties, which are largely of a technical character. Still they were not only not permitted to stay where they were but they were removed from under the laws giving them protection. The deputy marshals were left as spoils.

Then the next thing that came along was the currency act. My colleague [Mr. LEWIS] has got into some controversy with the Federal reserve bank. I do not know what the merits or the demerits of the controversy are, but I apprehend that he will be able to take care of himself, and so will the other fellows. Therefore I will be a neutral power and let the belligerents fight it out. But the Federal reserve act, one would think, would call for a class of employees that were not necessarily politicians. Instantly there arises in a man's mind visions of cashiers and bookkeepers and those having knowledge of stocks, bonds, commercial paper, and so forth, running through the list necessary for an average-sized bank in a city of a million or two population. We proposed here to place the employees provided for and necessary to operate the Federal reserve act under the civil service. A Senator on this side of the Chamber made the motion. It suffered the same untimely fate that other motions of the kind did. My recollection now is—I think I am correct on this point—that it was tied. There were some of our Democratic friends on the other side of the Chamber who were disposed on a thing of that kind to vote with us. So there was a tie vote, and I think the RECORD shows that on the tie the Vice President was in the chair; and as he decided the tie for the Democratic majority, he voted against putting the employees of the Federal Reserve Board under the civil-service laws of this country.

The Covington bill, which created the Trade Commission, has in it no elements of politics. It seems to me that there is no more politics in that commission than there is in the Interstate Commerce Commission, and I hope it will work out in that way. Still, the Members on this side of the Chamber were unable to have the employees made necessary by that act placed under the civil-service laws of this country.

I need not say anything of assistant postmasters and fourth-class postmasters, because I do not care so much, for my part, about that. All of my life I have never had any patronage to distribute. It has always been in the hands of the other fellow in my country. In our party, in our family divisions, my lot has always been cast with the fellow who did not have the pay roll. Possibly I am unfortunate in it. I have missed a great deal of trouble, very likely, that I have seen the other fellow have; so I am not wearing any visible signs of mourning over the postmasters in this country. We expect them to go out; but I do respectfully protest against the infamous cloak of hypocracy that has mantled the shoulders of a deserving law.

In the name of civil service more political crimes have been committed under this administration than were ever perpetrated in the palmiest days of the worst spoilsmen that the field of American politics ever saw. Take a county that formerly was in my old legislative district of 25 years ago, a Democratic county. My district was Democratic. I was raised among Democrats, Mr. President. I have always been a minority man. I am used to them. I learned to like them early, personally, but I learned to distrust their politics. Down in this Democratic county three men were examined for postmaster, and just out of sheer, unadulterated, malicious curiosity, I investigated it. One was appointed. He was a Democrat. The other two were disappointed. [Laughter.] They were both Democrats, so I could assume a severely judicial aspect, as it was not my kettle of fish. I looked it up. I got

their ratings on their examination. One man made 70 and a fraction, another made 82, another made 97, and the one that got the 70 mark was appointed. Do you know why? He was a politician. The other two were just simply men that attended to their own business and voted the Democratic ticket, and did no go around and hustle for delegates and help nominate the Member of Congress. So certainly the 70 per cent man got in. They put out another man whose public service in his little post office was as efficient as that of any postmaster in the Republic, and all the years of his faithful service went for nothing. He was a fourth-class postmaster, too.

Should a wise man utter vain knowledge—

That is one of Job's neighbor's fervid utterances at a time when Job was somewhat ailing.

Should a wise man utter vain knowledge and fill his belly with the east wind?

That is the old version, and I like it. The new one is, "Fill himself with the east wind," but I like to have the anatomy specified where the wind is. That is civil service from A to Z in this administration, simply wind in that locality—an idle jest; something about which the petty gods of Egypt or of Greece, 30,000 in number, if they had time to bother about such things in their day, might have turned into an idle holiday jest—contemplate civil service under this administration!

Trust a lamb to something carnivorous with claws and expect it to get away alive! Do not trust civil service to such professions as this in a platform. The President is a good man. I respect him. I am talking about the principle, and not the man, but he has certainly got around him some people that do not tell him every day what they are doing, or else they do not let the right hand know what the left hand is doing.

These things are platform pledges; and I now quote from our President on civil service when he was a candidate in order that the record may be rounded out on this plank. I only do it to put it in the RECORD, as it is old and hackneyed by this time. He phrased it somewhat picturesquely when he said the Democratic—

Platform was not molasses to catch flies.

After the election, and in the full flush of admiration for the confidence the people seemed to have manifested in him, he gave utterance to this inspired sentiment. I do not think there is anybody but the senior Senator from Missouri who could fully appreciate the warmth, the ardor, the deep sense of devotion, that is manifested in this quotation. He says:

My warm advocacy and support both of the principle and the bona fide practice of civil-service reform is known to the whole country, and there is no danger that the spoils system will creep in with my approval or connivance.

Well, give him the benefit of the doubt. It has not crept in with his approval or his connivance; but you know what the law is the world over wherever the common law is administered, wherever that great code exists that flows from the days of the mighty Alfred, leading us to practice under the same forms here that are in use on the banks of the Thames. You know that under a principle that is as old as Anglo-Saxon liberty there is such a thing as criminal negligence, and that the person who causes loss of life or personal injury by the nonperformance of a duty is as responsible as the one guilty of an overt, intentional act. There is such a thing as official negligence, and it is manifested in this case.

Why, here is another thing, and it comes at a most inopportune time, because I have a very great admiration for the sage from Nebraska. We have been together on platforms sometimes. We have touched elbows at many banquet tables, until I have grown blasé and dyspeptic. The only difference is that I never took a dollar of gate money in my life of such mostly humble service for nearly 20 years. If anybody ever could stand staying in an audience and listening to me on a public occasion, he did not have to pay for the privilege. He could get my talk for nothing. The only difference is that the Secretary of State took the gate money, and it is all right. He started that way, and I started the other way, and we are both entitled to our liberty of opinion; but here is quite another matter. In view of this platform declaration I have a right to say something about that. The other matter I will drop.

It will be necessary, in order to observe this properly and with the especial éclat that it demands, to read this again, Mr. President:

The law pertaining to the civil service should be honestly and rightly enforced, to the end that merit and ability should be the standard of appointment and promotion rather than service rendered to a political party.

The letter addressed to Walter W. Vick, dated August 20, 1913, said:

Now that you have arrived and have acquainted yourself with the situation—

This is down in San Domingo, down in the Tropics. Now, there ought to be a little allowance made. It is universally recognized that morals are a little more lax in the Tropics than they are in the North Temperate Zone. Their raiment is not so complete. The formalities and conventions of life are not observed to the degree that they are in our latitude, and so probably some degree of liberality ought to be shown in reading this letter; that is, for the people of the majority party meditating over tropical statecraft. What about the one that lives at this end of the line of communication, the premier of this administration?

Now that you have arrived and have acquainted yourself with the situation, can you let me know what positions you have at your disposal with which to reward deserving Democrats?

To the end that merit and ability shall be the standard of appointment and promotion rather than service rendered to a political party.

Let me know what positions you have at your disposal with which to reward deserving Democrats. Whenever you desire a suggestion from me in regard to a man for any place down there call on me.

You have had enough experience in politics to know how valuable workers are when the campaign is on—

Why, certainly—

and how difficult it is to find suitable rewards for the deserving. I do not know to what extent a knowledge of the Spanish language is necessary for employees. Let me know what is requisite, together with the salary and when appointments are likely to be made. Sullivan will be down before long.

That is not Roger Sullivan. That is another fellow. [Laughter.]

And you and he together ought to be able to bring about such reforms as may be necessary there.

Well, now, that is a likely outfit for reform down at that end, the way things look to me. Reform! Ah, that is the reason reform gets a bad name in this country. There are a bevy of reformers, in the language of the poet, that you ought to look at a long way off. "Distance lends enchantment to the view"; and if you watch them right closely I am not so sure about whether you would be a reformer or not, Mr. President, or I myself.

And you and he together ought to be able to bring about such reforms as may be necessary there. You will find Sullivan a strong, courageous, reliable fellow. The more I have seen of him, the better satisfied I am that he will fit into the place there and do what is necessary to be done.

Very truly, yours, W. J. BRYAN.

Another splintered plank! Another bottom fallen out! Another great principle gone! Where? Nobody knows—to the limbo of broken promises. The letter in its entirety, unprofaned by ribald comment of mine, ought to appear. So I insert it here in its primeval chastity as a fit and enduring epitaph to another deceased plank in the remarkable document I am quoting.

The letter addressed to Walter W. Vick dated August 20, 1913, is as follows:

Now that you have arrived and have acquainted yourself with the situation, can you let me know what positions you have at your disposal with which to reward deserving Democrats? Whenever you desire a suggestion from me in regard to a man for any place down there call on me.

You have had enough experience in politics to know how valuable workers are when the campaign is on and how difficult it is to find suitable rewards for the deserving. I do not know to what extent a knowledge of the Spanish language is necessary for employees. Let me know what is requisite, together with the salary, and when appointments are likely to be made. Sullivan will be down before long and you and he together ought to be able to bring about such reforms as may be necessary there. You will find Sullivan a strong, courageous, reliable fellow. The more I have seen of him the better satisfied I am that he will fit into the place there and do what is necessary to be done.

Very truly, yours, W. J. BRYAN.

I do not know all of those people, but the National Civil Service Reform League gathered itself in solemn conclave in New York on February 7, Sunday. It is a good day, and possibly a good deed. They thought it was. Their motives were pure. After some mental labor they produced the following, to wit:

The National Civil Service Reform League profoundly regrets that the Secretary of State appears to have suggested and advocated and later publicly justified the use of the customs service of Santo Domingo, constituting a national trust for the benefit of another American Republic and its creditors, to reward partisan services in our domestic politics.

The National Civil Service Reform League, by its governing body, declares this course plainly inconsistent, not only with fidelity to the principles of the merit system, and with the purpose avowed in the Democratic national platform of 1912, to make "merit and ability the standard of appointment and promotion rather than service to a political party," but with ordinary good faith toward the Dominican Republic and its creditors.

It hereby publicly expresses its earnest hope that the President will promptly take such effective action as may prevent the practical application of a policy so generally and justly condemned.

And, Mr. President, here endeth this chapter on this plank.

I feel as to the shipping bill that, when a subsidy is condemned because a Democratic plank opposes it, these are all legitimate arguments. I think I would be derelict in the performance of my duty if I did not preserve in some permanent form these evidences of high devotion, filling us with high, exciting, and gratifying prospects, of the love of this administration for the civil service. It is without a parallel and the interpretation thereof is equal to that where they said they would destroy no legitimate industry, when their first act was to smite down one of the principal industries in this country.

Here is another thing. This is possibly a matter of opinion, and there would be a difference of opinion because it refers to the Federal reserve act. I did not vote for that act, and up to this time my conscience is reasonably clear on that subject; I have lost no sleep about it; and what is much more gratifying, I could not discover during the last election that I lost any votes because of my perversity. I refer to the central bank plank. I hate to mutilate this orphan known as "the Baltimore platform."

Mr. SMITH of Michigan. You did not strike the first blow.

Mr. SHERMAN. That is right; it was smitten in the house of its supposed friends. It might be premised here properly that the central bank which was condemned by the platform was known as the Aldrich central bank and was denounced with greater or less vehemence as a repetition of the second United States Bank that created some trouble in the earlier finances of this country as well as in its politics. So the central reserve bank appeared to be in the last campaign a charge made against Republicans.

The National Monetary Commission expressed its views in a report in substance which provided for a single bank, the functions of which would be largely the same as those performed either by the Federal reserve bank or those banks on the Federal Reserve Board. The language in which the Democratic Party opposed this measure is as follows:

> We oppose the so-called Aldrich bill or the establishment of a central bank, and we believe the people of the country will be largely freed from panics and consequent unemployment and business depression by such a systematic revision of our banking laws as will render temporary relief in localities where such relief is needed, with protection from control or domination by what is known as the Money Trust.
>
> Banks exist for the accommodation of the public and not for the control of business. All legislation on the subject of banking and currency should have for its purpose the securing of these accommodations on terms of absolute security to the public and of complete protection from the misuse of the power that wealth gives to those who possess it.
>
> We condemn the present methods of depositing Government funds in a few favored banks, largely situated in or controlled by Wall Street, in return for political favors, and we pledge our party to provide by law for their deposit by competitive bidding in the banking institutions of the country, National and State, without discrimination as to locality upon approved securities and subject to call by the Government.

I inquire if anybody has ever heard of any bids for deposits from the Federal reserve bank in any of the 12 regional districts in the United States?

Mr. SMITH of Michigan. No.

Mr. SHERMAN. I think not. The bank that was created was not a central bank, as was explained here on this floor by the very able Senator from Oklahoma [Mr. OWEN], who was the chairman of the Banking and Currency Committee and whom we all greatly respect and like on this side. It broke up the power of the central bank into 12 regional banks or financial pools, all of which were so interrelated that, by simply making use of the powers given, any difference in the financial level could be readily adjusted, and if it were too low in one place, it could be turned off and the level raised from the extra funds in some other region.

There were 12 of these Federal reserve banks. Of course there was some difference of opinion about their location. Some cities were not satisfied, and it is not my purpose now to go into that matter at length. The only historical significance that it possesses now to this plank of the Democratic platform is that the reading of divers resolutions from several disappointed cities led our genial friend, JOHN SHARP WILLIAMS, to rise on the other side of the Chamber, and shake his long, bony fist at the divided Democratic party, and then and there deliver to them the justly merited lecture, which has been quoted probably more than any literary gem which the senior Senator from Mississippi ever worked out of the great intellectual laboratory he possesses.

The Federal reserve bank in a district through this law commandeered every national bank doing business, notwithstanding that the original national banking association act that was in force when this law was passed declared that the shares of stock in a national bank were personal property and notwithstanding that the charter of the member banks was to be forfeited if they refused to go into the Federal reserve bank, the bill retained those coercive features.

Instead of having one central bank, they created a Federal Reserve Board. The appointments to that board are unquestionably of a high type; I am not objecting to them; I am objecting to the power in this act given to one of the members of that board, the Secretary of the Treasury, which puts in the hands of one man the right to take or remove Government deposits from Federal reserve banks. The last report from his office, as I figured it up, showed that nearly $250,000,000 of deposits were controlled by the Secretary of the Treasury. He controlled more deposits than there were resources in all of the reserve banks in the United States. He can make or break, he can favor or punish, he can administer as he will that tremendous financial power that lies unregulated in his hands or regulated by nothing more than his unbridled discretion.

Mr. SHAFROTH. Mr. President——

The PRESIDING OFFICER (Mr. THORNTON in the chair). Does the Senator from Illinois yield to the Senator from Colorado?

Mr. SHERMAN. For a question; I do not yield the floor.

Mr. SHAFROTH. I do not want to take the Senator off the floor, but I wish to ask, is it not a fact that the Secretary of the Treasury has for years possessed the same power to make deposits of all the cash in the Treasury in whatever banks he might desire under the old system of national bank deposits?

Mr. SHERMAN. Yes, sir.

Mr. SHAFROTH. Then, why is it so wrong to have in this bill a reiteration of the same power?

Mr. SHERMAN. I will tell you. Let me read you here what I read a little while ago from the Democratic platform:

> We condemn the present methods of depositing Government funds in a few favored banks, largely situated in or controlled by Wall Street, in return for political favors, and we pledge our party to provide by law for their deposit by competitive bidding in the banking institutions of the country, National and State, without discrimination as to locality upon approved securities and subject to call by the Government.

That is your platform, not mine. You sought in that platform to reform and correct the alleged evil, and I am frank to confess to the Senator that I think sometimes there was favoritism, or at least what appeared to be that; if I had had the power I would have hedged that about so that no Secretary of the Treasury would ever be empowered to do such a thing. I do not say this as applying to the present Secretary, because he is an upright man, but the power is there to remain for abuse possibly at some time later.

Mr. SHAFROTH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Colorado?

Mr. SHERMAN. I yield for a question.

Mr. SHAFROTH. Does not the Senator recognize that it is a great reform to have the power limited to deposit all these funds in banks which, according to their nature, have a relation with the United States Government, such as the Federal reserve banks, instead of having them deposited in purely private banks, as heretofore?

Mr. SMITH of Michigan. Private banks have not handled these deposits.

Mr. SHAFROTH. I mean national banks; and the national banks are private banks.

Mr. SMITH of Michigan. Oh, no.

Mr. SHAFROTH. They are controlled by private capital; but in the Federal reserve bank there is a controlling voice in the Federal Government, represented by the Federal Reserve Board.

Mr. SHERMAN. Mr. President, while that act was being written it could have been so written that this power would have been safeguarded in the hands of the Secretary of the Treasury, so that if any improper occupant of that office sought to use that great power he could not do so. As it is, it is open, and the Secretary of the Treasury, if he were disposed to do so, might show very great favoritism in the deposit of the funds.

Mr. SHAFROTH. Mr. President, I will state to the Senator that I was on the Committee on Banking and Currency that framed the Federal reserve act. The question arose there as to what would be the attitude of the National Government in respect to deposits that we should make of the money in the Federal Treasury. There was considerable comment over it and study as to what would be the best solution of the problem. The difficulty was that, if you compelled this money to be put in the banks, in what proportion and in what manner should it be done? Difficulties arose to such an extent that it was deemed best in the interest of good government that there should be a sufficient limited discretion left in the Secretary of the Treasury so that this money could be distributed equitably throughout the United States as the Secretary of the Treasury

thought it would be to the best interests of the people and of the Government to have them deposited.

Mr. SHERMAN. Before that time the Secretary of the Treasury had the supervision of those matters through the Comptroller of the Currency, had he not? If any national bank kept its reserve at some point disapproved for reasons that were satisfactory to the Comptroller of the Currency or the Secretary of the Treasury—and the Comptroller of the Currency is the arm, the hand, and the eye of the Secretary of the Treasury—did he not under the old law have the right to remove the deposits?

Mr. SHAFROTH. Certainly he had the right to remove them; there can be no doubt about that; but the money deposited in the Federal reserve banks serves a double purpose. It serves as a basis for the circulation of currency, and it serves to build up a system of the Government in which the Government has a great interest. It was deemed best and wise that this power should not be curbed by any hard and fast rule so that money often had to remain in places where it was not of use and was not necessary. For that reason, at last it was concluded best to vest the discretion in the Secretary of the Treasury.

Mr. SHERMAN. Mr. President, the Senator is aware that the reserves, wherever they were deposited with a reserve agent, were available for current uses and that they were so used. One criticism was that sometimes they were piled up too high in the reserve or central reserve cities, but they were available. A certain per cent of them were kept in the vaults, but it was not idle money.

Mr. SHAFROTH. Yes, Mr. President, but the feature of it by which the people get an advantage is the fact that a large proportion of the amounts of money that are deposited being gold it can be used in times of emergency whenever necessary to build up a circulating medium, and, therefore, increase the quantity of circulation during crop periods; and then the funds can be withdrawn when they are no longer needed for circulation.

Mr. SHERMAN. But the Democratic Party when vested with the power to legislate did not guard against the alleged evil it denounced in the plank I have quoted. This is the point I originally made, and I restate it before passing on.

Mr. SMOOT. Mr. President, will the Senator yield?

Mr. SHERMAN. I yield for a question.

Mr. SMOOT. I want to say to the Senator from Colorado [Mr. SHAFROTH] that the Vreeland-Aldrich bill provided a system of using emergency currency, and, in my opinion, it was the best system that has ever been developed. The Senator knows if it had not been for the Vreeland-Aldrich bill there would have been a panic in this country such as never before had been known in the history of the country. The Senator also knows that that emergency currency is not all in yet. There is some $150,000,000 of it out. That is the emergency currency that was used, and that was the only thing that saved our Government from the greatest panic we have ever known.

Mr. SHAFROTH. Mr. President, far be it from me to condemn the Aldrich-Vreeland currency that was issued. It has served a purpose. There is no doubt about that. At the same time, it has not that stability about it that the currency that can be issued under the Federal reserve act has. There is no doubt but that there is some of it out in circulation. It is a temporary measure. The difficulty—and the reason the Aldrich-Vreeland Act did not operate for years and years was not that there was not a demand for it, but the fact that the banks and the United States Government would not guarantee each other's paper, and it was not until after considerable experiment upon it and finding that they could do it with safety that at last the currency was issued. Under this system, however, you do not have to rely upon the individual bank indorsing the paper of other banks. All you have to do is to present paper that in my judgment is the best banking paper that ever has been issued by any banking system in the history of the world; and when that is presented the currency can be issued, dependent upon the demands of the particular bank or the particular individual that wants the money, instead of relying upon the indorsement of other banks.

Mr. SMOOT. The Senator certainly must have forgotten the basis of the emergency currency. The basis of the emergency currency was exactly the same as the basis you have now as far as the security is concerned. I want to say to the Senator also that I think he was mistaken when he said there was a demand for that emergency currency. Whenever the demand was created it was issued. That is the great strength of that law—that it is not a building up of credits, pyramid upon pyramid, and it is there always as a reserve to be drawn upon when they want it. That is why I say it is very, very much better than the present system, with the amendments that have been offered; and if the Senator remembers, the reason I spoke of it particularly was that only last evening that was one of the things that were condemned—the passage of the Vreeland-Aldrich bill by a Republican administration. On the other hand, the Senator well knows—well, I do not want to take the time of the Senator.

Mr. SHERMAN. Just so I do not lose the floor, it is all right.

Mr. SMOOT. I will not proceed any further now.

Mr. SHERMAN. I am yielding only on the idea that the Senator is asking a question, and that I retain the floor.

The PRESIDING OFFICER. As long as the Senator yields only for a question he can not lose his right to the floor.

Mr. SHAFROTH. All I want to say in answer to the question is this——

Mr. SHERMAN. I yield to the Senator for a question.

Mr. SHAFROTH. I do not want to take the Senator off the floor. It seems to me that everyone concedes—and I think it was generally conceded in the committee—that while the Aldrich-Vreeland bill had served a good purpose, though it was slow in getting into operation, the system that was devised under the Federal reserve act was much better than that, because you did not have to have the guaranty of other banks in order to issue the currency.

Mr. SMOOT. Just one other word, Mr. President, and then I am through.

Mr. SHERMAN. I yield only for a question.

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Utah for a question?

Mr. SHERMAN. Only for a question, if the Senator desires to ask a question.

Mr. SMOOT. No; I do not desire to ask the Senator a question. I was going to make a statement in answer to what the Senator from Colorado has said, but I will not do so, Mr. President.

The PRESIDING OFFICER. The Senator from Illinois will proceed.

Mr. SHERMAN. Another provision of the bill that has to do with the plank I am referring to now empowers the Federal Reserve Board to go out into its district and become a competitor in the open market with its member banks and with the State banks in the district that are not member banks. This power is contained in a provision that authorizes the Federal reserve bank to buy bills of exchange in the open market. This makes the Federal reserve bank a competitor. I am not criticizing that feature of it because of any tender solicitude for the interests of the banks. Many years ago the second United States Bank had a most unpleasant experience, and it finally, before it liquidated and went out of business, became an alleged menace in its power to the public. It was because the second United States Bank became a competitor of all the other banks in the country, and being a competitor it very naturally created opposition in such a way that political activities began to be manifested against the bank, and out of it came Jackson's enmity, which resulted in the final destruction of the bank. There is in the Federal reserve bank system now a similar principle of mischief, in that it makes the Federal reserve bank in the district a competitor in the open market with both the State and private banks and the member banks of the district.

The last of these planks to which I shall have time to refer is the conclusion. There are others here of lesser moment that under other conditions I should be very glad to take up. I refer now, however, to the last plank in the platform, which says:

> Our platform is one of principles which we believe to be essential to our national welfare. Our pledges are made to be kept when in office as well as relied upon during the campaign, and we invite the cooperation of all citizens, regardless of party, who believe in maintaining unimpaired the institutions and traditions of our country.

That is a sort of a general all-around prayer in the platform, and it only adds to the breaches of the specific ones that I have enumerated.

The President recently admitted in Indianapolis that the Democrats were a minority party and that they are still on trial. The returns of the last November election indicate that he has difficulty in distinguishing between a trial and a verdict against the defendant. The President tells every independent voter, to use his language, that it is cold and lonely where he is, and to come into the Democratic Party, where it is warm and where there are great emotions. I had not seen a great emotion in the Democratic Party until along about midnight last night, when the senior Senator from Missouri [Mr. STONE] was possessed of tremendous emotion for a while, equaled only by that the other day when they exchanged courtesies with each

other on that side of the Chamber. These are the only emotions I have witnessed either before or since the Indianapolis address. These emotions are roused by Democrats who are sitting on the breeching strap, and the warmth produced comes from factional disputes over patronage and criticisms of his legislation. If the last half of his administration matches the first half, the warmth is likely to kindle an incendiary fire in his household.

It is said that this legislation is in obedience to public opinion. What evidence is there of this public opinion? The President's election in 1912 by a minority of nearly one and one-half millions? The division of the Republicans, so that either wing fell below a united Democracy? The returns of the 1914 election, in which the Republicans warn him they are united as of old? The loss of the States and votes that writes defeat for him in 1916? The results of his legislation and what the public think of it?

If three men be in a race and two stop and quarrel, the third can walk to the goal and win. But let not the victor exult in his speed, for he won not on his own swiftness but the quarrel of his adversaries. The less shall he invoke his deceptive strength to justify legislation to which his adversaries are both opposed. For when his adversaries shall see what has been wrought by President Wilson they will rise together and overthrow him.

THE PRESIDENT AND CONGRESS.

The President must and does assume the responsibility for both the legislative and executive acts of his administration. Congress until recently has only registered his executive decrees. The first sign of legislative independence by a Democratic Congress evokes a threat against Congress that disobedience to his orders will bring "deep bitterness to them."

What will that "deep bitterness" be? The denial of patronage? If the shipping bill is not supported, will it be made a test of obedience? Will the "deep bitterness" consist in withholding patronage from Senators who do not take Executive orders? Will Senators be hunted down in their own States and destroyed because, forsooth, they do not take orders from the Executive? I never took an order from an Executive in my life, and I have more respect for a member of any party, my own or anybody else's, who does not, and who prefers to stand upon the dignity and power of whatever legislative office he may possess.

It is the height of Executive usurpation; and in a happier day and in a better time such interference with the legislative branch of the Government, not only by this administration but by those of the Republican Party in days past, ought to lead to the impeachment of an Executive.

If we undertook by our acts in this body to make war upon the Executive, to hamper him in the performance of his duties, to threaten reprisals upon him in this body if he did not take our orders in nominating or selecting the members of his own Cabinet and those that are immediately connected with his political household, I would think the Senate had descended from its dignified level and had played the part of a usurping branch of the Government, and none the less is that true when an Executive sees fit to go outside of his official duties and undertake to thrust legislation upon the Congress and upon the people under the pretense that it is in obedience to public opinion.

These are not the words of a constitutional President, sworn to perform his duties. They are the lawless proclamation of a man who has thrown aside the orderly procedure of government by law and substituted the unregulated will of the arbitrary and accidental man. This is too often the infirmity of occupants of high office, either elective or inherited. It was one of the reasons governmental power was divided and the Executive restrained. History and recent experience confirm the wisdom of that restraint.

The President assaults the United States Senate in language the Senators are forbidden to use toward each other, even in the acrimony of personal debate. While his attack is on the Republican minority, it reaches all Senators who do not agree with him. It includes Democrats who are "sitting on the breeching strap."

In the whole field of parliamentary government in this country the United States Senate is the only open forum remaining. The rules here are designed to protect the rights of the minority. The majority can always take care of themselves. If at any time the majority loses its power it is converted to a minority. If there be no just regulations, if there be no great barrier thrown up to protect the rights of a minority, then the former minority, converted into a majority, will persecute and oppress and deny. To-day I may be in the majority; to-morrow you may be in the majority and I may be in the minority. Parliamentary rules or statutes or laws, and especially constitutions, are not the fleeting caprice of an agitated, rapidly forming, and rapidly dissolving multitude. They are fixed rules that protect me when you are in power and protect you when I am in power.

The minority rules here, it is said, are sometimes abused, sometimes made the instrument to obstruct legislation. That may be their effect. I apprehend that both parties here ought not to go to trial on that issue. It would be one of those cases where both probably would be found guilty. The tremendous indignation of my friend the senior Senator from Missouri in regard to people who filibuster comes with but little force and less propriety from him. Not many days ago he himself saw the propriety of a filibuster, and good naturedly everybody accepted it as such. If last night's lecture to the minority side of this Chamber were designed as a bit of pleasantry, all is well. If it were intended as a sober rebuke, we say, "Surgeon, heal thyself, and after that it will be time enough to be looking after the alleged maladies of your neighbors."

Why, what a crime it is to filibuster here, because it is said we are opposing or preventing the passage of the shipping bill. I wish there were some way to ascertain public opinion on the shipping bill. I know that any one person is a very fallible judge of what public opinion is. Very often we judge of public opinion from the immediate surroundings, from the little pool where we live, from those with whom we are immediately associated, forgetting that there are fifteen or sixteen million other voters in the United States, and of all that great array we know and see and talk to but a few.

The Senate is the only body on whose floor the President's experimental dogmas may be analyzed, exposed, or defied. None can talk enough to prevent the passage of a bill unless the talk shows its weakness and folly. If he fears the talk may last until March 4, 1915, when the Sixty-third Congress adjourns automatically, I remind him that he still has two full years of the Sixty-fourth Congress in which to operate under the New Freedom on the business of the country. A Democratic Congress, acting under his orders, has been in practically continuous session ever since he was inaugurated; so he ought not hesitate to convene it after March 4 next if his edict to quit talking is defied by the Senate. In dealing with men nothing is gained by peremptory orders to shut up. Human speech, human opinion, can never be kept confined. You had as well undertake to confine the steam in the bowels of the earth. It always finds a vent; it may be a peaceful one, but if too long suppressed it becomes the source of endless destruction. This language may be used in the kindergarten. An Executive who applies it to the United States Senate betrays his inability to grasp the difference between an independent legislative power in the conduct of human affairs and the absolute dominion of his arbitrary impatience.

"Cease your talking," he says; "you are misguided, blind, and ignorant. I have settled everything. I have cleared the decks."

That is of a kind with the persistent desire to control both branches of Congress. He has said how the business of the country shall be done, how the Philippines shall be governed, how our water power shall be handled, how the resources of the public domain, imprisoned by excessive conservation, shall be unlocked; how the Government freight boats shall be run by the Government at a cost or a profit and then sold out to the minority shareholders or somebody else and not be guilty of a subsidy condemned by the Democratic Party for half a century. He can do everything except keep a deficit from stalking through the Treasury Building. That he can not do; that he has not done; and I predict he will not do it. It is seldom that I assume the rôle of prophecy, but I am almost moved to do so in this emergency.

All this explains why Secretary McAdoo last December congratulated the American people they could endure a prolonged business stagnation without a panic. We have learned to look for stagnation as a normal symptom of every Democratic administration. Disaster is discounted. Shipwreck is averted by staying in the harbor of idleness with the anchor down and the crew absent on shore leave hunting the bread line.

Still, the Republicans are ignorant and have not had a new idea in 30 years. Republican Senators were elected by a direct vote of the people in Connecticut, Vermont, New Hampshire, New York, Pennsylvania, Ohio, Iowa, North Dakota, Kansas, Utah, Washington, Idaho, and Illinois. Why should the Chief Magistrate stigmatize them as ignorant? They represent their constituents, and, without making any invidious comparisons, the constituents in one locality or in one State are about on an equality, so far as intelligence and public spirit go, with those in all other places or States.

Blaine knew nothing; Edmunds and Hoar were in the primary class. All the array of living Republicans are void of

understanding. Misguided Republicans follow the steady light of the imperishable beliefs of Lincoln and Grant, of Garfield, Morton, and Harrison, and McKinley; we, the living blind, following the wisdom and governmental science of the immortal dead, whose public services and memory shall endure while civil liberty and representative constitutional government of a free people abide in the New World. The only wise and good are those who derive their title to public office from the Republican Party and manifest their virtues by spurning its principles and attempting its destruction whenever they are not candidates on its ticket. President Wilson's greatest emotions are manifested in anathemas for Democrats who refuse implicit obedience to his decrees and unstinted praise for Republicans whose votes for Republican measures are the exception and not the rule.

REPUBLICAN ACHIEVEMENTS.

Call the roll of 30 years! Labor employed, punctuated only by the idleness of Democratic administrations. Manufacturers were active. Our foreign commerce rose with every year; neither was it dependent on war supplies for its volume, continuance, or trade balances. Restraints of trade and monopolies were curbed. The first great antitrust act was drawn by a Republican. It is the sane level from which the heights and depths of effective legislation have since been measured. Two hundred and fifty thousand miles of railways fulfill daily the arduous duties of the greatest carrier system in the world under laws written by a Republican. Not while the pulse of commerce beats or railways bear their burdens will the names of Cullom and John Sherman fade from the annals of legislation that light the way for succeeding generations.

Republicans created the Bureau of Labor and made its head a Cabinet member. It enacted the first contract labor law; abolished child labor in the District of Columbia; passed a liability law compensating workmen. Pure food and meat inspection acts, limited hours of labor in interstate service, rural free delivery, parcel post, postal savings banks, reclamation of arid lands, the Isthmian Canal, Hawaii and Samoa were made our outposts in the Pacific Ocean—all answer to that call. The rights of labor have been secure under just laws. Great police regulations have safeguarded the public. The history of American finances is written by the Republican Party. It fought repudiation and fiat money. It passed the resumption act against the evil prophecy of the Democratic Party. It refunded the public debt, and it is carried to-day at the lowest interest rates known to the civilized world. It sent free silver to an unlamented grave—with the help of some of our Democratic friends—and 16 to 1, once the war cry of a great party, is a jest; none know it but scorn it; none name it but to laugh. The Republican Party established the gold standard and created the Monetary Commission and the original emergency currency act. The Democratic Party, with its fatal capacity to misinterpret and miscreate from the material and experience gathered, produced the Federal reserve law. It will duplicate Frankenstein. It is not merely a central bank; it is a centralized person with greater power than ought to be vested in any man over any lawful business.

The arm of the Postal Service reached out to cheapen communication and encourage thrift. The two great oceans were joined under the American flag. Where has this Rip Van Winkle slept the last 30 years who now rubs his eyes and says the Republican Party has not had a new idea in all that time? The great national statutes of 30 years have sprung from the councils of that party. He can not distinguish between the morning light of the Republican sunrise of things, doing and done, and the dusk that is falling on the Democracy. Samuel Pepys, the Englishman who kept a diary, records that once, after a night of revelry, he woke from a deep sleep and mistook sunrise for sunset. History still repeats itself.

REPUBLICANS BRING PROSPERITY.

One great issue towers above and divides the voters of the United States. Other questions may come and go, but the protection of the American people's industrial life overshadows them all. It reaches into the depths of the permanent sources of prosperity. There is a deep-seated feeling among the people that business is more prosperous, work more abundant at fair wages, and that they are better off under a Republican than a Democratic administration. This belief, traced to its source, is founded on historical fact. The abandonment of the protective system has always been followed by disaster. A revision of the tariff by the Democratic Party has always produced adversity and business depression, as uniformly redeemed by the return to the protective schedules of the Republican Party. When revision becomes necessary, the Republicans preserve the protective features and the Democrats destroy them.

The Republican Party bases the duty on conditions and builds it high enough to keep the pay rolls in our country at American wages and standards of living. It secures the home market for our own producers. It sees no advantage in creating either idleness or an excessive surplus by flooding the country with free listed or revenue duty imports. It exalts the home market above any to be reached at the expense of freight commissions, inspection charges, and foreign tariffs. The American people instinctively know that we ought to be able to supply by our own industry all of every article we have facilities to produce equal to our wants.

The people understand that supplying our home market with the work of their own hands makes the difference between activity and idleness, between a Republican and Democratic administration. We therefore limit the imports of a competitive article the like of which we can produce in quantity adequate for our needs by a protective duty on the article. This further gives revenue, collected as toll, from the importer and tends to equalize differences in conditions of production. When we have so supplied our own wants we seek a foreign market for our surplus, so there may be no idle period. We know, however, the American market is the greatest field for the employment of our people and the sale of our products. Secretary Redfield will lecture us in vain on foreign markets. This generation has learned once more that distance lends enchantment to his view.

The Democratic tariff reform is always conceived in theory but enacted in sectional discrimination—protective in a few places and destructive in all. From the horizontal reduction of Morrison to the perpendicular ruin of President Wilson, it is the signal for everybody to hunt his storm cellar till the Democratic administration is over. It is always a good time to rest if one can keep from worrying too much.

DEMOCRATIC EXTRAVAGANCE.

From December, 1913, to November 30, 1914, disbursements of the Government exceeded its receipts by nearly $15,000,000. During this time we have had an internal-revenue tax, a corporation tax, an income tax, a war tax, and a tariff for revenue only, with promises of others as soon as the administration can take a day off from devising new bills to increase the Treasury deficit.

The Democratic Party holds the record as the spendthrift of nations for over half a century. The sum of $35,000,000 has been appropriated for a Government railway in Alaska; $25,000,000 will be asked to console Colombia for her failure to blockade the construction of the Panama Canal, unless her rapacity and insolence are satisfied; $10,000,000 increase in salaries and creation of new offices and $100,000,000 increase over the last Republican appropriation testify to faithful endeavors for economy and civil-service reform; $40,000,000 for a Government steamship line rounds out a record to which Democrats can point with pride or view with alarm, as they may chance to be frugal or liberal in their disposition.

Their tariff law opened our fields to the free-listed animals, grains, and manufacturers of the world. Its immediate result is seen in an influx of animal diseases and insect pests, in increased imports, decreased exports, diminished revenue, stagnation and distress, mitigated only by the horrors of the European war.

The Federal reserve act places the great banking and credit resources of the country in the hands of one man. The resources of the national-bank system have been commandeered for the benefit of States that represent a decided minority in agriculture, commerce, and manufactures.

A Federal Trade Commission has been created. Its purpose is not to regulate but to manage business. The commission will supplant boards of directors chosen by private stockholders.

The antitrust act amendment introduces new regulations and restrictions that will not be made plain to the average business man in 20 years. Neither individuals nor corporations can act without fear of indictment or disastrous reversal of their business policies.

Amendments of the postal laws have imposed heavy burdens on the railways without additional compensation. The Rural Free-Delivery Service is in grave danger of impairment, and it is now proposed to abolish all the employees of that branch and substitute a star route contract system.

There is a manifest hostility to the railways of the United States exhibited by this administration. It is admitted in certain quarters if they shall be driven into failure in the performance of their great carrier duties the Government will assume ownership.

SECTIONAL LEGISLATION.

The Southern States have a minority of the agriculture, manufacturing, and commerce of the United States; yet they

are legislating for the whole country. The great trade and banking centers built by the generations of more than a hundred years are sought to be despoiled. Every American hopes for and will help the South to a greater future. Because her staple is cotton, it is the peer, but not the king of the diversified fields of our country. Because she exports more than three-fifths of it, we ought not burden the Treasury with temporary steamship lines, to be abandoned when war no longer vexes the capitals of the Old World. The cotton interests behind the shipping bill propose to exploit the taxpayers of 100,000,000 people for cheap ocean freights to a foreign market. Government railways, Government steamships, Government banks advancing funds to promote private business, Government bond issues for money to loan cotton growers, a vast swarm of bureaus absorbing the departments of State government until an empty shell remains—is the goal of the way this administration is traveling.

The President says the Republican Party is a refuge for those who want to consult their grandfathers about everything. The platform on which he was elected in 1912 reaffirms its devotion to the traditions of his party enforced by a long and illustrious line of Democratic Presidents. He is following his grandfathers many generations back, for I read in Deuteronomy, "Thy sheep shall be given to thine enemies, and thou shalt have none to rescue them." With the embargo on the principal foreign source of our clothing wools we are learning anew the value of a domestic supply not subject to the fortunes of war.

PARTY PLATFORM FORGOTTEN.

If one of the plain people wants to know what President Wilson's administration has not done, read the Baltimore platform. It indorses his Democratic grandfathers. He spurns their advice. To heed them would be reactionary, and two-thirds of his party, he says, are progressive. His administration is afloat on the uncharted seas of socialism, with its hidden dangers and its destination unknown.

RIGHTS OF STATES ABSORBED.

States, once strong in their self-reliant pride, are now mere suppliants for favors their ancestors would have spurned with haughty and indignant pride. The States, once the civic training ground of men, will be but provinces waiting the edicts from a distant Capital under the sway of an encroaching Executive. Ancient Commonwealths, once instinct with local rights jealously reserved in the great charter of the Republic, now abase themselves and worship with humiliating abandonment at the shrine of centralized power. You who quote Jefferson and hail from the land of Alexander H. Stephens contemplate how are the mighty fallen from the tradition of your fathers.

The only thing in the country not bursting its jacket is the Government's cash box. The high cost of living is still bursting its victims, and there is nothing the matter with American business except a state of mind. Start buying now and there will be no end to it, for the new freedom has released credit and money is to be had for the asking.

REPUBLICANS PROPOSE REMEDIES.

What does the Republican Party offer? Why should it be returned to power? It will restore the protective tariff. Confidence will follow, and the army of the unemployed will disperse. Business will again move in its accustomed channels and enterprise no longer halt by the wayside.

Great corporations, necessary in modern affairs, will be regulated and given the equal protection of the law. Monopolies will not prey upon the public, but will be converted into beneficial enterprises, obedient to wise antitrust laws that will make certain what can rightfully be done. Certainty will be substituted for confusion, and business will not be under suspicion. Success will not be regarded as a badge of rascality and bankruptcy as the only conclusive presumption of virtue. Railways will not be condemned to perform an unrequited service, and the financial life of the great banking interests of the country shall not be subject to the arbitrary will of a single official.

Social justice will be wrought out in fairness. The workingman's rights, after a pay roll gives him a chance to earn a living, will be safeguarded by progressive laws. A return of prosperity under the Republican Party will insure employment under such terms and conditions as will secure them their share of that prosperity.

THE MEXICAN PROBLEM.

A Mexican policy will be adopted that will protect our citizens and their possessions in that country. The civil strife in that unhappy land is directly chargeable to the vacillating, nerveless, purposeless course of President Wilson's administration. He undertook to decide on the moral title of various military dictators struggling for supremacy. What choice is there between Villa and Huerta? If Jesse James were alive he could be substituted as a great moral improvement on both. The result has swept its hapless people in the flames of constant revolution. Peace is less probable now than when Huerta was condemned by the President. Nothing is so precarious there as the rights of a citizen of the United States. The oil and oil wells of a subject of Great Britain are protected by a note from this administration, while the lives of American citizens have been taken with insolent cruelty without a protest. The note evoked by a demand from Great Britain is the only decisive act that breathed the power and dignity of this Government since this administration assumed its high office. It is humiliating that this was to protect an alien's property, and it secured that protection promptly.

This administration has made us, under the Monroe doctrine, the dog in the manger of the Western Hemisphere. We have not protected the rights of aliens. The Monroe doctrine warns other nations to abstain. When will the European Governments hold us liable for the pillage and destruction suffered by their subjects while we barred them from relief? Some future Hague tribunal may ask us why we are not responsible when we assume to be our brother's keeper.

An adequate Navy and a rehabilitation of the Army along the lines recommended by the Secretary of War are imperative, and a part of the Republican future.

A GLORIOUS RECORD.

Shall we not walk steadfastly in the faith of our Republican fathers? Shall we condemn their handiwork because we will not consult anything that is past? The greatest chapters of American history were written in the years of their ascendancy in power. They hewed with sturdy stroke the corner stone of civil liberty. They were progressive without destruction and preservative without inertia. On their foundation the Republic rose to unexampled heights of prosperity. The resources of a vast continent sprang into industrial life. Our wealth outrivaled recorded history. Not an act of the Republican Party has been a headlong plunge into the gulf of experiment. It measures and weighs its advances. It has translated the popular will into the orderly processes of constitutional government. From its foundation to this day, tested by its achievements, it is the greatest political party that has ever administered American Government.

On Life and Service of Robert G. Bremner.

MEMORIAL ADDRESS

OF

HON. HENRY GEORGE, JR.,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, January 24, 1915,

On House resolution 711, as follows:

"*Resolved*, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. ROBERT G. BREMNER, late a Member of this House from the State of New Jersey.

"*Resolved*, That as a particular mark of respect to the memory of the deceased and in recognition of his distinguished public career the House, at the conclusion of these exercises, shall stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. GEORGE. Mr. Speaker, it is with deep and solemn joy that I participate in the services in memory of my colleague and friend, ROBERT GUNN BREMNER. We were participants in certain committee work of this House of exempting buildings and all personal property from taxation that aimed to make Washington not only the most beautiful city in the world but the model of cities, showing the way American municipalities should be built. He brought to the task a well-stored and lofty mind and a great heart.

ROBERT GUNN BREMNER was born in the far north highlands of Scotland on the 17th of December, 1873, the eldest of a large family. When a youth, with his father and mother and three younger brothers, he came to Canada. His father was engaged in the fishery vocation, and had met with financial reverses mainly through the loss of a ship of which he was owner and captain.

When Canada was reached they had little money. Mr. Bremner bought a farm near Orangeville, Ontario, and, though he knew nothing of farming to begin with, he succeeded.

That country home knew little of luxury; still it was pleasant and presented no hardship which family love and energy did not easily overcome, and left no memories save those which were

recalled with delight and transmitted with profit and pride. There in that country home were developed those characteristics of good nature, sympathy, liberality, and helpfulness which so characterized his later life.

Robert attended the near-by school and went to the high school in Orangeville, of which Mr. Alexander Steele was and still is principal, where he boarded with a Mrs. McQuarrie and chummed with her son, John, who is now a prominent physician in Chicago. At school he was a good student and took great interest in athletics, but even a deeper interest in the various literary organizations of the school. When Robert graduated from the high school he taught in the primary department of the home school, where later he taught as principal. In 1893 he went to New York City.

At this period times were anything but good and opportunities for employment were not nearly so plentiful as the applicants for positions, yet the stranger, whose only letter of recommendation was a winning smile, did not find it difficult to secure the work that he needed so badly. The very day of his arrival in New York he dropped in at the rooms of the Manhattan Single Tax Club and there found that the tide in his fortunes had turned.

As those who were acquainted with ROBERT G. BREMNER know, his interest in the single-tax idea was deeper than the casual reader of his paper might suspect. Occasionally he referred to those theories, editorially or in the news columns of his New Jersey paper, and his treatment of such subjects always displayed a most friendly spirit for single-tax organization, and deep down in his heart he was persuaded that the principles advocated in "Progress and Poverty" would prove of the greatest benefit to the Nation. Even as a boy Mr. BREMNER was a prolific reader. Every book that was within his reach was eagerly devoured. It was while still at home in Canada that he became acquainted with the writings of Henry George, and he was one of the latter's most ardent disciples by the time he arrived in New York.

It was this sentimental bond that drew him to the rooms of the Manhattan Single Tax Club, and it was the same bond of sympathy, the spirit of fellowship which a person breeds in the hearts of men, that won for him so hearty a welcome.

After a few months in New York City he went to Paterson, where he worked as newspaper reporter on the Evening News, Morning Call, and Press and Chronicle, respectively, until 1902, when he purchased the Passaic Daily Herald. By strenuous work he succeeded in making the Herald a paper of influence, extending far beyond his own city.

Mr. BREMNER was active in the Democratic Party from the first time he cast his vote. He created new life in the party in Passaic, and from the first year he arrived in this city he was looked up to as a political leader who inspired. He never sought political office for himself, and frequently declined attractive political offers and ignored suggestions that he accept nominations for office.

When the time came, however, for nominating candidates for the Democratic national convention at Baltimore, in 1911, Mr. BREMNER favored the nomination of Woodrow Wilson. His great admiration for Wilson caused him to break the rule he had adhered to up to that time. Mr. BREMNER and Senator HUGHES were elected district delegates, and Mr. BREMNER, although ill, was one of the most active spirits in the interest of Woodrow Wilson in that convention. His activity is best told by State Senator Hinchliffe, who was one of the delegates at large from New Jersey in the convention:

No one at Baltimore—

Senator Hinchliffe said—

was stronger or steadier than Bob. He fought, not to offend or injure, but for the real pleasure it gave him. He had a keen sense for seeing an advantage and a keen sense for following it up. He had more underground passages, more inside information, than any man at the convention.

There was no man in Baltimore who after two days at the convention could call by their first names so many men from California to Maine—and they all called him by his.

Following that convention the question as to who would be the most available candidate for the Democratic nomination for Congress in the newly created seventh district, comprising all Passaic County excepting West Milford and Pompton, was discussed by the Democratic leaders.

The unanimous opinion was that BOB BREMNER could lead the party to victory and at the same time help swell the vote for Woodrow Wilson.

In the primaries Mr. BREMNER was practically the unanimous choice of the Democratic voters of the district, and immediately he began a campaign that aroused interest from one end of the district to the other.

But the most notable tribute paid to Mr. BREMNER was the vote in Passaic. Although the city was always strongly Republican and some of the districts had only a "corporal's guard" of Democratic votes, Mr. BREMNER carried every one of the 16 districts.

"I feel more proud of that than I do of my election," Mr. BREMNER commented when he had the complete returns.

His interest in congressional work in Washington was not lessened by his intense physical sufferings, and all who met him marveled at his cheery smile and determination to make the best possible use of what he well realized to be a brief time to remain here.

On Christmas Day, 1913, when he went to Baltimore to the hospital to take treatment, he was accompanied by his sister, Miss Helen, and Dr. Horwitz. He was bright and happy, and his hopeful nature was an inspiration. For several weeks his sister was the only one allowed to be with him, and she cared for his office affairs as well as devoting herself personally to his nursing from the time he entered Dr. Kelly's sanitarium until his death. His brother, Will, upon whose advice he had always relied, gave up his studies in Toronto University to be with him in Baltimore and assist his sister. To them the stricken man talked of his hope of recovery, his intense desire to do more efficient congressional work, which he expected to do when freed from his physical weakness and pain; but, aside from these yearnings, he cheerfully awaited the end.

When his physicians informed him that he could not live, he was still inveterate. He talked with strong faith and beautiful resignation. His thoughts returned to the dear ones at home, especially his mother and sister, Nina; but he would not call them to his bedside to harrow them with the sight of his suffering. Nothing in all that noble life was finer than its close. In the last hours he had his devoted sister read to him his many favorite passages of Scripture and he repeated hymns learned in his youth.

ROBERT GUNN BREMNER thus passed in the flesh.

His legislative work was brief, but his lofty spirit and brave example will long continue to be a cherished heritage of this House.

The Sugar Industry in the United States.

EXTENSION OF REMARKS

OF

HON. RICHARD W. AUSTIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915.

Mr. AUSTIN. Mr. Speaker, I desire to call the attention of the Members of the House to the views of a Member elect from Louisiana, Hon. Whit P. Martin, on the sugar industry in the United States, taken from the Times-Picayune, of New Orleans:

"Hon. Whit. P. Martin, of Thibodaux, La., who was elected as a protectionist to succeed Senator elect ROBERT F. BROUSSARD from the third Louisiana congressional district, has made public the following announcement of the main policies for which he will stand and the course he proposes to pursue in the Sixty-fourth Congress.

"While Judge Martin was elected to Congress following, what he claims, the unfair and unjust treatment which the industries of his State received at the hands of the Democratic Party in the Sixty-third Congress, he is yet a protectionist in principle, and does not propose to confine his efforts to securing protection of the sugar industry alone.

"When seen to-day by the Times-Picayune correspondent, Congressman elect Martin said:

"'I have been following with deep interest the fate of House joint resolution 284, introduced by Mr. BROUSSARD at this session of Congress. The object of this resolution is to give to the State of Louisiana the right to enter suit for the purpose of determining the legal rate of duty to be assessed on sugars imported from Cuba. On January 23 of this year I addressed a letter to the Hon. William G. McAdoo, Secretary of the Treasury, calling his attention to the importance of the adoption of this resolution at this session of Congress. On February 10, through the efforts of Congressmen DUPRÉ and BROUSSARD, the Judiciary Committee of the House made a favorable report upon this resolution, and it will doubtless be passed by the House before Congress adjourns on March 4. In the absence, however, of any effort to have the Senate take favorable action, it is more than likely that the resolution will fail of adoption by this Congress.

"'When it is considered that the suit for the institution of which this resolution would be authority means, if successful, the recovery of over $25,000,000 which the State of Louisiana claims will be wrongfully diverted into the treasury of the Sugar Trust, its importance to the American people in this day of a depleted Treasury can be seen at a glance. It is my intention, therefore, at the next session of Congress to reintroduce this resolution, and use my best endeavors for its final passage, to the end that the United States may recover millions of dollars that have been diverted to the coffers of the Sugar Trust by reason of the very questionable interpretation of the Cuban reciprocity treaty.

"'I purpose also to ask Congress at its next session to suspend the free-sugar clause of the Underwood bill, which provides for free sugar after May 1, 1916. The present deficiency already amounts to over $80,000,000, and before Congress again convenes in regular session this deficiency will probably be doubled. This deplorable situation must be met, and it having been demonstrated that the income and so-called war taxes are not adequate to meet the expenses of Government, it is but natural that our Democratic friends should return to the time-honored custom of raising a large part of the revenues of this Government by the imposition of a duty upon sugar. As it is imperative that an additional source of revenue be found, this administration, which seems unalterably opposed to protection, will have a splendid defense by setting up that this duty is continued as a matter of revenue only.

"'That the State of Louisiana is essentially a protective State should be apparent to anyone who will give the matter thoughtful consideration. Not only are our staple crops of sugar, rice, and corn, as well as the lumber industry, dependent upon protection, but our truck and fruit industry, in which many of our people have so recently ventured, will soon feel the ruinous effect of the free-trade policy of this administration. Encouraged by this policy, there has been recently constructed the largest ferry steamer in the world, which will ply between Cuba and the United States. This steamer is equipped with four sets of standard-gauge tracks and will accommodate 30 of the largest size refrigerator cars. Cars laden with vegetables and fruit will be transferred from Cuba to the United States and then distributed by rail to all portions of this country. Our truckers and fruit growers, therefore, like the sugar growers, must either compete with our Cuban neighbors or go out of business; and as the Cuban crop will be in the northern markets long before our crops are matured, it follows that our fruit and truck growers can not compete with these Cuban products. We can not make a success of fruit and truck growing so long as we are compelled to compete with like products grown in a warmer climate and with cheaper labor.'"

Postal Laws.

EXTENSION OF REMARKS
OF
HON. WILLIAM KENNEDY,
OF CONNECTICUT.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915.

Mr. KENNEDY of Connecticut. Mr. Speaker, on Jauuary 7 a bill was presented to this House to amend the postal laws, and the number of said bill is 20644. I desire to favor said bill, believing that the subject is very important and ought to become a law. The Postmaster General should have additional powers with those already given him in relation to excluding obscene or immoral books, pamphlets, pictures, prints, engravings, lithographs, photographs, and other publishing matter and things of indecent, immoral, scurrilous, or libelous character, and to decide what is mailable matter, and he should be vested with sufficient power to make rules and regulations to exclude nonmailable matter from the mails.

There is no denying the advantages which the circulation of good literature confers on the country. Acting as a stimulus to the intellect and an inspiration to the heart, it constitutes a cultural element the value of which can not be overestimated. It tends to the peaceful and orderly progress of the community. It forms a bond of union between the different classes of society, and helps to weld the citizens into a united and homogenous body, fearing no foe and prepared to resist all forms of foreign aggression. The value of the possession of a common literary tradition in consolidating and preserving the idea and the ideals of nationality no man can measure. It is immeasurable, imponderable, but, like the air, it is all pervasive, and is never more potent than when least consciously felt.

There is another kind of reading matter which can clearly be designated as scurrilous, indecent, and mendacious, and will tend even more quickly to disintegrate society, tending to set man against man, class against class, and thus by fomenting internal dissensions to expose the body politic to outside attack. I refer, of course, to those publications whose purpose is to stir up "theological hatred." Week after week there is poured from certain publications a series of scurrilous, indecent, and mendacious attacks on the religious beliefs and practices of the most numerous Christian body in this country; when their worship is derided, their ministers defamed, and the things which they cherish as dear and sacred are subjected to obloquy and ridicule; when they are wrongfully accused of being bad citizens and of holding a foreign power in more respect and greater awe than they hold the Constitution of their own country—then, I say, it is time to call a halt. What must be the inevitable result of these attacks if persevered in long enough? The result will inevitably be that those who believe what they read will hate those who are the butt of the attacks and to cause these in return to hate those who attack them and all their aiders and abettors and those whom they influence. It is very dangerous for the welfare of any community to have a neighbor taught to distrust neighbor, to have good characters which men have spent a lifetime in building up ruined, and to cause children to be brought up to hate institutions of which they know nothing.

A distinction must be made between criticism of religious beliefs and libelous denunciation. The former is allowable, because it implies an effort to get at the truth without encroaching on the freedom of each citizen to worship God according to the dictates of conscience; the latter should be prohibited, because it is an insult and injustice to all who hold the beliefs that are thus attacked. As our Government guarantees liberty in religious matters, it should not become an abettor of schemes that aim at putting any body of citizens, because of their beliefs, in the position of criminals and traitors. If the charges are true, the Government ought to protect itself against those who are accused, or, at any rate, ought not to spread the accusation.

Freedom of speech does not mean that everyone may say or publish whatever he pleases. There are laws against profane language, against obscenity, and slander. They are based on the principle that to some extent at least morality must be safeguarded. But just as much harm, if not more, is done by publications that assail religion in the manner which is here under consideration. An obscene book or picture, though it may please many people, is excluded from the mails because by admitting it the Government would lend its sanction and practical assistance to the spread of immorality. For a parallel reason the publications in question should be excluded. The Government must have sufficient laws to prevent attacks on religion, and so undermine the chief support both of morality and of good citizenship.

The Government can not surely adopt for its policy the engendering of bitterness and strife among its citizens. Yet there is nothing better calculated to produce these results than publications which assail that which is most sacred to each man, i. e., his religion. In many parts of the country where adherents of different beliefs have until recently lived together in harmony, mutual helpfulness, and earnest cooperation for the common weal, there is now being fostered a spirit of hatred owing to the dissemination of books and papers of the type in question.

Our Postal System is supported by the taxation of citizens irrespective of their religious opinions. Why, then, should the post office be used by any person to defame any body of citizens? What is to hinder any other agency of government from following the same course? If the courts, the Army, and every other department of public service are required to treat all citizens on the same basis, there is no reason why the mails should be used to the injury of any body of citizens. If it is unlawful to bring religious discussion into the schools controlled by the State, why should the post office circulate attacks on any religion? An order has just been issued forbidding the men in the Army and Navy to express their views regarding the war in Europe. And yet we are paying a multitude of officials to distribute publications that are aimed directly at thousands of our own people, that misrepresent these people as the worst enemies of the country, simply because they exercise the fundamental American right of worshiping their Maker in the way they believe to be worthy and true.

The situation would be altogether different if it had been shown that a given form of religion, whatever name it might assume, was in reality a means of spreading corruption in private or in public life, of stirring up sedition or of setting class against class. But in that case the adherents of such a religion should be dealt with openly and squarely by the Government itself. Even then the mails should not be made the vehicle of individual condemnation by persons possessed of no authority. The Government never will become a party to such usurpation of power, any more than it will approve lynching or mob violence.

In a very prominent place in this city the following inscription is to be seen and read:

Messenger of sympathy and love.
Servant of parted friends.
Consoler of the lonely.
Bond of the scattered family.
Enlarger of the common life.

Now, considering that these lines sum up the all-important functions of the United States post office, it is pertinent to ask, What sort of sympathy and love is likely to spring up if the "messenger" is allowed to spread the germs of hatred? What service is rendered to "parted friends" by holding up their cherished beliefs as unworthy of civilized men, much less of American citizens? What consolation is it to know that the lonely is being made more lonely because his neighbor's mind is being turned against him? What strength is added to the "bond" when the national family, scattered by geographical distance, is set even further asunder by religious antagonism? How is the common life enlarged when the common right is narrowed down to this, "You shall believe as I do or forfeit all claim to respect, to citizenship, to manhood?"

The United States post office is indeed a marvel of efficiency. It can be used as a means of progress and enlightenment, of peace and good will. But it ceases to be American when it becomes the instrument whereby one individual or one group of citizens is enabled to place any stigma he or they may choose upon their fellow citizens.

The author of the bill mentioned herein stated before the committee—

That the bill is not designed to restrict the freedom of the press. It is more in accord with the desires of the decent, Christian, free minded people of this country that such publications should be excluded from the mails rather than that such vile, filthy, and dirty literature should be permitted to circulate for fear, perhaps, that the freedom of the press would in some way be impaired.

Mr. Speaker, in the closing days of this Sixty-third Congress I do not expect that the bill I have mentioned will become a law, but I trust that another Congress will take this bill up and give additional power to the Postmaster General. We are living under the same flag. While here we should strive to do that which will bring peace, prosperity, and happiness to every home in this land.

Shipping Bill.

EXTENSION OF REMARKS

OF

HON. EDWIN Y. WEBB,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915,

On the bill (S. 5259) to establish one or more United States Navy mail lines between the United States and South America and between the United States and the countries of Europe.

Mr. WEBB. Mr. Speaker, in order that we may the better understand the proposition now before the House, I will take a little time to explain it.

The bill now under consideration is a combination of the so-called Weeks bill and the so-called Gore bill. The Weeks bill passed the Senate last August, practically unanimously. The Gore bill is now pending in the Senate.

The Weeks bill provides that the Secretary of the Navy may take such vessels as are not absolutely necessary in the Navy and use them in the establishment of mail steamship lines, which lines shall carry not only mail but passengers and freight as well.

The Gore bill provides for the creation of a shipping board or corporation, 51 per cent of whose stock, at least, shall be owned by the United States, and through this board, for the purchase, construction, equipment, maintenance, and operation of merchant vessels to meet the requirements of the foreign commerce of the United States, and for chartering vessels for that purpose. It also provides that this board may lease any of its vessels to other corporations for use in carrying out this purpose.

The present bill makes the Gore bill a temporary measure. By it the shipping corporation is abolished two years after hostilities in Europe cease. At that time the Weeks bill goes into effect, and the business is transferred to the Navy Department. In other words, we have given gentlemen at the other end of the Capitol what they say they want in the Gore bill and what they voted for in the Weeks bill.

The subject of legislation to increase our American merchant marine should receive hearty interest by every Member of Congress of whatever political party, for since the Civil War repeated efforts have been made through legislation to restore our merchant marine to some measure of its ante bellum greatness. There has been great difference of opinion as to the best method of accomplishing this result, but all have joined in desiring to bring it about.

As this country continues to develop her natural resources and increase in population, wealth, and manufactories, it will be necessary to extend our commercial relations with foreign nations. This question of providing or encouraging the building up of an American merchant marine, which in the past has been considered desirable, has in the course of national development now become a commercial necessity. Congress has in the past considered many propositions looking to the betterment of our facilities for foreign commerce but has brushed them aside with a hope that in the evolution of commercial events—the operation of the natural law of supply and demand—the question would solve itself, or at any rate would become simpler. But such has not been the case.

We have hoped that this crying need of our Nation would be met by private enterprises. We have done much to encourage such private investments, but the history of the last 50 years has clearly demonstrated that we have nothing to hope for in this direction. Instead of building up an American merchant marine by Government-encouraged private enterprise we have seen our country develop along every other line of industrial activity, but at the same time we have seen our American merchant marine almost disappear from the high seas. In spite of the fact that we are paying annually the princely sum of $1,212,500, largely to encourage the building of an American merchant marine by private enterprise, we have only 361 vessels, aggregating only about 1,000,000 tons gross capacity flying the American flag and representing our ocean-going American merchant marine.

In 1821 about 89 per cent of our foreign commerce was carried in American vessels; in 1831, 86 per cent; in 1841, 83 per cent; in 1851, 73 per cent; in 1861, 65 per cent; in 1871, 32 per cent; in 1881, 16 per cent; in 1891, 12 per cent; and in 1901, 8 per cent. To-day our foreign commerce represents about one-eighth of the world's total, and not more than one-tenth of that one-eighth, or 1¼ per cent, of the world's commerce is carried in American bottoms. The Bureau of Navigation of the Department of Commerce estimates that the approximate value of American ships engaged in the foreign trade, including steam and sail tonnage, is only $69,000,000.

As showing the importance of maintaining some adequate dependable agency for carrying our exports abroad, let me call your attention to the fact that we produce about 42 per cent of the world's pig iron, nearly 25 per cent of its wheat, over 40 per cent of its coal, over 70 per cent of its corn, and 60 per cent of its cotton. This is far in excess of the needs of our own people. If we are to continue to develop our fields and mines and factories, we must not only find a foreign market for all our surplus products, but we must have a dependable agency that will transport our goods. Our total exports for the fiscal year ending June 30, 1914, aggregated $2,047,755,872. Our combined imports and exports for the same period were $3,785,404,525. To those who hesitate to have the Government directly provide American ships to carry our goods abroad on the ground that this interferes with private enterprise, let me call attention to the fact that it cost our farmers and manufacturers for the year ending June 30, 1914, the sum of $220,245,600 for freights on ocean transportation alone, while the total individual investment by Americans in American ships only amounts to $69,000,000. Nine-tenths of this $220,245,600 went to foreign vessel owners.

The tremendous war that is now being waged on the continent of Europe has contributed to reduce us to the pitiable condition that we find ourselves in, though we now have more merchant vessels flying the American flag than we had when the war began. The war has produced the unusual condition that has served to demonstrate how helpless we are, both on

account of our lack of vessels and a lack of any control over the few that are available.

Daily complaints are pouring in from the merchants of every section that facilities for carrying their goods are not available.

We have sent our agents abroad to advertise American goods; established foreign banks to provide mediums of exchange to facilitate our trade; negotiated commercial treaties, and in many ways expended our efforts and the people's money to find and build up foreign markets.

The European war has created an unprecedented demand for our products at advantageous prices. Our farmers and manufacturers have stored their warehouses with the products that the other nations need and are anxious to buy, but the European war has so demoralized the shipping interests of the nations at war that the vessels of these nations are not available for carrying our products. Of England's 4,000 merchant vessels, 1,200 have been withdrawn and added to her naval reserve. Of Germany's 2,300 merchant vessels, practically all have been withdrawn from service on account of the war. It is estimated that about 5,000,000 tons of German and Austrian shipping are completely out of commission, and in addition to this a large number of French and Russian merchant ships have been taken over by their respective Governments for transports and as naval auxiliaries. Even if vessels from these nations were available, such vessels would not have the immunity from attack by the enemy which American ships would have. We are, therefore, suffering from lack of sufficient ships to carry our goods to foreign ports. The evidence of this is overwhelming.

But the conclusive evidence of the shortage of tonnage is the excessive and unparalleled ocean freight rates now prevailing. Such rates could not be maintained if tonnage were abundant.

As shown by a report of the Secretary of Commerce to the Senate on January 27, 1915, from July to December, 1914, there has been an increase of 141 per cent in the freight cost charged on goods from American ports to the foreign ports. At this advanced rate, and based upon the estimated volume of business done in December last, the American farmers and business men will pay for the year 1915 the sum of $532,110,000 as freight charges on our exports and imports with foreign countries, or an increase over the cost of the same business last year of $311,864,400. This increased burden amounts to almost eight times the $40,000,000 that the Government proposes by this bill to invest in American ships for the protection of our foreign commerce, and more than five times the total capital invested now by private enterprises in what remains of our American merchant marine. As pointed out in this report, in two months and seven days, based upon the December estimate of business, the increased freight charges alone would more than equal the $40,000,000 which this shipping bill authorizes.

Since the December estimate was made freight charges have increased still more and shipping has become more difficult and uncertain. The rates being charged and the uncertainty as to when the shipment will be carried or how long the present rate will prevail has in many instances shut our merchants off from foreign business entirely.

The Republicans in Congress have had the opportunity for half a century to build up a merchant marine, and during all that period it has been growing sadly less. This effort on the part of this Democratic Congress to supply this great national necessity has met stubborn opposition from Republicans in both Houses. They have never proposed a remedy, except a subsidy to private shipowners which was repudiated years ago, and failed to get enough votes even in a Republican Congress to pass.

Instead of contenting themselves by finding fault with the efforts of the Democrats to do something for the country, why have they not embodied their wisdom in a bill and offered it to some of the Republican Congresses during the last half century? Is there any man who denies that the exports of the United States are being held up in practically every port in the United States? That at these ports the warehouses and sidetracks are overcrowded?

Only on the 6th day of February of this year the collectors of practically every port in the United States telegraphed to the Secretary of the Treasury the conditions with regard to commerce in each particular port, and without exception the collectors wired that all the ports were jammed, clogged, and crowded with wheat, cotton, corn, lumber, tobacco, and many other products ready for export with no ships to take them.

From December 26, 1914, to January 25, 1915, complaints have come to the Secretary of the Treasury from export merchants and dealers at almost every important port on the Atlantic seaboard and from those on the Gulf of Mexico, all to the same effect, telling of the exorbitant and unreasonable rates and the difficulty of booking shipments at any price.

Mr. W. B. Cooper & Co., from my own State, writing from Wilmington, N. C., to the Secretary of the Treasury on December 31, 1914, says:

> Please allow us to indorse the action of the administration in trying to secure boats for the movement of American products. We are frank to say that as a general proposition we are not anxious to see the United States Government get into too many lines of business, but when 3 cents per pound, or more, is to be paid freight on cotton across the water against 35 cents per 100 pounds 6 months ago, it is time something should be done, in our opinion.

The firm of Inman, Akers & Inman, of Atlanta, Ga., who are regarded as among the big cotton merchants of the South, write on December 28, 1914:

> We are paying ocean freight from Savannah to Rotterdam and to Bremen of $2, $2.25, to $3 per hundredweight. Formerly the rates to these places were about 35 cents per hundredweight on cotton.

Mr. Frank F. Fee, president Fee-Crayton Hardwood Lumber Co., Dermott, Ark., writes on December 28, 1914:

> * * * It is now a serious menace to our business by reason of our inability to get reasonable, and in some cases our inability to get any, ocean rates on our production of hardwood lumber. We usually ship through the port of New Orleans to British and continental ports. The writer has been to New Orleans personally and is informed by the steamship agents that they are receiving a tonnage of cotton and wheat and other commodities for the belligerents at such high rates and at such easier loading and unloading that they make tremendous profits for their vessels, and they do not want to take lumber tonnage. We can say that we have before us inquiries for many carloads of lumber which could be shipped immediately provided reasonable rates could be had. * * * Further, one of the steamship agent's commission for a single month was $25,000 for the month. We trust that there is some way in which our National Government can arrange whereby lumber traffic can be resumed at something like a reasonable rate.

Alphonse Weil & Bros., of New York, N. Y., on December 26, 1914, write:

> We intended to ship a large quantity of oats to the other side, but were prevented from doing so on account of the rate of freight advancing from 4s. per bushel to 6s. 6d. We are told that the reason of this advance is due to the fact that there are very few vessels available at the present time.

Henry Lauts & Co., Baltimore, Md., on December 29, write:

> The present rates charged by this line (Holland-American line) are almost prohibitive and are a decided menace to the tobacco export industry of this country.

These complaints do not deal solely with European countries, but with the South American countries, Panama, and the neutral governments of Europe, and are very numerous.

The following are a few of the shorter letters which will serve to show how pressing is this demand for action:

LYNCHBURG, VA., *December 28, 1914.*

THE SECRETARY OF COMMERCE,
Washington, D. C.

SIR: Having seen in the newspapers that the Department of Commerce wishes to be informed about difficulties which shippers in the export trade experience as to making satisfactory freight engagements for shipments of merchandise to foreign countries, we beg to say that the different steamship lines having steamers running between home ports and neutral countries in Europe seem to be taking advantage of the fact that the number of steamers is not near sufficient to take care of the ordinary legitimate business with foreign countries and are constantly advancing freight rates, which now have reached such high figures as to be almost prohibitive to shippers as well as to producers (farmers). Our business is the buying of leaf tobacco direct from farmers and putting it in proper shape for export. Freight rates on leaf tobacco to Rotterdam, Holland, before outbreak of the war have been 30 cents per 100 pounds, and shortly thereafter the rate was raised to 45 cents; in November the same was advanced to 82 cents, beginning of December to $1.02, and now to $1.25 per 100 pounds. Rates to Liverpool are now quoted at $1 per 100 pounds, where we have been shipping before the war at about 25 cents per 100 pounds. Freight rates to Genoa, which is the port for shipments of leaf tobacco to Switzerland, have been about $5 to $6 a hogshead before the war, and have now advanced to about $25 a hogshead. We have been shipping some tobacco to Christiania, Norway, before the war at freight rates of about 40 cents per 100 pounds; during latter part of August we made a shipment at 65 cents per 100 pounds, and the same manufacturer now wants another lot shipped and we have not been able to secure a freight engagement so far, nor even a quotation at which this tobacco will be taken. Have just received quotation of $1.50 per 100 pounds.

There is a considerable scarcity of steamers flying the American or neutral flags, and unless more ships can be put at the disposal of shippers, causing a general reduction of ocean freight rates, which are now unreasonable, excessive, and almost prohibitive, the export business in this country is bound to suffer greatly.

Respectfully,

G. STALLING & CO.

NEW YORK, *January 15, 1914.*

SECRETARY OF DEPARTMENT OF COMMERCE AND LABOR,
Washington, D. C.

DEAR SIR: Referring further to excessive through rate on barreled apples from New York to London via Liverpool on White Star Line:

When writing you under date of January 14 we neglected to state that the through rate on apples to London direct on Atlantic Transport boats figures out 4s. 6d. per barrel; that is, the rate has been 4s. 6d. up until now. But we have just received advice that beginning February 1 Atlantic Transport Line is advancing their rates so that apples, ordinary, will pay 6s. per barrel. As a matter of fact, this line is en-

deavoring to exclude fruit shipments entirely, and it would seem that unless some efforts are made shortly we will be practically without shipping facilities for exporting fruit, except under rates that are absolutely prohibitory.

Yours, very truly,

W. T. SEIBELS & Co.,
By W. T. S.

[Extract from letter to Secretary of the Treasury from R. R. Dancy, cotton and cotton linters, Houston, Tex., dated Dec. 26, 1914.]

Last week brokers asked $17 per bale freight to Germany (Bremen), now $14. Surely the United States Government can and should control the situation and shipping and insurance to such extent that if only one steamer could be had her charter or freight charge should be in the limit of reason, controlled by the Government and not by sharks and sharps. Needs no probe, but action in distress.

HOUSTON HEIGHTS, TEX., *December 28, 1914.*

UNITED STATES COMMERCE DEPARTMENT,
Washington, D. C.

GENTLEMEN: We respectfully call your attention to the paralysis of our business due to the exorbitant ocean freight rates now being imposed upon the manufacturers and producers of this country. For years our entire output has been disposed of abroad, but owing to the present prohibitive tariffs in ocean transportation we are unable to deliver our goods, consequently our plant will remain closed down until such rates are established as will enable us to market our goods. The majority of our shipments have heretofore gone via Liverpool and Manchester.

In our judgment a Government merchant marine will solve the problem.

Very truly,

WM. HAAS & SONS,
By WILLIAM HAAS, Sr.

[Extract from a letter to the Secretary of Commerce from David C. Reid, 18 Broadway, New York, dated January 2, 1915.]

For your information and guidance, the question of getting tonnage at the present time for trans-Atlantic business is practically impossible. I have offered by cablegram up to 10s. 3d., Government form per deadweight ton, and was refused by my London correspondents, who state that much higher offers must be made before tonnage can be procured. Under ordinary circumstances these tramp steamers I made the offers for in good faith could be secured at 3s. per deadweight ton. Conditions with us are almost impossible. Tonnage is unprocurable at almost any except the most extraordinary and prohibitive terms. I speak now of the cargo steamer for the general carrying tramp steamer trade. Anything that can be done to put tonnage in the market should be done.

BALTIMORE, MD., *December 28, 1914.*

DEPARTMENT COMMERCE, *Washington D. C.*

GENTLEMEN: In the name of the Leaf Tobacco Association of Baltimore City, of which I am president, I desire to file with your department an urgent protest against the unwarranted advance in freight rates on tobacco as recently established by the Holland-American Line. Some of our exporting members shipping to Holland points have signed contracts with this company expiring December 31, 1914, for a rate of $3.50 per hogshead of tobacco. This contract has been disregarded entirely and the rate increased first to $5.25, then to $6.85, and to-day a notice that it will be $7.50 until further notice. This, I repeat, in the face of the written contract for $3.50 per hogshead.

Their explanation is the war conditions, claiming a war clause which some of our members claim is not in their contract. In any event, there is no war between the nations whose subjects are signers of the contracts, and we wish for your department to take some action to adjust this if possible; and we shall gladly furnish you with any further information which your department might wish to have.

Very respectfully, yours,

CHAS. E. MOORE,
President of Leaf Tobacco Association, Baltimore, Md.

AZALEA, N. C., *December 29, 1914.*

Hon. WILLIAM G. MCADOO,
Secretary of the Treasury, Washington, D. C.

DEAR SIR: Referring to item in New York Herald indicating your desire for information concerning the effect of the present ocean rates upon business, would say that for our part the present rates are practically prohibitive, as they have advanced 10 and 15 cents per hundredweight, and in many cases even these rates are not protected, except for immediate acceptance and subject to confirmation by steamship lines, thus making it impossible for shipper to quote delivered prices with any certainty that the rates on which he bases his quotations would be confirmed. Further than this, it is our information that the steamship companies are giving other tonnage carrying higher freight rates preference, and in some instances are limiting their boats to a certain small amount of lumber tonnage. There is certainly a need of more boats and some method of obtaining reasonable and dependable rates which shall be protected long enough at least that we might be able to get quotations by mail to our customer on the other side and his reply.

As illustrative of the present situation, we quote you below from letters received from the Virginia Line, operating from Norfolk and Newport News, upon whom we are dependent for the larger amount of our export business:

"We further beg to advise that we will only be able to make contracts for a specific number of cars for shipment by one steamer. In other words, we will not be able to make contracts for a maximum and minimum number of cars for shipment over a period of time.

"You must not feel that this is an arbitrary position which we are taking, as such is not the case, and it is due entirely to circumstances over which we have no control. So many of our steamers have been requisitioned by the Admiralty that we have not enough steamers to go around, and if you are at all familiar with the vessel situation you will know that there is an extreme shortage in vessel tonnage, due to the fact that the British Admiralty has requisitioned about 25 per cent of the vessels under the British flag, and the further fact that all of the German and Austrian steamers are laid up. If conditions were normal, we would have plenty of vessels to take care of all tonnage offering and would be only too glad to place the room at the disposal of our friends, but as our available tonnage has been reduced more than 50 per cent it is simply a question of doing the best we can and apportioning our room as equitably as possible."

You will see from the above that we have no certain assurance of being able to forward our lumber, and all the charges, storage, trackage, etc., that might accumulate at seaport owing to the steamship lines' failure or inability to take the lumber would be at our expense.

Trusting that this letter may be of service to you, and that some relief may be obtained, we remain,

Yours, very truly,

MCEWEN LUMBER CO.,
W. B. MCEWEN, *President.*

AZALEA, N. C., *January 8, 1915.*

Mr. A. J. PETERS,
Assistant Secretary Treasury, Washington, D. C.

DEAR SIR: Acknowledging yours of the 5th instant and supplementing our letter of the 29th ultimo, we beg to quote below letter dated December 30 from Lunham & Moore, export freight brokers, Produce Exchange, New York City, written to us in response to our application for rates to Copenhagen:

"Your favor of the 28th instant to hand. Lumber rates are not very encouraging, and the best we can quote you to-day is as follows (which apply from New York only to both Copenhagen and Christiania): Oak lumber, 100s. and 5 per cent per 2,240 pounds; poplar lumber, 102s. 6d. and 5 per cent per 2,240 pounds.

"All freight to be prepaid. We quite realize that these rates are entirely too high to enable you to make shipments. No room until March-April steamship agents' option."

From the above you will note the high rates asked for movement of freight. These rates amount on oak lumber to about $45 per 1,000 feet. On poplar lumber to about $35 per 1,000 feet.

Our last quotation on lumber moving from New York City to Copenhagen and Christiania just prior to the outbreak of the war was 31 cents per 100 pounds, as against the rate named above, which is equivalent to $1.14 per 100 pounds on oak lumber. Poplar in proportion. We mention this for your information, and if there is anything further that you wish to know along this line we will be glad to communicate further with you.

Yours, very truly,

MCEWEN LUMBER CO.

NEW YORK, *December 26, 1914.*

Hon. WILLIAM G. MCADOO,
Secretary of Treasury, Washington, D. C.

HONORABLE AND DEAR SIR: Permit us, please, to lay before you our complaint against the scarcity of ships and the exorbitant rate of freight now being charged on shipments of our commodities to the various foreign ports, which seriously handicaps our business.

We therefore feel that something should be done by our Government to relieve the present situation, since it so seriously interferes with our foreign business.

Trusting that you may be able to take prompt steps to remedy this condition, we beg to remain,

Very truly, yours,

A. GROSS & Co.,
J. A. BURNS, *Secretary.*

GALVESTON, TEX., *December 26, 1914.*

Secretary MCADOO, *Washington, D. C.*

DEAR SIR: Referring to your call for information from shippers who have been affected by high ocean freights, beg to advise we are shippers of old rails and scrap iron and steel.

We have in the past paid various rates of freight, from 12s. to 18s. per ton; however, steamship companies now either quote abnormal freights or refuse to quote at all, so it is impossible to ship any material, as the freights in some cases amount to three-fourths of the delivered price of the commodity.

The Texas Transport & Terminal Co. have carried practically all of our material from New Orleans and Galveston to Genoa, Italy. This steamship company has now asked us 45s. per ton for January, February, and March, and the material itself is only worth about 60s. per ton delivered.

The above facts are given for your information and in case you can suggest some remedy, or possibly would like to see the writer regarding other details of this matter, he would take great pleasure in seeing you in Washington at any time you may state.

Yours, very truly,

PHOENIX IRON & STEEL CO.,
LEONARD JOSEPHS, *President.*

ATLANTA, GA., *December 28, 1914.*

Mr. W. G. MCADOO,
Secretary of Treasury, Washington, D. C.

DEAR SIR: Agreeable to governmental request, beg to advise that this company is experiencing considerable trouble in booking shipments of cottonseed meal, cake, and linters to foreign ports. In fact, we have been endeavoring since the 19th instant to find space for cottonseed meal and cake of approximately 3,000 tons to Liverpool and London, and the very best offer received up to the 24th instant was $8.50 per ton from Savannah to Liverpool, January-February sailing, and not exceeding 1,000 tons at that. However, in endeavoring to book this lot to-day, the Strachan Shipping Co., agents, Savannah, have just wired as follows:

"Regret can not confirm thousand meal Liverpool eight fifty. Freight market advancing one firm offer to-day $9. Feel sure can place January-February shipment."

To which the following is our reply:

"Your wire date. Best we can stand is eight fifty. Will book one thousand tons at that. Advise."

Further, it appears that the Strachan Shipping Co. are the only ones that have any space at all in sight for January-February for commodities other than cotton, they advising us on the 21st instant they are unable, at the moment, to quote a rate on meal or cake from either Charleston or Jacksonville and have but limited room from Savannah and Brunswick, going on to say that they can not assure us of January room from either of these ports at present. Also that the tonnage market is exceedingly strong and steamers scarce. Therefore, they are experiencing the greatest difficulty in securing boats to cover their actual January commitments, consequently would not care, at the moment, to quote a guaranteed shipment that month.

We are also advised by the Churchill Line, also by the J. H. W. Steele Co., of Savannah, as well as Street Bros., of Charleston, S. C., that they have no space at all, and to the further effect that just now tonnage, especially as regards neutral boats, is scarce and rates high.

In fact, the result of our inquiries along this line principally develops that shipowners have restricted their vessels almost exclusively to cotton by charter or at very high rates, one of my informants placing the charter price at $12 per bale.

The best quotation we have had from Norfolk is $8 per short ton, while the rates quoted us from Savannah, above mentioned, are for a ton of 2,240 pounds.

So far we have been unable to secure quotations to London, Rotterdam, or any ports other than Liverpool.

Yours, very truly,

E. P. McBURNEY, *Vice President.*

MEMPHIS, TENN., *December 7, 1914.*

Hon. WILLIAM G. McADOO,
Secretary of the Treasury, Washington, D. C.

DEAR SIR: The cotton pool, raising money for the farmer to carry his cotton, is a splendid idea and has everyone's indorsement; but the real thing you want to do is to make a market for the farmer's cotton, so as he can sell it if he so desires.

I have on my desk several very important inquiries for cotton for Germany and feel satisfied that at least a million bales of cotton could be sold to Germany and Austria at once if freight room at a reasonable price could be secured and, above all, that the "war risk" would cover the shipments absolutely.

Now, can not you find a way for the Government to furnish us ships and guaranteeing the delivery of the cotton either at Gottenburg, Rotterdam, or Copenhagen? The importance of this move you can realize in a moment when you think that every bale of cotton that is held over and not spun becomes a weight on the market and reduces the chances of an advance later on that much. You can not grind the mill with the water that has passed, and when a spindle stops operating and the cotton is not being used it becomes a dead weight on the market, it matters not how much you advance against it.

Now, what we want is open markets and a chance to ship our cotton. If this can be done, the cotton pool will only be used limitedly. The rate from New Orleans to-day to Gottenburg is $1.50 per hundredweight, and to Rotterdam $2 per hundredweight. This is three and four times the regular rate. Suppose a rate of $1 was effected and with a "war risk" of not over 50 cents per bale, this would enable you at once to take a million bales of cotton off the market. Can't you suggest some outlet for these conditions?

A steamship loaded with 10,000 bales of cotton at $3 per hundredweight, or $15 per bale, realizes, gross, $150,000 for the cargo, when the vessel itself is not worth exceeding $125,000. For such conditions there certainly should be some remedy.

Yours, very truly,

JOS. NEWBURGER.

KIOMATIA, RED RIVER COUNTY, TEX., *December 27, 1914.*

Hon. WILLIAM G. McADOO,
Secretary Treasury, Washington, D. C.

DEAR SIR: I notice from the press reports that you expressed a desire to learn something of the excessive ocean freight rates which are now being charged to foreign ports.

I have been requested to act as chairman of a marketing committee of the Northeast Texas District Farmers' Union, to try and market some of our cotton direct from the farmers to European spinners, and we would like to reach Germany and Austria with some cotton. The ordinary rate from Gulf ports to these points is about 50 cents per 100 pounds, but I have been informed that as much as $3 per 100 pounds has been charged on cotton.

We also find it will be difficult to secure a steamer.

I am advised that the United States Government has a number of transports which might be used as cotton carriers, and I am also advised that there are some German ships which could be purchased in some Gulf ports.

Is it possible for you to arrange so that we can secure a ship, and pay only a reasonable freight rate from here to Germany and Austria?

I would like this information as early as possible, as we will have to make arrangements to concentrate this cotton in either Galveston or New Orleans, and our ability to finance it will determine which port we will use.

I wish to state in advance this will be a transaction for and in behalf of the farmers who have been able to hold their cotton and not forced to sacrifice it at beggarly prices, which has been the fate of thousands of farmers in our State.

Awaiting your prompt advices, I am,

Yours, very respectfully,

R. D. BOWEN.

The daily newspapers carry complaints of the same nature almost daily. I clipped the following from the Evening Star of Washington, Friday, February 12.

LACK OF SHIPS KILLS TRADE, EXPORTER SAYS.

Trade which should come to this country from South America as a direct result of the European war is being strangled, and unusual measures must be taken at once to cope with it, according to a letter made public to-day by Secretary Redfield of the Department of Commerce, from William C. Wulp, secretary of a New York firm of exporters.

While figures are given to show that rates on bulk goods to South American points have increased since August 1 from 50 to 300 per cent, yet the principal complaint seems not to be the increase, but the refusal of steamship companies to guarantee the stability of their rates.

CAUSE OF LOSS.

"Quite aside from this question of rates," says the letter, in part, "the very scarcity of steamers, which prevents a constant and punctual service, interferes with our foreign trade fully as much as, and perhaps a little more, than the high rates of freight, of which it is said to be the cause. The South American business is largely made up of offers and acceptances covering transactions to take place at some specified future time. I am speaking of the business in foodstuffs and other staple lines, which run into bulk and which, therefore, are the most important part of the business from the carrier's standpoint.

HOW ORDERS ARE PLACED.

"The Brazilian merchant usually covers his requirements in flour for several months ahead, at a fixed price, which, besides the cost of the article itself, includes all incidental expenses, such as freight, insurance, commission, and interest.

"During the past few weeks we have been compelled to neglect a large number of promising inquiries from our regular Brazilian customers simply because we could not obtain definite assurance from the steamship companies as to the required shipping opportunities and as to the rates to be charged by them.

"In the case of one bulk commodity, for which we act as selling agents, we were compelled to cable our representatives in the Argentine Republic to stop selling, not because the rates of freight are too high, but because of the uncertainty of shipping facilities during the next few months, and the unwillingness or inability of the steamship companies to quote a firm rate of freight, to hold good for a sufficient period of time. Thus business is lost daily because of the scarcity of tonnage and the many perplexing questions resulting from that condition.

SCARCITY OF SHIPS.

"It seems immaterial whether this scarcity is due to congestion in European ports or whether it is due to the withdrawal of a large amount of tonnage by the British Government for war purposes. The fact remains that the scarcity exists and seriously interferes with the successful conduct of our South American trade, which in other respects is beginning to show considerable improvement over the first four or five months following the outbreak of the war. This scarcity must be remedied before this country can take advantage of the revival of trade in South American countries, and it follows that what is required is new and additional tonnage not now actually in operation.

"There is no doubt that an unusual emergency exists, and unusual measures must be taken to cope with it in order to prevent the strangulation of the South American trade, which just now is of such vast importance to this country."

The average increase in ocean freight rates from July to December on all commodities is estimated to be 141 per cent. This general average is, however, somewhat misleading. The greatest part of this burden falls upon those products of the farms in which the American farmer is most vitally interested, namely, grain and cotton. These are the two articles of commerce that constitute the great bulk of our foreign commerce. As showing the effect of high ocean freight rates on American farmers, I quote from the report of the Secretary of Commerce the following:

While the steamship companies have imposed conscienceless taxes in the form of increased rates on grain, amounting, as already shown, to as much as 900 per cent to some ports, they have placed an even heavier burden upon cotton, where the increase in rates to some ports is as high as 1,100 per cent. This increase is particularly onerous upon the cotton producers of the South, because it comes at a time when the effects of the war have greatly reduced the value of cotton and when the southern farmers are least able to bear additional burdens.

Grain, cotton, and other commodities are usually sold "delivered" at the port of destination. When steamship companies raise the cost of delivery of grain from 6 cents to 60 cents per bushel it makes a vast difference in the price the farmer receives for his product, and when ocean freight charges on cotton are raised from $1.25 to $15 per bale the price at which the farmer sells his cotton is seriously reduced.

To show what the burden imposed on the farmers by these high ocean freight rates means it is necessary only to bring out the fact that while the total freight cost on our exports by sea for the month of December, 1914, was $30,742,500, the great commodities of grain, cotton, and flour bore $11,782,250 of this charge, more than 36 per cent of the entire freight cost on all exports by sea for the month.

These exorbitant rates are not necessary in order to meet expenses and pay a reasonable profit on the investment. As pointed out in an article prepared by the Southern Commercial Congress on the proposed establishment of a merchant marine, the shipping business is one of the most profitable in the world. Special Diplomatic and Consular Reports, page 39, says:

The White Star Line in 1910 earned a net profit of £540,000 on a capital of £750,000 after writing off £370,016 for depreciation. A dividend of 30 per cent was paid in that year.

The Holland Amerika Line earned about 50 per cent net on its capital during the fiscal year 1913. The Hamburg-American Line earned about 30 per cent net during its fiscal year of 1913. These are only a few specific instances of steamship-line earnings. They are not at all unusual, but are the regular thing in the shipping business.

F. E. Dixon & Co., of London, who own and operate a large fleet of "tramp" freighters, showed earnings of about 50 per cent net last year, which proves that steamship earnings are large in irregular services as well as in the regular lines. In fact, the profits in the steamship business are so large that frequently the entire cost of a ship is earned in two years.

There are those who oppose this measure on the ground that it will not be a profitable investment for the Government and that it will entail a heavy loss on us. It is not my understanding that the advocates of this measure are urging its passage on account of the profits that they hope the Government will receive from it, but that the primary object is to furnish to our merchants, manufacturers, and farmers a necessary agency which private enterprise has failed to furnish. An agency which will connect our farms and factories with a foreign market and prevent such losses as our farmers and merchants are now experiencing. The profit to be made did not prompt the Government in adding to the Postal Service the parcel post. The Government finds itself justified by the great public service it has and is rendering to the people. It has brought the great express companies to their senses and forced them to reduce the unreasonable toll that they had been exacting from the people. This bill will have the same effect upon the shipowners of the world. It will force them to adopt a schedule of reasonable rates such as will give them a reasonable profit on their investment and no more.

If it does this it will have saved the cotton farmers of the South and the grain farmers of the West, and the mine and mill owners of this country, not only the exorbitant sums they are being charged now as I have already pointed out, but it will be the agency by which to extend our markets, and give us that commercial supremacy that we so desire.

But there is no reason why such a governmental enterprise should not be reasonably profitable. It would not be an entirely new and untried field. The Government is already in the shipping business. It owns the entire capital stock of the Panama Railroad & Steamship Co. Its reports show that for the fiscal year ending June 30, 1914, there was a net revenue from the steamship line alone of $314,296.36, and in the four months ending October 31, 1914, there was a net revenue from the steamship line alone of $84,294.16. The fact that this bill seeks to extend this to much greater fields, is no reason why the Government should still not be successful.

But others object to Government ownership. That has no terrors for me. Long ago this country went into the business of Government ownership of enterprises. We find examples of this from the days of Thomas Jefferson and Abraham Lincoln on down to the time of William H. Taft and Woodrow Wilson. We have been in the Government control and ownership of interstate highways and business for 100 years, and if there was ever a time when we should engage in it, that time is now. Thomas Jefferson ordered a great highway surveyed from Baltimore to New Orleans. Has the Government a right to build highways? Yes; that was long ago decided. A little later on, the Cumberland Road, a great interstate road from Cumberland, Md., to Jefferson City, Mo., was ordered to be built, and the Government spent $710,000 to build it.

During the administration of Abraham Lincoln the Government not only built but practically controlled the great transcontinental railroads for the purpose of developing the western plains and reaching the Pacific Ocean. The Government then built a similar road from Chicago and Cairo to New Orleans.

In 1904 the Government of the United States authorized the building of the Philippine railroad and guaranteed 4 per cent interest on its bonds. That law, which is still on the statute books, was enacted by a Republican Congress. And, strange as it may sound, this Republican Congress, back in the days when the Republican Party professed to believe in the great benefits to be derived from a high protective tariff, provided for the necessary building materials to go into the Philippine Islands free of tariff duty.

There was also the parcel post. For years we heard the cry that "you are going to put the Government in the carrying business in competition with private enterprise, to wit, the express companies." But the Government did go into the business, and where is the man who now would vote to repeal the law?

The Government is carrying freight on land. Why not carry it on the sea? Since individual effort has failed to supply this great national need, and will continue to fail until conditions change, the Government should step in and provide this great need for its people. There is no paternalism in the proposition. We authorized the construction of the Alaskan railroad; we make powder and armor plate; we print envelopes and sell them to the people of the United States; we destroy the cattle tick and boll weevil and do thousands of other things that private individuals not only do but are anxious to do.

In order to meet the emergencies of the European war the Government has gone into the insurance business. Some of the Republican Congressmen who voted to allow the Government to insure the cargoes that are carried abroad in monopolistic ships are holding their hands up in holy horror against this shipping bill. I can see no difference in owning the ships that carry the cargoes and the Government insuring the cargoes which the ships carry. I have no metaphysical scissors with which I can make a distinction in principle.

But the question naturally suggests itself to our minds, Why has this rich field of profitable business not been sought by private enterprise? It has been sought by foreign ships in the past, it is not now supplied by them for the reason that some of them have been destroyed, others have been drafted into the service of their navy as auxiliaries, and others are afraid to venture upon the high seas while their nation is at war. But the reason private enterprise has not built up an American merchant marine is because of the presence of the foreign shipping trust. Few private enterprises have ever been launched with their full strength, ready to meet and compete with so strong and dangerous an adversary as the shipping trust. These private enterprises usually start with a small capital, and as they feel their way along successfully they extend their business. Picture to yourself such an enterprise standing up against this giant of the sea. During this Congress, while we had under consideration the adoption of the conference report, providing that foreign-built vessels may engage in the coastwise trade if registered pursuant to the provisions of the act, etc., a leading Republican strongly urged as a reason for his opposition that this would permit this foreign trust to gobble up our coastwise shipping just as it has our foreign commerce.

In this connection he says:

* * * it always interests me to hear the declarations against American combinations and American shipping trusts, when every sane man who has given this subject one moment's consideration knows that the greatest trust in all this world is the shipping trust of Great Britain.

Continuing his argument he says:

On the other hand, the House report brings out the fact that the most formidable, aggressive, and oppressive shipping trusts and combinations are those of foreign flags and foreign ownership in the foreign trade of the United States.

The committee says (p. 415), in summarizing its findings, that "the facts contained in the foregoing report show that it is the almost universal practice of steamship lines engaged in the American foreign trade to operate, both on the inbound and the outbound voyages, under the terms of written agreements, conference agreements, or gentlemen's understandings. * * * Eighty such agreements or understandings, involving practically all the regular steamship lines operating on nearly every American foreign trade route, are described in the foregoing report."

In an article prepared by the Southern Commercial Congress on the proposed establishment of a merchant marine, we find the following:

Objection to the shipping bill now before Congress has developed from two sources. It was to be expected that there would be objection by shipping interests which have been reaping the benefit of American inactivity in the foreign shipping trade. It was also to be expected that certain financial interests and their affiliations, especially those interested in foreign shipping, would object to a Government merchant marine.

Opponents of the bill have advanced arguments to sustain their position, but not one of them will stand analysis. Many newspapers and periodicals are opposing the bill, but the fact that they enjoy considerable advertising and other patronage from the steamship lines and the financial interests that are opposing the bill may go far toward explaining their position on this great question of an American merchant marine.

CONSTITUTIONAL POWER TO ENACT SUCH LEGISLATION.

It is now too late in the Nation's history to seriously question the right of Congress to pass such a bill.

The Constitution vests in Congress the power—

To regulate commerce with foreign nations and among the several States, and with the Indian tribes.

Chief Justice Marshall said, in 1824, in writing the opinion of the court in the case of Gibbons *v.* Ogden (22 U. S., 192), that the word used in the Constitution comprehends navigation within its meaning. Further discussing the question he said:

We are now arriving at the inquiry, What is this power? It is the power to regulate; that is, to prescribe the rule by which commerce is to be governed. This power, like all others vested in Congress, is complete in itself, may be exercised to its utmost extent, and acknowledges no limitations, other than are prescribed in the Constitution. * * * If, as has always been understood, the sovereignty of Congress, though limited to specific objects, is plenary as to those objects, the power over commerce with foreign nations, and among the several States, is vested in Congress as absolutely as it would be in a single government, having in its constitution the same restrictions on the exercise of the power as are found in the Constitution of the United States.

Justice Johnson, in his concurring opinion in the case of Gibbons *v.* Ogden, on page 228–229, says.

When speaking of the power of Congress over navigation, I do not regard it as a power incident to that of regulating commerce; I consider it as the thing itself; inseparable from it as vital motion is from vital existence. Commerce, in its simplest signification, means an exchange of goods; but in the advancement of society, labor, transportation, intelligence, care, and various mediums of exchange, become commodities, and enter into commerce; the subject, the vehicle, the agent, and their various operations, become the objects of commercial regulation. Shipbuilding, the carrying trade, and propagation of seamen, are such vital agents of commercial prosperity, that the nation which could not legislate over these subjects, would not possess the power to regulate commerce.

In the case of Wilson *v.* Shaw (204 U. S., 24) the contention was made that the Government had no power to engage anywhere in the work of constructing a railroad or the Panama Canal.

Justice Brewer disposes of this contention by saying that "the decisions of the court are adverse to the contention," and by citing and quoting from a number of decisions.

He quotes from the decision in the case of California *v.* Pacific Railroad Co. (127 U. S., 39) the following:

It can not at the present day be doubted that Congress, under the power to regulate commerce among the several States, as well as to provide for postal accommodations and military exigencies, had authority to pass these laws. The power to construct, or to authorize indi-

viduals or corporations to construct, national highways and bridges from State to State is essential to the complete control and regulation of interstate commerce. Without authority in Congress to establish and maintain such highways and bridges it would be without authority to regulate one of the most important adjuncts of commerce. This power in former times was exerted to a very limited extent, the Cumberland or National road being the most notable instance. Its exertion was but little called for, as commerce was then mostly conducted by water, and many of our statesmen entertained doubts as to the existence of the power to establish ways of communication by land. But since, in consequence of the expansion of the country, the multiplication of its products, and the invention of railroads and locomotion by steam, land transportation has so vastly increased, a sounder consideration of the subject has prevailed and led to the conclusion that Congress has plenary power over the whole subject. Of course the authority of Congress over the Territories of the United States, and its power to grant franchises exercisable therein, are, and ever have been, undoubted. But the wider power was very freely exercised, and much to the general satisfaction, in the creation of the vast system of railroads connecting the East with the Pacific, traversing States as well as Territories, and employing the agency of State as well as Federal corporations.

Congress, therefore, may create corporations as appropriate means of executing the powers of government, as, for instance, a bank for the purpose of carrying on the fiscal operations of the United States, or a railroad corporation for the purpose of promoting commerce among the States. McCulloch *v.* Maryland, 4 Wheat., 316, 411, 422; Osborn *v.* Bank of United States, 9 Wheat., 738, 861, 873; Pacific Railroad Removal cases, 115 U. S., 1, 18; California *v.* Pacific Railroad, 127 U. S., 1, 39. Congress has likewise the power, exercised early in this century by successive acts in the Cumberland or National road, from the Potomac across the Alleghanies to the Ohio, to authorize the construction of a public highway connecting several States. See Indiana *v.* United States, 148 U. S., 148.

This same provision of the Constitution which has been construed to grant the power to the Federal Government to construct bridges, build railroads, turnpikes, and canals, own and maintain the Panama Steamship Line, will, if the same reasoning is applied, furnish the authority needed to carry out the purposes of this bill, because the power of Congress over foreign commerce is the same as it is over interstate commerce.

Rural Credits.

EXTENSION OF REMARKS
OF
HON. SCOTT FERRIS,
OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 2, 1915.

Mr. FERRIS. Mr. Speaker, two things are necessary before any rural-credit system will be of avail to the farmer—he must have long tenure and he must have a low rate of interest. No outside concern without the backing and the strength and the stability of the great Government behind it can command these two things. Therefore the amendment brought in on the Agricultural bill, the so-called Hollis amendment not carrying that, is not what the American farmers expect, is not what we promised to give them, is not what they are entitled to, and, in truth and in fact, is not a rural-credit bill at all.

The gentleman from Ohio [Mr. BULKLEY] brings to us, not a hurried, jumped-up amendment, but an amendment that has received careful, painstaking attention, an amendment which is well digested, an amendment which carries a forceful, well-thought-out principle, to wit, that of Government aid. Those who really want to give the farmer a rural-credit bill ought to support the Bulkley amendment. Those who really do not care to play pranks on the American farmer ought to oppose the Hollis amendment as it now stands. I greatly hope the Committee on Agriculture will aid, and that its individual membership will join hands in maintaining and committing this Government to the principle of Federal aid which will really amount to a rural credit system.

The SPEAKER. The time of the gentleman has expired.

Mr. LEVER. I yield my one minute to the gentleman from Oklahoma.

Mr. FERRIS. I share the heavy responsibility and burden that hangs on the chairman of the Committee on Agriculture [Mr. LEVER]. I share likewise the burden that hangs upon the entire committee, which had to meet this morning and bring into the House something that the House could consider in a single day. I think they did the best they could. I think perhaps they did all they could. I can not but believe that with the Bulkley amendment added we have taken a long step toward doing in this most important matter what we ought to do. It may be imperfect; it may not be what the Senate conferees will accept; it may not be what the President will sign; but we must do our duty. We may be building up a straw man and knocking him down instead of doing anything, because it may fail. But I believe this is the best thing we can do under all the circumstances, the nearest we can come to doing our duty; and I think we ought to adopt the Federal-aid amendment now pending. [Applause.]

That a rural credit law is needed is recognized by all political parties; that a rural credit law is necessary is the belief of more than three-fourths of the membership of this House; that a rural credit law has been promised in platform and on the stump while securing our commissions here is likewise true. The Senate has passed a loose-jointed, poorly considered measure as an amendment or rider to the agricultural appropriation bill. It is admitted that it passed the Senate without any real consideration at all; it was merely added while four or five Senators were present and accepted without any careful scrutiny whatever.

There are many weird rural credit proposals now pending before Congress. There is much misinformation about this subject. Stripped of all details and stripped of all personalities, there is but one great question in this matter and that is, Shall the Federal Government lend its strength, its stability and strong arm toward making a rural credit system that will be workable, feasible, and of aid to the American farmers? It is not too much to say, and I do not believe it will be controverted by either friend or foe of this legislation, that practically every civilized country in the world is given Government aid toward a rural credit system to encourage agricultural production. I think it will not be controverted that in order to have long tenure and a low rate of interest two things are of necessity to the farmer, who from the very nature of things can earn but slowly; the Government must place its strong right arm behind the proposal and see to it that a few scheming speculators do not outstrip the farmer. The present short loans made by the farm loan companies or by the banks and the exorbitant rates of interest charged have become almost intolerable. Few, if any, well-organized business firms would be able to amortize or bring about amortization on either the land or personal security within the short periods of time allotted to farmers by the ordinary farm loan company. Therefore, if a well-regulated business organization with admitted earning capacity can not amortize and pay out on short tenure, how can the American farmer be expected to succeed and comply with short tenure and the high rates accorded him by the banks and farm loan companies?

From the very nature of things it is impossible to induce a private concern with limited credit, limited capital, and limited public confidence to make long-time loans or to permit loans to be paid off in partial payments or driblets or to let the farmer amortize or pay off his loans other than on short tenure. The farmer has no rapid earning capacity, and from the very nature of things his ability to pay his loans must naturally be limited.

Again, it is impossible for a private institution within a limited period of time to establish sufficient public confidence to make the mortgages or debenture bonds salable unless they bear an outrageously high rate of interest, but if the Government, through Federal aid and supervision, will see to it that, first, the loans are made for long periods, and, second, secure or guarantee the bonds, see that the rate of interest is reasonable, the things necessary to a successful rural credit system are accomplished.

Private concerns with limited capital do not desire their money to be contracted away for long periods of time. There is no way to compel them to do it. It is necessary that they call in their capital often, reinvest it, and keep it in motion in order that large profits will come to them. I think it will not be controverted that there is not a single example in all the world of a successful land-mortgage system on long-time amortization and low rates that has ever succeeded without Federal aid, support, and confidence. Great strength is required. Great confidence must be ever present, and only the strong hand of a great government can afford this.

The different methods of Government aid are without uniformity, but in each case of a country having a rural credits system it has been present. There is a veiled recognition of the principle of Federal aid in the reserve act. This, perhaps, would be sufficient to serve as a precedent, but insufficient to be of immediate or substantial value to the farmers. Those opposed to any aid being accorded the American producer say with great unction and enthusiasm that if we give it to the farmer we must likewise give it to all others. Such logic does not appeal to me; such logic does not rest on a firm foundation; such logic does not call to its aid parallel cases for the American producer who produces, not alone to feed himself but something to feed his neighbor, hence this proposition stands on a basis totally different from any other avocation of life. When the producer is successful we are all successful; when the producer is success-

ful we are without want, but when the producer fails, want, famine, and disaster hovers about us. It may likewise be called to your attention that in cities and towns building and loan organizations have sprung up, and while they are not meeting effectually all of the necessities of small home owners, they are taking a long step in the right direction, and it may be reasonably be said that they are fairly well handling the situation there.

COUNTRIES WHERE FEDERAL AID OBTAINS.

Direct loans are made to purchasers and tillers of the soil by England, Russia, Denmark, Sweden, New Zealand, and some of the Australian Provinces.

Land mortgages are guaranteed by the Federal Government in the following countries: Austria, Switzerland, Norway, Egypt, Australia, certain Provinces of Mexico, Argentina, and Uruguay.

The following countries have by stock subscriptions made a rural credits system successful: Hungary, Roumania, Switzerland, Denmark, Norway, the Philippine Islands, and Chile.

The following Governments have loaned their funds to organized mortgage loan companies: France, Italy, Servia, Chile, and Japan.

It may be interesting to the student of rural or farm credits to know the tenure of these farm loans in foreign countries. It is interesting to observe that some of them run as long as 75 years, and in most cases amortization by partial payments is permitted. I think it is not too much to assert that in a few growing Republics, like our own, where our citizenship is alert, vigilant, and industrious, with fast earning capacity, a 75-year tenure would be more than is necessary. I do think, however, that the tenure of loan in a rural credit system should be sufficiently long to induce nonhome owners to become home owners at the earliest possible moment. I know many able statesmen, both in and out of Congress, shrink from launching their Government into paternalism, and they shrink from its constant encroachments. Nevertheless, a spirit of modern times demands that a Government do more for its citizenship than gather taxes from among them and preserve peace and order among its citizenship. This very Congress has appropriated for building railroads in Alaska; this and the preceding Congresses have appropriated money for the building of the Panama Canal, for the construction of a railroad across the zone, and the maintenance of steamship lines through the canal. This Federal Government has launched into the insurance business by setting about to insure cargoes of vessels on the high seas leaving this country for foreign ports, so our citizens might have their business and exports insured while on the ocean, and the Federal Government did this in the face of the fact that private capital shrank from the undertaking.

This Congress, or this House, has passed a bill appropriating about $35,000,000 for the purchase of ships to haul products to foreign lands. If we can do all these things, where more or less risk is attached in each case, can we in good conscience be heard to say that the land of the American farmer shall not be a basis of credit sufficient to invite cooperation, aid, and help from the Federal Government? Can the President of this 100,000,000 people, who has been constantly and without equivocation advocating this legislation we want enacted, now say that he will not give an attentive ear to the class that does not alone support himself but which feeds the world? Can this Congress by parliamentary pranks or tricks in conference fail to do the thing it has promised to do, fail to do the thing which is needed and demanded on every hand? No. I can not believe it and, if perchance such a thing does happen that our opportunity to secure rural credit legislation is lost, I anticipate that America's farmers will ask who is responsible for doing the thing that caused us to lose. They will ask, Which body did its duty, the House or the Senate? They will ask, Which conferee failed to do his full duty? They will ask if the President gave his aid or his hindrance to the accomplishment of a thing so universally desired. America's rural population does not, and I would not, ask for them Federal aid if it would launch us into difficulty; if it would endanger us or undermine the Republic we are sworn to uphold and protect, but such is not the case; we offer the Government the most staple security that can be found; we ask that the Government aid with safety, with propriety, with moderation, the same as every other civilized country in the world has aided its producing population.

Mr. Chairman and gentlemen of the Congress, I do not now try to say that all the bills offered by the several gentlemen are not well intended; I do not now nor shall I try to say that they are not hopeful of being of benefit to the citizens who sent them here; but, gentlemen of the House, we can not adopt undigested, unconsidered bills of such great importance in this hasty, haphazard fashion.

The only course open to us is to in an orderly manner perfect the amendment added by the Agriculture Committee onto the Agricultural appropriation bill, so that it will carry with it clear and well defined principles that the Federal Government shall, in one form or another, stand behind a rural credit system that will be of some real value to the American farmer.

The gentleman from Ohio [Mr. BULKLEY], a prominent and forceful member of the Banking and Currency Committee, has a very well considered Government-aid section in his bill that we can offer as an amendment to the so-called Hollis amendment, and we can really make a good bill of the Hollis amendment. The amendment is section 30 of the Bulkley bill, and those of us who believe in rural credits and Government aid are asking that it be added to the Hollis amendment now pending before the House. We, as friends of this legislation, must not scatter and vote hither and thither for this thing and that thing without knowing well what we do. We should set up ahead of us a goal and all pull together unitedly for it. If we support this bill or that bill, if we follow off after this idea or that idea, we lose force of purpose; we dissipate and emanciate our strength; and in so doing we hand a club to our enemies to depose us and, yea, not alone to depose us but to depose the American farmers. I ask such friends as I have in this House, and I ask the friends of rural credit, to work and cooperate with me for the incorporation of section 30 of the Bulkley bill in this amendment.

By so doing you will preserve a principle sacred to any successful rural credits system. By so doing you will, at least in part, be doing what each of the great parties promised in their platforms they would do. By so doing you will commit the Federal Government to a principle that the American farmer very much desires. We must not permit ourselves to be lost or destroyed by a maze of detail and difference of opinion. We must of necessity single out a cardinal principle that towers far and above all the rest, and work for it and pull for it. That principle is Federal aid, Federal backing, Federal confidence—in a rural credits bill.

Personally I am sorry the two Banking and Currency Committees did not bring in, in an orderly manner, long before this time a bill that would bring relief to the American farmers. [Applause.]

But it is almost idle and silly to talk of the ship that passed in the night. It is always selfish and an element of weakness to grieve over things and opportunities that have passed; and our position now is to be up and doing and to this day do what we can for rural credits legislation.

The friends of rural credit must not stop with this day's work; they must follow this legislation to conference and fight for it there; they must follow it to the Senate and fight for it there; they must follow it, if necessary, to the White House and plead their cause there. It is a necessity; it is desired; it is what the American farmers are entitled to. Let us of all parties, of all creeds, and of all views, join hands in the accomplishment of a thing that is eminently necessary and vital to the producing population of our great country. [Applause.]

Deliberations and Legislative Actions of the House of Representatives.

EXTENSION OF REMARKS

OF

HON. JEFFERSON M. LEVY,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. LEVY. Mr. Speaker, I do not claim to be gifted with the divine power of oratory, nor to have the readiness of speech and flow of words with which many of my colleagues are favored; but I have distinct views and strong convictions arrived at from a long legal and business experience in contact with men of affairs, and I have endeavored to use this experience for the welfare of the country, and to express these convictions when matters of moment were under consideration which did not appear to me to be conducive to this welfare.

I want to make a general résumé of the part I have taken in the deliberations and legislative actions of this body, and I trust that in this endeavor I may be pardoned for the necessary reference to personal views which have guided my action. I may not have always been right, but my action and my vote has

always been guided by the belief that I was, which the record as made and the future must determine.

TRUST INVESTIGATIONS.

I was opposed to the Steel Trust and the Pujo Money Trust investigations, claiming that they would prove disastrous to the country and would bring on financial distress. So far, I regret to say, my prediction has proven true. No good whatever was derived from these investigations. Both committees spent extravagant sums of money without securing any information beyond what was already known.

When proposals for these investigating committees were under discussion I then made a statement in the following words, which time and your own action in the reserve act has demonstrated to be true:

What we need is remedial legislation, not investigation. Our credit system is based upon stocks and bonds. What we need is a system based upon the principle of commercial paper.

CURRENCY LEGISLATION.

It has been said that political economy is not an exact science. We have had a great mass of suggestions, and a great variety of ideas submitted in the formation of the Federal reserve act. The monetary commission scoured the face of the earth in looking into the varying methods adopted by various nations for conducting commercial relations by means of banking facilities, and it employed experts of national and world-wide reputation to contribute out of their reflections or experience to the bank library, which, though a wonderful compendium of investigation and knowledge, will ever stand as a monument to its extravagance.

The Banking and Currency Committee called before them for examination the leading bankers of the country, the professors of economics from our universities, experts in financial and banking questions, business men from all the walks of life, and the Senate, through its similar committee, followed the example, prolonging these examinations for days and months.

The whole field of human endeavor, in the wide range of questions asked, was touched upon, and hence in the framing of the Federal reserve act the knowledge, the wisdom, the advice, and the forethought of the best minds of the country have been brought into action.

I consider the Federal reserve act a great piece of constructive legislation, evolved out of the necessities of our own times, and in keeping with democratic ideals and American development.

I am impressed, however—eliminating the details of the provisions of the act—with the succinct manner in which the few number of principles involved in its creation may be stated.

Unless, however, those in charge of the legislation had been well grounded in these fundamental principles, tenaciously held to, with the acumen and judgment to detect and point out fallacious interpolations offered without number, but probably with the best intentions, we should never have been able to put upon our statute books a law which will mark an epoch in financial legislation as the release from the concentrating power of unbridled wealth.

At the beginning of active consideration of this proposed legislation in the Sixty-second Congress, I had the honor to introduce a bill covering the subject (H. R. 27139), following it by remarks under date of January 11, 1913, explaining its provisions. I then stated unwise legislation to have been the cause of our financial troubles in these words:

The destruction of the bank function of note issue and the false assumption that debt represented by paper money is equivalent to coin.

I reintroduced this bill at the beginning of the Sixty-third Congress (H. R. 1937) and subsequently appeared before the House Banking and Currency Committee—February 28, 1913—explaining the principles which must be followed in any sound legislation, and I reiterated these principles in my remarks before this House August 5, 1913.

That it may be seen how they are followed in the Federal reserve act, I now recapitulate what I then stated as essential requisites.

1. To restore the bank function of note issue.
2. To remove from our statutes the evidences of fruitless efforts to create values by legislation.
3. To provide some reserve source of credit.

All of these requisites are followed in the Federal reserve act, though the methods adopted in following them do not conform in details to the provisions of the Levy bill.

I pointed out in my remarks of August 5, 1913, the variations in the methods adopted, and it is not necessary to reiterate these variations here.

I trust, however, that I may be pardoned for calling attention to the fact that some of the changes made in the Senate and adopted in conference followed the lines of my bill, and that the amendment to the Federal reserve act of August 4, 1914, hurriedly rushed through as an emergency measure, would not have been needed if my suggestion for the extension of the act of May 30, 1908, had been heeded.

As a method of providing "a reserve source of credit"—one of the essentials enumerated by me—I asked that the Aldrich-Vreeland law be extended by repealing the expiration clause, and at the same time removing therefrom the prohibitive-tax provision, and also the condition precedent that every bank should have an amount equal to 40 per cent of its capital in circulating notes outstanding before availing of its note-issue benefits.

The House committee declined to adopt the suggestions, and the bill as it passed the House contained neither provision. The Senate extended the operation of the Aldrich-Vreeland law, removing the prohibitive tax, but failed to alter the condition precedent as to the issuance of notes, and the bill thus amended received the sanction of the conference committee and became a law December 23, 1913. Before, however, the law became operative by its terms the amendment which passed both Houses and was approved August 4, 1914, was, in effect, adopting the identical suggestion I had made for the repeal of the requirement of an outstanding circulation of 40 per cent of capital as a condition precedent by allowing the Secretary of the Treasury discretion as to its operation, thus incorporating into the Federal reserve act, when it became operative, the extension of the Aldrich-Vreeland law, the removal of the prohibitive tax on note issues, and the suspension of the condition precedent, as I had originally suggested to this House.

Another suggestion I then made which was not incorporated in the bill was that there should be some limitation fixed by law of the liabilities of each bank in some proportion to its capital stock and surplus. I stated "that this is sound in principle there can be no doubt, as it fixes a point beyond which extension of credit facilities or expansion may not go." I then predicted "the time will come when it will be added to the Federal reserve act," and I call your attention to the fact that the Comptroller of the Currency, in his current annual report, though he probably never heard of my prediction, has already asked you to incorporate this principle into the law.

NEW YORK CITY.

In various speeches of mine before this body I have stated that every currency bill or financial measure which comes before this House for discussion is made the pretext for unjust attacks upon New York City. New York is characterized as the abiding place of all the evils that ever afflicted or ever will afflict this Government and as the home and refuge of all the enemies who seek to destroy the welfare of our Nation. But wherein lies the reason for these charges and calumnies? New York rejoices and glories in the prosperity which has come to every State in the Union, and her own prosperity is only the reflex of the advancement of the whole Nation. She does not hoard her wealth for selfish ends, but is constantly applying it to the betterment of the various sections of the United States seeking her aid.

She builds railroads and highways; she sells your securities and finds a market for your properties; she is the clearing port of a majority of the States; she is their market for supplies to be purchased from or sent abroad; she enlarges your local markets so as to bring the markets of the world at your disposal; she moves your crops and finds investment for money from East, North, West, and South; she does everything that brains can devise and activity can formulate for the advancement of our Union.

New York has always been helpful in her supremacy. She has been instrumental in furnishing the capital for all the large enterprises of the country. She has built our railroads and our steamship lines and has gathered from the uttermost parts of the earth the necessary capital for our wonderful industrial development. And when grim-visaged disaster has come to any section of our beloved country by flood, fire, or earthquake, what heart has shown that it pulsated more in unison to humanity's cry of distress than that of this noble and princely city, where I am proud to say I was born and reared?

INCOME TAX.

I was opposed to the imposition of an income tax. I thought then, and I think now, it was a bad political move. I sought to make the collection conditional on the needs of the Treasury, and the law operative only when the surplus funds of the Treasury reached a minimum amount. Any apparent deficit in the Treasury is primarily due to building of the Panama Canal from current receipts out of the general fund instead of selling Panama Canal bonds, as the law intended.

This great project is a valuable asset and should be represented by a bonded indebtedness, on which we pay interest, and the expense charge, if any, should be the difference between the

interest we pay, plus the cost of repair and maintenance, and the tolls we receive. Except for this application of current funds to permanent improvements, we should never have had need of an income-tax law or war-revenue measure, and our party would have been free from the onus of having passed this unpopular measure.

CLAYTON ANTITRUST BILL.

I was opposed to any additional legislation in the way of antitrust laws. I maintain that the Sherman law properly interpreted is sufficient to prevent any unreasonable restraint of trade, and I tried to have followed the decision of the Supreme Court in incorporating the word "reasonable" into that law by having it inserted in the Clayton bill.

It is with no little pride that I can point to the fact that prior to this time and prior to the decision of the Supreme Court referred to, I introduced a bill amending the Sherman Act by inserting the word "unreasonable" to qualify the prohibitions of that act, thus anticipating this very decision.

I maintain that the high cost of living is due to the restraint of trade produced by uncertainty in the interpretation of our laws with reference thereto, and that now, after 20 years, when our courts begin to give a reasonable construction to these laws, we add to this uncertainty by additional ambiguous legislation.

NATIONAL DEFENSE.

I have always been a consistent and persistent advocate of a greater Navy, and have at all times endeavored to render every possible assistance toward the proper maintenance of our military service. On January 21, 1913, when the final vote was about to be taken on the Army appropriation bill, I demanded a separate vote on the amendment which had been adopted in the Committee of the Whole, as follows: "*Provided*, That no part of this or any other appropriation shall be expended in payment for heat and light for quarters of officers who receive commutation of quarters." This separate vote overwhelmingly defeated this amendment—the vote being 84 yeas to 142 nays.

RAILROAD VALUATIONS.

I endeavored to have the physical valuation of railroads made under contract with suitable experts in order to save an enormous amount of useless expenditure by the Interstate Commerce Commission. I presented the bid of a well-known expert in such matters, offering to complete the work within five years for the sum of approximately $5,000,000, in order to demonstrate that it was both feasible and economical to have the work done by contract instead of in the expensive, indefinite, and interminable manner of prolonged examination adopted by that commission. I now call your attention to the fact that $2,500,000 has already been expended in these examinations, and that $3,000,000 is now asked for, thus consuming in two years a greater sum than the amount for which I demonstrated the work could be more intelligently completed.

Under the plan adopted the work has hardly begun, and at the same rate of progress will probably consume 25 years, at an expense of perhaps $50,000,000 or more. No one will maintain that there is anyone on the commission competent to make such a valuation, and that it must be arrived at in the end by expert opinion, so that my proposition was made to procure this opinion through undoubted expert knowledge on a competitive basis to produce the minimum of expense.

COTTON FUTURES.

While I have made many unavailing efforts to have my views prevail, as, undoubtedly, has been the experience of every other Member, it is a source of great satisfaction to me to know that in the matter of defeating the obnoxious features of the so-called "cotton-futures" bill I was somewhat instrumental. There is no class of men of higher integrity in the United States than the members of the New York Cotton Exchange, and the majority are men born and bred in the South. They handle millions and millions of business without the scratch of a pen, and their word is their bond.

As part of my remarks in opposition to the "cotton-futures" bill I had the good fortune to find and include therein a great speech, delivered in 1892, by Hon. Edward Douglass White, now Chief Justice of the Supreme Court, when he was a Member of the United States Senate. This speech, delivered in opposition to a bill which sought to abolish dealings in cotton options, was upon such a high plane and so covered the ground as to constitutionality and expediency from a business standpoint, as to show that the bill before us, in the provision I opposed, which was the practical elimination of the cotton exchanges by taxation, was unconstitutional and unfair.

LOAN-SHARK BILL.

I was the author of the amendment to the so-called "District loan-shark bill," limiting the rate of interest charges to 12 per cent per annum, which rate has now become the generally recognized maximum rate throughout the country.

INCREASED PAY OF POST-OFFICE LABORERS.

It is with much satisfaction that I recall the fact of my success in securing an amendment to the Post Office appropriation bill increasing the pay of watchmen, messengers, and laborers employed in the post offices throughout the country. This was only a tardy act of justice to men in humble positions who serve the country faithfully.

SALE OF PANAMA CANAL BONDS.

I urged the Secretary of the Treasury to recommend the sale of the $240,000,000 of Panama Canal bonds, even though 3 per cent would have to be paid, instead of pressing the war-revenue measure. At the time I called the attention of the Democratic caucus to the matter, but they refused to take warning The disposition of the Panama Canal bonds in this manner was the only proper way to raise additional funds instead of levying the war tax, which latter is a political mistake. The Republican Party blundered financially in suspending the sale of 2 per cent Panama Canal bonds. The bill authorizing the construction of the waterway provided that the bonds should be sold and the Treasury reimbursed. By neglecting to do this the Government thereby lost the opportunity of thus preventing the stress in the money market. It was never intended that the present generation should pay for the construction of the Panama Canal, but that the cost of the capital invested should be paid out of the receipts after the waterway was opened and as the earnings increased in the future the principal otherwise provided for. The failure to make the sale of Panama Canal bonds as the law directed has forced the income tax and war revenue measures upon us.

REGULATION OF NIAGARA RIVER ABOVE THE FALLS.

During the Sixty-second and Sixty-third Congresses I persistently opposed the bills introduced in the House which sought to deprve the State of New York of her rights in Niagara River above the Falls, and it is largely due to my efforts that no action has been taken on the matter in the House. During both the aforementioned Congresses bills have been favorably reported from the Committee on Foreign Affairs, but in each case I disagreed with the majority of the committee and filed minority views, for, in my opinion, the title of the Niagara River to its center and to the waters that pass over that portion of the river is in the State of New York and individual riparian owners. The use by the State or by the individual riparian owners is subject, first, to international regulation; and, second, to Federal regulation. My contention is, and has been, that the Federal Government has no right over Niagara River except for the purpose of navigation and national defense, and on January 16, 1914, I introduced a bill (H. R. 11756) in the House to give effect to the fifth article of the treaty between the United States Government and Great Britain, dated January 11, 1909.

Mr. Speaker, this is, perhaps, the last time I shall be given the opportunity at this session of addressing this body in a set speech. I have tried to promote the interets of my constituents to the best of my ability. I have resented the prejudice sometimes exhibited on this floor toward the great city from which I come, from those who, regarding it as the embodiment of wealth, have imagined that wealth could be accumulated only for selfish ends. In this they forget that the power which comes with great wealth brings with it responsibilities and duties which can not be ignored. Life is not worth living unless we can have the love and respect of our fellow men. This desire is the very fiber of our being, and so implanted in our natures as to be the very essence that distinguishes the human from the brute. A membership in this body is the expression and the evidence of this desire among each of us. So with wealth and power comes the ambition to be loved and honored by others—the desire to be considered great. And what is greatness? Only the measure of the estimate in which we are held by others. Greatness does not come from the gratification of selfish ends. Men are great because they are unselfish, because they do things to benefit others, for thus only can greatness come. But, Mr. Speaker, while I have the honor to number among my constituents some great men of wealth, and great because they do not work for selfish ends, I venture to say that excepting these few, my constituents will show as low a per capita of this world's goods as that of any Representative on this floor. I have, therefore, felt justified in resenting to the best of my ability the slurs which have thus ignorantly been sometimes made upon my great city, but I have no hard feelings in the matter.

I have made some, indeed many, strong friendships here on this floor and the other side of the Capitol, which I will cherish to the end of my days, and shall always feel a pride in the fact that I have been honored by my fellow men with the opportunity to make such friends, among really great men.

Panics and Business Crises.

EXTENSION OF REMARKS
OF
HON. MICHAEL J. GILL,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. GILL. Mr. Speaker, there is no difficulty in securing definite and adequate information and truthful knowledge concerning panics or business crises which have occurred during the last 50 years in this country. The current opinion of business men and historical writers of business cycles are numerous, but not hopelessly conflicting, especially when one has experienced these crises, met with the employer countless times in an endeavor to settle the difference between him and the employee, stood up against the furnace in highly-protective industry for 40 years, one necessarily becomes acquainted with the facts surrounding its inception, progress, and subsequent decline of business.

The great difficulty lies not in the mere determination of the facts themselves, but when once determined and singled out as significant, then comes the time for men in Congress to rise even to a greater task, not to allow their political affiliations or their own good judgment to be obscured by their passion or political hatred.

It is generally conceded that the chief economic crises or panics in American history are those of 1819, 1837, 1873, 1883, 1893, 1907, and 1913–14.

In some instances distinction is not made between panics and the general term "industrial depression." If the latter expression is included in the former term "panic," then the dates of these occurrences are numerous. At this time, however, I am desirous of enumerating and analyzing the panics, strikes, lockouts, and disturbances in the financial, industrial, and commercial world which have occurred since the Republican Party came into power in this country.

The most significant dates are 1873–1879, 1882–1885, 1891–1895, and from 1907 up to the present time. Industrial depressions are and have been contemporaneous in the manufacturing nations of the world. Many speeches have been made during the course of this Congress by Republican Members, on the Republican side of this Chamber, relative to the causes of those industrail depressions. With them I take issue, challenge their statements, and make assertion that since the Civil War there has not been a panic, financial or industrial depression but those occurring under Republican rule and under the highest protective tariff the country ever knew. I have tables to prove my statement, and place them in the RECORD at this time.

Have the Republican speeches been delivered with the purpose to end or remedy such evils of which they make complaint? Or have they yielded to political importunity to crystallize public sentiment and, by a wise direction of that force, overcome the present Democratic majority and defeat the men who have been guiding the destiny of the Nation so prudently in the past few years?

I have been a worker in this, our great country, for years, and a keen observer of the existing relations between him who employs and him who is employed. By a systematic effort I have sought the truth, and it is my desire to state a few of the conclusions resulting from this search. First, let me question you gentlemen on the Republican side of this Chamber. If, as you say, you have been levying a tax upon imports into this country in order that the manufacturer might be protected, I ask you, Why should it be wrong for the same power to legislate here in a way that the American workmen might not suffer? I, as a workingman, contend that you have not done so. On the contrary, you have legislated for the rich, legislated for the greedy, legislated for the powerful. You have sold laws to the corrupt, monopolized markets, you have monopolized opportunities, made money your god, and now you are bragging about it.

The Democrats have been successful in but three elections in the last 50 years—1884, 1892, and 1912. The Republican Party lost the political dominance because their administration effected a panic and caused much suffering in the land.

Before taking up each of the four great panics of 1873 to 1879, 1882 to 1885, 1891 to 1895, and 1907 up to the present time, I would like to make a few observations. Is it not a fact that during the past century there has been a conflict going on in all civilized nations by two opposing tendencies in human society—individualism and collectivism? Until the end of the Civil War individualism held its own while collectivism seemed to have flourished when the Republican Party came into power; in other words, from about 1870 to the present date. Now, it can be unmistakably said that we are living in the age of the "group." Individualism values highly the rights of the single person, but he in many cases when left unsupported, is not tolerated and is interfered with by the collective power of the land.

In the two years previous to 1872 trade revived, especially in the mechanical industries. The consumption of pig iron increased, railroad building reached the highest point thus far in its history, prices of construction materials advanced, and advances in the price of labor and strikes for higher wages were of frequent occurrence. The cost of finished construction likewise advanced from the spring of 1871 to the summer of 1872 from 50 to 100 per cent. This checked the volume of contracts so that they had almost ceased by the beginning of 1872. Railroad construction also dropped, and the production of rails started falling off in January, 1872, 21 months before the panic, and steadily declined from that time. (Industrial Depressions, Geo. H. Hall, pp. 149–150.)

From 12 months to 21 months before the panic of 1873 industrial depression set in. Within 12 months before the panic mechanical industries fell off, pig iron dropping $10 per ton, bar iron $39 per ton, and iron rails $10 per ton. (Industrial Depressions, Geo. H. Hall, pp. 149–150.)

THE ACT OF 1875.

Following the panic of 1873 imports greatly diminished, and during the next three years our foreign commerce showed a decided slump, failures increased, production lagged; in fact, the reaction was felt until the year 1878, when the tide turned.

THE TARIFF ACT OF 1883.

This act was the result of the work of a Republican tariff commission appointed the previous year. Mr. C. A. Arthur was President with both Houses of Congress Republican. Taussig calls this act—

a half hearted attempt on the part of those wishing to keep a system of high protection to make some concession to a public demand for a more moderate tariff system.

Previous to this period, beginning with 1878–79, the unprecedented amount of manufacturing and construction contracts placed at low prices kept the mechanical industries in a prosperous state well into the year 1882. Then depression came in that year and continued until 1885. The usual earmarks of depression were shown. Railroad building which had reached high water mark in 1882 fell off, the consumption of iron decreased, commerce lessened, bank clearings were lower, and immigration slackened.

The panic of 1882, when all the glass, steel, and iron industries were idle, was under a Republican tariff. The panic was caused by the very large crops in western Europe, decreasing the exports of American breadstuffs, large supplies from India, by way of the Suez Canal, being shipped into western European countries, and to some extent by short crops here at home and the prohibition fully or in part of American meats by some countries which resulted in a terrible injury to our exports in food products. These influences at that time crippled the sources of revenue of the railroads, from which salaries came, and in consequence the cessation of railroad building was augmented, whereby a large unproductive force had been thrown upon the country without a purchasing power to stimulate consumption, which was necessarily reduced to a minimum. Rapid immigration aggravated the many accumulated influences by a large surplus of labor, which also tended to reduce the purchasing power of the great masses of the people, and which reflected itself in the business of the small storekeeper and consequently to the injury of the manufacturer and employer. At this same time the decrease in Europe of American cotton helped to bring on stagnation in the southern section of our country. Thus the combined influences were the cause of a panic or a severe industrial depression was brought on under a protective tariff, Republican House and Senate, and nothing, in my judgment, up to this Congress has ever been instituted by the Republican Party which will prevent the recurrence, mitigate the severity, or shorten the duration of such calamities in the financial, industrial, and commercial world.

Permit me at this stage of the argument to copy from the speech delivered in this House by Hon. LAWRENCE B. STRINGER, of Illinois, on April 26, 1913, on the panic of 1893:

I appeal to history. I first assert that there has not been a protective-tariff speech made in this country since the year 1893 that has not been tuned upon what has been called the "Cleveland panic" of that year. I assert next that the so-called "Cleveland panic of 1893" was not a "Cleveland panic" at all, but was the Harrison high-protective tariff panic of 1891 and 1892, which was projected into the Cleveland administration, beginning in 1893.

Yet, despite this fact, the charges have been rung on this Cleveland panic falsehood for nearly 20 years. It has been thundered from the public rostrum, printed in the daily and weekly press, and pro-

mulgated in every section of the Nation. It has been echoed by political spellbinders, great and small, in every campaign, and there is not a hamlet in the width and breadth of the land where the street-corner protection advocate, driven to cover by his adversary in every argument presented, has not sneeringly rejoined that "you want to return to the Cleveland hard times of 1893."

Grover Cleveland was first inaugurated President in 1885, Benjamin Harrison was inaugurated President in 1889, and Grover Cleveland was inaugurated the second time in 1893. Benjamin Harrison's administration was thus sandwiched in between Cleveland's first and second terms.

It will be conceded that during Cleveland's first administration the country enjoyed prosperity to a noteworthy degree. Business conditions were good, trade was active, labor was employed, industrial troubles were substantially unknown, the public debt was reduced by nearly half a million, and when Cleveland retired, in 1889, there was turned over to Mr. Harrison, his successor, a Treasury surplus aggregating three hundred millions. This surplus furnished the political issue for the campaign of 1888, and on every stump the question of the day was, "What shall we do with the surplus now in the Treasury?" And this was the situation of things when Benjamin Harrison was inducted into office as Grover Cleveland's successor, in 1889.

EFFECT OF THE M'KINLEY LAW.

But, from the year 1889, when Mr. Harrison assumed the reins of power, business conditions took on a more somber hue. In 1890, during Harrison's second year, the McKinley tariff bill was passed, raising tariff rates all along the line. It was passed by a high-tariff Congress, signed by the President in due course of time, and enacted into a law.

On October 9, 1890, the McKinley tariff law went into effect. One month and two days after the New York Clearing House Association voted its certificates to its allied banks, admitted to be in dire distress, and six days later the Boston Clearing House did the same. On the same day the banking house of Barker Bros., of Philadelphia, failed for five millions. Two days later there was a run on the Citizens' Savings Bank of the same city, and a receiver appointed for the North River Bank. Five days later the Union Rolling Stock Co., of Chicago, assigned for seven millions. Six days later Jamison & Co., of Philadelphia, failed for two millions, and on December 6 the Oliver Iron & Steel Mills, of Pittsburgh, closed down, throwing 2,000 workmen out of employment, and Myer & Co., of New Orleans, failed with liabilities of two millions. This was the record of the first year of the McKinley high-tariff law and the second year of Mr. Harrison's administration.

The year 1891 opened up with continuing business disasters. On January 3 the Scottsdale Rolling Mills and the Charlotte Furnace Co., of Philadelphia, went to the wall, throwing out 10,000 workmen. On January 18 the American National Bank, of Kansas City, shut its doors, with liabilities of nearly three millions. On May 8 the Spring Garden National Bank and the Pennsylvania Trust Co. closed their doors. Business failures, which had increased to 10,000 in 1890, the first year of the McKinley law, increased to over 12,000 in 1891, and in the fall of 1892, just before Grover Cleveland was reelected for his second term, there occurred the bloody Homestead strike at Carnegie's Mills, which wrote the most awful chapter in our Nation's industrial history.

I pause here to advert that all this occurred under the operations of the high-tariff McKinley law and close upon the heels of its enactment, and I pause further to muse for a moment as to what a mighty volume of clamorous sound would arise from the cohorts of protection if the Underwood bill should face conditions at any time after its passage one-hundredth part as disastrous as those which faced the McKinley bill within 12 months after its enactment. It is safe to say that the sunset chorus of the wild jackasses on mid-Pacific isles would be like the murmur of gentle breezes in comparison to it.

In 1892, following the general run on the banks of the country, already described, gold began to disappear and go to Europe and the National Treasury was soon drained of its supply of gold. It was then charged, and has never been successfully denied, that this disappearance of gold was part and parcel of a general conspiracy, framed and carried into effect by sinister interests in the land, to force the hands of Congress to repeal the purchasing clause of the Sherman law.

CLEVELAND'S SECOND TERM.

Such were the conditions existing when Cleveland became President a second time in 1893, and such were the conditions which really caused his election in 1892. When he retired from power in 1889 he left prosperity general and diffused; when he returned to power in 1893, after four years of Harrison's rule, he found distress and disaster. He left the times good and found them bad; he left business flourishing and found it prostrated; he left conditions satisfactory and found breaking banks, closed factories, labor out of employment, and gold disappearing as if under a magician's wand. He left a surplus of three hundred millions in the Treasury vaults, but returned to find that surplus dissipated and gone and a deficit of fifty millions, which had to be met and met without delay.

To replenish the Treasury and meet the deficit which had been willed to him by a high-tariff administration preceding, he was forced to issue bonds. And these bonds issued by him were printed on plates that had been manufactured and engraved by order of Harrison's Secretary of the Treasury before Harrison went out of office, to be used by the Harrison administration itself had it been returned to power.

And yet despite these facts, proven by reference to history, either known or accessible to all, this falsehood of a "Cleveland panic of 1893," hoary with age, is brought out in every campaign to mislead the unwary, frighten the ignorant, and perpetuate a system of high taxation which aggrandizes the very rich at the expense of the very poor.

WHY NOT BE FAIR?

Why not be fair? Has not the time for cheap demagoguery passed by? The less informed may be pardoned for their omissions to state the facts, for they but echo the utterances of those higher in the party's councils. But those higher up know that the so-called "Cleveland free-trade hard times" were not Cleveland times at all.

The "Cleveland panic of 1893" did not exist; it was the Harrison panic of 1892. It occurred under high-tariff rule, with a high-tariff President and Congress in full control in every branch of Government and with the McKinley high-tariff law upon the statute books of the Nation. The hard times of Cleveland's first year, in 1893, was a legacy bequeathed to him by a high-tariff administration just relinquishing power. It was a cancer which former modes of living had produced upon the body politic of the Nation, and which required the surgeon's knife to bring about a cure. It was a foundling left upon the doorstep of the new administration, its natural parents having refused to father their own child.

Equally absurd is the claim that the Wilson tariff bill brought about these ills. The panic began in 1890 and 1891, reached its height in 1892 and 1893, and the Wilson tariff bill did not go into effect until the fall of 1894.

"It is difficult to explain," said Senator Dolliver, Republican Senator from Iowa, in discussing the tariff in the Senate of the United States, "how a panic which came in 1893 could have been caused by a tariff law which was not enacted until the latter part of 1894."

Neither can it be well said that the fear of lower tariff duties caused these hard times, for the panic was at its height before Mr. Cleveland was elected, and his election was due to the fact that times were so hard that the people desired and welcomed a change, and they voted the Democratic ticket to bring about the change of policies on the tariff question which Mr. Cleveland had advocated at all times.

SOME PANIC HISTORY.

Going one step further in this argument, the history of tariff legislation conclusively proves that the panics of the country have not occurred in low-tariff times; but, on the contrary, every panic through which the country has passed occurred under high-tariff administrations and under the full operation of high-tariff laws.

The great panic of 1869, which gave "Black Friday" to our history, occurred under the administration of President Grant, both Houses Republican, and the war-tariff taxes in operation to their full extent.

The panic of 1873, marked by the failure of Jay Cooke & Co., likewise occurred under the administration of President Grant, a Republican Congress, and high-tariff laws.

The panic of 1893 occurred with Benjamin Harrison as President, a Republican Congress, and the McKinley bill in full force and effect.

The money panic of 1907 occurred with Theodore Roosevelt in the saddle, a Republican Senate and House, and the Dingley bill doing business every day at the same old stand.

That a panic existed in 1907, I offer in evidence the declarations published in magazines and newspapers, at advertising rates, in the campaign just past, placarded throughout the Nation on billboards and walls in letters so broad and long that all could read, and which declarations were duly signed by the chairman and secretary of the national Republican committee in their official capacity. I note a few of these choice extracts:

"Only four years ago (1907), just before President Taft was elected, there was panic and misery. Capital was tied up in safe-deposit boxes; mills and factories were closed, because manufacturers could not sell the goods they made; empty freight cars filled the railroad sidings; farms were mortgaged; labor was hungry and desperate."

And again:

"When President Taft took over the Government the country was prostrate; industry was paralyzed; business was chaotic, uncertain, suspicious; millions were out of employment; investors, wherever possible, had withdrawn their capital; enterprise was dead. All this was the result of the panic of 1907. The rich man's panic, it was called, but do you remember any poor man who was not hurt?"

TARIFF ACT OF 1894 (WILSON BILL).

This tariff act was passed during the second administration of President Cleveland, 1893–1897, but did not meet with his approval, and became a law without his signature on August 28, 1894. The measure as passed by the House contained considerable reductions. This body had a greater Democratic majority than the Senate, in which it was very narrow. Many amendments were made to the bill in the Senate moderating the reductions made by the House. When the bill finally came from the committee of both Houses, it was found that the Senate arguments had prevailed, and it was passed in that form.

In June, 1893, a financial panic occurred, and again in April, 1894, another depression. Prosperity set in once more, however, and by September, 1895, industrial activity was greater than ever in the history of the country. The industry increased rapidly until December, 1895, when iron consumption, for one example, reached a consumption of 11,200,000 tons per annum rate. Trouble with Venezuela at this time changed the tenor of business and a reaction set in.

TARIFF ACT OF 1897 (DINGLEY BILL).

This act was passed in President McKinley's administration. Both Houses of Congress were Republican by a wide majority, and in the passing of the bill the high rates enacted by the House were confirmed in the Senate. The bill became a law on July 24, 1897. Like the act of 1890, the Dingley bill represented the aggressive spirit of protection. It remained in force for 12 years.

While this law was in effect there occurred a financial panic in October, 1907. Factories, furnaces, mills, and industrial machinery all over the country received a sudden check, and a great army of breadwinners was again thrown out of employment.

TARIFF ACT OF 1909 (PAYNE-ALDRICH TARIFF).

This bill was passed during the administration of President Taft, who had a majority of both Houses of Congress at the time the bill became a law. The act was supposed to be a "revision downward," but brought no essential change and was a thoroughly protective measure. It was, however, less aggressive than previous Republican measures.

The depression which had followed the crisis of 1907 continued after the passage of the tariff act of 1909. The Republicans who had claimed the good times of the decade beginning in 1897 were held equally responsible for the depression. They were hoist by their own petard. The Democrats, therefore, in the Congress of 1911–1913 obtained a majority in the House.

In the presidential election of 1912 the defeat of the Republicans was overwhelming.

TARIFF ACT OF 1913 (UNDERWOOD TARIFF).

Almost immediately after taking office President Wilson called a special session of Congress, which was now completely controlled by the Democrats, and passed a tariff bill by October 3, 1913. This act served to lower duties which had been prohibitory or abolished duties which had been nominal. The act aimed at a general revision of the high duties under the Payne-Aldrich tariff.

THE UNDERWOOD TARIFF LAW IN OPERATION.

As a revenue measure the Underwood tariff law fully justified the claims of its framers during the first fiscal year of its operation. The law went into effect October 3, 1913. On that date $85,500,000 had been collected from customs during the fiscal year 1914. It was estimated that during the remainder of the fiscal year ended June 30, 1914, that the new law would yield $184,500,000, making a total yield from customs for the fiscal year of $270,000,000. The revenue yield from customs was $292,000,000, or $22,000,000 in excess of the estimates.

The new revenue law eliminated the inequalities and abuses of the protective tariff system of taxation, reduced the customs rates to a sound revenue basis, placed maximum rates on luxuries, and minimum rates or none at all on the necessaries of life, and levied an income tax to more equitably adjust the tax burden and to make up the deficit caused by the loss in revenue from customs.

That the new tariff law produced during its first year more revenue than the Payne law, which it superseded, is shown by the following comparison of revenue receipts:

Items.	Fiscal year ending June 30—	
	1914	1913
Customs	$292,320,014.51	$318,891,395.83
Corporation and income tax	71,381,274.74	35,006,299.84
Total	363,701,289.25	353,897,695.70

IMPORTS UNDER THE NEW TARIFF ACT.

The hidebound protectionists have endeavored to create the impression that the imports under the new law have been enormous and likely to destroy the manufacturing industries of this country. The facts show that the total imports for the calendar year 1913 amounted to $1,792,596,000, as compared with $1,789,276,000 in 1914. The imports of manufactures in 1913 were valued at $753,689,000, as compared with $682,632,000.

Practically the only increase of imports under the new tariff law has been in foodstuffs and food animals.

The imports of glass manufactures in 1914 were valued at $6,864,000, as compared with $7,172,740. The following tables show the imports and exports of glass manufactures by items during the calendar years 1912, 1913, and 1914:

Imports of merchandise, by articles, quantities, and values.

Articles.	Twelve months ending December—					
	1912		1913		1914

[1] Includes imports from Albania.

If the Payne tariff law had been in operation during this world-wide depression of 1914 it would not have aided business any more than the Dingley law in the panic of 1907. With the Payne law in operation without the income tax during the European war the receipts from customs would have correspondingly less, the Congress would have been obliged to enact an emergency revenue that would have yielded about $70,000,000 more than the present emergency revenue measure.

If it had not been for the European war the Underwood tariff law would have yielded ample revenue to meet the expenditures of the Government economically administered. Under the present conditions the new tariff law will yield a greater revenue than the Payne law had it remained in operation, because, while the imports have fallen off under the new law with its lower rates of duty, the decline would have been far greater under the high and, in many instances, prohibitive tariff rates of the Payne law.

The new law has removed most of the arbitrary restraints imposed upon legitimate trade and commerce by preceding tariff laws, and is a measure drafted by the representatives of the people in the interest of the consumer and not in the interest of special classes.

APPENDIX B.

Important strikes in the United States 1877 to 1914.

Names of strikes.	Industry involved.	Date commenced.	Date ended.
Republican tariff act, 1875:			
General railroad strike (1877).	Transportation	June 27, 1877	Aug. 1, 1877
Leadville, Col., miners' strike (1880).	Coal mining	May 26, 1880	June 17, 1880
Republican tariff act, 1883:			
Telegraphers' strike (1883)	Telegraphy	July 19, 1883	Aug. 20, 1883
Wabash strike (1885)	Transportation		
Eight-hour day strikes (1886).	General	May 1, 1886	June 1, 1886
Burlington strike (1888)	do	Feb. 27, 1888	Mar. 15, 1888
Republican tariff act, 1890 (McKinley):			
Homestead strike (1892) [1]	Iron and steel	June 30, 1892	Nov. 30, 1892
Pullman car strike (1894)	Transportation	May —, 1894	July —, 1894
Bituminous coal strike (1894).	Coal mining	do	June —, 1894
Cripple Creek strike (1894)	Metal mining	Feb. 1, 1894	June 5, 1894
Democratic tariff act 1894 (Wilson):			
Leadville strike, 1897	do	June 19, 1896	Feb. —, 1897
Bituminous coal strike	Coal mining	June —, 1897	Aug.–Sept., 1897.
Republican tariff act 1897 (Dingley):			
Steel workers strike (1901)	Iron and steel		
Anthracite coal strike (1902)	Coal mining	May 2, 1902	Oct. 23, 1902
Colorado and Cripple Creek (1903–4).	Metal mining	Feb. 14, 1903	July —, 1904
Chicago packing-house, butchers (1904).	Meat packing		
Iron molders (1904–1907)	Molding	1904	1907
Printers 8-hour day strike (1905–6).	Printing		
Chicago teamsters strike (1905)	Teaming	1905	
Goldfield, Nev. (1907) [2]	Gold mining	Nov. 27, 1907	Feb. —, 1908
Republican tariff act 1909 (Payne-Aldrich):			
McKee's Rocks, Pa., strike (1909). [2]	Steel	July 13, 1909	Sept. —, 1909
Shirt-waist makers, New York (1909–10).	Clothing	Nov. 22, 1909	Mar. —, 1910
Bethlehem steel workers (1910–11).	Steel	Feb. 4, 1910	May —, 1910
Westmoreland coal strike (1910).	Coal mining	Mar. 4, 1910	July —, 1911
Cloak makers, New York (1910).	Clothing	July 6, 1910	Sept. 2, 1910
Shopmen's strike, Harriman Lines (1911).	Transportation	Sept. —, 1911	

[1] This was technically a lockout.
[2] Series of strikes and disturbances in which I. W. W. played a leading part.

Important strikes in the United States 1877 to 1914—Continued.

Names of strikes.	Industry involved.	Date commenced.	Date ended.
Republican tariff act 1909 (Payne-Aldrich)—Continued.			
Lawrence strike (1912) [1]	Textiles	Jan. 11, 1912	Mar. —, 1912
Paterson strike (1912) [1]	Silk	Nov. —, 1911	Dec. —, 1913
Michigan copper strike (1913–14).	Copper mining	July 23, 1913	Apr. 14, 1914
Paint Creek, W. Va., coal strike.	Coal mining	Apr. —, 1912	July 29, 1913
Colorado coal strike (1913–14).	do	Sept. 23, 1913	Dec. —, 1914
Democratic tariff act 1913 (Underwood):			
Indianapolis strike (1913)	Street cars	Oct. 31, 1913	Nov. —, 1913
Roosevelt, N. J. (1915) (fertilizer, Feb., 1915).	Fertilizer	Feb. —, 1915	

[1] Series of strikes and disturbances in which I. W. W. played a leading part.

APPENDIX C.

Strikes, establishments involved, strikers, and employees thrown out of work, by years, 1881 to 1905.

[Twenty-first Annual Report of the Commissioner of Labor, p. 15.]

Years.	Strikes.	Establishments.		Strikers.		Employees thrown out of work.	
		Number.	Average per strike.	Number.	Average per strike.	Number.	Average per strike.
1881	471	2,928	6.2	101,070	215	129,521	275

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. LUTHER W. MOTT.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915.

Mr. MOTT. Mr. Speaker, whether or not women shall vote is to be passed upon by the male voters of New York, New Jersey, Pennsylvania, and Massachusetts this fall. The debate in the House of Representatives in January was proof that the question can no longer be ignored. There are 91 electoral votes from the woman-suffrage States. These 91 votes would have changed the result of almost every presidential election. Last fall two Western States voted to allow their women the right to vote. This year it comes up in the Northern States for the first time. The Southern States are beginning to turn their attention to woman suffrage. Already the Legislatures of Tennessee and West Virginia have passed the suffrage bill. North Carolina and Alabama will soon consider it, while the women are campaigning in New Mexico, Texas, and Oklahoma. Two New England States—Vermont and New Hampshire—have introduced bills for presidential suffrage.

In the face of this situation the men of New York must give serious attention to the question. No longer will the legislature smother the demand for a vote. It is up to the men to decide the question this coming November.

There are a few facts which it is well to keep in mind and think about before one decides how to vote on the question of woman suffrage. In the States where only men vote, only about 65 per cent of them take advantage of their opportunity. In the equal-suffrage States, from 70 to 90 per cent of the women vote. One hundred and forty mayors of the four oldest suffrage States have signed statements saying that women voted in large numbers and that they were public-spirited. California, Colorado, Idaho, Utah, Oregon, and Washington, where women vote, give pensions to widowed, destitute women, that they may care for their children at home, instead of sending them to public institutions. The Legislature of New York, elected solely by men, is just beginning to discuss this question. Norway, Finland, Iceland, Australia, and New Zealand, after first giving women the vote on municipal elections and thoroughly testing this, have now given them full suffrage. The Australian Parliament almost unanimously declared that woman suffrage was an unqualified success in that country. In Denmark, Sweden, England, Ireland, Scotland, Wales, and nine of the Provinces of Canada women have the municipal franchise, and the Parliaments of Denmark and Sweden are just on the point of giving them full suffrage. No country, State, or community which has granted women any measure of suffrage at all has ever permanently taken it away. On the contrary, it has extended the right.

Voting, save when we have questions like constitutional amendments to be decided, is merely the way by which we choose those who are to make and to administer the laws. A man votes and looks after his business or profession just as well for having done so. A woman is fully capable of doing the same thing. Mrs. Howard Mansfield, of New York, president of the Equal Franchise Society, recently said:

> The trouble is that so many people confuse the issue. Suffrage is not a prohibition measure—thousands upon thousands of suffragists are not prohibitionists; suffrage is not a peace movement—thousands upon thousands who are not suffragists believe in peace; suffrage is not socialism—thousands upon thousands—Democrats, Republicans, Progressives—are suffragists and not socialists; and suffrage is not a plea for easy divorce, for, as Creel says, "there is not a case on record of a divorce arising from anything connected with the vote."

Suffrage is surely coming to the women of New York and the other States. It is just a question of time. Other classes of voters have had to wait to get the ballot, but they have never had to fight for it as the women have to do now. First of all, the right to vote went to the artistocracy, then it was extended in turn to the aliens, the laboring men, the negroes, and the Indians. Now the nonvoting classes of the population are made up of the criminally defective and the women. Shall we tie together these two and deny them both the right to vote?

Representatives in Congress from all over the country and representing all parties voted for woman suffrage when the vote was taken January 11, 1915. It has seemed to me that it would be of interest to take two or three sentences each from the speeches delivered by these Members. Accordingly I have gathered together some extracts from the debates of the day of the

vote on the amendment. The first two are by the party leaders. Others are by leading Representatives from the nonsuffrage States as well as by those from the States where the women have won their fight.

Representative MANN, of Illinois, the Republican leader in the House of Representatives:

I believe the time has come in this country where we must safely say to those who are in intimate relation with us all through life that "We ask you to help us in the management of the affairs of this great Nation, in the hope that we may make progress still greater in the future than we have in the past, in the belief that granting responsibility will bring new considerations to the great problems which we have to meet." And I feel that we are warranted in trusting in the good wife's judgment of the other half of humanity in a management of the affairs of our country.

Representative MURDOCK, of Kansas, the Progressive leader:

Mr. Speaker, I have watched for years the development of woman suffrage in my own State. I have discovered this interesting feature in all suffrage discussions: The ordinary American statesman will face courageously all of American womankind and refuse her the right and privilege of suffrage, but his courage absolutely fails him when his own wife demands it of him. I have heard men in my own State for years before the adoption of suffrage say that suffrage would merely double the vote and that the women would vote with the men. I have seen the same men by hundreds after the adoption of suffrage go to the polls and vote with the women.

Representative TAYLOR, of Colorado, a Democrat:

I look upon the recognition of women as citizens as being an act of simple justice; and I can not appreciate either the logic, common sense, or honesty of refusing to grant an act of simple justice to women merely because they are women. The present civilization will not much longer permit the physically stronger half of the human race to ignore the plain rights of the physically weaker half. The reasons why women should vote are the same as why men should vote, the same as the reasons for having a Republic rather than a monarchy.

Representative LINDBERGH, of Minnesota, a Republican:

Mr. Speaker, the ladies already have a moral and legal right to vote, and the only reason that they do not vote is because the other half, or nearly half, of the population is too selfish or has been too selfish to permit them to vote. It makes no difference what public sentiment may be upon this question, there is an absolute fundamental right in the women to vote. Not only that, but I believe the politics of this country would be very much improved and purified if they were permitted to vote.

Representative HULINGS, of Pennsylvania, a Progressive:

I have honestly tried to find some convincing reason against woman suffrage. There are many given, and here are some of them.

Perhaps the reason oftenest urged is that woman is afraid of mice and would make a poor soldier, and nobody ought to vote that can not bear arms. Now, two-thirds of the male voters, as soldiers, would not be worth the powder that would blow them up; so the ability to bear arms is not a requisite to male suffrage. Why, then, impose it upon women? The soldier is not as necessary to the state as the mother. You might as well deny man the right of suffrage because he is no good as a wet nurse as to deny woman because she can not bear arms.

Representative CAMPBELL, of Kansas, a Republican:

Woman has been equal to every duty that has been imposed upon her and to every responsibility she has assumed. The franchise will give her opportunities for good in the Republic, if what we have been taught and what we teach with respect to high standards of voters and voting is true. Woman will raise the standard in politics as she has raised and maintained the standard in every relation she sustains in life.

Representative KELLY, of Pennsylvania, a Progressive:

To-day the ballot is denied but one class of American citizens, and that class America's women. The scum and riffraff of the land, the unconvicted thief and thug, the moral leper, take their places at the ballot box as American citizens, while the womanhood of the Nation is pushed aside. Such injustice can not long endure, and no power of reaction can stop the final determination of America that as the ballot is not conditioned on race nor color neither shall it be conditioned on sex.

Representative SELDOMRIDGE, of Colorado, a Democrat:

We should give the ballot to woman because it will add to rather than detract from her usefulness to society and the Nation. Neither the State nor the Nation has taken any step to relieve her from the pressure of industrial life. We not only expect her to fulfill all the obligations that rest upon her by reason of her sex, but we compel her to endure the strain and stress of mental and physical competition with the other sex in order to support herself and those who are dependent upon her. If the Nation is not willing to provide for her release from this burden, she should at least be given the franchise in order that she may use it, as far as possible, as a means to alleviate and remove oppressive conditions of toil and environment.

Representative MADDEN, of Illinois, a Republican:

The people are supposed to make the laws for the people, but half of the people are excluded from that privilege. The laws of the land are enforceable against all alike, women as well as men. The women are neither above nor below the laws, but are subject in every sense to the laws of the land. This being the case, why should they not be permitted to help make the laws?

Representative LAFFERTY, of Oregon, a Progressive Republican:

The same men who are to-day opposing the extension of the right of suffrage to our mothers, our wives, and our sisters would take that same right away from our fathers, our brothers, and ourselves if they had the chance, unless we could show such property qualification as would seem to insure that we would vote on the side of property and against humanity.

The question as to which shall be paramount, the rights of property or the rights of humanity, comes up directly upon this resolution to give the right of suffrage to one-half of our adult population. Those who place the rights of property first are opposed to woman's suffrage. Those who place the rights of humanity first are in favor of woman's suffrage.

Representative BROWNE, of New York, a Democrat:

The occupations of most women are, and are likely to remain, principally domestic; but the idea that these occupations are incompatible with taking an interest in national affairs or in any of the great concerns of humanity is absurd as the fear once sincerely manifested that if those who work for their daily bread should be taught to read there would be no more work done in the world.

Representative STEPHENS, of California, a Republican:

The women of California are as beautiful, as accomplished, as entertaining as are their sisters in every other State of this Union. They make as winsome sweethearts, as lovable and loving wives and helpmates, and as good and God-fearing, home-loving, and home-making mothers as are to be found in any section of our country or in any part if the world. They are not less attractive as sweethearts, they are not less appreciative as wives, and they have gained rather than lost as home-loving and home-making mothers because of the right and opportunity to vote.

Representative BRYAN, of Washington, a Progressive:

Why is it that the American Federation of Labor is for suffrage? Why are the workers, both North and South, in favor of letting women vote? It is simply because they are compelled by economic conditions to work side by side with the women. Every woman worker in industry takes the place of a man worker. And these men who toil know that women must be taught to appraise rightly their own individual worth and responsibility. I recently visited Jacksonville, Fla., and I found there the State Federation of Labor of Florida for equal suffrage by official resolution. The same story is told in practically every Southern State as well as Northern State.

Representative STEVENS, of New Hampshire, a Democrat:

If elections were merely a fight between certain gangs of men for office, and that seems to be the view that some of my brethren hold, it would be a dirty game, and there would be no reason why women should enter into it. Politics is a dirty game when carried on by dirty men, and not otherwise. But politics is something far different. The activities of the Government, both State and National, are largely devoted to-day to matters of social welfare and domestic questions, many that used to be settled in the home, questions in which women are interested and well informed. We pass laws concerning the raising and health of children. Are women disqualified from voting on such subjects because they are mothers of children? We vote on questions dealing with pure food and pure fabrics. Are women disqualified because their "natural sphere" is in the home, cooking and sewing?

Representative MONDELL, of Wyoming, a Republican:

If the unanimous testimony of experience and the convincing logic of successful demonstration is to be our guide, there can be but one opinion as to the benefits to government and society through the granting of the franchise to women. From every American State, from every foreign people that have invited their women to participate in government, through the medium of the ballot, the testimony is all but unanimous, emphatic, and enthusiastic of the benefits and improvements to government and society which have followed and attended this extension of the franchise.

Representative FALCONER, of Washington, a Progressive:

The desired vote will come to the American women, and for the sufficient and persistent reasons that there are 9,000,000 wage-earning women in the United States; there are 1,750,000 children working in the mines, factories, and mills in the United States; there are 30,000 women over 65 years of age earning their own livelihood in the United States; there are women working in all trades and professions in our industrial United States; there are 390,000 women out of 490,000 teachers in the schools and colleges of the United States; there are over 1,000 suffrage associations in the United States; there are millions of people outside of these associations who have indorsed the movement; in practically one-half of the territory of the United States suffrage now exists. One-fourth of the States, including Washington, Oregon, California, Idaho, Nevada, Wyoming, Colorado, Utah, Arizona, Kansas, Montana, Illinois (partially), and Alaska have granted suffrage.

Representative HOBSON, of Alabama, a Democrat:

There is but one real question to ask: Would the giving of the ballot to woman tend to lower her average standard of character? Would it tend to take her from the home and have her no longer the differentiated repository of the spiritual life of the race? The testimony from all Members from suffrage States is directly to the contrary. I have not yet found anyone who has seen the franchise exercised in any equal-suffrage State—I have yet to find one man from a suffrage State, in politics or out, who said it tended to lower the character of woman to have her exercise the ballot.

Representative FESS, of Ohio, a Republican:

Her participation will be an advantage to the public. The numerous questions with which we have battled unsuccessfully will appeal to womanhood in a deeper sense than to manhood. Were she a power in lawmaking and enforcing there would be less irresponsible utterances about the futility of the Nation doing this or doing that. I need not enumerate. Men say the people do not want to extend the electorate. It is too much extended now. They cite the votes of several States against suffrage. I care not how many men have voted against extending this power to woman. Why should I say that any woman should not have that power? The women have not been heard on it. If only one woman claims the right to vote, upon what grounds do I justify myself standing up declaring she shall not have the right? Who gave it to me? Who denied it to her? Why to me? Why not to her?

Representative EVANS, of Montana, a Democrat:

It has been suggested that equal suffrage would increase the number of electors who are poorly qualified mentally to exercise this right. In answer I wish to say that more girls than boys attend the public schools and, in my judgment, are as well educated as men, and the statistics show that of the criminals of the country only one of every twenty is a woman. And I think that everyone will admit that if the women of the country had a voice in the making of the laws they would take as much interest and exercise as wholesome an interest in the enforcement of the law as does the man. To those who believe that the woman's social sphere is in her home I am in perfect accord, and yet I indulge the be-

lief that the few hours devoted to the casting of the ballot would not deprive the home of the presence of the woman to any material extent. And with the influence and exercise of that ballot the home would be very much better protected.

Representative FARR, of Pennsylvania, a Republican:

We say that good citizenship is based on intelligence and morality. The women have both those qualities, and we need to give them the opportunity to use them in the affairs of government. We may rest assured that they will not vote against their home or their children, and, as a rule, for right and justice, to make conditions better and to help those who need help. As for the sturdy oak and clinging vine theory voiced to-day by those opposed to women voting, we know that in times of trouble, adversity, and distress, when real courage and faith and wisdom are necessary, very frequently the sturdy oak is the woman and the clinging vine the man.

Representative REILLY of Connecticut, a Democrat:

The priceless jewel of motherhood is her manly son. Can not you trust a mother to make laws to best govern that son?

In times of trial and tribulation the comfort and advice of woman is sought and given to man; as she helps and sustains him, so can she help and sustain the Government by her vote.

There would be no dirty politics were pure, clean women the politicians. The law-abiding, decent man engaged in any business has no need to fear the power of suffrage in the hand of woman.

The rights of the States will never suffer by reason of voting women, but the wrongs of many will be righted.

Representative BAKER, of New Jersey, a Democrat:

If it is true that half of the adult people of the United States have no voice in making the laws under which they live nor adjusting the revenues to which they must contribute, how do we account for our slogan of "Equal rights to all, special privilege to none"?

We have always declared in words that glitter and gleam, "Taxation without representation is usurpation," and yet we deny to women a single word in making the rates and levies through which we compel them to pay hundreds of millions in taxes annually.

Our duplicity outshines our consistency, overmasters our delicacy, and obliterates the last vestige of justice.

Representative KEATING, of Colorado, a Democrat:

We were told that if we gave the women the ballot our homes would be destroyed. And yet, my friends, the homes of Colorado are intact to-day. Our women have not become truculent amazons; our churches are still maintained and are full of worshipers; our schools are in operation and are overflowing with rosy-cheeked youngsters. In fact, my friends, none of the dire predictions made by the opponents of woman suffrage has come to pass.

Pneumatic Tubes in the Postal Service.

EXTENSION OF REMARKS

OF

HON. VICTOR MURDOCK,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. MURDOCK. Mr. Speaker, inasmuch as the contracts for pneumatic tube postal service, maintained in six cities of the country, expire June 30, 1913, and the question of their purchase by the Government is likely to be at issue soon, I desire to put before Congress my views upon that proposition as embodied in a report recently made by me as a member of the Pneumatic Tube Commission. The report is as follows:

PNEUMATIC TUBE POSTAL COMMISSION.

I submit the following report as a member of the joint commission of the Senate and the House of Representatives appointed under an act of Congress approved August 24, 1912, to investigate the feasibility and desirability of the Government purchasing and operating the equipment for pneumatic-tube service in the cities in which such service is now installed.

The commission held extensive hearings, employed engineers to determine the physical condition of the properties and accountants to ascertain their value. On October 24, 1914, Senator SMITH of Georgia and Second Assistant Postmaster General Stewart made a report recommending that the Postmaster General be authorized to negotiate for the purchase of the tubes, the purchase to be approved by the two Committees on Post Offices and Post Roads of the Senate and the House of Representatives. Mr. FRED L. BLACKMON, a Representative from the State of Alabama, the only other member of the commission besides myself, made a report at the same time declining to join in a recommendation for the purchase of the tubes.

I do not believe that a purchase of these tubes by the Government would be warranted by the facts.

I am not only opposed to such purchase, but I also believe that certain parts of the present tube service should be discontinued.

HISTORY OF MOVEMENT FOR GOVERNMENT SERVICE.

The pneumatic-tube service made its first appearance in the postal service in 1893 in Philadelphia. It started with a congressional appropriation of $10,000 for experimental purposes, after the construction of the tube had begun in Philadelphia. The promoters of the tube, under the easy optimism of that period, had entered the field apparently in the belief that it would develop rapidly into a profitable proposition. The United States Government, the tube's only customer, was accounted in those days a most liberal patron. Tube construction in Boston and New York followed, and by 1898 the system had reached in those cities and in Philadelphia a total length of 8 miles. The annual rate of pay had mounted to an average of $28,830 per mile. In the same year the Congress ushered in a new era in pneumatic-tube history by absolutely prohibiting any new contracts for this service.

From the day of this prohibition, which continued until June 30, 1901, there has been a growing desire among the owners of these tubes to sell them to the Government. In later years it has waxed to an anxious desire to have the Government take them over. With considerable regularity commissions have been appointed to inquire into the desirability of Government purchase. The congressional commission which investigated the question of railway mail pay in 1900 had recommended the discontinuance of the tube service. The commissions which followed, however, never reported this decision, but recommended not only operation but extensions. A commission in 1901 introduced for the first time the idea of desirability of Government ownership. Its qualification was that the Government should purchase the tubes whenever the system had passed the experimental stage. In 1905 a commission reported in favor of the extension of the system. In 1908 another commission investigated the desirability of Government purchase, and withheld a favorable recommendation because mechanically the tube service appeared to be still in an experimental condition.

In the meanwhile the question of the tube service had been a matter of yearly controversy in Congress. The rate of pay was of a magnitude to challenge easy attack, and the benefits of certain portions of the service, undeniably actual, were difficult of effectual presentation in debate. In 1902 Congress, in terms of prohibition upon the Post Office Department, forbade a payment in excess of $17,000 a mile per annum and fixed an arbitrary limit of the total amount which could be expended. Contracts were made for tube service in Chicago and St. Louis, the total mileage contracted for in these two cities and New York, Boston, and Philadelphia reaching 49. In 1905 Congress permitted the extension of tube service to the cities of Baltimore, Cincinnati, Kansas City, Pittsburgh, and San Francisco. Contracts for these extensions were not secured.

In 1912 the present commission was authorized by Congress to investigate the desirability of Government purchase of the tubes, the total mileage of which is now 55.49, which calls for an annual expenditure of $943,408. The present contracts expire June 30, 1916.

THE UTILITY OF THE TUBES AND THEIR LACK OF IT.

Any considerable survey of this service as it stands to-day brings out strongly two features—

First. The difference of degree of utility of the tubes in sections where the mail is heavy and where, comparatively, it is not heavy.

Second. The undeniable advantage of larger tubes where the mail is heavy.

To take up the first feature and explain it: The carriers can be dispatched through the tubes at the rate of four a minute—that is, the maximum efficiency of the tube is a dispatch of a carrier every 15 seconds in each direction for 20 hours a day. For the most part, because of the size of the carriers, mostly 8 inches in diameter, only first-class mail, letters, is forwarded in them. The table given below will show the percentage of the tube capacity utilized in 1913:

	4.5 to 10 per cent.	10 to 20 per cent.	20 to 30 per cent.	30 to 40 per cent.	40 to 50 per cent.	50 to 60 per cent.	60 to 70 per cent.	Length of tube.
	Miles.	*Miles.*	*Miles.*	*Miles.*	*Miles.*	*Miles.*	*Miles.*	*Miles.*
Boston	1.43	2.03	1.24	0.47	0.87	0.73	.....	6.7740
New York	.....	6.11	4.12	6.80	4.78	2.58	1.39	25.7810
Brooklyn	1.35	.....	.....	.....	.....	.....	.....	1.3500
Philadelphia	3.39	5.88	.....	.....	.....	.72	.....	9.9999
Chicago	4.54	2.04	.....	.....	1.67	.82	.55	9.6017
St. Louis	.55	.....	1.43	.....	.....	.....	.....	1.9880
Total	11.26	16.06	6.79	7.27	7.32	4.85	1.94	55.4945

It will be observed that on 11 miles of the total of 55 miles operated a minimum of mail is forwarded—that is, under 10 per cent of the capacity of the tube is utilized—while on 1.94 miles only, 3½ per cent of the total mileage, is the tube used from 60 to 70 per cent of its capacity. Of this latter 60 to 70 per cent of capacity utilized, 1.39 miles is New York City. In

the instance of the lesser utilization the first-class mail offering for transmission is not sufficiently heavy to keep the tubes busy during the period of time they can be operated, and to accomplish the expedition of a mass of mail which an expenditure of so large a rate as $17,000 a mile must contemplate. For the warrant for the postal use of the tube is necessarily the quick dispatch of an amount of mail so great that the tubes, service in which is not paid for by the amount of mail transmitted but for their use, shall not be idle. This is the more clearly seen when the tubes in the busy section of New York are examined. For here the use of the tubes offers the best defense of the Government's present expenditure and opens the way for a valid demand for their retention in the postal service. For in the 8-inch tube between the busier stations in New York City, at certain hours, the utilization of the tubes is complete, and some first-class mail must be dispatched by other means. In Boston, Brooklyn, and St. Louis the tubes apparently are capable at all times of accommodating all first-class mail between tube stations. In New York, Philadelphia, and Chicago the amount of first-class mail which is transported by other means is shown in this table:

Place.	From—	To—	From (hours)—	To (hours)—	Pieces of first-class mail dispatched by other means.	
					Number.	Per cent of number dispatched by tube.
			P. m.	P. m.		
New York	General post office.	Madison Square	6.30	7.30	97,880	1.33
			[1] 4.38	8.58		
			[2] 12.48	4.00	270,625	17.50
Do	Madison Square	Grand Central.	[1] 6.00	7.30		
Do	Station F	Madison Square	4.00	8.00		
			[1] 1.00	4.00	85,833	11.66
Do	Hudson Terminal.	General post office.	[1] 4.30	9.18		
			[1] 1.40	9.18	1,173,807	34.50
Philadelphia.	Bourse	Central post office.	6.00	7.00	26,575	3.80
Chicago	General post office.	Illinois Central.	[2] 7.00	[3] 8.00	21,600	12.84
Do	do	La Salle	[2] 7.00	[2] 9.30	129,600	19.50
			6.00	9.30	172,800	30.00
Do	La Salle	Union	[3] 7.00	[3] 10.00	206,900	28.59
			6.00	10.00	245,700	36.36
Do	Union	Canal	6.00	10.00	175,500	31.01

[1] Daily except Saturday and Sunday. [2] Saturday. [3] A. m.

The figures in this table in revealing the inadequacy of the tubes at certain hours in areas of congested mail leads directly to a consideration of the second feature which a study of this subject evokes—the advantages of larger tubes where the mail is heavy.

THE ADVANTAGES OF LARGER TUBES.

At least two former commissions, in reviewing the question of Government purchase, referred to tube service, mechanically, as in an experimental stage. There has been for years a quite general belief among students of this question that eventually the mechanical practicability of larger tubes would be demonstrated to a point where they would supersede the smaller tubes. It would seem that this development is virtually certain to come. An 18-inch tube which runs between the Capitol and the House Office Building in Washington adds to this probability in the minds of those who have seen it in operation. If the Government is to embark in the ownership of the tubes, and the larger tubes are to be available, the Government should have the larger tubes in the areas of greater mail congestion. The larger tubes would move all the first-class mail, and when it was accommodated could take care of the other classes of mail not now accommodated by the smaller tubes. Emphasis is given to this consideration by the fact that the units of mail carriage are the sack and the bag. The bulk of mail is now broken in the dispatch through tubes. The larger tubes would carry the mail in bulk and to a degree the element of expedition by that means increased.

I am therefore convinced that if the Government proposed to construct its own tubes, based on the needs of the service, it would adopt larger tubes than it now uses in congested areas; that it would reproduce 8-inch tubes, if at all, only when the volume of mail offered made possible the utilization of a higher percentage of capacity combined with the necessities of rapid dispatch than we now find in many of the tubes.

TUBES IN SERVICE WHICH SHOULD BE DISCONTINUED.

This brings me to a consideration of those tubes which are utilized to a minimum of their capacity. The Government certainly would not build tubes when the percentage of utilization promised to be so low that the acceleration of a comparatively small amount of mail would be the sole consideration. The Government should not purchase, under any consideration, lines of this character now in existence. And it would be commendable administrative action to discontinue the present use of them.

I will illustrate by the citation of two lines of tubes, one between Southwark and Station D, Philadelphia, and another between Roxbury and Uphams Corners, Boston.

The line between Southwark and Station D, Philadelphia, is 0.872 mile in length. This tube is used to 4.5 per cent of its capacity—that is, 4,800 dispatches could be made in 20 hours on 15 seconds headway. In March, 1913, the carriers sent in one day were 216. The postal revenue at Station D June 30, 1912, was $32,796.74. Station D is also served with mail by trolley and wagon.

The line between Roxbury and Uphams Corner, Boston, is 1.43 miles in length. The tube is used 5⅛ per cent of its capacity—that is, out of the 4,800 dispatches that could be made in 20 hours on 15 seconds headway from Roxbury to Uphams Corner 248 carriers were sent in one day in March, 1913. The postal revenue at Uphams Corner station June 30, 1912, was $38,193.39. This revenue seems pitiably small when it is remembered that tube service is at the rate of $17,000 a year.

Other instances could be cited. I consider it a rank injustice to the Government to expend this amount of money annually upon an expedition of so small quantity of mail, and in these and in similar cases the department should discontinue the service, and if the department does not Congress should expressly prohibit payment for it. Certainly the Government should not purchase tubes of this nature.

The defense of the use of these tubes—that they are feeders—is based on a specious argument. It could be argued with equal grace that tubes could be extended into rural districts because they would add to the volume of the mail. The essential element for the warrant for the use of pneumatic tubes in the Postal Service is found in the magnitude of the volume of mail to be expedited. If there is to be a warrantable use of pneumatic tubes, at a rate of $17,000 per mile per year, then the Government must have a sufficient quantity of mail offered at a station to make its expedition by tube economical service.

METHODS OF MEASURING TUBES.

In this connection I gathered during the investigation that in measuring the tubes to arrive at the mileage for which annual payment is made that the lateral tubes through which power is furnished is included in the length. While this addition may not be great, the annual rate of pay is high, and the Government should not be charged for this tubing, which is merely a part of the operating plant. In one station in New York—Madison Square—it seemed considerable.

FORMULA FOR VALUATION.

If any of the tubes are to be purchased, the greatest care should be exercised in fixing a basis of valuation. The following table will show the cost of construction claimed and reported by the tube companies and the engineering experts and accountants employed by the commission:

Cost of production to Dec. 31, 1912, and of duplication.

	Length.	Total cost claimed by companies.	Cash cost of construction, etc., as claimed by companies.	Cost of construction as reported by American Audit Co.	Estimated cost of duplication.	Estimated cost per mile of duplication.
	Miles.					
Boston	6.77	[1] $422,408.06	[1] $384,418.12	$380,238.12	$426,762.00	$62,704
New York and Brooklyn	26.52	[1] 6,527,046.45	[1] 5,511,645.38	3,244,648.30	2,363,439.00	87,151
Chicago	9.60	[1] 1,002,960.39	[1] 614,482.19	905,188.76	653,318.87	68,042
St. Louis	1.94	[1] 275,121.99	[1] 108,856.95	149,489.11	123,000.00	62,000
Total	44.83	8,227,536.89	6,619,402.64	4,679,564.29	3,566,519.87	.....
Philadelphia	10.00	[2] 2,006,575.14	[2] 643,000.00	1,123,000.00	724,000.00	72,400
Total	54.83	10,234,112.03	7,262,402.64	5,802,564.29	4,290,519.87	.....

[1] Reported by Mr. Fry. [2] Reported by American Audit Co.

One of the plans proposed for arriving at the value of this system was to take the cost of construction, the cost of reproduction, and the going value and to take an average of the three. Before this formula for valuation is used as a basis of purchase recourse should be had to the later studies in the elements of valuation of the Interstate Commerce Commission.

TUBE ADVANTAGES, FANCIFUL, AND ACTUAL.

Frequently argument is made by the champions of the pneumatic-tube postal service that it has certain advantages which investigation proves do not exist in fact. An early contention of the enthusiasts, for instance, was that the tube service would supersede mail carriage by wagon to such a material degree that the tube service could be accounted a measure of transportation economy. The cost of the tube service is so large that this element of economy can not be seriously considered. Mail between tube stations is still carried by wagons. And while the prime advantage of the tube is expedition, in certain instances the slower wagon has its advantages over the tube in dispatch because of the limited capacity of the latter. That is, if two quantities of mail are dispatched between given points, one by wagon and one by tube, if the volume of the two bulks is large, all the mail dispatched by wagon will reach its destination before the last of the mail sent by tube reaches the same destination.

Another claim made for the tube service which can be accounted hardly of moment when an expenditure of $17,000 a year is considered is that greater security is afforded the mail in transit from place to place by the tube than by means of surface transportation. The loss in the transportation of the mails is not considerable in any event, but the tube mail is as much exposed to loss at dispatching and receiving stations as is the mail transported by wagon or trolley.

Still another contention by the advocates of the Government purchase of tubes is that Government operation would be more economical than is operation under the present contract system. This is an altogether ambitious hope which no facts or figures can be adduced to sustain. The Government owns one tube in New York City now, a tube running to the appraisers' stores. Its construction was not warranted by the needs of the service and its operation is not economical.

The actual advantage of the tubes is the acceleration of dispatch of a certain portion of the mails. There can be added to this advantage, warrantably, the fact that the tubes are available at all times and are not subject to the delays from weather conditions which occasionally block surface transportation.

The pneumatic-tube service therefore, in my view, is a defensible auxiliary for the rapid transportation of mails in those areas of mail receipt and dispatch where the volume of mail utilizes a considerable capacity of the tubes, and it is not defensible as an auxiliary for that purpose in areas of mail where the volume of mail utilizes an inconsiderable capacity of the tubes.

In those areas of heavy mails where it is defensible the tube service is still in an experimental condition and is, in my opinion, only in the earlier stages of capacity development.

CONCLUSIONS.

In view of these facts I have reached the following conclusions:

It is not desirable that the Government purchase and operate the equipment for pneumatic-tube postal service which is now installed in various cities.

It is desirable, as it would be just and economical administration, to refuse to renew all contracts for service where less than 10 per cent of the capacity of the tube is utilized.

VICTOR MURDOCK.

The North Pole Aftermath.

SPEECH

OF

HON. SIMEON D. FESS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. FESS. Mr. Speaker, I would not take notice of the pretensions of Dr. Cook were they limited to a mere newspaper publicity campaign, but in view of the fact that some material in the interests of his North Pole contentions has been incorporated in the CONGRESSIONAL RECORD during the present session, much of which is misleading and some with no basis of fact, and which he appears to be using as an advertisement in furtherance of his activities upon the vaudeville stage by attempting to give the impression to those unfamiliar with our procedure here that his polar claims are under investigation by Congress and receiving its serious consideration, I as a member of the Education Committee before which his representative appeared, propose, as a guide to the unwary and in the interests of historical accuracy, briefly to outline what has occurred that there may hereafter be no warrant, without gross perversions of fact, to continue to use Congress as an accessory to his advertising propaganda, and as a result of which he has already succeeded in misleading some most excellent people, who, without themselves investigating the facts have been impressed by his plausibility. And I shall also at the same time—as we are all so prone to forget—incorporate a few of the salient facts with which we were once all familiar, but which may have escaped the memory of some.

AMERICAN HISTORY MUST NOT BE PERVERTED.

And in what I am about to say I shall voice my sentiments not only as a Member of Congress, but in the spirit of an educator—a college president, a teacher of history, and as a citizen jealous that there should be no perversions of our American history. I may add that while Dr. Cook has called upon me, and both he and his representative have pressed his claims upon my attention, it has never been my privilege to meet Admiral Peary. Therefore I do not speak from the standpoint of personal friendship for the discoverer of the North Pole, but I honor him for the luster he has shed upon the American Nation by his achievements, and trust that a clear statement of the case will aid in preventing further misrepresentations (such as the latest, to the effect that the Congress is investigating Dr. Cook's claims) and may lead those who are not experts in Arctic matters and not familiar with the facts to remember that it is well to be upon their guard lest, as has recently been said, "the skill and acumen of a practiced faker" be at work—qualities that are subtle and not always readily discernible.

PEARY'S POSITION UNQUESTIONED AND UNASSAILABLE.

The public mind should be refreshed at this juncture. Peary's journey in quest of the North Pole and to make polar soundings and tidal observations was undertaken with the sanction and full approval of the President of the United States and of the Navy Department; indeed, he went to the Arctic under the direct orders of the President as Commander in Chief of the Navy. The Congress more than four years ago thoroughly investigated his journey and records and by formal act extended to him the thanks of Congress for reaching the North Pole, and by authority of the same act he was raised to the rank of rear admiral. Peary appeared before the congressional committee which took the testimony and was examined at great length concerning his trip, observations, records, etc.

The report of the committee presented January 21, 1911, was unanimous that Peary had reached the pole. It is, however, particularly deplorable that through false and misleading newspaper reports resulting from Dr. Cook's press propoganda he should from time to time succeed in linking his name with Peary's and thereby in the minds of a part of the unthinking and uninformed public create the impression that there was a possible question about Peary's attainment of the pole.

THE REPORT OF THE CONGRESSIONAL COMMITTEE.

For the report in full of the congressional committee investigating the matter of Peary's successful trip to the North Pole see House of Representatives Report No. 1961, third session Sixty-first Congress, from which I shall excerpt a few salient paragraphs.

PEARY REACHED THE NORTH POLE APRIL 6, 1909.

The committee after reporting that "Robert E. Peary reached the North Pole on April 6, 1909," declared:

> Your committee have come to the above conclusion after a careful examination and hearing by the subcommittee extending over several days at which Capt. Peary appeared in person and gave important testimony submitting all his papers, original data, daily journal kept by him during the journey and notes of astronomical observations and soundings, etc.

Continuing, the report set forth:

> Your committee also heard—
> The report of the National Geographic Society of Washington;
> The report of the president and one of the board of governors of the Royal Geographical Society of London, which society, through its official computer, had made an independent examination of the data and proofs;
> And also a report from Hugh C. Mitchell and C. R. Duvall, expert computers of astronomical observations, from the Coast and Geodetic Survey of the United States.

As to the ability of Messrs Mitchell and Duvall, Mr. O. H. Titmann, Superintendent of the United States Coast and Geodetic Survey, testified that they were professional computers employed by his bureau, and that, speaking as the head of the bureau, he was of opinion that they were "unsurpassed anywhere in ability or experience"; that he considered them "unsurpassed" not only in that bureau, but "in that line of work anywhere." See pages 134 and 135 of the testimony reported by the committee.

The committee in their report declared:

These reports of the American and British societies and of Messrs. Mitchell and Duvall of our own Coast and Geodetic Survey are submitted in full in the printed report of the hearings had before your committee.

These hearings established the fact that Peary reached the North Pole on the above-named date in pursuance of a well-defined and carefully laid plan which he had been able to formulate as the result of more than 20 years' Arctic experience and which he was able to carry out because of an indefatigable earnestness and singleness of purpose.

As a result of this plan, when he reached out over the Arctic Sea, as had been done by other explorers—Nansen, Cagni, Greely, Lockwood, Markham, and others—and came to a point beyond where they had turned back, and beyond where he himself in former excursions had been obliged to retreat, he was able, by reason of his supporting parties, to go forward with sledges filled with provisions and fresh dogs for locomotion, these very essentials of success having been conserved for his final dash.

PEARY ALSO WON FARTHEST NORTH RECORD IN 1906.

The report of the congressional committee of investigation asserted:

Three years before, in 1906, Peary had reached 87° 6′, the farthest north ever attained up to that time.

He then learned the necessity of more careful preparation, and, returning to the United States, planned a campaign by ship, men, Eskimos, dogs, canned provisions, lighter equipment, to the very last detail, which resulted in success.

Thus Peary, as the result of each of two independent trips to the Arctic regions, established records farther north than has any other explorer in the history of the world, his successful trip to the North Pole having broken the previous record which he held.

PEARY WENT TO THE ARCTIC UNDER OFFICIAL ORDERS.

The committee reported:

Peary was an officer of the United States Navy and charged with the specific duty in which he was engaged. President Roosevelt, July 3, 1908, detailed Peary to report to the Superintendent of the United States Coast and Geodetic Survey and instructed that Peary be ordered to make tidal observations along the Grant Land and Greenland shore of the Polar Sea.

Mr. Peary entered the Navy in 1881 and has served almost 30 years. He is at present a civil engineer with the rank of captain. When leaving for his polar trip, the Acting Secretary of the Navy wrote him that he was granted this leave of absence for Arctic explorations because he is believed to be better equipped than any other person in the country to undertake such work.

"You have," said the letter from the Navy Department, "the requisite courage, fortitude, and physique; you have had a longer term of service within the Arctic Circle than any other explorer; and you have had large experience in sledge journeying on the land and upon the polar pack; you have demonstrated your ability to maintain yourself in that latitude for a longer period in health and safety than any other explorer; you have reduced the inconveniences and hardships of the Arctic service to the minimum. The attainment of the pole should be your main object. Nothing short will suffice. Our national pride is involved in the undertaking. This department expects that you will accomplish your purpose and bring further distinction to a service of illustrious traditions."

The President of the United States gave Peary this parting injunction:

"I believe in you, Peary, and I believe in your success if it is in the possibility of man."

BRIEF OUTLINE OF PEARY'S CAMPAIGN TO REACH THE POLE.

Our congressional committee of investigation outlined Peary's successful campaign to reach the North Pole as follows:

Going into winter quarters at Cape Sheridan, tidal observations were commenced, and the members of the expedition began the transportation of supplies westward to Cape Columbia. This became a camp and depot of supplies, from which the journey over the Arctic Ocean to the pole was to begin.

The winter months of 1909 were occupied in preparing Eskimos, dogs, and other equipments. After careful training the Eskimos and dogs were in the best condition, hard and fit for the work that was before them.

The men, Eskimos, and dogs were divided into supporting parties. Each supporting party was independent in the matter of supplies and equipment; they were sent north over the ice at intervals of a day or more each.

In this way the first supporting party sought and found the easiest trail, which could readily be found by the succeeding parties coming on.

Capt. Bartlett accompanied Peary to latitude 87° 47′, or within 133 miles of the pole. At this point they exchanged signed statements as result of observations, and Bartlett turned back with his supporting party, leaving Peary with picked dogs, good sledges, and plenty of provisions, and in fact the very best equipment and supplies for the final journey.

In five marches from where Peary and Bartlett parted, Peary reached the long sought for goal.

PEARY'S OBSERVATIONS AND INSTRUMENTS.

The report declared:

Mr. Mitchell and Mr. Duvall figured the position of Peary at the pole independently, but based on the same observations and by independent methods. Their calculations agree within a second of latitude.

Mitchell states that from his professional experience it would have been impossible for the data of these observations to have been obtained other than under the circumstances claimed. The observations at the pole were made at different times. He states that in using these observations in connection with each other they, in a measure, prove each other, and that error could be detected had the observations not been made at the points set forth in the data. In other words, the two independent observations taken on the 6th and 7th, with the sun in the same direction, practically agree upon comparison.

On the return of the Peary party to the United States the standard chronometer used by Peary was sent to its makers for rating and comparison.

PEARY'S RETURN FROM THE NORTH POLE.

The committee's report sets forth the speed of Peary and his various supporting parties comparatively and with considerable detail, as follows:

The return journey was made more quickly than the outward journey. There was a trail easily distinguishable, and both men and dogs realized that they were returning to land.

Peary covered 27 outward marches (413 miles) in 16 return marches with the pick of Eskimos and dogs all in good condition, 25¾ miles per march.

MacMillan, of the first supporting party, covered 7 outward marches (82 miles) in 4 return marches, 20½ miles per march.

Borup, of the second supporting party, covered 12 outward marches (136 miles) in 7 return marches with partially crippled men and poor dogs, 19½ miles per march.

Bartlett, of the fourth supporting party, covered 22 outward marches (280 miles) in 13 return marches, 21½ miles per march.

Bartlett returned from his farthest, 87° 47′, in the same number of marches (13) as Peary did from that same point.

Later in the season MacMillan and Borup, returning from Cape Jesup with the same dogs used on the northern trip, covered 235 to 300 miles in 8 marches, and on more than one occasion covered over 50 miles in a march.

Shackleton, on his outward journey, made marches of 18 and 20 miles. He returned without dogs, and he and his men, dragging their own sledges, made marches of 20, 26, and 29 miles.

The report then declares—and I desire particularly to emphasize the next paragraph, showing that Peary had at last attained the goal of centuries of effort:

Your committee recognize that the attainment of the North Pole has been the object of the world's famous explorers for centuries past; that Peary, overcoming almost insurmountable obstacles reached the goal of a life's work, that he was specifically commissioned to do so by his commanders in chief, the President and the Secretary of the Navy.

The committee then reported that if Peary had not gone to the Arctic he would already have been a rear admiral, and that the advancement in rank which they recommended would really have the effect of decreasing the remuneration he was then receiving from the Government. Upon these points the committee declared:

Peary has at present the rank of captain. Had he remained at home and served as a chief of one of the bureaus at the Navy Department he would to-day have the rank of rear admiral. It is proposed in this bill to bestow upon him this rank with the retired pay of that grade; such retired pay, the committee learns from the Navy Department, will be $300 per year less than the pay he is now receiving from salary and allowances under his present rank.

HONORS AWARDED PEARY.

The committee further reported that up to the date of its report (Jan. 21, 1911) Peary had already received the following recognition for his discoveries:

The special great gold medal of the Royal Geographical Society of London.

The special great gold medal of the National Geographic Society of Washington.

The special great gold medal of the Philadelphia Geographical Society.

The Helen Culver medal of the Chicago Geographical Society.

The honorary degree of doctor of laws from Bowdoin College.

Honorary member of the New York Chamber of Commerce.

Honorary member of the Pennsylvania Society.

The Nachtigall gold medal of the Imperial German Geographical Society.

The King Humbert gold medal of the Royal Italian Geographical Society.

The Hauer medal of the Imperial Austrian Geographical Society.

The gold medal of the Hungarian Geographical Society.

The gold medal of the Royal Belgian Geographical Society.

The gold medal of the Royal Geographical Society of Antwerp.

A special trophy from the Royal Scottish Geographical Society—a replica in silver of the ships used by Hudson, Baffin, and Davis.

The honorary degree of doctor of laws from the Edinburgh University.

Honorary membership in the Manchester Geographical Society.

Honorary membership in the Royal Netherlands Geographical Society of Amsterdam.

THE NORTH POLE THE GREATEST GEOGRAPHICAL PRIZE OF THREE CENTURIES.

Upon this point the committee said:

The President of the United States and the Secretary of the Navy have recommended that fitting recognition by Congress be accorded Peary for this great achievement. The scientific societies of the world accord in pronouncing this the greatest geographical prize of the last three centuries. It is a matter of just pride that this honor has come to the United States.

THE COMMITTEE'S TRIBUTE TO PEARY AND ITS RECOMMENDATIONS.

The committee reported:

Your committee believe that in view of his long distinguished service in the Arctic regions in ascertaining the northern boundaries of Greenland; his soundings and tidal observations; his ascertainment of facts concerning the northern Arctic Ocean; the general information he has obtained by living over 12 years within the Arctic circle; and finally having successfully followed a carefully laid plan resulting in his reaching on April 6, 1909, and bringing back to civilization the conditions existing at the North Pole, that Robert Edwin Peary has performed a most remarkable and wonderful service; that he has attracted the favorable attention of the civilized world; and that therefore the American people, through its Congress, shall render him thanks, and bestow upon him the highest rank of the service which he adorns.

These, Mr. Speaker, are the important paragraphs in the official report of the committee of investigation and upon which the Congress of the United States acted when they extended to him the thanks of Congress, and authorized that he be raised to the rank of rear admiral. And in submitting the report to the Congress they transmitted the testimony before them, covering 142 printed pages.

The act of Congress adopted upon report of the committee became effective March 4, 1911. So much for official American recognition of the services of the explorer.

ACTION OF THE ROYAL GEOGRAPHIC SOCIETY OF GREAT BRITAIN.

Although our own National Geographic Society had acted with more rapidity than did Congress and had more than a year prior to the act of Congress acclaimed Peary the discoverer of the North Pole, it is of interest to note that the Royal Geographical Society of Great Britain accorded Peary the highest honor within their power nearly a year before Congress acted, to wit, on May 4, 1910, at a meeting of the society in Albert Hall, London. In conferring upon Peary at that time the special gold medal of the society, President Darwin, son of the great scientist, Charles Darwin, extended to him, in the presence of its members, the fullest assurance of their conviction that he was *"the first and only human being who has ever led a party of his fellow creatures to a pole of the earth,"* for it will be remembered that at that time the South Pole had not as yet been reached. He said:

I stand here to-night as the representative of the Royal Geographical Society, and, armed with the full authority of its council to welcome you, Commander Peary, as the first and only human being who has ever led a party of his fellow creatures to a pole of the earth.

At the same time the vote of thanks to Peary was moved and seconded by two of Great Britain's most distinguished Arctic explorers, Admiral Sir George Nares and Admiral Sir Lewis Beaumont. The motion was also supported in a feeling speech by Capt. R. F. Scott, who so soon was to lose his life returning from the South Pole. The proceedings may be found set out in full in the Geographical Journal of London for August, 1910, pages 129 to 148.

Subsequently Admiral Peary laid before the Royal Geographical Society additional proofs of his attainment of the pole and supplemental to those previously submitted. This was not done at their request, but voluntarily, that there might be no question hereafter as to the action of that world-famous organization being based upon adequate examination of Admiral Peary's proofs. President Darwin wrote Peary on December 5, 1910, in his official capacity as president of the society, acknowledging the receipt of the documents and advising him of the results of the examination of same. He said:

They have been thoroughly examined by us. In the opinion of my council there is nothing in this or any other new matter which has come to their notice that in any way affects the position indicated by me when I, on behalf of the society, presented you with a special gold medal at the Albert Hall for your explorations, during which you were the first to reach a pole of the earth.

And about the same time another member of the council of the Royal Geographical Society wrote Admiral Peary advising him that the documents he sent had been "most thoroughly and critically examined." Both these letters are set out in full in the record of the proceedings before our congressional investigating committee. So much for the recognition of the services of the explorer by distinguished men and bodies in foreign countries, and more particularly mentioned in the report of the committee as quoted supra.

SOME OF DR. COOK'S RECENT ACTIVITIES WITH RESPECT TO CONGRESS.

As to Dr. Cook's repeated efforts to get more notoriety by keeping a North Pole lobby at work in Washington, it will be recalled he procured a joint resolution in his behalf, to be introduced in the Senate last spring (April, 1914). It was referred to the Library Committee, and a subcommittee, which was named to look into the matter, flatly refused to give aid or encouragement to the investigation of any such subject, and there the matter ended in the Senate.

THE AMERICAN PRESS SAW THE HUMOR OF THE SITUATION.

While editorial discussion is usually timed in seriousness, in this case there were numerous humorous newspaper comments upon the subject when the resolution was introduced, as Members of Congress may remember, such as—

Now introduce a resolution that Perkin Warbeck was really King of England and that Madero died of indigestion. Go as far as you like. (Dallas Herald.)

—

Maybe he also believes there is a pot of gold at the end of a rainbow. (Birmingham Age-Herald.)

—

But why insist upon the rest of us limiting our intelligence? (Reading Telegram.)

—

Let us not be wastefully, ridiculously excessive. Why spend $300 for a medal for Dr. Cook when he'd feel just as happy and look a lot more natural with a 50-cent wreath of flowers around his neck? (New York American.)

—

If Dr. Cook gets that medal from Congress he may decide to send it to Copenhagen as a mark of gratitude for the free dinners he received there. (Cleveland Plain Dealer.)

—

Gold or leather? (Des Moines Capital.)

—

If "Doc" Cook gets from Congress that medal for discovering the North Pole, he may come back and want one for scaling Mount McKinley. (Detroit Free Press.)

—

Why not strike off 98,781,323 duplicates and give everybody else in the country one, too? (Boston Transcript.)

—

Why not vote Jack Johnson a subsidy as balm for abuse heaped upon him prior to his going abroad? (Los Angeles Express.)

—

Vaudeville having received the doctor cordially, why not Congress? (Tacoma Ledger.)

—

As some seem to think that the Ananias Club is a committee of that body, a motion to so refer it might be in order. (Tampa Daily Times.)

—

"Doc." always has some new scheme for getting before the public just about the time people have forgotten him. (Johnstown Leader.)

—

Surely some recognition should be given the most stupendous fraud of the age. (Portland Oregonian.)

—

Dr. Cook might accept a medal, but the chances are that he would shy if anybody were to offer another wreath of roses. (Washington Star.)

I would not repeat these quotations were they not called out by the character of the vaudeville performances of the subject of their comment.

Not satisfied with the Senate's ignoring of his resolution, Dr. Cook had another one introduced in the House shortly after the Senate Library Committee had dropped consideration of the one before it, and the House resolution provided for action by Congress with respect to the discovery of the North Pole. It was referred to the Naval Committee in course of regular routine, and in accordance with the usual procedure it was sent to the Secretary of the Navy to report upon. Secretary Daniels recommended that the resolution be not favorably considered. In his report to the committee, dated July 30, 1914, he set forth the facts in possession of the Navy Department in reference to the discovery of the North Pole, Peary's promotion to rank of rear admiral, and so forth, and closed the report as follows:

Believing that no useful purpose could be accomplished by such an investigation, the department recommends that the resolution (H. J. Res. 282) be not favorably considered. Should, however, it be the desire of Congress to institute such investigation, it is recommended that the same be conducted by some form of commission independent of any governmental department.

Thereupon the Naval Committee of the House of Representatives dropped consideration of the matter. Dr. Cook, however, had still another resolution upon the subject presented and drawn in such a way that it was referred to the Education Committee, of which I am a member. This committee at the time knew nothing about the matter having been before the Naval Committee or of the report of the Secretary of the Navy, and one evening at one of the meetings informally heard ex parte some statements by three or four persons whom Dr. Cook desired to have heard. I had no intimation of the purpose of any member of the Committee on Education to give a hearing to anyone. *The meeting was not of the committee*, as there was not a quorum present, and the minutes show there was not.

AN ILLUSTRATION OF DR. COOK'S EVIDENCE.

There was an attempt to lead the committee to believe that in an article appearing over the signature of Dr. Cook in the January, 1911, number of Hampton's Magazine, a confession by him that he did not know whether or not he had reached the pole was inserted in the article without his knowledge and approval. It is sufficient to say that this was an attempt to impose upon the credulity of the committee, for it was a simple matter for any of its members to examine the newspaper files of that period—as I did—and to see that Dr. Cook, in interviews, fathered the very statement which he was attempting to repudiate; indeed, that he not only did not repudiate it, but that he expressed himself as in accord therewith. It is needless to go into the subject of this resolution further. Suffice it to say that the committee adopted a resolution dropping consideration of the matter and by common con-

sent declined to publish the proceedings of the informal meeting before mentioned.

Then, a few days thereafter, the same method of procedure was again followed by Dr. Cook, and still a further resolution upon the subject was introduced, and this time it was referred to the Library Committee of the House of Representatives. That those not familiar with the procedure in Congress may not misunderstand how simple a matter it is to introduce a resolution, I need only say that all that need be done is for a Member of Congress to file the resolution and it goes automatically to one of the numerous committees. The Library Committee gave no consideration to this new resolution. Notwithstanding this record, Dr. Cook, through advertisements and announcements in various parts of the country, has succeeded in some quarters in giving the impression that Congress was much interested in his claims and was giving them consideration. Comments upon this phase is unnecessary in the light of the record here, and it is not worth while to incorporate them here.

THE CHARACTER OF EVIDENCE DR. COOK SUBMITTED AT COPENHAGEN.

It is well for us to remember that the forum selected by Dr. Cook for the determination of his claims was the University of Copenhagen. He sent it what he declared were his proofs of his alleged discovery of the North Pole; but he failed to appear in person before the commission of experts the university appointed to pass upon the question. It found that Dr. Cook had utterly failed to establish his claim.

REPUDIATION OF DR. COOK BY THE UNIVERSITY OF COPENHAGEN.

The verdict of the University of Copenhagen of December 21, 1909, is fully set forth in the papers of the world of December 22, 1909. I quote, however, from an editorial in The Outlook which succinctly covered the important facts. This editorial said:

It was by the University of Copenhagen that Dr. Cook himself elected to be judged; the verdict of that court of decision, thus selected by himself, must be accepted by the world as final and conclusive. The wonderful tales now put forth as to the cause of the disappearance of the original documents in the case will have no effect on the mind of the public, because that public had already become wearied with a long series of inconclusive and improbable statements heretofore made. Dr. Cook had several months in which to prepare his case and submit it in proper form to that tribunal to which he thought fit to have it referred. The result has been a total collapse of his claim, always based chiefly on his bare assertion that he had been the first to reach the North Pole.

WHAT DR. COOK SUBMITTED AT COPENHAGEN.

The Outlook editorial, continuing, said:

The committee of scientists to whom the University of Copenhagen submitted the claim report that what they received was, first, a narrative of the expedition, essentially the same as that printed two months ago in the New York Herald and prepared for the present purpose by Dr. Cook's secretary; and, secondly, what purported to be a typewritten copy of part of Dr. Cook's original notebook.

This alleged copy, they say, "does not contain any original astronomical observations whatever, but only results," and the committee declare further that "*the documents presented are inexcusably lacking in information which would prove that the astronomical observations therein referred to were really made;* and also contain no details regarding the practical work of the expedition and the sledge journey which would enable the committee to determine their reliability.

THE COPENHAGEN VERDICT REJECTING DR. COOK'S CLAIMS.

The Outlook quoted the same as follows:

The committee's final verdict and the verdict of the university consistory is expressed formally in the finding of the latter:

"The documents handed the university for examination do not contain observations and information which can be regarded as proof that Dr. Cook reached the North Pole on his recent expedition."

The editorial mentioned also quoted individual expressions of opinion thus:

Officers of the university in their individual expressions of feeling go even further. Thus, Dr. Stromgren, director of the Astronomical Observatory, at Copenhagen, and chairman of the committee on the Cook claims, is quoted as calling Cook's actions shameless, as admitting with sorrow and indignation that the university had been hoaxed, and as saying that "it was an offense to submit such papers to scientific men."

Rasmussen, a noted Arctic explorer who has favored Dr. Cook's claim, was called in as an expert by the university's committee; he is reported as saying:

"When I saw the observations, I realized that it was a scandal. The documents which Dr. Cook sent to the university are most impudent. It is the most childish sort of attempt at cheating."

It will be remembered that Rasmussen was the Danish explorer whom Cook declared, when he believed Rasmussen was in favor of his claims, was better qualified than any other explorer to pass upon the question then at issue.

The Outlook summed the matter up as follows:

The fundamental justification of the distrust which has been felt all along in this country by many scientific observers and students of the laws of evidence has been that, to put it squarely, Dr. Cook has not acted as would have acted a man of honor whose claims had been disputed and who knew that they were just. * * * Dr. Cook, on the contrary, has carried on a long series of evasions and delays, and has apparently put his main efforts into making money by lectures and through publication. In this way he gained, some say $30,000, some say $100,000. Finally, when patience was all but exhausted, he presented to a foreign court of inquiry a lame and even ridiculous case. The mere fact that he did not offer to appear in person before the court he had himself selected, in order that he might answer inquiries, is most significant.

DR. COOK'S FALSE CLAIMS OF SUPPORT BY POLAR EXPERTS.

On the cover of Dr. Cook's book as now being sold in New York are printed the names of a number of Arctic explorers and of others whom it is alleged support him. Among them are Roald Amundsen, the discoverer of the South Pole; our own Gen. Greely, who in one of his Arctic expeditions broke the record then existing of the farthest north, taking it away from England after it had been held by that country for nearly 300 years; and Capt. E. B. Baldwin, of the Baldwin-Ziegler polar expedition of 1901. While it is true that these men, as well as many others, before Dr. Cook's methods were understood, credited him with veracity, it is the height of charlatanary now to name them as supporters, and the same remark, no doubt, applies to every other Arctic explorer familiar with the facts of the case whom Cook claims as a supporter.

AMUNDSEN REPUDIATES DR. COOK.

As to the position of Amundsen, the discoverer of the South Pole, I quote as follows from the report of an interview with him in the Detroit News:

Capt. Amundsen, himself unsuccessful in a search for the North Pole, generously joined in the acclaim that at first hailed Dr. Cook as the discoverer, and remained firmly convinced that Cook was telling the truth until he (Amundsen) was given an opportunity to examine the data and observations that Dr. Cook laid before the University of Copenhagen.

"There was absolutely nothing in these alleged observations of Dr. Cook," said Capt. Amundsen. "It was all fake and could have deceived nobody. Thus, in sorrow, was I forced to the conclusion that my old comrade was lying."

GEN. GREELEY REPUDIATES DR. COOK.

General Greely, on October 14, 1913, sent out the following letter for publication:

To the editor of the New York Times:

Returning from Europe after 10 months' absence, my attention has been drawn to a recent editorial article in the Times stating that I am quoted by Dr. Cook as indorsing his claim to have reached the Pole. When the North Polar discussion was at its height I published in the fifth edition of my Handbook of Polar Discoveries, under date of Florence, Italy, January, 1910, the following opinion:

"The claims of Dr. Cook of reaching the North Pole have been thoroughly discredited by his failure to furnish to the University of Copenhagen his promised proofs of such journey."

That opinion has never been modified.

A. W. GREELY.

WASHINGTON, D. C.

And Gen. Greely, at page 269 of his book, "Handbook of Polar Discoveries," asserts:

The marvelous and detailed claims of Dr. F. A. Cook, regarding his alleged attainment of the North Pole in 1908, are now generally and thoroughly discredited.

And at page 265 of the same work Gen. Greely declares:

R. E. Peary, the discoverer of the deep sea at the pole, who has won deserved fame by his attainment of the North Geographic Pole prior to its being reached by any other explorer—to the ability, endurance, and persistency of R. E. Peary the world owes the discovery of the pole.

CAPT. BALDWIN REPUDIATES DR. COOK.

Capt. Baldwin publicly repudiated Dr. Cook in December, 1913, as was extensively reported in the papers of that period. I quote from a clipping upon the point as follows:

Baldwin had refused to desert Cook in the early stages of the controversy, which followed the return of Peary from the pole, and was widely advertised by Dr. Cook as an indorser of his claims. In a letter printed in the "Cook book" Capt. Baldwin sought to defend the pretender from the charge of falsifying documents, refusing to accept the declarations of others to that effect. Now he is convinced to the contrary, since his own statements have been so amplified and altered by Cook that he has felt impelled to make public refutation of them. Even his letter that appeared in the "Cook book" was "cooked," and for two years Baldwin has been protesting against the further use of his name. * * *

When Baldwin was asked how he had come to stay so long in the Cook camp he said it was hard to believe the claimant had deliberately deceived, but after a careful study of documentary evidence he had become convinced that Dr. Cook "never was anywhere near the top of Mount McKinley and never got within hundreds of miles of the North Pole." Baldwin states that he has reached the end of his years of defense of Cook, which continued "until I learned for myself the manner in which he plays the charlatan with documents and letters."

It is needless to pursue this phase further. The matter was well but briefly summed up by the Washington Star some years ago in these words:

Dr. Cook has deliberately entered upon a campaign of justification, not for the sake of making the world believe him regardless of reward, but for the sake of dollars and cents to be won. He has organized his fraud and capitalized his deceit.

* * * The most deplorable feature of the matter at the present time is that it is possible for a self-convicted claimant to the highest honors in the scientific world to continue to reap a profit from the credulity and the partisanship of those who refuse to accept official verdicts.

The Chicago Inter-Ocean, at the time of the Copenhagen verdict, touched upon the situation as follows:

It is now possible to discuss Dr. Cook in plain language. The rejection of his "records" as worthless by the University of Copenhagen ends forever his claim to having discovered the North Pole. He stands to-day exposed as the chief imposter of the age. * * *

The single-handed achievement of which Dr. Cook pretended to be the hero had about it a glamor that won him friends by the thousand. Peary's forthright utterance when, fresh from the north, he declared Dr. Cook had not been out of sight of land and had given the world "a gold brick," won Dr. Cook more friends. These friends have remained loyal through thick and thin. But it would now seem impossible for any but the most stubborn sentimentalist to preserve faith.

Many, no doubt, will cling to the belief that Dr. Cook at least was honest and believed, he had discovered the pole. It seems almost heartless to shatter this last forlorn hope of loyalty. It will be remembered that Dr. Cook's two Eskimo companions asserted to Peary that Dr. Cook had turned south from Cape Thomas Hubbard. If Dr. Cook traveled south it is impossible he thought he was going north.

Nothing is left but to believe that Dr. Cook attempted to deceive the world with malice aforethought and in cold blood that he might win fame and fortune. There are no extenuating circumstances. Even common honesty must be denied him.

As a last resort, Dr. Cook, through his secretary, sent a letter to the university committee saying judgment should be suspended until his instruments and original data could be brought from Etah. * * *

Good men everywhere must regret there is no law among the nations to punish this atrocious crime. For such an act of infamy the thumbs of the world turn down.

The New York Nation at the same time strongly brought out a point which every true-hearted American should take to heart:

In foisting this fraud upon the world Cook was guilty of much more than an injury to the man whose laurels he was falsely claiming. It has been a great loss to all the world that one of those rare events in which mankind spontaneously finds occasion for triumph and rejoicing was converted into a time of noxious wrangling.

As for Peary himself, he has been defrauded of something which can never be restored to him. The enthusiasm which in the first instance would have hailed the accomplishment of a feat that heroic venturers for three generations had strenuously sought to compass can never be resuscitated out of the possibilities of the past. Such is the temper of man.

False as it has been proved, the claim of the cheap swindler has dimmed the luster of the true discoverer's achievement. He will receive the full acknowledgment that his work merits, in the form of recognition from scientific and other bodies and of a sure place in history, but the joy of the acclaim that should have greeted him at the triumphant close of his 23 years' quest can never be his.

And one more word of regret is in order. The denunciations of Cook's story telegraphed by Peary from the far North were made the occasion of criticisms which are now shown to have been unjust. That Cook was an outright imposter, without the slightest title to consideration, was doubtless as well known to Peary from the beginning as it is to us all now.

REPUDIATION OF DR. COOK BY AMERICAN ORGANIZATIONS OF EXPERTS.

Although the University of Copenhagen found that Dr. Cook had utterly failed to establish his claim, it will be remembered that he was discredited by and expelled from membership in America's leading organizations made up of explorers, those most familiar with the problems involved in his claims. Among those whose action was published to the world may be mentioned:

The Explorers' Club.

The Alpine Club.

The Arctic Club of America, and so forth.

The latter organization, *composed of American Arctic explorers, who had crossed the Arctic Circle*, expelled him while Admiral Schley was its president.

Would not a man of a keen sense of honor, if he had a righteous claim and really believed it should be investigated, instead of maintaining a lobby in Washington and besieging Congress, present his facts to the organizations of experts in exploration, which had expelled him, and ask them to reinstate him?

Until he has at least submitted his case to them, it is suggested that he has not purged himself or even attempted to purge himself of the odium which attaches to his name, fame, and cause, which fact alone ought to be conclusive that he has no proper standing upon which to appeal to the Congress of the United States to take time and money to investigate his claims.

DR. COOK'S EXPULSION FROM MEMBERSHIP IN THE ARCTIC CLUB OF AMERICA.

The printed bulletin issued by the Arctic Club of America, which is a different organization than the Peary Arctic Club and composed of explorers who have crossed the Arctic Circle, shows that at the annual meeting of the club, held December 22, 1909, officers were elected, including Admiral Schley as president, 75 members voting. This bulletin also says:

After the election of officers the following resolution was adopted after rather a lengthy discussion:

"*Resolved*, That the further membership of Dr. Frederick A. Cook in the Arctic Club of America be referred to the board of directors just elected, with full power to act."

The same bulletin further shows:

The first meeting of the board of directors for 1910 was held on the evening of January 5, 1910. The following resolution was unanimously adopted:

"Whereas the claims of Dr. Frederick A. Cook of having discovered the North Pole have been rejected by the University of Copenhagen and other scientific bodies; and

"Whereas Dr. Frederick A. Cook keeps in hiding instead of facing his accusers; and

"Whereas Dr. Frederick A. Cook has failed to communicate with the Arctic Club of America, whose members have so steadily proved his friends in the past: Therefore be it

"*Resolved*, That we consider the further membership of Dr. Frederick A. Cook in the Arctic Club of America as not to its interests, and that the name of Dr. Frederick A. Cook be dropped from the roll of members forthwith."

DR. COOK ALSO DISMISSED FROM THE COUNCIL OF THE BROOKLYN INSTITUTE OF ARTS AND SCIENCES.

The Washington Evening Star for January 6, 1910, contains the following report of Dr. Cook's expulsion from the Arctic Club of America and from the council of the Brooklyn Institute of Arts and Sciences, the scientific organization of Dr. Cook's home city:

COOK BARREN OF HONOR—ALMOST LAST VESTIGE OF SCIENTIFIC SUPPORT GONE—ARCTIC CLUB OF AMERICA, WHICH HE FOUNDED, DROPS HIS NAME FROM ITS ROLL.

NEW YORK, *January 6.*

The Arctic Club of America, founded by Dr. Frederick A. Cook and his supporters in the North Pole controversy, through its board of directors, has dropped the name of the explorer from the roll of membership.

The action of the Arctic Club directors last night was unanimous, and follows hard on the heels of the explorer's summary dismissal from the council of the Brooklyn Institute of Arts and Sciences two days ago, and strips from the explorer almost the last vestige of scientific honors, only the degree of doctor of philosophy conferred by the University of Copenhagen remaining.

The Arctic Club of America led in the welcoming festivities to Dr. Cook on his return from Greenland and Copenhagen. Later the club tendered Dr. Cook, a former president of the organization, a banquet at the Waldorf-Astoria, while many of its individual members, including Admiral Schley and Capt. Osbon, warmly championed the cause of Cook when his now discredited polar claim was challenged.

DR. COOK'S CLAIM TO HAVING ASCENDED TO THE SUMMIT OF MOUNT M'KINLEY, IN ALASKA.

Dr. Cook's contention that he ascended to the summit of Mount McKinley two or three years prior to his claim with respect to the North Pole is a matter with which the public generally is so thoroughly familiar that it is hardly worth while to comment thereon extensively. The Delegate in Congress from Alaska, who himself attempted the first ascent to the summit of the mountain in the year 1903, does not hesitate to say with respect to Dr. Cook:

All of us who know anything about Mount McKinley know that Cook's story of his successful ascent of that mountain is a deliberate falsehood. * * * His story was so fraudulent that one does not have time to talk about it.

EXPLORERS' CLUB INVESTIGATE AND REJECT DR. COOK'S CLAIM TO HAVE CLIMBED MOUNT M'KINLEY AND THEN EXPEL HIM FROM MEMBERSHIP.

The Explorers' Club, after investigating Dr. Cook's claim to have climbed Mount McKinley, rejected it and expelled him from membership. The following account of their action I take from report in the Washington Post of December 25, 1909:

CLUB EXPELS COOK—EXPLORERS DECLARE MOUNT M'KINLEY "ASCENT" A FRAUD—EXPOSED IN LONG REPORT—NEEDING MONEY, FORMER FRIENDS SAY, HE PUT UP THE JOB—ASSOCIATES ON THE TRIP TO ALASKA ASSERT THAT PICTURES, HIS CLAIMS, AND HIS BOOK ARE ALL A SERIES OF PALPABLE FAKES—PHOTOGRAPHED ONE SIDE OF THE MOUNTAIN AND MADE IT APPEAR TO BE ANOTHER—HAD NO INSTRUMENTS.

NEW YORK, *December 24, 1909.*

The board of governors of the Explorers' Club met to-day in executive session and, standing in silence, voted with bowed heads that Dr. Frederick A. Cook be dropped from the rolls of the club for frauds practiced on its members and on the public. Preliminary to its vote of expulsion the board met to pass upon the report of its committee, which has been investigating the validity of Dr. Cook's assertion that he reached the summit of Mount McKinley. This committee, in concluding an exhaustive report, recommended that—

"Dr. Cook's claim that he ascended the summit of Mount McKinley in 1906 be rejected by the Explorers' Club as unworthy of credence."

The committee's recommendation was based on its finding that—

"Dr. Cook had repeatedly made statements that have not been in accord with the facts, and that he had entered into agreements which he has failed to keep, and that the misstatements and broken agreements deal not only with matters appertaining to discovery, but to ordinary financial transactions, so that no credence can be given to statements made by him."

FRIENDS AMONG SIGNERS.

Among the signatures appended were those of Whitney and Anthony Fiala, both personal friends of Dr. Cook. The committee is further explicit in its statement that it undertook its investigation only after first apprising Dr. Cook of its purpose, which he approved in person; and that it has disregarded entirely the testimony of Edward Barrill, Dr. Cook's guide, and of Frederick Printz, his packer, although such testimony was before them—because it wished no cloud of partisan contention or question of financial interest to dim the integrity of its verdict.

In addition to Whitney and Fiala, the report is signed by Frederick S. Dallenbaugh, of the American Geographical Society; Prof. Marshall H. Saville, of the chair of archæology in Columbia University; Walter G. Clark, Charles H. Townsend, director of the New York aquarium, and Henry G. Walsh, secretary of the Explorers' Club, and individual

signed reports are submitted by Herschel C. Parker, professor of physics at Columbia, and Belmore Brown, both of whom are members of the Cook-McKinley expedition, and by Charles Sheldon, who has recently returned from a year's residence on the slope of Mount McKinley, where he went for the purpose of studying the configuration of the mountain, with a view to the possibility of its ascent.

HIS PLANS NOT FEASIBLE.

Prof. Parker reports that he was a partner with Dr. Cook in the McKinley expedition, both physically and financially. Dr. Cook assumed the lead with a plan which proved unfeasible, and the party escaped with their lives, thanks to the local knowledge of Belmore Brown, one of its members. "It was perfectly understood," says Prof. Parker, "that after the misadventure all further attempts were abandoned for the season." Otherwise Prof. Parker would not have left the expedition.

Instead of this, Dr. Cook, it is charged, sidetracked all members of the expedition until there remained only himself, his guide, Barrill, and one packer, who was subsequently got rid of also. These defections left Dr. Cook, says Prof. Parker, no instruments capable of measuring the altitudes he says he attained. Moreover, he adds, the summer's experience had shown that of all the party Dr. Cook and Barrill were the least fitted physically for arduous mountain climbing.

Belmore Brown, in the main, confirms Prof. Parker, and says also that in Dr. Cook's book there is not one date given from the time he left the Chulitna River. This makes intelligent criticism impossible, he declares. Brown asserts further that he never saw Dr. Cook make a single aneroid barometer reading during the whole trip. Confirming a charge that has previously been made, he says that Dr. Cook was known to be in serious financial straits, and would have had great difficulty in getting out of Alaska if he had not reported that he attained the summit of Mount McKinley.

DECLARES PICTURES FAKES.

Brown fortifies his charges with the declaration that Cook and Barrill had no ice creepers, and that, though Dr. Cook afterwards told Prof. Parker that he and Barrill were roped together every foot of the last stages, Prof. Parker and Brown both remembered that they destroyed the climbing rope as defective before they quit the expedition. Furthermore, in none of the pictures published in Dr. Cook's book does a climbing rope appear.

Brown and Sheldon also report that various photographs in Dr. Cook's book do not represent the peaks they are said to picture; while Sheldon denies that he is the author of the appendix C in the book which Dr. Cook credits to him.

The committee as a whole, therefore, concludes in part that—

"Dr. Cook's account of the ascent is not only such as to be unconvincing to the experienced mountaineer, but that *under analysis it becomes incredible.*

"That he entered into a secret financial agreement with a publisher which resulted in embarrassment to his associates.

"That he broke his agreement with his fellow club members to supply his original photographs and data upon which his book was based.

DESCRIBES ANOTHER RIDGE.

"That the evidence before the committee is to the effect that it would be utterly impossible to ascend the glaciers and frozen snow slopes wearing the rubber shoepacks which Dr. Cook states in his book he wore while making the ascent.

"That Dr. Cook's description of the ascent of Mount McKinley on the northeast ridge, which is the ridge by which he claimed to have reached the peak, is, in reality, a description of the southeast ridge. The former ridge was explored by him on a previous expedition, and in his book he declares it impossible as a route to the peak."

PROF. PARKER, OF COLUMBIA UNIVERSITY, PHOTOGRAPHS DR. COOK'S PEAK MANY MILES FROM MOUNT M'KINLEY.

It will be remembered that upon Dr. Cook's return from the Arctic regions in 1909 the guide whom he alleged went to the top of Mount McKinley with him announced that they never had been to the summit and that the picture Dr. Cook took with this guide holding a flag on the top was miles from the peak. Dr. Cook, with respect to this, asserted that this was merely a plot of Admiral Peary to ruin him. Anyone, however, who takes the trouble to examine the newspaper files of that period can readily ascertain for himself that this guide repudiated Cook's claim before it was even known that Peary had reached the North Pole, for at the time he had not yet been even heard from. This guide subsequently drew a map upon which he located the peak which was photographed as the summit of Mount McKinley.

Prof. Parker, of Columbia University, subsequently took this map to Alaska in an effort to locate this fake peak.

The following newspaper clipping sets forth his report upon the subject:

PROF. PARKER LAYS BARE MOUNT M'KINLEY FAKE OF DR. COOK—MAKES A DUPLICATE PHOTOGRAPH OF HIS FAMOUS "TOP OF THE CONTINENT" AT AN ELEVATION OF ONLY 5,000 FEET AND 20 MILES AWAY FROM THE BASE OF THE GIANT ALASKAN PEAK—EXPOSURE BY EDWARD BARRILL IS COMPLETELY CORROBORATED—WITH MAP MADE BY FORMER GUIDE AND DR. COOK'S OWN PHOTOGRAPH NOTED EXPLORER AND MOUNTAIN CLIMBER HAS NO TROUBLE IN LOCATING THE SPOT.

Indisputable evidence of the falsity of Dr. Frederick A. Cook's claim to having ascended to the top of Mount McKinley, the highest peak in North America, is furnished by Prof. Herschal C. Parker, of Columbia University, who has just returned to New York City from his latest trip to Alaska. Prof. Parker undertook the journey during the past summer to settle once and for all time the question of Dr. Cook's veracity as to the Mount McKinley episode, and the proofs he has brought back with him show beyond a shadow of a doubt that the man who failed miserably in his attempt to rob Capt. Robert E. Peary of the credit of having discovered the North Pole was 20 miles away in an air line from the "Top of the Continent" at the time he claims to have stood on the utmost height of the snow-capped peak.

The most important piece of evidence obtained by Prof. Parker, and which not even the most ardent supporter of Dr. Cook can question, if there be any left who still believe in him, is a duplicate photograph of Dr. Cook's Top of the Continent, or, as he was pleased to also term it, the ultima thule of his ambition. * * *

The most cursory examination of the two pictures will show that they are photographs of the same rock, while a tracing of the outlines of each leaves no doubt of it.

ARCHDEACON STUCK, OF ALASKA, EXPOSES DR. COOK.

The Rev. Dr. Hudson Stuck, archdeacon of the Yukon, in 1913 made the first accepted ascent of the summit. In his book upon the subject, published by Scribners in 1914, after tracing Dr. Cook's account of his alleged trip with the packer Barrille to a point on a glacier several miles from Mount McKinley, then asserted:

From this point "up and up to the heaven-scraped granite of the top" Dr. Cook grows grandiloquent and vague, for at this point his true narrative ends.

The claims that Dr. Cook made on his return are well known, but it is quite impossible to follow his course from the description given in his book, *To the Top of the Continent.*

Dr. Cook talks "about the heaven-scraped granite of the top" and "the dazzling whiteness of the frosted granite blocks," and prints a photograph of the top showing granite slabs. There is no rock of any kind on the south (the higher) peak above 19,000 feet. The last 1,500 feet of the mountain is all permanent snow and ice; nor is the conformation of the summit in the least like the photograph printed as "the top of Mount McKinley."

But it is not worth while to pursue the subject further. The present writer feels confident that any man who climbs to the top of Denali (Mount McKinley) and then reads Dr. Cook's account of his ascent will not need Edward Barrille's affidavit to convince him that Cook's narrative is untrue. Indignation is, however, swallowed up in pity when one thinks upon the really excellent pioneering and exploring work done by this man and realizes that the immediate success of the imposition about the ascent of Denali (Mount McKinley) doubtless led to the more audacious imposition about the discovery of the North Pole and that to his discredit and downfall.

DR. COOK'S PRESENT METHODS.

It is said in a recent St. Louis newspaper, reporting an interview with Dr. Cook, that he says he has "made about $10,000 a year out of his lectures and his writings."

This same newspaper gives us the interesting information that during his campaign he has obtained "90,000 signatures, which, attached to a petition, have been forwarded to Washington," and we may assume that as long as Dr. Cook can find a market for his wares by his present methods he will continue them, and I presume Congress can stand being deluged with these petitions from people who do not have the facts except as presented to them by Dr. Cook and his coadjutors, and who have no knowledge of Arctic conditions, but who seem to think that Members of Congress are more competent to deal with them than the scientific experts who have already passed upon them.

THE STAND OF ADMIRAL PEARY.

Admiral Peary's stand, persisted in through many years, not to demean himself by any controversy with Dr. Cook, is one which must receive the hearty approval of all right-thinking Americans. A few, perhaps, not knowing the character of Dr. Cook's propaganda, do not understand that no self-respecting man could stoop to engage in such a controversy. This phase is well summed up in an editorial in the Omaha World-Herald which I will quote:

"They must either admit the charges or put me in jail," says Cook and in the saying discloses his motive. It is not only the besoiling of his successful rival that he seeks; it is continued publicity—publicity no matter how unenviable, so it may prolong his earning capacity on the vaudeville stage.

As a matter of fact, of course, "they" need do neither the one nor the other. For the sake of the national sense of self-respect it is to be hoped that "they" will leave the worm-eaten Cook severely alone, and that decent newspapers will soon come to the stage where they will refuse to print his villainous slanders, which are an affront not only to Peary but to the United States.

The Buffalo Evening News also expresses much the same thought in the following editorial—and I lay particular emphasis upon the paragraph which I have italicized:

One would think that when a man has been, by his own acts of folly and deception, utterly discredited and held in disgrace by his own countrymen, who are, frankly, ashamed of him, he would shut up, keep out of the way, nor dare to appear in any public capacity. Yet Dr. Frederick Cook, the archfaker among Arctic explorers and climbers of Mount McKinley, has nerve enough to erupt again. * * *

Such charges, emanating from such a source, can do no harm to the distinguished explorer whose claims as the discoverer of the North Pole have been passed upon and verified by the leading scientific societies of the world, and who, for the glory he won for the American flag by his courage and perseverance, has been fittingly rewarded by Congress. * * *

It is a shameful and disgusting exhibition, and Dr. Cook's appearance on the Chautauqua platform is likely to cast discredit on the whole Chautauqua idea.

THE LOWERING OF THE STANDARD OF THE CHAUTAUQUA PLATFORM.

As the president of a Chautauqua I must severely condemn the perversion of the Chautauqua idea and commend the expression of opinion in the last paragraph above quoted.

The Philadelphia Public Ledger has recently expressed a somewhat similar thought in an editorial which I quote:

Throughout certain western Chautauqua circles, wherein the name but not the nobility of the parent institution is used as a cloak for circus methods in education, Dr. Cook has been eminently successful; but this will not change the universal verdict of America and of the whole world. Let us have an end of any further Cook Polar claims.

It also says:

Back of the recent action of the Committee on Education of the House of Representatives, in dropping further consideration of what is known as the "Cook-Peary controversy," lies a long and sordid story, discreditable in all its aspects. A group of people, some of them innocent and misled and others not classifiable in polite terms, have been busily engaged in trying to filch from Peary the credit due him as discoverer of the North Pole in the interests of Dr. Cook.

Most Americans supposed that the Cook issue died a natural death years ago.

The time will undoubtedly come when Chautauqua managers will be thoroughly conversant with the activities of this man and the press of the country will ultimately do its part against the circulation of perversions of history with respect to *the great feat that Admiral Peary achieved, an honor of which through all future ages no nation can rob us.*

The glory that is ours as a nation has been feelingly portrayed in the following lines from the pen of Leigh Mitchell Hodges, entitled "The Flag that Tops the World":

You may sing a song of banners that are brave against the breeze,
Of flags that ne'er in time of need are furl'd;
You may boast the battle ensigns that have swept the seven seas,
But I toast the starry flag that tops the world!

Where the purple cold eternal
Seals the doom of all things vernal,
It is blooming with the beauty of a cause that can not die;
Where the wind is Death in motion
Flying o'er a frozen ocean,
It is smiling at the outer worlds against the frozen sky.

And the pole that bears the blossom of the old Red, White, and Blue,
Is the axis of the ball on which we're whirl'd;
O, it's fine to see her floating from the rod that holds us true!
So uncover to the flag that tops the world!

'Round its base the hosts of nations
Through all coming generations
Will be circling in the life march till the spear of Time is hurl'd,
And by land or water faring
Not a man can get his bearing
Till his compass needle points him to the flag that tops the world!

THE LAST PHASE.

Every true American educator must resent the recent efforts to poison the minds of the children of this country with respect to the discovery of the North Pole. Many newspapers seem to have been misled and have fallen into the trap of offering Dr. Cook's book as prizes for essays from the children upon the subject of the priority of the discovery of the North Pole, and then, while the children were in the act of writing such essays, printing a mass of material furnished by Dr. Cook and giving a wholly distorted idea of the facts, yet in such a subtle way as to give the impression of fairness.

To the honor of the editor of the Quincy (Ill.) Whig let it be said that he exposed a similar plot in his issue of February 4, 1915. I quote from his editorial upon the subject as follows, which is entitled "Press Agenting":

A day or two ago a smooth-talking stranger stepped into the office of Superintendent of Schools Bauman, and after remarking about the weather, the beauty of Quincy, and the high standard maintained by the Gem City's school system declared that he was much interested in polar explorations and would like very much if it might be arranged to give a series of talks on geographical conditions in the far north in the local schools. He carried some testimonials and got by with his request.

Scene No. 2 reveals the Orpheum Theater announcing that Dr. Cook, the discovered discoverer of the North Pole, would appear at the Orpheum some time soon.

Scene No. 3 discloses an afternoon newspaper announcing that it will give away free Orpheum tickets and a batch of Doc Cook's books to the school child who writes the best essay on "Who discovered the North Pole?"

Scene No. 4 takes Mr. Baker into a number of grades and the high-school assembly not as a lecturer on geographical conditions in the far North, but as the advertising agent of the afternoon paper and the Orpheum Theater.

Mr. Baker made no "bones" in local newspaper offices as to who he was. The editor of the Whig has plenty of his literature, signed "Personal representative of Dr. Cook," but the Whig refuses to fall for the press-agent stunt which Mr. Baker sought to pull.

In justice to Mr. Bauman it should be said that Mr. Baker kept him in absolute ignorance of his real mission here, never mentioning his real mission nor his connection with Dr. Cook. And should Mr. Baker hereafter attempt to set foot inside a schoolhouse where the superintendent chanced to be it is more than an even bet that he would never make a talk. * * *

The Whig believes that the people of Quincy and school patrons should know just what manner of press agenting has been "pulled" on them.

The fact is that Doc Cook is just a plain notoriety seeker, now making his living on the vaudeville circuits. * * *

His press-agenting stunt, however, is a good one and indicates the cleverness of the chap who once was hailed as the greatest man of his time and not the greatest faker. That the public generally and reputable newspapers will fall for "Mr. Baker" is just another evidence, however, that the American public likes to be gulled.

Further comment upon such activities is unnecessary. I would not close the door of investigation even to Dr. Cook, but he is not entitled to one in any direction until he acts in a manner that accords with his pretensions. If he has any bona fide claims there is but one honest course for him to pursue. Let him in a straightforward manner submit them to the forum he himself selected, the University of Copenhagen, or lay them before the American organizations of scientific experts which have expelled him from membership and secure reinstatement. Until he has done so and removed the stigma which rests upon him as a result of his expulsion from the organizations of American explorers and experts upon Arctic conditions he should not, through a lobby, press his claims upon the attention of Congressmen, who know little if anything of polar research and less of the scientific observations necessary to prove them.

That a group of Congressmen, such as the Committee on Education upon which I serve, are more capable of determining the contentions of this man than the distinguished scientists who have already passed upon them is both amusing and ridiculous. All will admit that such a committee could further the advertising scheme of the lecturer, but no one will contend that any committee of Congress should be a party to such an enterprise. Neither should this body be a party in furthering this latest propaganda among the school children of the country.

NOTE.—The New York World, Philadelphia Public Ledger, and other newspapers of March 7 in dispatches from Palm Beach, Fla., announce that at a raid upon the Beach Club there, made by directions of the governor of Florida in efforts to break up gambling, its alleged proprietors, John R. Bradley and his brother, were arrested and held in $5,000 bail. John R. Bradley, it will be remembered, was the financial backer of Dr. Cook on his alleged North Pole quest, and it was with him on his yacht, the *John R. Bradley,* that Dr. Cook went north.

The Late Representative Martin, of New Jersey.

MEMORIAL ADDRESS
OF
HON. W. E. TUTTLE, JR.,
OF NEW JERSEY,
IN THE HOUSE OF REPRESENTATIVES,
Sunday, February 14, 1915,

On House resolution 735, as follows:

"*Resolved,* That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. LEWIS J. MARTIN, late a Member of this House from the State of New Jersey.

"*Resolved,* That as a particular mark of respect to the memory of the deceased and in recognition of his distinguished public career the House at the conclusion of these exercises shall stand adjourned.

Mr. TUTTLE. Mr. Speaker, what my colleagues from New Jersey have said in tribute to the life and character of our late associate, Hon. LEWIS J. MARTIN, I might better perhaps accept as my own tribute. They have told the story of a busy and useful life, and the record is complete concerning those historical things we would know of men.

Judge MARTIN came to Congress from a part of the old district which I represented for two years, and I was thus admitted into an intimacy which was of a public rather than a personal character. Out of the shock of his sudden death to me came the regret that the Members of this Congress could not come to know this man better; know his capacity for public service, his qualities for social enjoyment, the delights of personal intimacy. There was undoubted quality and capacity in a man who held to himself the personal and political loyalty that was his. I would not dare to heap upon his bier the unfragrant flowers of lip service, because he can not protest, but I can enter into that sympathy that moistens every mention of his name back in the district that gave him birth, gave him honor, and will always treasure his memory. He occupies no lofty pedestal back in Sussex County, but he fills the hearts of men who loved him, trusted him, and set the seal of their approval upon his accomplishment. He was just a normal, natural man, reaching up in his strength, bowing down in his weakness, expanding to opportunity, possessed of a sympathy and charity as wide as friendship. No life is wasted that accomplished so much within the narrow environment of the average individual whose memory is the treasure of personal friendship in so many hearts.

It seems to me very fitting on these quiet Sabbath mornings that the American Congress, free from the turmoil and the strife of the week, should meet in solemn testimony to those who have fallen in the trenches as Judge MARTIN has fallen and send back to those who know the keener sorrow the message of our sympathy.

Wording of the National Constitutional Prohibition Amendment.

EXTENSION OF REMARKS
OF
HON. RICHMOND P. HOBSON,
OF ALABAMA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, March 4, 1915.

Mr. HOBSON. Mr. Speaker, under leave to print, I will insert a letter on the wording of the national constitutional prohibition amendment resolution.

The letter is as follows:

Mrs. MARGARET DYE ELLIS,
Legislative Secretary National W. C. T. U.,
Washington, D. C.

DEAR MRS. ELLIS: In reply to your request on behalf of the Woman's Christian Temperance Union, I am glad to prepare a brief statement of the principal reasons for inserting and repeating the words "for sale" in the resolution submitting to the States for ratification an amendment to the Constitution for national prohibition.

I hope the brief may be of some use in answering such inquiries as the one you inclose.

The reasons for the words are both scientific and strategic.

The object of the amendment, the aim of national prohibition, is to produce a sober Nation.

THE PROBLEM.

The attainment of this great object by process of law presents a problem of great difficulty and complexity twofold in its nature. The first problem is to devise a resolution which in actual operation would attain the object. The other problem is to so draw the resolution that in the face of all opposition we can actually pass it by a two-thirds majority through both Houses of Congress, and can secure its ratification by three-fourths of all the States.

THE NATURE OF THE DISEASE.

To solve the twofold problem we must understand the very nature of the drink evil. We must diagnose and understand the disease before we can intelligently prescribe a remedy.

The use by man of alcoholic beverages is well-nigh universal, and has come down the centuries. The liquor traffic built upon this use is an inherited, a vested institution, that permeates the business life, the political life, the social life of the Nation, constituting a disease that is deep and organic. To eradicate such an institution we must find out the sources and roots from which it propagates and perpetuates its power from generation to generation.

THE LIQUOR INTERESTS FEED UPON THE YOUNG.

Investigation indicates that more than two-thirds of the drunkards in the land had already contracted their habits before they were 21 years old, that 30 per cent had begun their habits before they were 16, and 7 per cent before they were 12. The perpetuation and expansion of the liquor traffic is founded upon teaching boys to drink; upon debauching the youth.

DRINKERS ARE NOT THE CAUSE.

Through what agencies and instrumentalities are the boys systematically taught to drink? I have been abstemious myself, but as a man in the world of affairs I have been thrown with drinking men in many lands, but I have never yet found a drinking man who made a habit of teaching boys to drink. This fact simplifies our problem. It is not drinkers who propagate drinking from generation to generation.

RESCUE WORK IS NOT THE REMEDY.

Rescue work can therefore never solve our problem. In drawing the resolution we need not concern ourselves, except incidentally, with trying to stop old drinkers from drinking, for even if we succeeded, the tide of young drinkers would continue to rise.

THE FIRST PROBLEM—EFFECTIVENESS.

Our first problem, therefore, is fundamentally to stop the recruiting of young drinkers.

NATIONAL LIQUOR TRUST IS THE ROOT OF THE ILL.

Who are the recruiting agents? The hundreds of thousands of saloon keepers and bartenders and the scores of thousands of bootleggers, blind-tiger operators, blind-pig operators, who are in reality but agents of the great national liquor interests, the great distilling and brewing trusts that control, in partnership with the Government, a monopoly of the supply of alcoholic beverages.

THE NATIONAL ORGANIZED LIQUOR TRUST IS THE TAPROOT OF THE DISEASE.

If we can draw and enact a resolution to destroy the national liquor interests and cut out this taproot, all the other problems will be simplified; the tree itself must wither and fall.

THE MOTIVE.

What is the motive of the liquor trusts in sustaining its vast recruiting system? When a boy grows up with the drink appetite he becomes a customer for life of the liquor trust that controls a monopoly of the supply of drink. It is hard to teach men to drink. It is estimated that hardly 2 per cent of men begin to drink after they are grown. It is easy to teach boys to drink. The liquor interests have simply adopted the easiest way to develop their customers. The vast profits in the sale of their goods is the motive of the liquor trusts in carrying on all their business, the motive in debauching the boys and the youth of the land.

THE REMEDY.

If we stop nationally the sale and everything that relates to the sale of their goods, we remove the motive of their actions, the object of their existence. The adoption of a national resolution to this effect would cause the great national liquor interests of brewers and distillers and dealers to disintegrate, and the sustaining source of liquor's strength would dry up. The systemmatic debauching of the youth would end. Many old drinkers might continue to drink until they die, but no new drinkers would take their place. The rising generation would grow up sober.

NATURE'S WAY.

This is nature's way of curing an organic disease, not so much by curing old diseased tissue, but by producing young tissue free from the disease, thus growing a cure. The nature of any true remedy or treatment for an organic disease is to stop the young tissue from contracting the disease. In case of cancer, for instance, the operation in removing the diseased tissue is designed to stop the disease extending to the young tissue.

Thus we see that the scientific way to effect the cure is to prohibit the sale and everything that pertains to the sale. If this is done there can be no question about the result. An effective cure would necessarily result.

THE SECOND PROBLEM—HOW TO WIN.

The second problem is a question of strategy. Whether we can enact a resolution simply prohibiting the sale and everything that relates to the sale of beverage alcohol, whether it is necessary to do more than prohibit the sale in order to enact the resolution, whether in the national struggle it would strengthen or weaken our fight to extend the prohibition in an absolute form or a regulatory form to the question of the use, and matters relating to the use, whether in our stupendous struggle we should attack the vast armies of drinkers as well as the intrenched institution of dealers that produces the drinkers.

THE QUESTION OF OUR SIDE.

What is the effect upon the organized temperance and prohibition forces of confining the resolution simply to the sale and matters relating to sale? As a rule, members of the organized temperance forces, imbued with a realization of the terrible effects of drink, naturally prefer drastic measures of repression and a comprehensive scope to include use as well as sale, and to prohibit for all purposes as well as beverage purposes.

It can be assumed, however, that none of these members would actually oppose a measure that would clearly destroy the national liquor interests, the main central sustaining force not only in recruiting drinkers but in dominating politics, corrupting officials, violating the law, lowering the moral tone, the whole plane of living. Furthermore, with the resolution so drawn as to leave Congress the full right that it has now under the taxing power to tax and consequently destroy the production even when manufactured for private use, with the resolution so drawn as to leave to all the States their full rights to prohibit for all purposes, for use as well as for sale, so that no great abuses could grow up unchecked on account of the limitations of the resolution to questions of sale, under these conditions it can be safely assumed that when the resolution is fully understood, being finally settled on, all members of temperance oragnizations will not only acquiesce in but will cooperate heartily in the fight for enactment. In fact, the great strategic advantages gained by the words "for sale" will inspire more and more enthusiasm as the war advances. Already practically all organizations are ranged solidly behind the reso-

lution, and even notes of individual dissension have about died out.

Thus we do not stand to lose any appreciable part of the organized strength of our side, either as to numbers or as to enthusiasm, but, on the contrary, with the sequence of victories showing the wisdom of the strategy, we can see added enthusiasm and inspiration.

THE QUESTION OF LIQUOR'S SIDE.

The effect of the wording on the organized liquor forces is to paralyze their whole line of defense. Twelve decisions of the Supreme Court of the United States have declared that no citizen has an inherent right to sell intoxicating liquor. The liquor forces are left to defend the position, the naked position, of asking society to allow them for gain to continue systematically to debauch the youth, a position that is manifestly indefensible. Liquor men used to laugh at drastic measures for coercing drinkers. Now the national amendment resolution with the words "for sale" used throughout has spread despair over liquor's ranks. We now hear repeatedly of their leaders saying among themselves, "The handwriting is on the wall." We hear of brewery and distillery stocks going down and down on the stock market.

THE QUESTION OF THE PUBLIC.

While the effect of the wording on the organized temperance forces and on the organized liquor forces is important, the effect on the great body of the public that belong to neither side is absolutely vital.

It is estimated that between 70 and 80 per cent of the voters in this country are occasional drinkers, men who are gradually coming to recognize that drinking on the whole is harmful, but who still have the impression that the chief harm is in the abuse, men who do not know the full truth about alcohol and who have as yet no deep, impelling conviction on the subject.

LIQUOR'S FIGHT.

Liquor has always commanded and can be counted on in the future to command always a huge corruption fund with which to buy up without scruple the degenerate vote it has created, and practically all other purchasable votes. This factor is important and should not be underestimated. But liquor's victories in the past have depended on and liquor's victories in the future will depend on its success in reaching and binding the average honest voter whose convictions on liquor have not yet crystallized.

In seeking to bind this average voter liquor's adroit strategy in all referendum struggles is to avoid the subject of the merits and demerits of liquor and to link its cause up to great vested institutions and deep universal principles in the hearts of all good men, like individual liberty, the sanctity of the home, local self-government, home rule, States rights. With its inexhaustible war chest, with its compact, thoroughly organized and drilled forces, liquor can be counted on to control the press in large measure, to flood the mails, to put in the field an army of unscrupulous "workers." Liquor can be counted on to "beat us to" the average voter, particularly the voters in the back country districts and the congested portions of big cities, where the unsuspecting citizen is easily misled, prejudiced, and crytallized. If there is any opening in the wording of a measure where even by inference, whether real or imaginary, liquor can say that the enactment would bring sumptuary law, would menace individual liberty, the sanctity of the home, the rights of local self-government, liquor will reach these voters and have them set and prejudiced long before the prohibition side arrives. Then it is too late.

THE AMENDMENT FIGHT IN ALABAMA.

As an illustration, the proposed amendment to the constitution of Alabama, submitted to the voters in 1909, contained a second section which provided that the legislature should have power to prescribe where liquor for specified purposes might be kept. Liquor seized upon this opening instantly and went forth to the liberty-loving farmers in the back country districts and alarmed them by saying that if the amendment carried the legislature would pass a law forbidding them to have even blackberry cordial in the cupboard, and would provide for special agents who would descend upon them in the dead of night and search their homes and drag the women off to jail. The country districts were flooded with "workers" and speakers depicting the overthrow of their ancient liberties, and about once a week, sometimes oftener, the individual voter would get a letter or other literature depicting the horrors of violating the sanctity of the home if the amendment carried.

The papers day after day would tell about Runnymede and the sacrifices of our fathers and forefathers in establishing Anglo-Saxon liberty, which "fanatics" were conspiring to overthrow. By the time the slow, hard-up temperance forces reached the field it was too late. The farmers would not come out to their meetings, the speakers were looked upon with suspicion as public enemies. In some places it is reported they were met with shotguns and warned to leave. The country vote in Alabama is really a strong prohibition vote. With the second section of the proposed amendment liquor was able to take this vote away from us and with our own strongest forces to pound us to jelly. To this day in Alabama the very word "amendment" will raise a ghost and cause the Alabama farmer to reach for his rifle. Those who were not in that fight can never know how our forces were slaughtered, all because of the superfluous wording of the amendment. From that fight I went to the convention of the Antisaloon League in Chicago and laid before them the vital importance not only of confining future amendments, State and National, to prohibiting only "the sale," but also of repeating the words "for sale" to stop up every loophole. Then I laid the same matter before the Woman's Christian Temperance Union and before the Prohibition Party. The Woman's Christian Temperance Union was the first organization to accept the proposition, and with the indorsement of their national president, the sainted Mrs. L. M. N. Stevens, I introduced my joint resolution in its simplest form to comply with the demand of grand strategy. The Antisaloon League was next in giving its adherence. The Prohibition Party, with its martyr-like idealism, was last.

It is true that in order to save the words "for sale" in the first section I was compelled for the time to accept in House joint resolution 168 a compromise on section 2, wherein analogy to section 2 of the Alabama amendment Congress was given regulatory power over liquor for various purposes other than for beverages. The dangers of this section were immediately brought out in the hearings before the Judiciary Committee of the House and the Judiciary Committee of the Senate, and those who had insisted on the compromise were prompt to sanction a return practically to the simplest form, in which, as amended on the floor of the House on December 22 and contained in House joint resolution 394, now stands unassailable.

THE LAST ELECTION IN TEXAS.

Another illustration of liquor's alertness to seize upon any opening in this line of strategy is seen in the recent election in Texas.

Although I officially informed the Judiciary Committee of the House of the desire of our side to amend House joint resolution 168, that committee, in reporting the resolution to the House without recommendation, naturally left the resolution in its first form, and in this first compromise form it was carried on the House Calendar for many months. A great election in Texas was scheduled. Liquor promptly took the compromise form of the resolution unamended and went to the farmers of Texas on the plea of "State rights," and beat our forces, as they had beat us in Alabama. When the farmers of Texas learn how they were misled a day of reckoning will come for the Texas delegation that voted almost solidly against the resolution.

FEDERAL USURPATION AND CENTRALIZATION.

One of liquor's cries in the Texas campaign, so effective with the farmers, was against the usurpation of power by the Federal Government against the tendency toward centralization. The words "for sale" and the simplified form of the resolution remove all grounds upon which such a cry could be based.

THE ORGANIC LAW.

The people, especially those who live in the country, are very careful about changing the organic or constitutional law. Their suspicions of hidden dangers are easily aroused. Liquor tries to capitalize this. What might be accepted in a statute is often looked upon with alarm in a proposed amendment to the Constitution. Again, a control of the question of use, a regulation of domestic affairs that might be accepted from the State would often be resented and resisted if proposed for the distant Federal Government. Liquor is quick to capitalize this feeling. Confining the resolution to "the sale," and keeping it in its simple form, completely neutralizes this danger.

LIQUOR COMPLETELY DISARMED.

It is thus seen that the final wording of the resolution containing the operation of the Federal amendment to the question of sale for beverage purposes takes from the hands of liquor every weapon with which it has heretofore fought us in the struggle for the votes of the great body of the public, the average good citizen. On the crucial battle ground where the final result is always settled, liquor now stands completely disarmed. Stripped of its cloak of pretended morality, unable to invoke any principle of right, it is an easy task for us to show the average patriotic citizen how hideous is the naked form of the liquor traffic, feeding upon the youth, tainting the blood before the children are born, disrupting the home and its parental love, driving the boys upon the streets and into the mines and

factories, cheating them of their right to an education, menacing the productive power of labor, robbing the Nation of its wealth, and levying heavy burdens of taxation for the support of its finished products of crime, pauperism, and insanity, undermining the public health and the public morals, blighting politics, and menacing the very foundations of free institutions, dragging men, nations, and civilizations to their downfall and destruction. And what is it all for?

That a few thousand brewers and distillers might continue their monopoly and their vassals continue to dispense to the unsuspecting public a degenerating, poisonous, and habit-forming drug, to fill their coffers with blood money.

What is proposed?

Not to change any institutions, not to curtail any rights, but simply for the National Government to reach this national ill with a simple, universally recognized national remedy, continually applied by all civilized governments, simply to prohibit barter and sale and those things pertaining to sale. With liquor completely disarmed, our forces, with reasonable cooperation and with that devotion and inspiration that come from such a glorious cause, can move forward on an irresistible march.

This "for sale" wording of the resolution has enabled us to choose the battle line. Our strategy has isolated liquor. The battle line steadiiy forming ranges liquor with its blood money, its degenerate purchasable vote, in front of the determined manhood and patriotism of the Nation.

LIQUOR LEADERS SOUGHT TO STRIKE OUT "FOR SALE."

In the debate in the House on December 22 last the full force of liquor's fight was directed along the very lines that the final wording neutralized. Liquor leaders who organized and directed the fight against us, led by Mr. MANN, of Illinois, the Republican leader, aided by Mr. UNDERWOOD, the majority leader, brought all their united strength to bear upon an amendment offered by Mr. MANN to strike out the words "for sale" and thus take from us our vital strategic advantage. But our forces stood as solid as Gibraltar and voted down the amendment.

OBJECTIONS ADVANCED.

Having pointed out the real effectiveness of the amendment, based upon scientific analysis and its stupendous strategic advantages, it is not necessary to dwell at any length upon the objections that have been advanced by a few individuals, like the one you cite in your letter. Most of these individual objectors are devoted prohibitionists who fear that the amendment would be evaded by the general use of "kitchen distilleries" and "cooperative breweries." This fear is based on the incorrect assumption that there would be no recourse to meet such conditions if they arose. As a matter of fact, while the constitutional amendment is limited in its prohibition to the question of sale for beverage purposes, it does not abridge the power of Congress to tax when liquor is produced for other purposes. It is evident that Congress, assured of being overwhelmingly "dry" before the resolution could even be submitted, would promptly tax kitchen distilleries and cooperative breweries out of existence. This action would be exceedingly easy to secure since the chief opposition, that of the great national liquor interests, would be ended.

These objectors seem also to assume that the States, counties, and cities would have no additional authority. On the contrary, the constitutional amendment would not curtail the reserved power residing in the States to prohibit liquor even in its use.

With the national liquor interests—the chief sustaining source of evasion and violation—gone, States, counties, cities, and towns would have little difficulty in enforcing with the Federal Government the Federal prohibition and in adopting and enforcing any additional laws found necessary to prevent evasion in their own jurisdictions.

SINGULAR COINCIDENCE.

It is interesting to see how the liquor men in Congress made the same objection that these few extreme prohibitionists have made. Many of those who voted wet and fought hardest for the enemy are apologizing to their constituents by saying the proposed amendment was not a "real" prohibition measure; that they would have voted for it but for the words "for sale."

SATISFACTORY TO THE MILLIONS.

More than 6,000,000 of petitioners have petitioned Congress for the resolution with the words "for sale." Practically all the Protestant churches of the Nation have indorsed the resolution with these words. The great national battle lines are now forming. Let no real friend of temperance or prohibition imagine that at this time any good purpose could be served by internal discord and contention.

Let us all, to the last man, including even those who themselves would have preferred a different wording, now join hands and stand shoulder to shoulder.

Our amendment will destroy the national organized liquor interests. All the rest will follow, as effect follows cause. Our amendment gives us an overwhelming strategic advantage. Fall in line, all those who love their country and their fellow man. The stars in their courses are fighting against liquor. Close up the ranks, form companies and regiments, brigades, divisions, and army corps. Soldiers, God bids us forget self.

Keep step with the martial music of the spheres to which our armies are marching. If you fall, go down with a smile on your lips and a prayer of gratitude and rejoicing in your heart, for as surely as the laws of nature hold, as surely as God reigns in the universe, our armies are marching to victory, the result of which in a comparatively short time will be a sober Nation and a sober world.

Faithfully, yours, R. P. HOBSON.

"To Do or to Die."

This Congress, be it said to its credit, has given us a fairly good income-tax law, a fairly good banking law, a law creating a much-needed Federal Trade Commission, a law exempting labor and farmers' organizations from the rules of the antitrust statutes, and a law abolishing interlocking directorates in big business. This Congress has brought the Agricultural Department in direct contact with and assistance to the men and women on the farm. It has provided for the building of a Government railroad in Alaska to open up that wonderful Territory to civilization and development. It has broken up the traffic in the habit-forming drug, and it has lent itself to improve our Consular Service.

EXTENSION OF REMARKS

OF

HON. MICHAEL E. BURKE,

OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. BURKE of Wisconsin. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD, I herewith incorporate in the RECORD an editorial published March 1, 1915, in the Wisconsin State Journal, of Madison, Wis., and entitled "To do or to die."

The purpose of inserting this article is to place in the CONGRESSIONAL RECORD the public opinion and judgment of an influential and progressive newspaper upon the work of this the Sixty-third Congress.

Since the publication of this article the so-called child-labor bill was passed in the House of Representatives by a large majority. A rural credits system was also passed by Congress; but the conferees of the Senate and House being unable to agree in conference upon its terms, reported a provision for the appointment of a rural credits commission to investigate this important subject and to report to Congress not later than the commencement of the next regular session, when it is confidently believed that a wise and workable rural credits system will be prepared and passed by both Houses.

TO DO OR TO DIE.

This week will see Congress adjourn without an extra session to immediately follow. As always, Congress adjourns leaving many things undone which should have been done. Again it has failed to meet the great economic and moral issue of child labor by failing to pass the bill which would have prevented the interstate transportation of the products of child labor.

Congress failed to put through a group of important conservation measures, which would not only have preserved great water-power rights but would also have obtained the best results from the grazing and mineral lands and conserved our national radium supply.

Congress failed to provide an adequate rural credits system; to establish the presidential primaries, advocated by President Wilson; to revise the civil-service laws so as to advance a real merit system. It is planned that the House shall immediately approve the ship-purchase bill and that the Senate shall be its tomb, which act alone lends no added honor to the Senate.

But withal it may well be recorded that the Congress which now comes to a close has given us the most honest tariff law we have yet had; it is far from perfect, but it goes a long way in the right direction; it has lowered the tariff on articles of food, clothing, and shelter, and has raised the tariff on luxuries.

This Congress, be it said to its credit, has given us a fairly good income-tax law, a fairly good banking law, a law creating a much-needed Federal Trade Commission, a law exempting labor and farmers' organizations from the rules of the antitrust statutes, and a law abolishing interlocking directorates in big business. This Congress has brought the Agricultural Department in direct contact with and assistance to the men and women on the farm. It has provided for the building of a Government railroad in Alaska to open up that wonderful Territory to civilization and development. It has broken up the traffic in the habit-forming drug. And it has lent itself to improve our Consular Service.

Congress could have done more; it should have done better, but we doubt if, on the whole, any Congress since the Civil War, has, all things considered, done so well. For the first time it has attempted to calk up the leaks in the pork barrel. That is something a Republican Congress has never seriously attempted to do, though, be it said, this particular piece of work was fathered and urged by Republican Members of Congress.

But looking to 1916, the Republicans seem to be disposed to accept the position of an opposing party. It was that position which so long weakened the Democratic Party. That party is weak which, instead of setting up a positive constructive program of its own, seeks public favor by merely pointing to the mistakes of the party in power. President Wilson will advance in the favor of the American people by his hard fight for an honest attempt to meet a grave defect in our national commercial equipment, and the Republican Party will be held directly responsible for the defeat of that important measure.

"The Grand Old Party" but invites an early death; it will fail to get even Utah and Vermont in 1916 unless it plays a nobler and bolder rôle than that of a negative alternative to the Democrats. It can not win by default. However conservative may be the tendencies of the times, no party is going to win which merely marks time and sneeringly points to the fellows who are out of step in the column that is actually marching.

The election last November showed the Republican and Democratic parties to be of substantially the same voting strength. The balance is held by the Progressives, who number approximately 1,750,000 voters. These voters are going somewhere; they are not going to stand still; they are earnest, thinking voters, and they are going to vote for the party that will attempt to do something. They are not going to vote with any party that merely opposes and offers no positive, constructive program.

The Democratic Congress, which this week comes to a close, has at least given the Republican Party this alternative—to do or to die.

Our Coast Defenses.

EXTENSION OF REMARKS

OF

HON. AUGUSTUS P. GARDNER.

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 1, 1915.

Mr. GARDNER. Mr. Speaker, as the Sixty-third Congress is just coming to a close, I take this opportunity to print some remarks on our coast defenses. Part of these remarks have been delivered in this House. Part of them I intended to deliver, but forgot to do so when the fortifications bill was up. I also print certain exhibits.

YANKEE DOODLE, GUARD YOUR COAST.

As old as the Declaration of Independence, and more important than the Constitution of the United States, is the solemn injunction handed down by the fathers in our national anthem, "Yankee Doodle, Guard Your Coast." Now, that is exactly what we do not do, and on the Pacific coast we do not even pretend to do it, for we have no navy in the Pacific. In the Atlantic we have, to be sure, a navy; but, as everyone knows who does not willfully blind himself to the facts, it is inadequate and undermanned. Except for the Navy, we have no coast defenses for some 1,800 out of the 2,000 miles of which our Atlantic coast consists. Of course, it is true that we have harbor fortifications and that they probably cover not more than 200 miles altogether. Elsewhere the enemy can land troops at his own sweet will if once our fleet is disposed of or bottled up. These coast fortifications of ours are designed to accomplish three purposes, or so the experts tell us. I do not think that anyone will dispute the assertion that the object of our coast fortifications is, first, to compel an attacking enemy to land its troops elsewhere than under the guns of our forts; second, to protect against naval attack or bombardment the populous communities near which the defenses are erected; and, third, to enable our harbors to furnish bases for our own fleets instead of the enemy's fleets.

To quote the words of the Secretary of War:

They—

The coast defenses—

are not designed to be self-defensive against operations undertaken on the land side; neither are they expected to prevent the landing of hostile forces at other places than those controlled by their guns, from which to conduct a land campaign. It would not only be impracticable to defend with seacoast fortifications all of the possible landing places upon the coast of the United States—

And so forth.

THE BACK DOOR WIDE OPEN.

I am inclined to think that our seacoast fortifications, even in their incomplete and unsatisfactory condition, are under present circumstances sufficient to accomplish the first purpose. I do not suppose that any foreign fleet would be so crazy as to try to effect a landing under the guns of our forts when it could accomplish precisely the same object by effecting a landing a few miles away. Of course a very proud nation might insist on walking its troops in at the front door; but if the back door were wide open, as our back door is, even the proudest nation might probably be satisfied to avail itself of the open door rather than the door which is partially closed. And that reminds me: Do you realize that we have not even a strand of barbed wire to impede an attack on our forts in the rear? Not even a rat trap to catch an unguarded soldier's toe. Our forts are open on the land side, every one of them. As for our seacoast guns, they can not help us to repel a land attack, for we have ingeniously so arranged it that only 3 out of the entire 1,100 are mounted so as to shoot in every direction. There can be no doubt that troops convoyed and landed by a successful foreign nation could readily take our coast fortifications in the rear. Obviously enough that is so, unless Mr. Bryan's million patriots should suddenly spring to arms, if perchance they could discover the arms to spring to.

HOW ABOUT BOMBARDMENT?

With regard to the second purpose of our seacoast fortifications, I am absolutely unconvinced by the statement that our principal seacoast cities are safe from bombardment by the new British and German superdreadnaughts with their long-range guns. I have been told—and I believe it to be true—that the hearings do not contain all that transpired in the committee room between the officers present and the members of the committee when the safety of our seacoast cities was discussed. I believe it to be true that the officers pointed out certain very grave deficiencies in the fortifications which are supposed to protect some of our very largest cities. I know it to be true that both Gen. Crozier and Gen. Weaver averred that additional fortifications are now necessary on account of the increased range of naval guns and on account of the territorial growth of certain of our fortified cities. I am told that the whole matter has been referred to a board which will report next winter. Judging by the rapidity with which we have secured and acted upon the reports of boards in the past, it will be a good many years before much is accomplished.

CHESAPEAKE BAY.

For instance, take the report made in 1906 by the National Coast Defense Board. Here is what was said about the defenses of Chesapeake Bay:

Commercially and strategically, Chesapeake Bay is to-day, as it always has been, of the very first importance. With the entrance, as it is now, unfortified, a hostile fleet, should it gain control of the sea, can establish, without coming under the fire of a single gun, a base on its shores, pass in and out at pleasure, have access to large quantities of valuable supplies of all kinds, and paralyze the great trunk railway lines crossing the head of the bay.

That report was made nine years ago, but not one spadeful of earth has yet been turned in fulfillment of any fortification project for the defense of Chesapeake bay. To be sure, we have bought land on Cape Henry, at the entrance, and the Ordnance Department has prepared plans and has submitted to the Secretary of War a supplemental estimate of $1,750,000 to be appropriated this year. I regret very much that the Secretary has refused to recommend this appropriation to the committee, and, of course, the committee has not done anything about it. The Secretary points out that the conditions of the Public Treasury are not such as to justify this expenditure; a singular attitude to take, all this considered. The Secretary's view of the matter reminds me of the farmer with the valuable live stock, who refused to repair his fences because "it cost too much." I suppose that the fact is that Uncle Sam has got so much in the habit of talking about his poverty he is beginning to believe the yarn himself. Considering the fact that the United States is the only Nation on earth which can afford a strong armament without feeling the expense, it seems a little fantastic for us to plead poverty as an excuse for inadequate protection.

WHY SECRETARY GARRISON PARED THE CHEESE.

I notice that the defenders of the Committee on Fortifications, like the defenders of the Committee on Military Affairs, take refuge this year behind the plea, "We have given the War Department everything it asks for." That statement is true enough so far as the appropriation bills are concerned, but it needs a little explanation just the same. The estimates of each of the bureaus of the War Department as to its needs for the fiscal year beginning July 1, 1915, were submitted to the Secretary of War in March, April, and May of last year. The Secretary proceeded to whittle down the proposed expenditures, and his job was nearly completed in June, long before the war broke out. It was the result of his remorseless whittling labors which the Subcommittee on Fortifications had before it when this bill was prepared. As the Secretary frankly admits, the state of the national finances and the lack of public interest in military matters at the time he blue-penciled the estimates impelled him to pare the cheese until there was not enough of it left for the mites to lodge in; all of which seems a pity, but

does not account for the fact that the Secretary did not raise the estimates when the situation changed. Just why his conclusions of June, 1914, should be binding in February, 1915, can probably be explained by the Fortifications Committee, but by nobody else.

The explanation which the Secretary gives is that he thought other things in the military line much more important. Consequently he caused bills to be introduced in the Senate calling for an increase in the field army and an increased force of officers and men for our coast defense. These bills were not appropriation bills. They appropriated no money, but they were designed to pave the way for appropriations in the future. Inasmuch as Secretary Garrison is not going to get any of those bills passed this year, it would have been just as well for him to ask for everything which he thought necessary and "damn the expense."

The fact is that this bill which we are considering marks no advance at all. It carries less than half a million dollars more money than the corresponding bill which we passed last year.

THE NATIONAL COAST DEFENSE BOARD.

Let us take stock of our goods and see what we have on hand in the fortification line. When I was a red-headed lad of 19 the Endicott Board was created, and under the plans of the Endicott Board we have been engaged in fortifying the United States ever since. To be sure the Endicott Board's plans have been modified from time to time, but the original scheme is the basis for the whole system of our coast fortifications.

I am now a white-haired man who has rounded out about one-half century of existence, and still the plans of the Endicott Board are a long, long way from completion. Secretary Garrison says that it will take $40,000,000 to complete this work in the continental United States alone. For the last 10 years we have been appropriating on an average $1,150,000 a year to carry on the good work. At that rate of progress I shall be a Rip Van Winkle of 80 by the time that the job which was begun in my boyhood has reached completion.

AMMUNITION FOR THREE-QUARTERS OF AN HOUR.

The National Coast Defense Board some nine years ago, when battleships were smaller and naval guns less formidable, decided that it would be safe to fix the amount of our seacoast ammunition at the modest measure of an hour's battle supply for each gun. The theory was that both coasts would not be attacked at the same time, and the view of the board presupposed the possibility of the shipment of all the Pacific coast ammunition to reenforce the Atlantic coast supply in case the attack came from the direction of Europe. Modest as this estimate seems to be, Congress has disregarded it in the pleasant way in which we treat all such estimates. Instead of giving our coast defenses the ammunition which the board recommended as a minimum, we have given them a little less than three-quarters of an hour's ammunition on which to depend in case of war. In other words, we have given them 73 per cent of the minimum amount decreed to be essential. If this bill becomes a law in its present shape that 73 per cent will be increased to 74½ per cent and no more.

Gen. Crozier's testimony generally shows the caution of the veteran bureau chief. Yet even Gen. Crozier testified that we imperatively need the full 100 per cent. As for Gen. Weaver, the Chief of Artillery, in his uncompromising way, he blurted out his real opinion and he let the cat out of the meal. He absolutely scouted the idea that it would be possible to defend one coast with ammunition drawn from the other coast. One of the general's sentences is worth quoting:

Gen. WEAVER. * * * Having in mind past experiences during the Civil War and the Spanish War and the excitable nature of our people who live on the coast, a couple of (hostile) cruisers on one coast would be sufficient to hold intact both the personnel and the matériel on the least-threatened coast, and the people would protest so effectively as to prevent any withdrawal of ammunition or Coast Artillery troops.

The general emphatically says that the proper allowance is two hours' ammunition for each of our coast defense guns instead of one hour's ammunition. At the present rate of appropriations it will be 18 years before we have ammunition for our coast defense guns sufficient to last one hour. Perhaps by that time we may get around to considering the declaration of the Chief of the Coast Artillery to the effct that we need twice that amount.

EXHIBIT A.

GEN. SCRIVEN TO SECRETARY OF WAR.

JANUARY 5, 1915.

From: Office Chief Signal Officer.
To: Secretary of War.
Subject: Appropriation for aviation section.

1. I have the honor to bring to your attention the item in the Army bill appropriating $600,000 for the use of the Signal Corps of the Army, of which $300,000 (items—aeroplanes, $220,000; captive balloon plant for Hawaii, $35,000; dirigible balloon, hangar, and gas plant, $450,000; maintenance, etc., $301,300. Total, $1,006,300) only is made available for the purpose of aviation. If you will recall the care taken by the Secretary of War to examine the estimate for aviation submitted in the original estimates of the Chief Signal Officer for the year 1916, and that the amount thus submitted, $1,006,300, was reduced by the Secretary of War to $400,000 by omitting estimates for balloons and otherwise in the interests of economy, it should seem that a further reduction by Congress will decrease the amount for this important service to so small a figure that little real progress can be made during the coming year, and the small amount provided will necessarily be frittered away in details, since not enough money is allowed to create a well-planned and efficient establishment. No great aviation corps is asked for, no expensive dirigible balloons desired, but it is requested that a reasonable number of aeroplanes and their accessories be provided, and the necessary funds allotted to keep them in commission during the year and in fit condition for the training of military aviators.

2. It is therefore most earnestly recommended not only that the amount authorized by the Secretary of War be restored, but that for reasons hereinafter given this amount be increased by $100,000, and that the Signal Corps be allotted for the year 1916 for its aviation service $500,000.

3. It will be recalled that the bill providing for the present organization of an aviation branch of the Signal Corps became law on the 18th of July last. An excellent training school is established at San Diego, Cal., and now the aviation section consists of 29 officers and 155 enlisted men. Since the law passed most earnest efforts have been made by those in charge to carry out the wishes of Congress regarding this now vitally important service, and these efforts have been most faithfully and manfully supported by the splendid body of men at the aviation school. Here in their constant flights (summary from Jan. 1, 1914, to Dec. 19, 1914: Flights, 2,598; time in the air, 785 hours 26 minutes; passengers carried, 1,333) many young officers and enlisted men are risking their lives to train themselves for the service so much needed by the Army, and it is submitted that no consideration of economy should hold as regards these men or their equipment.

4. The officers provided under the law are all volunteers; the enlisted men and men from civil life are also in the service on their own application, or with their consent, and many more have applied than accepted. Great interest and pride are taken in the work.

5. Such is the present status, but without money this condition can not be maintained; old worn-out and defective machines must result, endangering the men and disgusting them with the service. For the aviators and for the important work they are doing there are now on hand 10 aeroplanes, some damaged (at the time of the hearing before the Military Committee there were 11), with 8 others under orders for construction, and with a balance to the credit of this year's fund of about $30,000, when all obligations have been paid. It is submitted that this is a ridiculously small establishment for the country's military aviation service seriously undertaken, and may result in unnecessary loss of life should the school be found to use obsolete, old, or patched-up aeroplanes—comparable, some of them, to the deacon's one-horse shay. This lamentable condition should not be allowed to arise, but it is difficult to see how it can fail to do so, as matters stand, if the full measure of the law is undertaken and unless the whole plan be reduced to the vanishing point, with an appropriation of $300,000 authorized for the coming year and $30,000 on hand for the remainder of this year.

6. It is pertinent here to invite your attention to the plan of the Chief Signal Officer of the Army and of the head of the aviation section for a proper and immediate organization of an aviation service proportionate to the size and immediate needs of the Army. In doing this no consideration is given to such important matters as the establishment and equipment of training schools, buildings, and many other matters which are left for future consideration, nor is it considered necessary to emphasize the vital necessity of an aeroplane service in modern armies. In regard to this suffice it to say that the present war seems to show that to the mobile artillery the aeroplane is a vital necessity; to guns of position, a powerful auxiliary; and to the commanding general, the very apple of the eye. Therefore it is believed that for the Army of the United States there should no longer be delay in putting into commission a first line of aeroplanes adequate to the needs of defense.

7. Considering the size of the Army and our conditions for service, an adequate air force, it is believed, besides dirigibles, which for the present are dropped from consideration, to be 50 aeroplanes divided into 4 squadrons of 8 aeroplanes and 50 per cent reserve for the replacement of damaged or worn-out machines. Three of the squadrons organized will be available for service either as a whole or in groups of companies or sections for use within the United States, and one squadron, at least, will be for use in the Philippine Islands, in Hawaii, and in the Panama Zone.

8. Presumably in the island possessions and in Panama hydro-aeroplanes would be preferable to the ordinary aeroplanes. It is difficult to see how any proper defense of these outlying positions, and especially Panama, can be maintained without aviation service. Obviously, also, both the Field Artillery and the coast defenses must use and become familiar with the aviation service, to say nothing of the Cavalry and of commanding generals. It follows that a considerable number of aeroplanes should be kept in commission, and it is difficult to see how any serious aeroplane service can be organized with a less number of machines than the 32, which for convenience may be considered as making up 4 squadrons of 8 machines as a first line of air craft. But experience proves that the loss by breakage, wear, and accident quickly reduces the number of machines in use, and a substitution of spare parts and engines must be kept always on hand to replace those destroyed. A moderate estimate places this replacement at 50 per cent of the first line, making 48 aeroplanes in all. To this may be added 2 training machines, giving a total of 50 aeroplanes which should be on hand ready for service at all times with the Army and maintained at a reasonable degree of activity in flying. The replacement of 50 per cent should be composed of engines and other parts unassembled, but capable of being asembled into complete machines, and stored where they may be needed. Besides the aeroplanes there should be provided for each squadron, when complete and ready for service, 18 automobiles and tractors for the transportation of spare parts, fuel, and men, and for other obvious purposes. In addition, there should, of course, be provided stores of oil, gasoline, tools, and material for repairs, and many other necessities of service.

9. A complete and theoretically perfect personnel requires for 1 squadron 8 pilots, 8 observers, and 4 administrative officers, and an enlisted strength of 90 men. The organization of 4 squadrons complete will therefore require 80 officers and 300 men, and the cost is estimated at $250,000 per squadron, roughly speaking. Part of this

establishment is on hand. The foregoing is an outline of a measurably satisfactory peace organization for the aviation service proportioned to our present needs, but it must be noted that:

10. Under the law of July, 1914, but 60 officers and 260 men are provided. Should four squadrons be organized, therefore, it follows either that the full number of 20 officers per squadron must be diminished by cutting off two or three of the four administrative officers, and, in addition, a number of the officer observers, or that only a part of the machines be put in commission at one time—a faulty organization. It is evident, therefore, that the number of machines to be placed in commission under the law this year must be reduced, say, to 25.

11. At present, therefore, the provision of 25 machines as a first aviation line appears to be the logical complement under the existing law and economical limitations. This much can be organized under the law and with the means now developing, provided the money necessary for the purpose is given. I have, therefore, to ask as urgently as I may that provision be made in the appropriation bill for the purchase and maintenance of 24 aeroplanes as a first line, with a 50 per cent replacement, a total of 36 aeroplanes and their necessary accessories reduced to the lowest useful limit. The cost of this provision for the year, subtracting the number of machines on hand, will be approximately:

Aeroplanes: Eighteen to be purchased (plus 18 on hand July 1, a liberal estimate). Total aeroplanes, estimating the cost of each at $10,000 (a liberal price and covering the cost of armor and accessories, barographs, etc.).

Total cost of aeroplanes	$180,000
Automobiles and tractors, 30 at, say, $4,000 each.	
Total land transportation	120,000
Maintenance, oil, fuel, and running expenses for year	100,000
Tools	50,000
Salaries and contingencies	50,000
Total	500,000

12. The conclusion, therefore, is obvious. If 24 aeroplanes are provided for a first line, with a replacement of 50 per cent, there will be created the very modest provision of 36 aeroplanes for the United States Army; no dirigibles nor other lighter-than-air machines; and this when the countries of Europe are counting their aeroplanes by the hundreds and losing them by the score. Our own Navy is recommending 200 dirigibles for the sea service. Some two millions is suggested for the sea service, whereas to carry out the recommendations here made the amount of money asked for is $500,000. In other words, it is most urgently requested that the amount of money for aviation purposes given in the estimates of the Military Committee of the House be increased by $200,000, and a total sum of $500,000 be granted for this purpose.

13. In brief, the whole matter comes down to a request for the means to provide 18 additional aeroplanes, the necessary transportation, and to supply the necessary fuel and accessories. The establishment suggested, viz, 24 aeroplanes and 12 replacements, and their transportation, will carry out to a reasonable extent the provisions of the existing law and will create an aviation corps reasonable in size and organization, and one that will not be merely contemptible in the way of material and dangerously inadequate to those who are sacrificing themselves to the aviation service of the country. Without the money asked for it is feared that the aviation service of the Army will become a mere reproach to the country and a danger to its own people.

GEORGE P. SCRIVEN,
Brigadier General, Chief Signal Officer.

EXHIBIT B.

GENERAL ORDERS, No. 10.
WAR DEPARTMENT, *Washington, February 23, 1915.*

Officers of the Army will refrain, until further orders, from giving out for publication any interview, statement, discussion, or article on the military situation in the United States or abroad, as any expression of their views on this subject at present is prejudicial to the best interests of the service.

[2260070, A. G. O.]

By order of the Secretary of War:

H. L. SCOTT,
Brigadier General, Chief of Staff.

Official:
H. P. MCCAIN,
The Adjutant General.

EXHIBIT C.

ANSWERS TO QUESTIONS PROPOUNDED IN HOUSE RESOLUTION NO. 698.

Letter from the Secretary of War, submitting answers to questions propounded in House resolution No. 698, adopted by the House of Representatives on January 14, 1915.

WAR DEPARTMENT,
Washington, January 15, 1915.

SIR: I beg leave to hand you herewith my report upon resolution 698, passed by the House of Representatives on January 14, 1915.

The questions in the resolution are herewith repeated and answered:

First:

QUESTION. Is there any gun mounted in the fortifications of the United States proper larger than 12 inches in diameter? If so, where?

ANSWER. No.

Second:

QUESTION. Is the range of those 12-inch guns, as at present mounted, more than 13,000 yards?

ANSWER. (a) For 12-inch guns mounted on disappearing carriages, the standard carriage for the coast defenses, no. (b) For barbette carriages, yes. There are 29 of these guns mounted in the United States, and their range is approximately 18,000 yards.

Third:

QUESTION. Are the British dreadnaughts of the *Queen Elizabeth* type being equipped with 15-inch 45-caliber guns?

ANSWER. Yes.

Fourth:

QUESTION (question is divided so as to permit of more explicit answer). Is the range of those 15-inch guns 21,000 yards?

ANSWER. Approximately, yes.

(Continuation of question.) And is it not true that that range exceeds by over 4 miles the range of the best guns mounted in the defense of the United States proper, either on the Atlantic or Pacific coast, not including the Panama Canal?

ANSWER. It is true that the range of the guns just mentioned exceeds by over 4 miles the range of the guns as mounted in the defense of the United States proper, either on the Atlantic or Pacific coast; but it is not true that the range of those guns need remain thus restricted, since by a slight change in the mounting their range will be practically equal to that of the 15-inch 45-caliber guns above referred to.

Very respectfully,

LINDLEY M. GARRISON,
Secretary of War.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES.

The Attack on Dr. Frederick A. Cook.

EXTENSION OF REMARKS

OF

HON. THADDEUS H. CARAWAY,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. CARAWAY. Mr. Speaker, I desire to say I wish to have inserted in the RECORD the hearings before the Committee on Education, of which the gentleman from Georgia, Hon. DUDLEY M. HUGHES, is chairman. These hearings were held on the 26th day of January, this year, and contained statements, if true, that disclose a most heinous attack upon the reputation of a gentleman who I have been convinced has been much maligned, Dr. Frederick A. Cook.

It further discloses, if true, a bit of inside magazine making the public should know. In view of statements made in behalf of each claimant to the honor of having discovered the North Pole and the lack of opportunity to present his proof upon the part of Dr. Frederick A. Cook, and a total lack of evidence offered in behalf of Admiral Peary, and in the interest of history this question should be reopened and thoroughly investigated, and with that desire I place in the RECORD the hearings before the above committee.

The matter referred to is as follows:

COMMITTEE ON EDUCATION,
HOUSE OF REPRESENTATIVES,
Thursday, January 28, 1915.

The committee met at 8 o'clock p. m., Hon. DUDLEY M. HUGHES (chairman) presiding.

The CHAIRMAN. It appears as though it will be impossible for us to get a quorum of the committee present. I wish to say that on Tuesday last, at the request of Mr. SMITH, the introducer of this resolution, this hearing was granted him for this evening. We have a good deal of business before this committee, and this request was granted Mr. SMITH because of the fact, as I understand it, that two or three of the gentlemen who are to appear before the committee this evening are in this country only for a short while, and while they were here they were very anxious to present their views. I suppose we ought to have a little agreement as to how much time each one of these gentlemen will occupy.

STATEMENT OF HON. CHARLES B. SMITH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK.

Mr. SMITH. Mr. Chairman, I judge that when the matter is opened it will be largely discretionary with the committee as to how long they will want to hear any particular witness. It is a kind of case where one witness might require an hour to give his testimony, while another might want to take several hours, and you might not care to have more than 10 minutes of his testimony. So it is rather difficult for that reason to make any definite statement as to how long the hearings will take. My suggestion is that the committee hear a certain number of witnesses and then come to its own conclusion as to how it wishes to proceed. Personally, I am not an expert on this polar question, and some one else would have a much better knowledge of the trend the investigation should take than I would. I believe that the committee could better decide that for itself after the hearing was begun. We have here to-night three or four witnesses, any one of whom can be called. It was my intention to ask Mr. Balch, of Philadelphia, to appear first. There is another witness now in Washington who is going to Bermuda, and that testimony ought to be taken soon if the hearings can continue. Those who are here have come from out of Washington, and therefore it is important, if they can be heard, that they be given an opportunity now. As I have said, the committee can judge as to whether the testimony is interesting or should be continued.

The CHAIRMAN. We can do that when a majority of the committee is present.

Mr. ABERCROMBIE. Mr. Smith, is it your desire to have this hearing continue after to-night?

Mr. SMITH. Yes, sir; it was my intention.

Mr. ABERCROMBIE. Do you have any hope that we might finish these hearings in time to report any bill at this session?

Mr. SMITH. That would depend on how frequently the hearings were held and how long they were held. The one chief purpose for bringing the matter to an issue now is the fact that there are two men in this country who can give important testimony, and who will go away soon. One of these is Capt. Holm, of Denmark, and I am anxious to get that testimony into the record.

Mr. ABERCROMBIE. Why would it not be a good idea to hear those men first?

The CHAIRMAN. This was the idea, and that is the reason this meeting was called for this evening. I wish to say this: This committee has quite a lot of business before it. We have had hearings on various matters, and we are very anxious to take action on them. I do not know when it will be possible to extend any further hearings because we have before the committee all that we can possibly do from now to the end of the session, and the hearing was extended this evening so as to give an opportunity to the gentlemen who are here in this country only for a short time to be heard. I suggest, therefore, if it meets the approval of the committee, that we will hear from those two gentlemen who are only temporarily here.

Mr. SMITH. Capt. Holm, of Denmark, was to be here to-night, but, apparently, he has not yet come to the committee room. My understanding was that it would not take very long to hear the testimony of those two men, and it was my purpose to have Mr. Balch, of Philadelphia, go on first and outline a general view of this case, which would, I believe, open the way for the committee to decide what it desires to do further.

The CHAIRMAN. Mr. Balch, are you ready to proceed?

STATEMENT OF MR. EDWIN SWIFT BALCH, OF PHILADELPHIA, PA.

The CHAIRMAN. You can state your occupation to the stenographer, Mr. Balch.

Mr. BALCH. I am a lawyer and a member of the bar of Philadelphia.

The CHAIRMAN. You can proceed with your statement.

Mr. BALCH. Mr. Chairman and gentlemen, I can only speak of this matter of the North Pole, and I suppose also, as it seems to be connected with it, Mount McKinley, from a geographical standpoint. I suppose I might be called a geographer, and I have devoted a good deal of time and hard study to Arctic subjects and mountain subjects. Now, in regard to the question of the discovery of the North Pole by Dr. Cook and Admiral Peary, to my mind it seems to raise but one point, and that is the question of priority.

The CHAIRMAN. Pardon my interruption, Mr. Balch, but would it not be better to read this resolution into the record?

Mr. SMITH. I think so.

The CHAIRMAN. I think it would be well to read it into the record, and if you will excuse me, Mr. Balch, I will do so.

The resolution is as follows.

House joint resolution 408.

[Sixty-third Congress, third session.]

IN THE HOUSE OF REPRESENTATIVES,

January 21, 1915.

Mr. SMITH of New York introduced the following joint resolution; which was referred to the Committee on Education and ordered to be printed:

"House joint resolution (H. J. Res. 408) to establish the priority of discovery of the North Pole and the regions contiguous thereto.

"Whereas the discovery of the North Pole and the region contiguous thereto involves questions of historic, scientific, geographic, economic, educational, and commercial importance: Therefore be it

"*Resolved, etc.*, That the priority of discovery of the North Pole and the region contiguous thereto be established and declared by Congress, in order that lands discovered by American explorers in the far North may be described and designated as territory of the United States and so set forth in the maps prepared and distributed by the United States Government."

Mr. BALCH. Mr. Chairman and gentlemen, I have not made the slightest preparation for this occasion and I am speaking entirely impromptu, so I hope you will excuse me if my statement is not altogether connected. As I said, the whole point of this matter as to who discovered the North Pole is simply a question of priority. Dr. Cook went there in 1908. He came back in the fall of 1909, and he sent a cablegram to the New York Herald, which was published on the 2d of September. In that cablegram he gave an outline of his story. That statement occupied about half a page of the New York Herald, and it gave an outline of the story that he told afterwards more at length in the New York Herald in the same month, and which he afterwards told in whole in his book. You will find the gist of it there in the paper. Admiral Peary came back a week later, and when he told his story it was practically the same story that Dr. Cook had told. That Dr. Cook's story has priority is evident from the fact that it was given quite independently of any information that he could have gotten through Peary or anyone else. That is true, because his story was cabled from the Shetland Islands, and, as we all know, the Shetland Islands are North of England. He came from there in a little steamer from Denmark that goes up to Greenland every summer for the service of the missionaries and some Danish settlements. It is perfectly evident therefore that he left Greenland sometime near the middle of August. Peary says that he left north Greenland on the 26th of August, and therefore it is evident that Dr. Cook could not have gotten any information from Peary. Cook's story, whatever it is, stands on its own merits, and whether you accept it or not, he got it from nobody else. His story begins when he gets into the unknown, and there is no use talking about anything until you get into the unknown, because, after a man has once been to a place, he can make up another tale or a description of something like it. Cook's story is of what he saw and of what he knows. He discovered Bradley Land. He discovered some kind of land ice, and we do not know yet just what it is. He thought that possibly it was a submerged island, but it was land ice, far away from any known land. Then, when he got to the North Pole, he found a field of ice that was perfectly smooth, where the general color effect was purple. When Admiral Peary was in the same latitude as Bradley Land, and a little farther to the east, he struck soundings of about three hundred and some odd fathoms. That was in the same latitude with Bradley Land, which makes it appear that Bradley Land, that Dr. Cook discovered, might well be a shelf of land extending not far from the edge of the continent. At the place where Cook says he found land ice, Peary found a broken pack. The fact that he found a broken pack, which he did not find anywhere else, must be accounted for by the presence of an obstruction or something. That broken pack is right next to this land ice that Dr. Cook speaks of, and there must be some connection between the two discoveries. Dr. Cook tells the same story as Admiral Peary about the ice at the pole. In other words, they came up that way [indicating] very close together, and their stories concerning the pole are almost identical. Dr. Cook is a very good observer, and I think his story gives every evidence of that. Now, Admiral Peary thought he saw land off Grant Land in 1906, and he called it Crocker Land, but the information comes now that Crocker Land does not exist. MacMillan went to about the reported position of Crocker Land.

Dr. Cook went within 25 miles of the supposed position of Crocker Land, and he did not see it and did not report it. That indicates that in certain ways you might say that Dr. Cook is perhaps more accurate than Peary. I have seen certain statements about Admiral Peary recently to the effect that he fabricated this thing. But that is a great mistake, because Admiral Peary undoubtedly thought he saw Crocker Land. There have been all sorts of mistakes made in the Arctic regions. He says on two occasions he saw the snow-clad peaks of Crocker Land. I have noticed several articles in the papers running down and criticizing Admiral Peary for saying that this thing was there when it was not there. You must explain his statement, because there is not a particle of doubt in my own mind that what Peary tells is true, and that he tells it just as accurately as he possibly can. Now, the explanation probably is that when he spied the tops of those peaks he really saw icebergs some 60 miles off. It was the tops of icebergs that he possibly mistook for peaks, and it is easily possible to do that. If so, it is a very interesting matter from the geographer's point of view, because it would show that there is land in that section of the unknown Arctic which Dr. R. A. Harris, of Washington, thinks has land in it, because these icebergs would indicate it. Now, another point: You might say that questions relating to the ascent of Mount McKinley have nothing to do with questions relating to the attainment of the North Pole. It has nothing to do with it. This mountain in Alaska, or its ascent, has nothing to do with the question of reaching the North Pole, and you have got to use entirely different facts and different witnesses when you come to inquire into it. Everything connected with the two propositions is different, but at the same time the method of solving the problem of whether McKinley was ascended or not, just the same as the method of solving the question of whether the North Pole was reached or not, will be by comparing the stories of men who say that they have been up the peak. Now, if their subsequent stories corroborate the man who told the story first, we have every reason to believe that the man who told the story first got there. You can not manufacture your facts about a great mountain peak, especially one in the wilderness. You have got to go on the mountain to find out what is there and where it is. The story that Dr. Cook tells us about Mount McKinley is practically corroborated by the other three men who followed him, namely, Mr. Lloyd, Mr. Browne, and Archdeacon Stuck. They say they went up the northeast ridge, and Dr. Cook climbed the northeast ridge. They found that the northeast ridge, as Cook had said, was very narrow, with slopes of 60 degrees. Now, nothing whatever was known about the northeast ridge before Cook's ascent, for no one had been within many miles of it. You could not fake that fact, because it would be impossible. Cook could not have ascertained that from a distance. There is an illustration of this in the story of the Aiguille d'Argentiere, in Switzerland. In that case two peaks were surveyed by the Sardinian Government about 50 years ago, The Sardinian ordnance survey prepared a map of the Mont Blanc Range, and marked on it two peaks, the Aiguille d'Argentiere and the Pointe des Plines, with a difference of 672 feet in altitude, at a distance of 1⅛ miles from each other. And it was not until many years later that it was discovered that these two supposed peaks were one and the same peak, missurveyed from different sides. Therefore it is perfectly impossible that anybody could tell anything about a great peak like Mount McKinley off in the wilderness, miles away.

Now, everything Cook says in regard to the northeast ridge, with its slopes of 60 degrees, is backed up by Mr. Browne, and it is also backed up by the statements of Archdeacon Stuck. Then, it appears that they all spoke of the same great rocks, and the last two parties say there was a natural camping place, just as it was described by Dr. Cook, at an altitude of 18,000 feet. Dr. Cook, who had been in the Arctic and in the Antarctic, also noticed the ice blink 200 miles away. Being an experienced Arctic explorer it is the most natural thing in the world that he would look for that. People who have not been in the Arctic regions do not look for it. When he got to the top, he speaks of the dark sky that you will find in the photograph. That dark sky at an altitude of 20,000 feet is a thing noticed very seldom, and it has been spoken of very seldom; indeed, it is hardly ever known to be found. Dr. Cook speaks of it as a dark sky, or blue-black sky; and Archdeacon Stuck speaks of it as a dark blue sky. In other words, the best proof that Archdeacon Struck could offer of his own ascent is really to be found in Dr. Cook's book.

Now, I think that I have covered the main points that I wished to cover, but if there are any questions that I can answer for you I shall be glad to do so. To speak offhand on a subject like this is very difficult.

The CHAIRMAN. Do any gentlemen of the committee wish to propound any questions?

Mr. ABERCROMBIE. I would like to ask you, Mr. Balch, why, in your opinion, the Congress ought to take up this question? Is it not a question for scientists rather than for lawmakers?

Mr. BALCH. I am afraid I am not informed as to that. That is not a geographical question. Of course, I think that scientists ought to take it up, but I think they are very much afraid of it.

Mr. ABERCROMBIE. Have not scientists, in fact, taken it up, and reached a decision on it?

Mr. BALCH. No, sir; they will not thrash it out.

Mr. ABERCROMBIE. Have not the geographical societies of the world passed upon it?

Mr. BALCH. I do not think so. One or two of them have in a sort of way. I think one in Scotland thinks that it has, but they have never examined the evidence. Certainly, none of the societies here have done so. I am on the board of the American Geographical Society of New York, but I can not get the American Geographical Society to take it up.

Mr. ABERCROMBIE. Has the American Geographical Society expressed any opinion upon it?

Mr. BALCH. No, sir. I think the National Geographic Society here gave an opinion on it, but I do not know, really——

The CHAIRMAN (interposing). Have they given any reason why they hesitate to take up the question?

Mr. BALCH. I am afraid they have not studied it, and that they will not take the facts on it.

The CHAIRMAN. It would take Congress quite a while to decide such a question.

Mr. RUPLEY. Was Dr. Cook's case submitted to the Geographic Society of Sweden?

Mr. BALCH. Of Denmark?

Mr. RUPLEY. Yes, sir; of Denmark.

Mr. BALCH. Yes, sir.

Mr. RUPLEY. They decided against him and rejected his reckonings?

Mr. BALCH. No, sir; their verdict was something like this, that there was nothing to prove that he got there, and nothing to prove that he did not get there.

Mr. RUPLEY. That he had no proof that he reached the North Pole?

Mr. BALCH. That it was not proven; but they did not throw it out.

Mr. RUPLEY. He submitted his case to this geographical society in Denmark?

Mr. BALCH. Yes, sir; I think he did.

Mr. ABERCROMBIE. His first report was made to that society, was it not?

Mr. BALCH. I am not sure about that.

Mr. RUPLEY. Was he under their auspices on this trip?

Mr. BALCH. No, sir; he came back on a Danish boat. He came back on a little Danish steamer going to Denmark from Greenland.

Mr. RUPLEY. He was under some obligations, as I gathered, to Denmark.

Mr. BALCH. There I think you are wrong. It was simply accidental that he went there. He was in Greenland, which was a Danish possession.

Mr. RUPLEY. His brief was submitted after he went to Denmark?

Mr. BALCH. Yes, sir.

Mr. RUPLEY. Then they questioned his brief, and some evidence was introduced afterwards that he employed some men familiar with those northern regions to prepare the brief he submitted to the Geographical Society of Denmark? I am simply searching my recollection of it, that is all. Then, as I recall, some question was raised relative to the brief that Dr. Cook submitted to the Geographical Society of Denmark; that is, that some old sailors familiar with the Arctic regions because of their whaling trips and other trips, and who had spent many years in the Arctic regions, were employed by Dr. Cook to prepare the brief submitted to the Geographical Society of Denmark?

Mr. BALCH. Not that I know of.

Mr. RUPLEY. I am simply searching my recollection. That is my recollection, simply from reading magazine articles and other literature——

Mr. BALCH (interposing). Not that I know of——

Mr. RUPLEY (interposing). Will some one help me out with his recollection of it?

Mr. SMITH. I think Mr. Clark Brown can explain that feature of it.

STATEMENT OF MR. CLARK BROWN, OF ALBANY, N. Y.

Mr. BROWN. Dr. Cook felt obligated from the fact that he was dined by the King and spent an afternoon with the family of the King, and was treated very nicely, and when he was invited by the head of the University of Copenhagen to submit his first notes to that institution he made the promise that he would. Then he was invited by the chairman of the committee on research of the National Georgaphic Society of Washington, in this way—I saved the clipping of that:

"We have invited Dr. Cook to send us his data, but we do not expect anything from him."

I think it was a single sentence—

"We have invited Dr. Cook to send us his data, but we do not expect anything from him."

It was a single sentence; and I might say that we could hardly speak of that as an invitation. It was rather an uninviting suggestion—

"We do not expect anything from him."

Then Dr. Cook did send to Copenhagen certain matter which had already been printed. He wrote to his secretary and asked him to request of the committee of the University of Copenhagen that they come to no decision and to make no report until he was able to get his data which he had left in Greenland with Whitney, but which, as the world has learned, Admiral Peary caused Whitney to leave at Etah, in Greenland. Now, as to the sailors: Two men that Dr. Cook employed to work over certain calculations. They were not men, as you suppose, of great Arctic experience. One of them was not a sailor at all, or I think one of them was not a sailor. I think one was an insurance agent in New York and the other one was a sailor. He prepared certain calculations, according to the report which was published in the New York Times. Dr. James H. Gore, of Washington, went to New York and examined that material. I saved the clippings on that. He was impressed with the idea that Dr. Cook had employed this Capt. A. W. Loose to fabricate the computations, but in the calculations published in the New York Times there are several things which convince me that that calculation was not made to aid Dr. Cook in deceiving the committee in Denmark, but was made as a trap for Dr. Cook. I think I can remember those things. He placed in there two words which I believe to be Danish words: "opp.," abbreviation for the English "apparent"; and "prix.," the abbreviation for the English "parallax"; but Dr. Cook speaks no Danish, and if Dr. Cook should present calculations in Denmark as his work which contained some words in a language he couldn't speak, it would be an immediate giveaway. There are two Danish words in that calculation. Then, again, he makes the calculation upon the basis that Dr. Cook was approaching the North Pole along the meridian of Greenwich, whereas his narrative throughout claims that he was approaching the pole from along the meridian of 97° west of Greenwich. There is another giveaway; another bait for the trap. The fourth point is that Capt. A. W. Loose has a note in connection with that observation of temperature 38° Fahrenheit, which would be 6° above freezing, whereas Cook had complained of the great cold. There are four points that would have exposed any man presenting that as a bona fide calculation to ridicule; he would have been exposed instantly. I claim, it is perfectly clear to my mind, that that was prepared as a trap for Dr. Cook and not as an aid for Dr. Cook to use in deceiving the Copenhagen committee.

Mr. RUPLEY. These calculations were used?

Mr. BROWN. Oh, yes; in the New York Times; in the paper from which Admiral Peary had borrowed $4,000.

Mr. RUPLEY. Used by Dr. Cook?

Mr. BROWN. No, sir; they were not.

Mr. SMITH. With the permission of the committee I should like to have Mr. Brown answer the question as to why the investigation should be conducted by Congress instead of by scientists. I have here two Navy maps which show the Arctic regions. Both maps show Crocker Land. The recent explorers in the north say there is no such land, and yet these official maps of the Navy show Crocker Land is a part of the section of the Arctic Circle. I understand that the Navy Department already is preparing to obliterate that land from official maps. The Federal Government, therefore, has a direct and vital interest in that subject; but there is further interest from an educational, geographical, and scientific standpoint for this investigation. With your permission I should like to have Mr. Brown go into that phase of it for the purpose of showing the committee that this is not merely an academic investigation, but that there is a purpose in it for the good of the country, and that there is no tribunal other than Congress to make the inquiry, and that this is the only place we can come to settle it. Admiral Peary was given a vote of thanks by Congress for reaching the North Pole, but the Congress carefully avoided saying that he was the discoverer of the North Pole, and thus we are in the position of having two men claiming to have discovered the North Pole, whereas our Government has not officially recognized either of them for the discovery. I want to get it into the minds of the committee that this is more than a theoretical matter and more than a mere matter of satisfying any one's curiosity.

The CHAIRMAN. You may proceed, Mr. Brown.

Mr. TOWNER. Please tell us who you are.

Mr. BROWN. My name is Clark Brown. I reside in Albany, N. Y., and I am employed in the department of the State engineer and surveyor.

Mr. TOWNER. Have you had any special interest in Arctic exploration?

Mr. BROWN. I have had a very great interest in this case.

Mr. TOWNER. In this case?

Mr. BROWN. Yes, sir; as a student and as a man whose bent of mind prompts him to exercise great care to avoid error, especially where the reputations and characters of eminent men are concerned.

Mr. TOWNER. Aside from this case, have you made any independent study or special investigation of Arctic subjects?

Mr. BROWN. I have read a very great number of Arctic books and acquainted myself with the experiences and trials of a very great number of travelers in the Arctic regions. I have never been north of Plattsburgh, N. Y.

Mr. TOWNER. Did you make any independent investigation, or commence any special study of the subject prior to the Cook case coming up?

Mr. BROWN. Only a little, 30 or 40 years ago, in Gen. Greely's time.

Mr. TOWNER. Just as any one else would; you made no special study?

Mr. BROWN. No, sir.

Mr. TOWNER. Your interest in Arctic exploration has been largely developed because of Dr. Cook's controversy?

Mr. BROWN. Well, almost everybody developed a great interest about that time.

Mr. TOWNER. I have no intention to criticise. I simply want to get at the situation.

Mr. BROWN. That was a subject for a long time that most everybody was reading and talking about, and I soon reached the opinion that the matter was not receiving that careful and thoughtful consideration that it deserved, and I saw that eminent men were making reckless statements that were not thoughtful, and I thought that there was a chance for a little amateur work, I should not like to say detective work, that would be worth while in order to clear up a subject of very great popular and historic interest. There are few of us, who, as we go through life, can see an opportunity to do something really worth while, and I thought that there was an opportunity, perhaps, for me to develop something which would be worth while, and perhaps cause my name to be remembered after my death. I considered it a laudable ambition, and I devoted considerable time to it. I believe that it is well nigh impossible for a man, a scientist, to work out this matter, and to bring it to the attention of the world unless he is willing to put quite a lot of money in it. There are some people who have worked for years at their own expense. A few have published books and pamphlets which they have given away, and have paid their own postage on their own publications. When Admiral Peary returned from his trip to the west of Grant Land, up there [indicating on map] it was of such interest that the Government got out this beautiful map at once. His addition to our knowledge of the Arctic regions by that particular trip was not very great, but this beautiful map was gotten up, from which I read:

"North American polar regions, Baffin Bay to Lincoln Sea, showing the recent discoveries of Civil Engineer R. E. Peary, United States Navy, incorporated with the earlier surveys and examinations made by the U. S. S. *Polaris* Expedition in 1871–72 under Capt. C. F. Hall; British Arctic Expedition in 1875–76 under Capt. G. S. Nares, Royal Navy; Lady Franklin Bay Expedition in 1881–1884 under Lieut. A. W. Greely, United States Army."

This beautiful map was gotten up to perpetuate and bring out his contribution to our knowledge at that time. Admiral Peary got a hearing before Congress in 1911 and received a very good acknowledgment of his work. Now, since this map has been published, within the last year or two, facts have shown the nonexistence of Peary Channel. It appears upon this map, which was evidently published in 1903.

The CHAIRMAN. By what authority was that map printed?

Mr. BROWN. It was published—I read from the map:

"By the United States Department of the Navy, Bureau of Navigation, published at Washington, D. C., October, 1903, at the Hydrographic Office. W. H. H. Southerland, commander United States Navy, Hydrographer."

Mr. TOWNER. Upon what data was that made?

Mr. BROWN. It says:

"Showing the recent discoveries by Civil Engineer R. E. Peary, United States Navy, incorporated with the earlier surveys and examinations made by the U. S. S. *Polaris* Expedition in 1891–92 under Capt. C. F. Hall; British Arctic Expedition in 1875–76 under Capt. G. S. Nares, Royal Navy; Lady Franklin Bay Expedition in 1881–1884 under Lieut. A. W. Greely, United States Army."

The Greely Expedition was a United States enterprise and the expenses were paid by the United States Government. The expenses of the British Arctic Expedition were paid by the Government of Great Britain. The expenses of the Hall Expedition I am not sure about. I do not know whether the expenses were paid by the Government or by some private collections. I do not like to say. I can not tell. I do not know.

Mr. TOWNER. Upon what data was that map drawn? Who gave the facts to the department upon which the map was based?

Mr. BROWN. The data is recited in this statement, and I suppose they got it there. It says:

"Showing the recent discoveries by Civil Engineer R. E. Peary, United States Navy, incorporated with the earlier surveys and examinations made by the U. S. S. *Polaris* Expedition in 1891–92 under Capt. C. F. Hall; British Arctic Expedition in 1875–76 under Capt. G. S. Nares, Royal Navy; Lady Franklin Bay Expedition in 1881–1884 under Lieut. A. W. Greely, United States Army."

The reports of those four expeditions. Now, this feature here that has recently been completed—

Mr. TOWNER (interposing). I do not quite understand what you mean when you say upon the report of those four expeditions. Was there an official report made to the Government upon which this map was drawn, by Capt. Peary?

Mr. BROWN. His addition was geographical only. His expedition was a private enterprise.

Mr. TOWNER. Did he make any official report to the Government?

Mr. BROWN. His expedition was a private enterprise. The United States Navy published this map and they used his material.

Mr. TOWNER. Do you mean to say that Capt. Peary made no official report to the Government?

Mr. BROWN. At this time, 1903, his expedition was a private enterprise.

Mr. TOWNER. Do you know whether or not he made any report to the Government on which that map was based?

Mr. BROWN. He made a report to the world at large.

Mr. TOWNER. Everybody knows that.

Mr. RUPLEY. You will find in the report of the committee on the confirmation of Capt. Peary that they required him, by holding up his confirmation for some considerable time, to make a full report of his expedition.

Mr. BROWN. In what year?

Mr. RUPLEY. I do not know.

Senator POINDEXTER. In 1910.

Mr. TOWNER. He did make an official report to the Government?

Mr. BROWN. This map was printed in 1903.

Mr. RUPLEY. The committee on confirmation required him to make a report before confirmation.

Mr. BROWN. My belief is that they never asked him for an official report, but I would not like to say about that.

Mr. RUPLEY. But upon what data or facts was this map made?

Mr. BROWN. His additions to it were copied from something he had published previously, as a private speculation. It is my belief that the Government never did ask for an official report, until this last expedition. That is my belief.

The CHAIRMAN. Is there anything further which you desire to say?

Mr. BROWN. I think I have covered the question which Mr. Smith asked me to answer.

Mr. RUPLEY. You were speaking of some land?

Mr. BROWN. I was speaking of Peary Channel up here [indicating].

Mr. TOWNER. You said there were two explorers who doubted the existence of the channel?

Mr. BROWN. The Dane, Rasmussen; and Mikkelsen, I think a Swede or a Norwegian.

(Some newspaper clippings are inserted here, as follows):

[Special to the New York Times.]

BRASHEAR DESERTS COOK—INTRODUCED HIM ONCE AT PITTSBURGH—HAS LOST ALL FAITH.

PITTSBURGH, *Dec. 10.*

"I have lost all faith in Dr. Cook." This statement was made to-day by Dr. John A. Brashear, the Pittsburgh astronomer and scientist, who is a member of the National Geographic Society; when Dr. Cook was in Pittsburgh and lectured, Dr. Brashear introduced him to the audience in Duquesne Garden, and indorsed his claims.

"In the statements made by Capt. Loose and George Dunkle, those two men not only make themselves out falsifiers, but cast doubts on Dr. Cook's veracity. If the midnight-sun observations made by Dr. Cook were made at all, they were made at 81 degrees and some minutes of latitude and not at the place he said they were made."

[From the New York Press, May 7, 1913.]

RASMUSSEN SUCCEEDS—EXPLORER AFTER THREE YEARS RETURNS FROM GREENLAND—FOUND LAND FREE FROM ICE.

COPENHAGEN, *May 6.*

A message from Thorshavn, Faroe Islands, announces the success of Knud Rasmussen's Greenland expedition, which returned there yesterday after a three years' absence. In Peary Land the Danish explorer found large numbers of seal and musk oxen, which provided ample supplies; where the Peary Channel was supposed to be he found a large tract of land free from ice. Game was abundant and the party halted for a month before starting on the return journey, over 600 miles covered at an average rate of 31 miles a day. Rasmussen depended entirely on his Eskimo outfit, and took with him no tinned provisions.

[From the Knickerbocker Press, May 7, 1913.]

PEARY "CHANNEL" DRY LAND, RASMUSSEN SAYS—DANISH EXPLORER CAMPS FOR A MONTH WHERE MAPS SHOW ARM OF ARCTIC SEA.

(By special cable.)

COPENHAGEN, *May 6.*

Capt. Rasmussen, a Danish explorer, who has just reached the Faroe Islands, after a trip through Greenland, reports that he has discovered that the supposed Peary Channel is actually land. He followed the coast line to Independence Bay, which narrows to the form of the so-called Peary Channel, but on arriving at the latter point he found a large ice-free tract of land with plenty of game. The party halted there for a month. They experienced continuous storms, but the excellent hunting compensated for this discomfort. Afterwards they continued their journey westward at the rate of 31 miles a day until they reached the destination of the expedition. They did not carry any provisions but depended entirely on the outfit of the Eskimos.

Mr. TOWNER. They are Arctic explorers?

Mr. BROWN. Yes, sir; the MacMillan expedition is up in the Arctic now, and a report has come back from his expedition that Crocker Land does not exist.

Mr. TOWNER. That is a contradiction of Admiral Peary's statement regarding it?

Mr. BROWN. Yes, sir; it is a contradiction.

Mr. SMITH. As to the existence of Peary's Channel, and also the existence of Crocker Land?

Mr. BROWN. The nonexistence of Peary's Channel has been determined by the Swede, Mikkelsen, and the Dane, Rasmussen; and the nonexistence of Crocker Land has been reported—of course, the men are not yet back—reported through a member of the MacMillan expedition, sent out by the McGill University of Canada, I think it is, and the American Museum of Natural History in New York City.

Mr. TOWNER. Are there any Arctic explorers interested in the establishment of Dr. Cook's case?

Mr. BROWN. They are interested as students and as scientists.

Mr. TOWNER. No; I mean interested in proving the truth of his claim?

Mr. BROWN. My acquaintance with explorers is only in the matter of reading. My information and belief is that practically all of the explorers have at one time or another been warm in their support and praise of Dr. Cook. A few of them, notably Mr. Baldwin, of New York City, changed their opinion. My information and belief is that Baldwin's change of mind was based upon pictures of Mt. McKinley, published by Prof. Parker and Belmore Browne. The principal picture of Mount McKinley is a picture of a rock of the general formation found in Dr. Cook's book about the ascent of Mount McKinley, but, sad to relate, in the foreground there is a field of snow in which there are no footprints, and there is an abundance of evidence scattered through Browne's book and Browne's magazine articles that they encountered no hard snow in the Mount McKinley region. The pictures showed that the sun was shining, so that the footprints would really be the most conspicuous thing, because they would be right where the men were. One of the pictures shows a man standing in soft snow up to about this depth [indicating], but another picture, which is reputed to be a simultaneous picture, shows no footprints. For instance, the man standing in the snow is in this position [indicating], evidently snapping a camera; and the story is that when this gentleman was snapping this camera and secured the picture upon which they convicted Dr. Cook of fraud about the McKinley matter the other gentleman stood a little further back of him in the snow. Another one of the pictures shows no footprints, although the sun was shining. There are men, who are competent to speak of these things, who say that independently of the absence of footprints in the pictures they are able to say that the picture is a laboratory production and not a photograph of the landscape. Some of the explorers who once believed in Dr. Cook, but who changed their minds afterwards, were convinced by these pictures. Some who at one time believed in Dr. Cook and were warm in his praise changed their minds and were deceived by Capt. A. W. Loose's computations, which I am convinced were made as a trap for Dr. Cook, rather than as an aid to help him in deceiving the people at Copenhagen. As one of the conspicuous instances, showing where men of reputation made reckless statements, the first opportunity that Admiral Melville got he said that Dr. Cook was a faker, and that he could not have traveled so fast. I think that within 48 hours after that statement was published in the New York Times he is reported to have telegraphed Mr. Peary, congratulating him upon his success, and saying that he had confidence in his report. In a few weeks we knew that Mr. Peary claimed to have made speed much greater than Dr. Cook claimed to have made. That shows that Admiral Melville's statement was not a thoughtful one. Those statements encouraged me to continue and to follow the thing up thoughtfully. Then Mr. Stockton, I think that name is correct, made a statement that was published also in the New York Times, that he arrived at the conclusion that Dr. Cook had turned back, I think, 481 miles from the Pole. He figured it out that Cook's diary footed up a journey of 900 miles, and he calculated the position of Cook's winter camp upon the basis that it was at 76.30, which would be here [indicating] instead of up here [indicating]. That is about 150 miles further away from the pole than Cook said he was at his winter camp. There were maps in existence showing where Cook's winter quarters were, and there were also two maps that had been published in the daily papers, showing that Cook claimed to have gone off this way [indicating] and out there [indicating]. Stockton figured the distance from Cook's winter camp, and that would have been 150 miles farther south, and that he went this way [indicating]. That he started here [indicating] and went off here [indicating] and then went this way [indicating]. By that reckless procedure he calculated the distance at 1,381 miles, and subtracted the 900 miles, which the dairy gave, and that left 481 miles. On that argument was based the idea that Cook turned back on the 21st of April.

Admiral Chester some weeks earlier had published an argument that Cook had turned back on the 7th of April, from a report that coincided very closely with the spot later fixed upon, of Stockton's, based on the argument that Cook was at some particular place when he first saw the midnight sun, and assuming that any man on a journey of that kind would surely see the midnight sun the first night it was possible to do so. He could not very well say that, because nobody had previously been on a foot journey like that on the Arctic ice upon the date of the return of the midnight sun. Dr. Cook was the first man to make a trip of that kind at that early date. No one could reasonably say that every man sees the midnight sun as early as possible. What Dr. Cook did say was that "The sun for a number of nights made strange faces at us at his setting," and that the midnight sun was not clearly defined, and that the night of April 7 was made notable by the shining of the sun at midnight over the northern ice. So that it is a matter of weather, rather than of geographical position, as to when he was able first to see the midnight sun. Admiral Chester, disregarding the weather and simply considering the above statement, assumed that it was unwarranted, that a man would not fail to see the midnight sun as soon as it was in a position, had the weather been favorable, and so he arrives at the conclusion that Dr. Cook turned back upon the 7th of April.

Mr. TOWNER. Upon what evidence and testimony do you think Congress would be warranted in taking action regarding the matter?

Mr. BROWN. On the same sort of general argument that Congress and the Government promote education, guarantee free press, and free speech.

Mr. TOWNER. But how are we to determine the facts upon which to act?

Mr. BROWN. Whether you shall act or how to act?

Mr. TOWNER. How to act if we do act?

Mr. BROWN. If you do act, I think the way to act is to call men who are competent, skilled in these arts, and who are competent to verify the statements of the gentlemen, and make a sort of scientific study of the human testimony.

Mr. TOWNER. Then we should call Dr. Cook, should we not?

Mr. BROWN. Certainly.

Mr. TOWNER. And Lieut. Peary?

Mr. BROWN. Certainly; and men who are able to cross-question both of them.

Mr. TOWNER. We will take care of that.

Mr. BROWN. I thought you asked for my judgment.

Mr. TOWNER. Who else should be called?

Mr. BROWN. I would not like to say; there are many gentlemen who are here to-night.

Mr. TOWNER. Please tell us about that; I should like to know.

Mr. BROWN. Dr. Balch, I think, is one of the most competent men who speaks the English language to form a wise opinion on this matter; and, with all modesty, I believe that I am competent to show a lack of weight in the criticisms that have been advanced against Dr. Cook.

The CHAIRMAN. I believe Mr. Balch stated that the scientists up to date had failed to decide as to the priority of discovery.

Mr. BROWN. The scientific societies——

The CHAIRMAN (interposing). If that is the case, how much more impossible will it be for Congress to decide it?

Mr. BROWN. Congress can get the services of a reasonable number of scientific men, and they——

Mr. TOWNER (interposing). Who are they?

Mr. BROWN. Dr. Balch is one.

Mr. TOWNER. What can Dr. Balch tell us?

Mr. BROWN. Dr. Balch can give you an analysis of the two stories.

Mr. TOWNER. We do not care anything about that; we will make the analysis. We want information; we want facts; and who can give them to us?

Mr. BROWN. Dr. Balch can set the facts in juxtaposition.

Mr. TOWNER. We do not need that; we will juxtapose the facts, and we will have to do it. Let me say this to you: I do not think that what you have stated to us to-night is of any particular value to us. We will have to determine all these things ourselves, and we will be compelled to determine them. What we must act upon, if we act upon anything at all, must be the evidence of men who are competent to give us the facts. Now, these men—Admiral Peary and Dr. Cook—will tell us their stories; we will say that they are equally credible; and they are directly opposed to each other. Now, let us have concretely from you a statement as to what we should depend upon outside of what they tell us, so that we can tell whether or not they are telling the truth about these matters.

Mr. ABERCROMBIE. Have they not put in book form what they have to say about it?

Mr. BROWN. Unfortunately Admiral Peary has. In the hearings of the Naval Committee of Congress, about four years ago, something was put in which he did not put in book form. He said that he went to the North Pole and back, from Cape Columbia up, and that he made no observations of compass variations. That I consider to be equivalent to a confession that he never made the journey. You could get men to pass an opinion upon the possibility or probability of a representative of the Coast and Geodetic Survey of the United States Navy taking men and provisions off on a journey of approximately 500 miles across an unknown region, where there were no prominent landmarks, without making the observations that navigators have found necessary and proper in order to make a journey in the direction they propose to go, and in order to find their way back. I have compiled a chart, a little smaller than this [indicating], which shows what has been determined heretofore about the magnetic variations in various parts of the Arctic regions. That is a blue print.

Mr. TOWNER. Has not most of the time of Dr. Cook's advocates and of Admiral Peary's advocates been spent in criticism and vituperation of the other?

Mr. BROWN. Admiral Peary's friends——

Mr. TOWNER (interposing). Would it be of any advantage for this committee to listen to the advocates of these respective parties casting discredit upon their statements——

Mr. BROWN (interposing). If they did in any way add to the knowledge of the world——

Mr. TOWNER (interposing). It seems to me that there has been so much of it given to the world already that the world is pretty sick of it. Can you name a single man, outside of these two explorers, that this committee could call before it who would be competent to give evidence in regard to that contest?

Mr. SMITH. I think Mr. Rost might answer that question.

STATEMENT OF MR. E. C. ROST, OF NEW YORK.

Mr. TOWNER. What is your calling?

Mr. ROST. I am a friend of Dr. Cook.

Mr. TOWNER. Have you had any Arctic experience?

Mr. ROST. None at all.

Mr. SMITH. He has letters on this subject from men who have had Arctic experience.

Mr. ROST. I have in my possession original letters that 32 men of Arctic experience have signed.

Mr. TOWNER. Were they Arctic explorers themselves?

Mr. ROST. Yes, sir; Arctic explorers.

Mr. TOWNER. Can the testimony of these men be procured?

Mr. ROST. Yes, sir; they are in this country.

Mr. TOWNER. Is that what you expect to introduce in support of Dr. Cook's claim, if hearings should be granted?

Mr. ROST. Yes, sir. They are such men as Capt. O. C. Hamlet, senior captain of the United States Revenue-Cutter Service, for 30 years in the Arctic regions on Government vessels. I do not know whether I should read this.

Mr. TOWNER. No; just state who they are.

Mr. ROST. Prof. L. L. Dyche, State Game and Fish Warden of the State of Kansas, who has been in the Arctic region for a great many years.

Mr. TOWNER. He has been in the Arctic regions himself?

Mr. ROST. Yes, sir.

Mr. TOWNER. He has been in those countries?

Mr. ROST. He has been in Greenland and through those lands that they call the northernmost lands on the way to the pole. The next is Capt. John E. Newsome, for 10 years in the Arctic. Then, of course, Admiral Schley, who indorsed this proposition——

Mr. TOWNER (interposing). What do you mean by the statement that he indorsed this proposition?

Mr. ROST. Admiral Schley said that after due investigation of both Admiral Peary's case and Dr. Cook's case he was absolutely convinced that both of them reached the pole. This letter is signed by Admiral Schley.

The CHAIRMAN. You have that letter?

Mr. ROST. Yes, sir.

The CHAIRMAN. Give the names you have there.

Mr. ROST. Capt. J. E. Bernier, a Canadian explorer; Prof. Samuel P. Orth, professor of law of Cornell University, and also an Arctic explorer; Edwin S. Brooke, jr., who was with the Crocker Land Expedition that reported that Crocker Land does not exist; Capt. E. Bergendahl, a Scandinavian; then Brig. Gen. P. J. E. Cleary, of the United States Army. I do not know whether he was in the Arctic regions or not, but this is an indorsement from him. Then there is Rudolph Franke, who was with Dr. Cook as far as Flagler Bay, and he made another trip into that region.

The CHAIRMAN. Since then?

Mr. ROST. Yes, sir.

Mr. BROWN. He is up there now.

Mr. ROST. Yes, sir. Then I mention Capt. John Marshall, of Gloucester, Mass., Dr. Middleton Smith, who was with the Point Barrow Expedition to the northernmost point of the American continent. That was an international expedition sent up at the same time the Greely Expedition was sent. In fact, it was a part of that expedition.

Mr. SMITH. Dr. Middleton Smith is now in the room.

Mr. ROST. The next is Samuel J. Entrikin, who was second in command in the Peary Expedition of 1894. His indorsement is on that letter [indicating]: "This is the way I have always looked at it." I personally have a map on which he states that after due investigation he is satisfied that both men reached the pole. The next is Capt. E. A. Haven, of the Ziegler Expedition. He is of the Revenue-Cutter Service, and has been some 17 or 18 years in the Arctic. Commodore John Byers Wirt, commander in chief of the United States Naval Veterans, said this, after a careful consideration of Admiral Schley's letter on the subject: "I do not hesitate to indorse every word the admiral said of the doctor."

Mr. TOWNER. That to be of any benefit to us——

Mr. ROST (interposing). He is ready to testify.

Mr. TOWNER. Those who are Arctic explorers and who know about the facts and circumstances of the case might help us, but such statements as that could not help the committee. How could that help the committee?

Mr. ROST. I am not sure of that. I am simply making the statement that 32 of the best-known Arctic men are willing to testify.

Mr. TOWNER. We would want to have evidence.

The CHAIRMAN. He was not an Arctic explorer.

Mr. TOWNER. That is a very important consideration for the committee. The committee would want to know if they are able to give testimony, and that is what I am trying to find out.

Senator POINDEXTER. I know that Mr. Rost has the original letters of these 32 men signed in their own handwriting, and I urged him to bring the original letters with him.

Mr. ROST. I have those letters.

Mr. TOWNER. Gentlemen, so far as I am concerned, those letters would be of very little importance to me. We want men here who know what they are testifying about, and evidence simply to establish the fact that a letter was written is of very little value here?

Mr. ROST. I thought it was in answer to your question as to whom we could produce——

Mr. TOWNER (interposing). It is, and that is what I said. It is of great value to us in that way, to know who can testify as to the facts.

Mr. ROST. And the next is Dr. J. G. Knowlton, of the Scott expedition. He is an Arctic man of many years' experience. Now, we have 32 men who are ready to appear, and there are about 18 others who have written books on the subject, going into this very minutely.

Mr. TOWNER. In other words, the friends of Dr. Cook ask the committee to give them a hearing. They ask the committee to allow Dr. Cook to testify, and they ask the committee to hear the testimony of at least 32 competent men, who have had Arctic experience, to assist in substantiating his claims. That is what I understand the friends of Dr. Cook desire the committee to do.

Mr. ABERCROMBIE. On what ground do the friends of Dr. Cook think that Congress ought to take up this matter?

Mr. ROST. My answer to that is this: That Congress did take up the matter in the case of Admiral Peary, and it struck out the word "discoverer"; therefore, the American Government has never said that an American discovered the North Pole. Now, I personally have correspondence from the boards of education and departments of public instruction, and none of them have any authority to offer or that they can use in order to teach the children of this country that an American discovered the North Pole. These letters cover the 48 States of the Union. The lands discovered by Americans should be placed on our maps; the lands and waterways that do not exist should be taken off from our Government maps.

The CHAIRMAN. Do you believe that after this testimony, and taking it from as expert sources as possible, we could reach a satisfactory conclusion and establish the question of priority involved?

Mr. ROST. I do, most decidedly. I think, if I may put it this way, that the gentlemen of the committee are sitting here as a jury; there is expert evidence presented by Dr. Cook and expert evidence presented by Mr. Peary, and the jury, composed of this committee, if you call it that, decides on that expert testimony. It is a provable matter. Civil engineers have worked this out, to prove the truth of Dr. Cook's data, and the falsity of Mr. Peary's.

Mr. TOWNER. Do you believe that Dr. Cook and Admiral Peary both really went to the pole?

Mr. ROST. I believe that Dr. Cook did. I say that after five years of hard study of the subject; and I believe just as certainly that Mr. Peary did not.

Mr. BAKER. Mr. Chairman, the proposition, as I take it from the bill, is to settle a mooted question not as to whether Peary or Cook reached the pole, as between them, but as to who did reach the pole and when he reached the pole, with all of the collateral effect that we would have in relation to the protection of American rights, dominion, possession, and property, together with the illumination of the question on the educational side. It seems to me that this is a very important thing, without reference to the personality of the actors or leaders. It is a matter of importance to the American people, to civilization, and to the Government of the United States. Therefore I say that this bill is a proposition devoid of all relation to individual interests or preferences, and it makes a suggestion that ought to be followed up without reference to our prejudices or preferences or misunderstandings or jealousies, or the like of that. It seems to me that this is a matter that ought to be presented fully.

The CHAIRMAN. There are only two contestants for priority; one is Dr. Cook and the other is Capt. Peary.

Mr. BAKER. We want to find out whether the pole has been reached, and if so, who reached it and when.

The CHAIRMAN. How are we to determine that?

Mr. TOWNER. Let me make this suggestion rather in line with what Mr. Baker has said. It occurs to me that this is what we ought to do; at least, that is now my impression: These gentlemen here and this lady, as I understand it, appear as advocates of Dr. Cook. They are presenting now to the committee what facts and data they can with regard to the question of whether or not it is of sufficient importance for us to consider this proposition and give hearings upon it. Now, it occurs to me that we ought to hear these people and everything that they have to say, and then we ought to consider in executive session among ourselves what action we ought to take after they have made their presentation of the subject. That is my idea of it.

Mr. ABERCROMBIE. I indorse the suggestion of Judge Towner, and I suggest, too, that they confine themselves to the question of whether Congress ought to act in the matter at all.

Mr. RUPLEY. I want to ask our friend from Philadelphia, Dr. Balch, whether in his judgment, after hearing this testimony, we could establish the priority of discovery of the North Pole?

Mr. BALCH. It is a pretty hard thing to do.

Mr. RUPLEY. Could we establish the question of priority?
Mr. BALCH. Certainly you could establish the priority; yes, sir.
Mr. RUPLEY. Incontestably and uncontrovertibly?
Mr. BALCH. Undoubtedly. You could undoubtedly prove that Cook was there ahead of Peary.
Mr. RUPLEY. I do not care whether Cook or Peary had priority of discovery——
Mr. BALCH (interposing). If you could establish anything at all you could establish the priority of discovery.
Mr. RUPLEY. Incontestably and uncontrovertibly after hearing all of this testimony?
Mr. BALCH. I do not know that I exactly understand your question.
Mr. RUPLEY. Take the language of the resolution. After hearing this testimony, could we establish the priority of discovery of the North Pole and the regions contiguous thereto?
Mr. BALCH. I think you could do that.
Mr. TOWNER. It seems to me that this lady ought to have been heard first.
The CHAIRMAN. I was not informed that the lady intended to make a statement this evening. If I had been, she would certainly have been called upon to speak first. I wish to ask you, Mr. Rost, whether you have submitted the names of the 32 witnesses?
Mr. ROST. I have not given the names of the 32, but I will do so. The names I have not already given are as follows: Maurice Connell, of the Greely Expedition and the United States Weather Bureau; Prof. W. H. Brewer, for 16 years president of the Arctic Club of America. He was a member of the Miranda Expedition and of the Harriman Expedition. Andrew J. Stone, has traveled and sledged the extreme Arctic coast; Dilion Wallace, Labrador explorer; Capt. Johan Menander, Capt. Thomas F. Hall, Henry Biederbeck, of Greely Expedition; M. Van Rysselburgh, L. C. Bement, of the Miranda Expedition to Greenland; Ralph Shainwald, Harry Johnson; John R. Bradley, Greenland Expedition; Harry Whitney, of Greenland Expedition; Anthony Fiala, of the Ziegler polar expedition; Dr. T. F. Dedrick, with one of Peary's expeditions; Dr. Seitz, Dr. W. H. Axtell, Hugh J. Lee, of Peary's Expedition (1892–93–94–95) to North Greenland, and in 1897 again accompanied Mr. Peary to the far North; Dr. Tarleton H. Bean, collector and observer in the Arctic in 1880, and again in 1889; Frank Wilbert Stokes, with one of Mr. Peary's expeditions to the far North; Father William F. Rigge, astronomer.
The CHAIRMAN. We will now be pleased to hear Miss Kiel.

STATEMENT OF MISS LILIAN ELEANOR KIEL.

Miss KIEL. I was formerly employed by Hampton's Magazine as editorial stenographer. Now, gentlemen, I am not here for the purpose of upholding Dr. Cook and neither am I here with the intention of denouncing Mr. Peary, but I am here merely to tell my story, simply and briefly. Everything I shall say I can prove, and I do not need any scientific data. In August, 1909, I was called by Hampton's Magazine, through the Underwood Typewriter Co., after I had passed the test as to my ability as a stenographer. I was sent up to Hampton's Magazine for special work—for editorial work—and later I was recalled to do some advertising work. They were pleased with my work, and finally I was recalled to take the Peary story, but not from Mr. Peary, because Mr. Peary did not write his story. Now, gentlemen, if you are to take the word of both explorers, then both explorers should give their word. Mr. Peary was given an opportunity to give his word to the world through Hampton's Magazine, but Mr. Peary did not write that story. Later, I was again recalled by Hampton's Magazine and took a letter to Dr. Frederick A. Cook, offering him the same medium through which Mr. Peary had given his story to the world. In that letter they made a distinct statement (and requested Dr. Cook to sign it), they making "no editorial guaranty whatsoever." Hampton's knew what they were going to do with Dr. Cook's story, just as they knew what they intended to do with Peary's story. Dr. Cook did not know, and here is where my story comes in. Dr. Cook was sent for and brought back to America and was kept in hiding at the Palatine Hotel, in Newburgh. Dr. Cook had every reason in the world to believe that he was going to have a square deal. He wrote his story—I did not write that story. Dr. Cook wrote his own story, and after he had O. K.'d the galley proofs (it was necessary that he should O. K. the galley proofs at the foot of each page) we of the editorial staff were set to work cutting through the galley proofs. I suppose you know what galley proofs are? They are long strips of paper upon which the magazine first goes to press for corrections. We cut through the galley proofs and inserted what has been known to the world as Dr. Cook's confession of "mental unbalancement."
Senator POINDEXTER. Who did that?
Miss KIEL. We did that in the editorial rooms of Hampton's Magazine. Dr. Cook had gone back to Europe to get his wife and children, believing that he would return to America a free man. He knew nothing about this. Now, the first issue of Hampton's Magazine was to appear in January, 1911, and simultaneously with that issue we issued a "statement for the press." That was done in order to make the magazine story appear authentic and also—and really ahead of any other motive—to boost the news-stand circulation of the magazine, or just to make a few men more wealthy than they previously were. Now, that statement for the press has been exhibited throughout the entire world as "Dr. Cook's confession of mental unbalancement." That statement was dictated to me by a subeditor of Hampton's Magazine; I was commanded to sign the name of Frederick A. Cook by typewriter, and Dr. Cook knew absolutely nothing about it. He was not in this country at the time; he was on the ocean. I then thoroughly believed that the "confession" was authorized by Dr. Cook, and I was horrified later to find that he knew absolutely nothing about it. If you would like to know the name of the man who dictated that "confession" I can give it to you. It was dictated by Mr. T. Everett Harre, subeditor of Hampton's Magazine. This [exhibiting] is a picture of the noble gentleman. You can see the intelligence in his face. Remember, gentlemen, Dr. Cook knew nothing about it. If he did, would you suppose that a man would dictate a thing of this kind? [Reads from "faked" confession:]
"Whatever the results may be, whether I shall be believed or not, howsoever my people will receive me, my whole aim in coming back is to prove, if possible, that I did not premeditate a lie for money, and that willingly or consciously I did not do anything to disgrace America. I have come back with the intention of telling the truth as far as is humanly possible for anyone. I shall bare my soul to friends and foes. With all the fervor of yearning in me, I want to be able to live again among my people, to be able to walk on the streets of my city, and to find Americans willing to shake my hand, and to have them say, 'Cook may have unconsciously lied, and may have deceived himself, but he did not deliberately try to deceive others.' I have not come back for money. My chief reason for giving my story to the world through Hampton's Magazine was to insure its being read in its full context."
That was not done because we had made insertions and eliminations, which distorted Dr. Cook's story in a vile manner. It was not Dr. Cook's story.
"Hampton's was willing, having printed Capt. Peary's story, to let me state my case through its columns, making no editorial guaranty whatever. My story must stand on its own merits; for it I alone am responsible. Until it has appeared in its full context it will be unfair to myself, to my friends, and to those I trust will believe in me to give out fragmentary answers to charges or explanations of my conduct in interviews. There is nothing of importance, so far as I know, which bears upon my case which I have omitted in my story."
Mr. TOWNER. Everything you have read there is a sheer fabrication?
Miss KIEL. Yes, sir.
Mr. TOWNER. Would it inconvenience you if I were to ask you one or two questions?
Miss KIEL. Not at all; but may I finish this paragraph?
Mr. TOWNER. Certainly.
Miss KIEL (reading):
"Only by reading the full, frank confession of my life, my life's work and my life's tragedy, can anyone understand me, understand my motives and my present convictions."
There is just one other line which I should like to read:
"For the position of suspicion and disgrace in which I find myself, I blame no one excepting myself. I want it to be understood now that I do not intend to enter into any controversy with Commander Peary, and that my feeling is that Commander Peary deserves the honor of a notable achievement, which was the result of sacrificing life work. I have never questioned Commander Peary's claim to the discovery of the North Pole. I do not now. I did not consciously try to filch an honor which belongs alone to Commander Peary."
I leave it to you, gentlemen, would any sane man make such a statement as this to the press?
Mr. TOWNER. I did not understand your first statement. You said that Lieut. Peary did not make his own statement.
Miss KIEL. No, sir. I said: "He did not write his own story."
Mr. TOWNER. Will you be kind enough to explain that?
Miss KIEL. When the story was first concocted Mr. Peary had no story, he had no data, he had nothing to present to Hampton's Magazine, but he was under contract of Hampton's Magazine to produce something. When he appeared before the committee of Congress they asked him for his proofs, and he made the statement that he was "under contract" with Hampton's Magazine to have his proofs appear first in Hampton's Magazine. They engaged a public stenographer to do the work, and Mr. Peary merely answered questions. From those notes Mrs. Elsa Barker made up the story. She had had trouble with the stenographers, and when they got to a certain point, which was the point where Mr. Peary was supposed to have left his ship for his final dash to the pole, Mrs. Barker could not go on with the story on account of incompetent stenographers. I was merely a humble little stenographer with the Hampton's Magazine. I always tried to do satisfactory work. Finally they sent me up to see what I could do. We got along beautifully from the time Mr. Peary left the ship up to the time that Mr. Peary was supposed to have reached the pole.
Mr. TOWNER. You were trying to interpret the manuscript of these other stenographers?
Miss KIEL. No. Mrs. Barker dictated to me her story. It was her own composition, and she occasionally referred to the manuscript of questions and answers.
Mr. TOWNER. Taken by other stenographers?
Miss KIEL. Yes, sir. I do not know who they were.
Mr. TOWNER. You yourself did not look at the stenographer's notes?
Miss KIEL. I have seen the manuscript.
Mr. TOWNER. You did not try to interpret the notes?
Miss KIEL. No; not the notes.
Mr. TOWNER. This lady was the head of the stenographic corps?
Miss KIEL. No. She was merely employed by Mr. Peary and Hampton's Magazine to get out the story. She was a personal friend of Mr. Peary's, and Hampton's were at a loss to know who to get. This very man who dictated the "faked confession" was also a personal friend of Mrs. Barker's. She knew Mr. Harre, and, in that way, Hampton's got hold of Mrs. Barker.
Mr. TOWNER. After you had finished it, was it submitted to Lieut. Peary?
Miss KIEL. No. I took the story from the time he left the ship up to the point where he was supposed to reach the pole. There were no proofs, and consequently, Hampton's Magazine was all in a furor. My services were discontinued for about two weeks. Then I received a letter from Mrs. Barker telling me that she had just finished the "observations"; that they were too technical to dictate to me, and she recalled me to finish the story. That was a very brief matter, because, after Mr. Peary reached the pole, it was merely a matter of getting him back from the pole in the magazine (laughter), and I can assure you that we did that very quickly. After that I broke down. I had been doing so much polar work that I could fairly see the polar ice, and I remained home for about a month. Then, as I told you, I was recalled once more and took a letter to Dr. Frederick A. Cock.
Mr. TOWNER. A letter to whom?
Miss KIEL. A letter to Dr. Frederick A. Cook asking for a story.
Mr. TOWNER. In response to that letter they did receive from Dr. Cook a manuscript statement?
Miss KIEL. In response to that we received word from Dr. Cook that he would give us a story, and we sent one of our subeditors over to London to get Dr. Cook's story. It was all done very quietly, and before anyone knew it, Dr. Cook was writing in America. It was not printed as Dr. Cook wrote it.
Mr. TOWNER. When you got Dr. Cook's story was it in his own handwriting, or in what condition?
Miss KIEL. I never saw the manuscript. I think Dr. Cook wrote the story and the stenographer transcribed the notes. It was all done very quickly.
Mr. TOWNER. Your first knowledge was when you saw the galley proofs?
Miss KIEL. Yes, sir. I was commanded to cut through the paragraphs and insert little scraps of paper, typewritten slips, which, I think, anyone can tell Dr. Cook did not write.
Mr. TOWNER. In other words, this printed statement called Dr. Cook's story is partly his story and partly a manufactured story that was inserted?
Miss KIEL. Yes, sir.

Mr. TOWNER. The magazine did not find Dr. Cook's story sufficiently exciting and sensational to suit them?

Miss KIEL. It was a magazine "stunt," and they were under contract with Mr. Peary not to print anything that would be detrimental to Mr. Peary.

Mr. TOWNER. How do you know that?

Miss KIEL. One day I was standing in the hall—I had been called over to one of the editor's offices—and when we knew that we were going to get Dr. Cook's story Mr. Long came along and grabbed Mr. Hampton by the arm and said, "We can't do it; we are under contract to Bob." Mr. Hampton said, "Never mind; we will fix it up with Bob." When I upheld Mr. Peary in office "confabs" the head stenographer told me that I did not know "everything."

Mr. TOWNER. This is the contention: Dr. Cook's story as originally given to Hampton's Magazine would have defended Dr. Cook?

Miss KIEL. It would have.

Mr. TOWNER. And in order that it should not do so these insertions were made?

Miss KIEL. Exactly.

Mr. TOWNER. As I understand you, some of Dr. Cook's statement that was given was eliminated entirely?

Miss KIEL. Yes, sir.

Mr. TOWNER. And a substitution made for it?

Miss KIEL. Yes, sir.

Mr. BAKER. Forgery?

Miss KIEL. You may call it what you like.

Mr. BAKER. That is the name.

Mr. TOWNER. Every insertion which was made, of course, was not made by Dr. Cook, but was made over his signature?

Miss KIEL. Because he had O. K'd the galley proofs.

Mr. TOWNER. Were they made over his signature?

Miss KIEL. The insertions?

Mr. TOWNER. Yes.

Miss KIEL. Naturally; they were slipped in after Dr. Cook had O. K'd the galley proofs.

Mr. TOWNER. Did Hampton's issue Dr. Cook's story as an authoritative statement? Did they advertise it as such?

Miss KIEL. This note did as much [exhibiting editorial note in Hampton's Magazine].

Mr. TOWNER. Will you just please give us the statement that was made at the commencement of Dr. Cook's story?

Miss KIEL. The editorial note?

Mr. TOWNER. Yes.

Miss KIEL. This is the editorial note given by Hampton's Magazine.

Mr. TOWNER. Please give us the title.

Miss KIEL. This is the first issue of Dr. Cook's story, January, 1911 [exhibiting]. The title is "Dr. Cook's Own Story, by Dr. Frederick A. Cook. Illustrations from photographs and diagrams." This is the editorial note:

"Since the sudden and mysterious disappearance of Dr. Frederick A. Cook in November, 1909, until the publication of this series no word has been received from this man, who stood so conspicuously for a brief while before the world, the recipient of unprecedented honors. Why did Dr. Cook disappear? Was not this a tacit admission that he had presented a fraudulent claim to the discovery of the North Pole? Or did he ever, possibly, believe in himself? Where, during his absence, has he been, and what has he done?

"During the past year Dr. Cook has been reported in many places. Various interviews have been attributed to him. One has announced his going secretly north; another told a tale of his attending the Peary lecture in London. Dr. Cook brands these fabrications. Here for the first time he makes an authoritative statement to the world and answers the questions asked about him.

"Hampton's presents the following statement on its own merits. It is a human document, of extraordinary interest and importance."

Mr. TOWNER. Is the statement which follows given in the first person, as if it were a recitation of facts by Dr. Cook himself?

Miss KIEL. The first word is "I."

Mr. TOWNER. That is what I wanted to know.

Mr. BAKER. The statements which you make go to the middle of things.

Mr. TOWNER. The bottom.

Mr. BAKER. They go to the middle. You stated that Dr. Cook, having written or dictated the story of his adventures, that Hampton's Magazine knowingly, willfully, and deliberately cut out parts of it and made insertions that were not given at all by Dr. Cook?

Miss KIEL. I do.

Mr. BAKER. What is the definition of a forgery? The changing of an instrument in writing to the detriment of another man's rights, is it not?

Mr. TOWNER. Yes.

Mr. RUPLEY. Ask the lady who perpetrated all this.

The CHAIRMAN. Who authorized the insertions?

Miss KIEL. Mr. Benjamin B. Hampton.

Mr. TOWNER. The editor and owner of the magazine at that time?

Miss KIEL. Yes, sir.

Mr. TOWNER. You have also given the name of the person who prepared the insertions, have you not?

Miss KIEL. Prepared this story?

Mr. TOWNER. These insertions.

Miss KIEL. I will leave it to you who prepared this statement and who prepared these insertions. They tally almost in words.

Mr. BAKER. Are we to understand——

Miss KIEL (interposing). Those insertions were not dictated to me; they were merely handed to us on typewritten slips to put in.

Senator POINDEXTER. What paper do you refer to?

Miss KIEL. This faked "confession for the press."

Senator POINDEXTER. The one from which you read just now?

Miss KIEL. Yes, sir.

Mr. BAKER. Are we to understand that Hampton's was under contract with Commander or Commodore or Admiral Peary to take care of Peary's reputation?

Miss KIEL. He was under contract to Mr. Peary to print nothing that would incriminate Mr. Peary. Mr. Peary had received $50,000 for his story, and naturally they had made Mr. Peary's reputation.

Mr. BAKER. You are saying some wonderful things.

Miss KIEL. I am telling the truth as I know it to be.

Mr. RUPLEY. What happened to these owners of this magazine?

Miss KIEL. Some of them went to jail.

Mr. RUPLEY. For what?

Miss KIEL. For selling bogus stock.

Mr. RUPLEY. In what enterprise?

Miss KIEL. After Hampton's virtually failed they combined with the Sterling Magazine—the Columbian-Sterling Co. They had to raise the finances, and they did so by selling stock, and the Government came down upon them and pressed them to the wall, and they were forced out of existence.

Mr. TOWNER. There are some indictments now pending against some of them for these fraudulent practices?

Miss KIEL. Not in connection with Dr. Cook's story; no. I am not speaking for Dr. Cook, but as human to human. I will tell you that Dr. Cook never read this magazine article. When the magazine appeared like this [exhibiting], with "Dr. Cook's confession" on the outside, it was a thing, if he had not been a strong character, which might have turned his brain; but he was heartbroken, and he refused to look at the magazine. Between ourselves, he did not read a portion of it until last October, when I forced him to read the insertions. He knew that they had lied and misrepresented his story, or they could never have printed "Dr. Cook's confession" on the cover. He did not know what they had done, but he did know that they had faked his story.

Mr. TOWNER. You spoke about the newspaper interview that you read from separately.

Miss KIEL. Yes, sir.

Mr. TOWNER. Tell us about that, please.

Miss KIEL. Do you mean this [indicating] "Statement for the press"?

Mr. TOWNER. Yes.

Miss KIEL. That is very simple. When they were ready to go to press with this first issue they had to do something to stir up excitement in order to increase the news-stand circulation; and they prepared this statement for the press, which was to appear simultaneously, with the first issue of the magazine, in every paper in the world.

Mr. TOWNER. It was practically an advertisement of the magazine?

Miss KIEL. Yes, sir; an advertisement.

Mr. TOWNER. Does that statement refer to the magazine itself?

Miss KIEL. Yes, sir.

Mr. TOWNER. In other words, it is supposed to be a résumé of the article that was to appear in Hampton's Magazine?

Miss KIEL. Yes, sir. As I read it says:

"My chief reason for giving my story to the world through Hampton's Magazine was to insure its being read in its full context. Hampton's was willing, having printed Capt. Peary's story, to let me state my case through its columns, making no editorial guaranty whatever."

Mr. RUPLEY. I think the world is entitled to know that. Hampton's Magazine succeeded the Sterling-Columbian Co.?

Miss KIEL. No; the Columbian-Sterling Corporation succeeded Hampton's, but Hampton was still in it.

Mr. RUPLEY. What was the name of the magazine before it bore the name of Hampton's?

Miss KIEL. I think it was the Hampton's Broadway Magazine. I was not with them at that time.

Mr. RUPLEY. It was first called the Hampton's Broadway Magazine and then Hampton's Magazine?

Miss KIEL. Yes, sir; and then the Columbian-Sterling, and later they resumed the name—which I can prove to you—of Hampton's Magazine, the New Hampton's Publishing Co. [exhibiting letter]. That was what they recalled me for the fourth time—my fifth experience with Hampton's—when I had a letter from the treasurer, in which he said:

"I have a position in the editorial department and would like very much to talk with you about it. Would you be interested? As we must have some one at once, I will appreciate it if you will advise me Monday morning."

That is signed by the secretary, Albert J. Gibney, for the New Hampton's Magazine. That was written on March 23, 1912, and on May 10, 1912, Hampton's Magazine went down to an ignominious grave and I received this notice:

"Miss L. Kiel, editorial department: It will be necessary to dispense with your services on Saturday, May 11, until further notice."

That is signed by A. Gordan Murray, president. At that time I took a pen and wrote across the memo: "Busted!"

Mr. RUPLEY. You said that some of them went to jail. I wish you would tell us who went to jail.

Mr. TOWNER. As I recollect it, in reorganizing the magazine, these people made certain representations through the mails regarding it, which were false, or claimed to be false as I understand, and they were prosecuted for putting this stock on the market, obtaining money through false pretenses.

Miss KIEL. Yes, sir. They were forced to close.

Mr. TOWNER. That is what I had in mind, and that there were some indictments found against some of them.

Miss KIEL. I was an editorial stenographer, and I was not very familiar with the commercial end of the magazine. These people failed absolutely, and we were all handed our "walking papers." The office was filled at the time with representatives from our own Government investigating our files, and I was told that they were representatives of the Post Office Department. They immediately took possession of all the files.

Mr. RUPLEY. You said that some of them went to jail?

Miss KIEL. Yes, sir.

Mr. RUPLEY. And the inference is that it might have been Hampton or Smith or Jones—who was it?

Miss KIEL. Mr. Hampton steered clear. Mr. Frank Orth, the president of the Columbian-Sterling Publishing Co., was put in jail, and with him—I have forgotten his name, I may recall it later—the treasurer went to jail, the president and treasurer.

Mr. RUPLEY. Of Hampton's Magazine?

Miss KIEL. Of the Columbian-Sterling corporation which included Hampton's Magazine.

Mr. SMITH. I would like to have Miss Kiel state why she came before the committee to give her testimony; what induced her to come here, and what her purpose is.

Miss KIEL. I am here merely in the interest of justice. I have no personal interest, but if you people are going to take the word of both explorers, then I think, in the name of justice, it must be determined what is the word of either explorer. Hitherto the words of both explorers were not the words of either explorer in Hampton's Magazine. Hampton's Magazine printed the exclusive stories of both explorers. Is that definite?

The CHAIRMAN. I think it is.

Mr. BAKER. Absolutely.

The CHAIRMAN. Miss Kiel, on behalf of the committee, I want to thank you. We certainly have been very much entertained by your interesting story.

Miss KIEL. I did not come here, gentlemen, to entertain you. I merely came to show you one of the many wicked methods which were employed to denounce Dr. Frederick A. Cook, who, in my opinion, is the discoverer of the North Pole. However, I am not a scientist. To me it is immaterial whether Robert E. Peary is the discoverer of the North Pole, or whether Dr. Cook is the discoverer. As I have repeated several times, I am here simply in the interest of justice.

The CHAIRMAN. You have given us some very interesting information. Mr. Smith, is there any other gentleman you wish us to hear to-night?

Mr. SMITH. I do not believe there is anyone else I would care to call. I agree entirely with Judge TOWNER'S statement that what the committee should have is evidence or facts, and as the Arctic explorers are not here I do not believe there is anyone else to be heard.

The CHAIRMAN. This will form the basis for our future action.

(Thereupon, at 10.25 o'clock p. m., the committee adjourned.)

Publicity in a Democracy.

EXTENSION OF REMARKS

OF

HON. M. CLYDE KELLY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. KELLY of Pennsylvania. Mr. Speaker, I desire to place in the RECORD an address on the Campaign Bulletin as a Tool of Democracy, delivered by James Mackaye at the second annual convention of the National Popular Government League, in Washington, D. C., January 5, 1915. The address follows:

SUCCESSFUL DEMOCRACY.

Democracy requires that the people rule their own affairs. Successful democracy requires that they rule their affairs intelligently. The ballot properly extended to measures as well as men is the great instrument of democracy. Successful democracy requires another instrument not now to be found in our election machinery, except in a rudimentary form.

The modern Australian ballot provides a fair, free, and adequate means of registering the decision of the electorate. In order to perfect the machinery of democracy there is required an equally fair, free, and adequate means of informing the electorate on the issues they are to decide, to the end that the decision may be an intelligent one. A properly designed campaign bulletin fulfills such a requirement, giving the electorate the information they need in order to use the ballot effectively in their own interest, and incidentally nullifying in large degree the influence of money in elections.

It is the purpose of the present paper briefly to describe and discuss a form of bulletin which has been worked out to fit the form of ballot used in Massachusetts, a bill for the issue of such a bulletin being at present (1915) before the legislature of that Commonwealth.

DESCRIPTION OF PROPOSED BULLETIN.

The bulletin is to be published by and at the expense of the Commonwealth, preceding each regular State election, in four numbers, the first number to be issued a week before the primaries, and the last three numbers at intervals of one week on the three successive Fridays preceding the election. There is a form of bulletin corresponding to each form of primary and election ballot, the bulletin varying as the ballot varies from district to district. All candidates whose names appear on the ballot, except for such minor offices as members of party committees, or presidential electors, are entitled to insert a statement in each number of the bulletin which corresponds to the ballot on which their names appear.

Moreover, the names of candidates appear in the same order in the bulletin as they do on the ballot, so that each form of bulletin resembles in a general way the corresponding form of ballot, except that each candidate is given a certain space beneath his name in which to present his views and qualifications to the voters entitled to vote for him. This space is the same for all candidates for the same office, but varies with the importance of the office, candidates for governor, United States Senator, and Congressman, for instance, being limited to 500 words in each number of the bulletin, those for lieutenant governor, State senator and representative to 250 words, while candidates for less important offices, such as State secretary and treasurer are limited to 125 words. In presidential years a supplement to each number of the bulletin relating to the election is issued in which each candidate for President is entitled to present a statement of 800 words, and each candidate for Vice President one of 400 words.

Measures referred to the voters are printed separately—any measure of more than 750 words in length being abridged to a length not greater than 750 words—and issued with the second number of the campaign bulletin. Arguments, affirmative and negative, on each referred measure appear in each of the last three numbers of the bulletin—these numbers relating to the election. The affirmative and negative arguments are limited to the same number of words—500 in the case of State-wide referenda, and 250 in the case of local referenda.

On the date of issue of each number of the bulletin a copy is sent to each registered voter in the State, each voter receiving a form of bulletin corresponding to the form of ballot which he is to vote at the ensuing primary or election, so that only statements of the candidates for whom and arguments relating to the measures for which he is entitled to vote are presented to him.

The persons who are to prepare the affirmative and negative arguments relating to referred measures are selected at a meeting of the proponents and opponents of the measure, called and presided over by the secretary of state, at which the proponents by majority vote select an avowed advocate to prepare the affirmative, and the opponents an avowed opponent to prepare the negative arguments. If there is no opposition, or practically none, negative arguments do not appear in the bulletin.

In the bill providing for the bulletin provision is made for a variety of matters too detailed for discussion here, such as the time limit on presentations of statements and arguments to the secretary of state for insertion in the several numbers of the bulletin; the treatment of possible libelous or other unmailable matter submitted by candidates; the size of sheet, type, and so forth, to be used in the bulletin; the method of dealing with variations in the number of candidates in different districts; the method of securing mailing lists of registered voters, and so forth.

A single number of a typical bulletin is simply a single sheet of newspaper size, printed on both sides with regulation newspaper type and columns. The bulletin follows the ballot and is well adapted to allow the average busy voter to inform himself of what the various candidates whose names he is later to encounter on the ballot have to say for themselves and how they stand on the issues of the election. He can similarly inform himself concerning the merits of the referred measures, the titles of which appear on the ballot, the affirmative and negative sides having equal opportunity to present their claims, the simplicity of the method of presentation throughout, and the parallel-column effect, rendering the reading and comparison of statements and arguments as easy as possible to the reader.

THE PRESENT CAMPAIGN PAMPHLET.

In Oregon, Oklahoma, Wisconsin, and a number of other Western States a crude and rudimentary form of campaign bulletin has been established, and, though very imperfect, has accomplished results highly suggestive of the benefits which would accrue from the adoption of an efficient form of bulletin.

The present campaign pamphlets are issued by the States in single numbers prior to elections, and sometimes to primaries. They include the texts of referred measures, and sell space to candidates and parties desiring to present arguments on measures much as newspapers do, though, of course, no profit is sought. In at least one State some restriction on the space which can be secured is made, but, in general, the space is proportional to the payment therefor—some candidates buying much, some little, some none at all; the importance of the office sought is not a factor, and there is no division into districts, the statements of candidates in one district going to all districts indiscriminately, and the whole affair has the characteristics common to a first attempt. The pamphlets are neither fair, free, nor adequate, and yet are so much better than nothing that it would be folly for the States using them to discard them for the old system. They might, however, discard them for a better system, the characteristics of which may best be suggested by instituting a comparison between the common form of campaign pamphlet and the proposed form of bulletin.

ADVANTAGES OF THE CAMPAIGN BULLETIN.

The advantages of the campaign bulletin over the typical campaign pamphlet are at least a dozen in number, as follows:

(1) It has the newspaper form adapted to the newspaper reading habits of the general public, the normal bulletin consisting of the two sides of a single sheet of paper, so that the complete text is accessible with the minimum expenditure of time or effort.

(2) All statements and arguments are short. This requires candidates to be brief and to the point. The average reader will read short statements, where he will skip long ones. By giving the voter the required information in a series of short snappy statements distributed through several bulletins he

can be induced to absorb much more than if everything is administered in one dose in a single dry looking pamphlet.

The total amount of reading matter in four typical bulletins like that figured is about 60,000 words—a fair-sized book—yet the form in which it is presented, subdivided, as it is, into four issues containing 50 or 60 short statements and arguments each, is such that it does not appear at all formidable, and the average voter will read it easily, when a single volume of 60,000 words would appall him. Should anyone think the space accorded each candidate is too short for adequate presentation of all that a candidate would like to present, let him reflect that we must reckon as much on what the average voter will take as on what the average candidate would like to give him. It is better both for candidate and voter to give the electorate a little that it will read than much that it will not. At any rate, the best way to increase the amount of space accorded candidates is probably not to increase the bulk of the bulletins, but to increase their number. Even as it is, the bulletin gives much more space to the average candidate than any reasonable sized pamphlet could, because the bulletin differs in different districts, while the pamphlet includes candidates in all districts. Hence to make it cover the ground covered by the pamphlet, in a State like Massachusetts, it would have to contain about 1,200,000 words, a book nearly twice the size of the Bible, very little of which would be applicable in any one district.

(3) All candidates and referenda are given a hearing in the bulletin. There is no discrimination. The bulletin is as complete and as fair as the ballot, the names of candidates and titles of referenda appearing in the same order in each, so that when the voter encounters his ballot in the booth on election day it will have a familiar look, each name and title will mean something to him, and he will vote with his eyes open.

(4) The length of statements is proportional only to the importance of the office sought. There is no question of one candidate buying more space or using louder headlines than another. The rich candidate and the poor stand on the same level in the bulletin as they do on the ballot.

(5) Moreover the form of bulletin used enables the parallel column expedient to be used with telling effect. The views of opposing candidates, the affirmative and negative arguments on referenda, can be compared with the least possible exertion, and led on by this arrangement the reader will be tempted to see how the different candidates for a given office stand on the issues of the campaign. In this way voters will read and compare the views of candidates of all parties and of no party, which is just the thing desired, since men are more likely to learn something from those with whom they disagree than from those with whom they agree. Each candidate striving to present the strength of his own position and the weakness of his opponents will enable the voter to estimate the strength and weakness of both—the same principle used in presenting a case to the jury.

(6) Another very marked advantage of the serial form of bulletin is that it enables candidates, and those presenting arguments to answer one another—to make rejoinders, not once, but at least twice. Thus a joint debate is carried on before all the voters; not between two candidates only, but between all the candidates, each one naturally giving his main attention to his particular opponents. The limits of space, however, are such that the reader can cover the whole debate because each candidate must boil his argument down and present his points with the greatest possible conciseness. This not only makes the bulletin highly interesting, but highly instructive as well, for the condensed debates in the bulletin will serve as the texts and germs of more protracted debates between the voters on street corners, in street cars, at the restaurant, and in the country store, and thus will start an intellectual ferment which will be the beginning of a really successful democracy.

(7) By the issue of the bulletin in serial forms it covers the period of the campaign when interest in practical discussion is greatest and when therefore it will be most effective educationally. The pamphlet issuing but once, and then long before the election—in some States it may be two months before—is not a live part of the campaign. By the end of the campaign it is in danger of being forgotten; it is a sort of back number.

(8) Another advantage of a live campaign bulletin is that it is likely by increasing the interest of the electorate in political affairs to make them more regular at the polls. At present large numbers of voters do not take the trouble to vote. A great many intelligent men can not help perceiving the futility of the "go it blind" method of voting now so much in vogue. Hence they lose faith in the ballot and neglect it as a matter of no importance. There are good reasons for believing that a really adequate campaign bulletin will increase the proportion of voters who go to the polls, and will tend to restore faith in the soundness of democracy on the part of those who mistake a defect in the instrument for a defect in the principle.

(9) The greatest advantage of the serial bulletin method is its elasticity—its possibility of expansion and extension. If 4 numbers during a campaign are found to be inadequate, if the voters show an appetite for more, the number can be increased to 6, 8, 10, or even more. Indeed, the bulletin might be extended beyond the election and be issued at intervals throughout the year as an agency for keeping the people in close touch with their Government, and giving them first-hand information through reports of the proper officials of the progress of the public business. In this way those charged with executing the public will could discuss their activities directly with the public, could make recommendations for improvements and extensions in the public service, and explain why they demand them in the public interest. Many other extensions are suggestable, but it is too long a story to go into them. It is only possible here to hint at the great and beneficent instrument of public education and intelligent democracy of which a practical campaign bulletin might become the germ.

(10) The bulletin, in contrast to the present pamphlet system, is entirely free—as free as the ballot. The rich candidate has no advantage over the poor one. Each candidate has the same space as his opponent and money can not buy any more. Thus money can no more be used as a makeweight in the bulletin than on the ballot itself.

(11) The fact that each candidate for a given office has the same space for his statement as each other candidate, and that no charge is made for the insertion of statements, enables each candidate to conduct his campaign and present his case to the voters on an even footing with his opponents, the rich man having no advantage over the poor man. This affords a basis for the enactment of a really effective corrupt-practices act—something at present unknown—for by the establishment of a campaign bulletin, affording a fair, free, and adequate channel of communication between candidate and voter, the State for the first time possesses proper ground for prohibiting the expenditure of money in private advertising. Having established a more efficient substitute for the present private methods of communication, where each candidate, having the means, tries to publish and distribute a little campaign bulletin of his own, the State is entitled, if it so elects, to prohibit the use of these private methods open to the rich but closed to the poor.

It is somewhat doubtful, however, whether such prohibition will be necessary, since private advertising by a candidate entitled to use the public channel of communication provided by the State is likely to act as a boomerang because of the obviousness of the effort to make money the controlling factor. Under present conditions where in most States candidates must use private means of communication or nothing, the fact that money is the controlling influence is not so obvious, and the State can not avert such subtle influence without shutting off communication altogether. If properly designed, the campaign bulletin can be made a substitute for present campaign methods, instead of a slight appendage to them, like the campaign pamphlet.

Unless the people are satisfied to vote blindly at the ballot box or to accept such guidance as comes to them through private and interested sources, usually controlled by those who are well content with things as they are, they must attend sufficiently to their own affairs to provide themselves with a free and impartial means of information in the form of some sort of adequate campaign bulletin.

(12) Last, but not least, in considering the practicability of a campaign bulletin is the cheapness of the form proposed. Having the newspaper dimensions and character, it can be printed with the newspaper presses and equipment now to be found in all our large cities. The presses of a daily newspaper printing only a morning edition are usually idle three-quarters of every day, and hence should be available for printing the campaign bulletin. Estimates made by one of the great Boston newspapers indicate that the total cost of printing the proposed Massachusetts campaign bulletin, consisting of four numbers of 600,000 copies and 300 changes in form each, and with a total composition of 1,200,000 words, would be about $6,000, or, including a liberal margin of profit, say, $8,000. The cost of printing one 600,000-copy edition of a pamphlet of 48 pages, containing 24,000 words (comparable to an average campaign pamphlet), is about $8,000, so that the cost of a campaign bulletin having the advantages enumerated herewith is no greater than that of a pamphlet containing only 2 per cent of the reading matter contained in the bulletin.

DISADVANTAGES OF THE CAMPAIGN-BULLETIN METHOD.

Turning now to the disadvantages of the proposed method, we find the principal, if not the only one, in the expense of distribution. Second-class postal facilities, which were estab-

lished to promote the dissemination of information among the people, and by means of which the newspapers and most of the other periodical publications of the country are distributed at the rate of 1 cent per pound, can not under the present postal law be applied to the campaign bulletin. The technicalities which cause this anomalous situation can not be discussed here. The result is that the distribution of the four copies of a campaign bulletin such as is proposed in Massachusetts would cost about $24,000, as compared with a cost of $6,000 or $12,000 for a single campaign pamphlet, according as it weighed less or more than 2 ounces. A large pamphlet might cost even more for distribution than this, the third-class rate requiring 1 cent for each 2 ounces or fraction thereof. With second-class rates available, the cost would be about $750 for the bulletin, and, say, half that for the pamphlet.

Another disadvantage is the addressing required under the present postal law. Addressing each copy of each number of the bulletin separately would probably cost nearly $6,000 for the 1,200,000 copies mailed, as compared with $1,500 for the pamphlet. Under the system practiced in Germany, where publications uniform in text are delivered in bundles addressed to post offices accompanied by a mailing list of the persons who are to receive copies, a great saving in time and trouble is effected, both to the sender and to the postal authorities. With such a system in force in our post office the cost of addressing the bulletins would probably be reduced to $500.

METHOD OF AVOIDING THE DISADVANTAGES.

Bills to permit of both these changes have been presented to Congress. They are eminently reasonable and no sane objection can be urged against their passage. Should they pass, the cost of printing and distributing a campaign bulletin to 600,000 voters would be reduced from $35,000 or $40,000 to $9,000 or $10,000, which is no more than a single pamphlet with all its inadequacies would cost.

In round numbers 600,000 registered voters means a population of 3,500,000, and a simple division will show that, assuming the proposed changes in the postal laws are secured, a campaign bulletin of the character described can be provided such a population at a cost of about 3 mills per capita.

But suppose, we assume, in order to be on the safe side, that the cost of such a bulletin is 10 mills or 1 cent per capita. Is this an exorbitant price to pay for an instrument of democracy having the present advantages and the future possibilities indicated in the foregoing pages? Is this too much for the public to expend in order to secure information so vital to intelligent use of the ballot, so essential to the success of democracy? In a democracy the solution of all other public issues rests upon the solution of the issue of providing the jury of the people, charged with the final decision on all such issues, with adequate and impartial information. Is there any other method of spending 1 cent per capita per annum which is likely to give the public a larger return for its money?

Opinion of the Hon. Joseph Buffington in the Wage Dispute Between the Pittsburgh Railway Co. and its Motormen and Conductors.

EXTENSION OF REMARKS

OF

HON. STEPHEN G. PORTER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. PORTER. Mr. Speaker, on May 1, 1914, the wage agreement between the Pittsburgh Railway Co., of Pittsburgh, Pa., and its motormen and conductors expired. After prolonged negotiations the company and the employees were unable to agree upon a scale of wages and agreed to submit the matters in dispute to a board of three arbitrators. The company designated James C. Gray, Esq., and I was selected by the employees, the two of us to agree upon a third man as umpire. We selected the Hon. Joseph Buffington, present judge of the United States circuit court of appeals. After lengthy hearings and arguments an award was agreed upon, to which I filed a dissenting opinion, which was made a part of the CONGRESSIONAL RECORD on December 16, 1914. I feel it but fair, so that both sides of the controversy may be fully understood, that the opinion of the umpire, the Hon. Joseph Buffington, should likewise be made a matter of record. His opinion follows:

ARBITRATORS' REPORT IN THE MATTER OF THE ARBITRATION BETWEEN THE PITTSBURGH RAILWAYS CO. AND THE MOTORMEN AND CONDUCTORS OF THAT COMPANY.

On the 5th of May, 1914, the Pittsburgh Railways Co., of the one part, and the motormen and conductors, of the other part, entered into a written agreement, a copy of which is marked "Exhibit A." By reference to such agreement it will be seen the parties provided for the selection by each of an arbitrator, who should together act to settle the questions at issue between said company and its employees. In pursuance of such agreement the men selected the Hon. STEPHEN G. PORTER, a Member of Congress from this city, and the company selected James C. Gray, Esq., also of this city, both of whom are members of the Allegheny County bar. After repeated efforts the said arbitrators were unable to settle the questions at issue between the parties, and thereupon they proceeded under the terms of said agreement to select a third arbitrator. This duty they fulfilled by choosing the Hon. S. Leslie Mestrezat, an associate justice of the Supreme Court of Pennsylvania. To the regret of all parties, Judge Mestrezat was unable to serve. Thereupon the two arbitrators, on June 22, 1914, selected as the third arbitrator Joseph Buffington, presiding judge of the United States circuit court of appeals for the third circuit, who on June 24 accepted. Thereafter, and as soon as both parties announced themselves ready to proceed, the said three arbitrators organized and began hearings on July 8, at the United States court room in the city of Pittsburgh, both parties being represented by counsel. On said day and continuously thereafter to and including July 20 the said board heard the testimony of some 100 witnesses produced by both sides and received large numbers of exhibits in the shape of charts, arbitration reports, public documents, surveys, essays, and reports. The oral testimony thus given exceeded 1,400 pages. During the hearings the utmost fairness and frankness was observed by both parties, no technical rules of evidence were followed, and whatever seemed to throw any light on the questions involved was frankly and freely produced by both sides and was received by the arbitrators. At the conclusion of the testimony the counsel were given until July 28 to brief the testimony, and on that day the board reassembled and heard the full arguments of counsel, supplemented by carefully prepared briefs on both sides. Thereafter the arbitrators proceeded to study the same and to confer, and it is but justice to themselves to say that all other matters were put aside and their whole and continuous work given to the fulfillment of their duty as arbitrators, which they have all accepted and attempted to fill as not only their duty to the two parties interested, but also to the public, whom both these parties are seeking to serve, and to the general cause of the arbitration of industrial differences. We have recited these proceedings at length as evidencing the fact that the case has had at the hands of all parties concerned, namely, the counsel of both parties, the arbitrators chosen by each side, and the arbitrator chosen by both sides, the most patient and laborious consideration possible.

While, as will be seen by reference to the agreement for arbitration, a considerable number of questions are involved, it became evident as the arbitration increased that the main and important question was that of an increase or decrease of wages, and without that question no arbitration would probably have been necessary. In first taking up and determining this one question, viz, whether there shall be an increase or decrease of the wages paid under the last agreement between the parties, we have then before us the important question involved in this arbitration. The others, as we have said, are of minor importance, were capable of adjustment between the parties, and, had they alone existed, they would possibly have been settled between the parties themselves or have been adjusted by the two arbitrators acting as mediators. But on this broad question of an increase or decrease of wages from the scale of the last agreement there was such a radical difference between the men and the company and between the two arbitrators chosen by them that the duty and the responsibility of deciding that question has fallen upon the third arbitrator. The sense of such a grave responsibility must be his warrant for here discussing at possibly undue length matters which, on the surface, may seem not to be here involved, but which, to his mind, are necessary to an intelligent and just settlement of this wage dispute. With this in view, let us first turn to the exact question involved in this wage dispute.

The scale of wages at present being paid under the existing agreement is as follows:

	Cents per hour.
First six months	23½
Second six months	25
Second year	26½
Third year	28
Fourth year	29
Fifth year and thereafter	30

The contention of the men is that a flat rate of 35 cents per hour should be paid to all employees, or, as stated by counsel for the men in their brief: "We say, in concluding, that we have submitted a case to you for your consideration in which, as we see it, there can be no question of our right for a substantial increase in wages, a wage of not less than 35 cents per hour. * * * We are now contending for a flat rate of 35 cents per hour."

Now, to support this contention for a flat rate of 35 cents per hour, it is manifest that we are required to do two things: First, to do away with any fixation of wages based on length of service; and, secondly, to raise the wages of inexperienced men 11½ cents per hour and of experienced men 5 cents per hour, with corresponding wages for all men of intermediate length of service. Such is the contention of the men.

On the other hand, the contention of the company, as stated in its brief, is: "The company's position is that the wages paid the men, considering all questions now existing in the Pittsburgh district, should be reduced proportionately."

Where a third person is called by two parties to fix the wages that shall be paid by one and received by the other, the difficulty in the question is lessened by considering what the parties have themselves done in the past in fixing such wages. When therefore he finds, as here, an existing working agreement, it is natural and proper to place on the party asking another wage scale, the burden of showing due cause for such change. In this case the company seeks to lower the scale, and we think it right that unless it can show us some substantial reason for lowering such scale, we are justified in regarding its agreement of a year ago to pay the wages it has been paying as substantial evidence that such wages are not too high. On the other hand, where the men

seek to increase such wages, we are likewise justified in regarding the same agreement as substantial evidence that such wages are not too low. In other words, both parties have evidenced what they regard as fair and right by their last fixation of wages, and it is common sense for an arbitrator, who is asked by either or both parties to fix a different wage rate, to call on him who seeks to change to show substantial reason for so seeking to change a standard which both parties have themselves set. It does not follow from such reasoning that where wages are once set there can be no rise or no fall; it only applies that common-sense principle that when a change is to be made, either up or down, there must be substantial reason to warrant such change. Ordinarily the universal law of supply and demand establishes wage rates, for whatever our theory of what wages are or ought to be, the scarcity or overplus of either work or workers controls the fixation of such wages. But where, as here, the men and the company have gone on with the public transportation duty and left to an arbitration the fixation of all wages since the date of this agreement, we think the determination of this question should be on broader lines than the mere question of supply and demand.

The ultimate fixation of the wages of street car men is, in our judgment, to-day in a somewhat uncertain condition. This is because the electric development of city transit has and is undergoing rapid changes. The change from a horse car to a present-day interurban type of car has been so rapid and the prospective changes are so many that the final fixation of a general standard of wages for street car men has not been made. We therefore find that not only is there no general standard, but we find that each of our large cities has made such fixations on the basis of local conditions. In this arbitration we have been impressed by the fact that what wages are paid in one city afforded little real light on what should be done in detail in another.

Turning, then, to the problem before us, we find that owing to its topography Pittsburgh presents a street car problem that is wholly different from that of any other city, and is one of the most acute problems of city transportation that street car operators and street car managers anywhere are called upon to justly solve. In Pittsburgh there are in the neighborhood of 3,000 motormen and conductors, operating approximately 580 miles of tracks—a trackage which if extended would span the distance between Pittsburgh and Milwaukee. In this territory there are 87 routes, and some 1,000 cars start from and return to 20 different car barns. In many cities there are main arteries where cars run north and south with intersecting cross-town cars, with a consequent distribution of directions of travel, but such is not the case in Pittsburgh. The high hills and deep valleys, coupled with the fact that the real center toward which all Pittsburgh and its tributary population converges is the small triangle at the forks of the rivers, excludes cross-town cars. The whole street car problem centers in the triangle between the rivers and from the point to the courthouse. It follows, therefore, that there is a congestion of travel to reach this central triangle in the morning and to get away from it in the evening that creates a street car problem such as confronts no other American city. And as this travel rush centers into two hours in the morning and two hours at night, and the road must, at those widely spread apart hours, have every available man and car at work, it will be seen what a difficult problem it is to handle. These concentrations of travel at the morning and evening hours are called peaks, and a moment's reflection will show that the travel-peak incident to most cities is accentuated in Pittsburgh by the fact that practically all lines of travel run to a common center. It is as though a liquid was able to pass through the nozzle of a funnel as fast as you could pour it into the body of the funnel. The extent of these peaks is shown in the proofs in this case. Thus in the three morning hours between 6 and 9 o'clock the company must bring 90,000 passengers into the city in 4,600 car lots, 53,000 of whom must be carried from half after 7 to 9 o'clock and in 2,000 car lots. In the three hours between 4 and 7 it must take out 102,000 people in 4,300 car trips, 69,000 of whom must be taken from half after 4 to 6, and in 2,300 trips. When it is realized that the summit of these two peaks, viz, 8.30 a. m. and 5.30 p. m., are eight hours apart, and that during all the other hours, both of night and day, between these two peaks, the dispatcher must have his cars in operation for the travel which spreads itself over the remaining hours of the day, we begin to realize the difficulties of the situation. These unchangeable public requirements of travel, namely, two widely separated 2-hour peaks, and 20 hours of night and day service, make the dispatcher's problem of workably and fairly and profitably doing justice alike to all three parties concerned, namely, the carmen, the company, and the public, a problem so complicated as to challenge the ability of the ablest, coolest, and fairest men who would attempt it. In trying to solve this problem the dispatcher who lays out the runs and the carmen who make them are confronted by unchangeable fixed public habits and demands which neither the dispatcher, motorman, or traction company can change. One of these is the hour of public travel, concentrating the bulk of its travel into two peaks and spreading the remainder over all hours of the day and night. In other activities employers and workmen can measurably control the hours when work is done, and thus not only make it a night or day work, or they can concentrate it all within certain hours. For example, in factory work, in the building trades and in trades and occupations generally, the work can be evenly distributed over the working hours of daylight, and if for any reason it is desired to have any particular work done at a desired time, either day or night, the employer and workman can so arrange it. But in street railway work the public decrees otherwise, and dispatcher, carman, and traction company have to accept this unyielding and unchanging public habit of two daily peaks and continuous night-and-day travel between such peaks as one of the incidents of street car operation and service. This makes street car work a night-and-day occupation.

In regard to the spread of his possible work being all over the 24 hours, and of possibly being on Sundays as well as on holidays, the street car man is like the seaman. It will thus be seen that any man who chooses street car service as his work must face the fact that he is choosing a work of which widespread hours and night and Sunday work are uncontrollable incidents. Generally speaking, most other occupations are controllable in the time and the concentration of work, and when one in such occupations is called upon, for instance, to do night or Sunday work he is called on to do that which is not an incident to that occupation and is not a necessity. In controllable work both night and Sunday work and spread of work over long hours can be avoided, but when one's work relates to public travel, that work must adjust itself to a public demand which does not subject itself either to hours or control. It is a mere truism to say that if a dispatcher could spread the work of his cars over the whole working day he could arrange without trouble the time when every man's work could be done and there would be no difficulty in adjusting his pay by relation to other occupations. We have dwelt on this at length, for we think a recognition of the uncontrollable nature of this public work of street car service is necessary to a reasonable and just fixation of wages. In weighing, therefore, the character of such work it is clear that street car service in the uncontrollable spread of its hours, caused by the peaks, the necessity of continuous service through every 24 hours of day and night and by its being required on Sundays and holidays is a work which in these particulars is less desirable than that of most other occupations.

On the other hand, it must be borne in mind that coupled with these unfavorable facts thus created by the nature of this public service there is coupled to it as public labor a valuable and oftentimes overlooked incident, and this is the certainty of the work. In the final analysis possibly the most favorable factor in work is the certainty of its continuance. Work will not keep, and a day out of work is a day lost. Steady work, a work that from its public character goes on without stop, a work that panics, shut-downs, lack of orders, overstocking of the market, and many other of the accidents and misfortunes of business does not affect in stopping men's work, is a factor that reason and common sense require should be regarded in a just estimate. We think that, other things being equal, the man who was offered guaranteed work that would pay him $1,000 a year as long as he chose to continue it would have a much more valuable work than one who received much higher pay but had no assurance it would last. In that regard street car service possesses an advantage over and above others. If a street car company fails, its work does not stop or its employees go idle. Whether the company fails or prospers, whether times are good or bad, the street car must run. This often overlooked fact of the certainty and stability of street car service is shown by the evidence in this case, for while the proofs show that 75,000 men are out of work in the Pittsburgh district and the wage pay roll of the district has fallen off $350,000 a day, or nearly $10,000,000 a month, no one of the 3,000 motormen and conductors of this company have been laid off. We allude to these facts of men in other branches of work being idle, not as factors of any oversupply of men to work and therefore as a reason why street car men who have work should be reduced in pay because other men are idle, but simply to strikingly emphasize what we have to say of the overlooked fact that street car service is virtually a guaranteed service. As contrasted with the certainty of street car service we have uncontradicted proof of the uncertainty of other employment in this district. Thus, speaking of the work situation here, an experienced statistical witness whose business it is to gather together information for "large mercantile houses, wholesale jobbing houses, houses that want to know conditions on stock purchasing and credits," and who frankly states he has no politics, speaking of the eight Carnegie mills in this district, says:

"The reports of that company officially show their normal employment last year was about 23,300; in June, this year, it was 18,600. Last year these men were employed six days a week, and this year, with the exception of two mills, Edgar Thompson and Homestead, they are employed four days a week. * * * The Pressed Steel Car Co. in June, 1913, and previous to that time were employing at McKees Rocks 4,000 men, and in their Woods Run Plant 2,000 men. * * * The number out of employment at McKees Rocks now is 1,500, and Woods Run 200, as against last year. * * * The Manufactuers' Association of Pittsburgh is an organization of metal trades, the machinery builders, and toolmakers of the district. The men employed by the Manufacturers' Association this year, as compared with last, is about 40 per cent less than last year. Most of these are steel workers. * * * The coal companies in the Pittsburgh district employ about 50,000 miners and mine workers. At the present time they are employing 30,000 or a little less. There are about 21,000 workers idle in this district to-day. * * * There are 37,000 coke ovens in this district and 17,000 of them are idle. * * * The Carnegie Steel Co. has 59 furnaces, and there are 31 operating out of the 59 furnaces at the present time. * * * The 1st day of July there were 40,000 railroad men out in the Pittsburgh district inclosed within a 60-mile radius; that is, shop men, freight and passenger crews, and track repairers."

Confirming this general estimate, the general manager of the Pittsburgh Coal Co. says:

"Compared with number of men a year ago, we employ at the present time about 5,000 men less than a year ago. The men are anxious to work, and it is distressing and disturbing to see the men around the works that we can't give work to. I believe this is true of all coal companies. There are some worse than the Pittsburgh Coal Co., if that is possible."

With such facts as above, and covering so many branches of industry, the stability and certainty of work in the case of motormen and conductors is an advantage in favor of that employment that more than offsets the advantages of other occupations, but which, with such advantages, have no guaranteed certainty of work.

Another feature of street car men's work that is overlooked, and which is not possessed by many other occupations, is that it combines out-of-door work with sheltered work. While the evidence is—and it is no doubt true—that the vibration of the car is conducive to kidney trouble, the standing on the feet to varicose veins, that stomach trouble is common and the hours are hard, yet no one could critically look at the large number of carmen who attended these hearings and not be impressed with the general robustness of their appearance. This was especially so among the motormen. Reflection will show that such work is conducive to health. He has the great advantage of open air, but modern improvements have given him an inclosed shelter in which to work, and, if he desires, his stool at times relieves him from standing on his feet. Like changes in car service and the general and growing adoption of the pay-as-you-enter car allows the conductors also to stay at the rear of the car, instead of requiring them to breathe the oftentimes close and confined air of a crowded car. These three features of certainty of work, open air, and yet sheltered work are matters which go to the very root of things—are factors in favor of this occupation which tend to offset the disadvantages which it certainly has. There is another feature which should be considered in making a just estimate, and that is that street car service, whether from its activity, its mingling with the public, or from the fact that men like to conrol, as the motorman and conductor do the car, seems to attract men. In that regard we have in the proofs where different witnesses who had been engaged in many other occupations have either from the element of health, from irregularity or uncertanty of work in other occupations, or from various causes, left them to take up street car work. So also there is proof of a considerable number of other men who after giving up street car work have come back to it. Another feature must not be overlooked, and this especially refers to conductors. While in other occupations a long period of apprenticeship is necessary to fit one for such work, the proof in this case is that two weeks' trial will fit a man for intelligently undertaking conductor's work.

In considering this subject we have not overlooked the fact that cars have increased in size and carry more passengers, that there are

more stops to make and more street traffic to be contended with, but coupled with all these facts there are many other things to be considered. While there are more people carried on a large car than in the old type of car, yet the pay-as-you-enter system has made a conductor's work easier than when he had to push through a crowded car. So also the electrical equipment and brake facilities in a car have tended to give the motorman more effective means of operating and controlling it.

Having thus considered the general features of street car work we turn to the contention of the street car company that the wages of the men should be reduced. In considering that subject, as also the position of the men, we start, as we have said, with the agreement of last year as a working basis, and we place upon the party seeking to change that basis the burden of showing such substantial ground for departing from it. In that regard, both parties base their contention on the relation of wages to the cost of living. The contention of the company is that, taking a range of several years, they say that while under the proofs in this case and as testified to by an expert statistician called by the men, there has been an increase in the price of food products, there has been a larger increase in the wages paid by the Pittsburgh Railways Co. to its men. Turning first to the increase of the cost of food products, it seems in a general way to be conceded by all parties that food products consist substantially of two-fifths of the expense of living, and on that basis it would seem to be further assumed that there has been as applied to food products an added expense of somewhat less than 8 per cent of the entire sum covered by the whole cost of living. Going back over the years during which this increase has been going on, the company says they have increased the wages of motormen and conductors over 12 per cent. For example, this increase may be illustrated by citing the increase of wages of the five-year men for the years—

Wages per hour of five-year men.	Cents.
1907	27
1908	26½
1909	26½
1910	28½
1911	29½
1912	30
1913	30

Finding, as I think we must, that during these years the increase of wages paid by this company has more than kept pace with the cost of food products, is this difference such as to warrant this board of arbitrators in lowering the wages of the men? Theoretically it might be, but practically it is not. Take, for instance, what these figures mean when applied to a single man. Take, for instance, a man receiving $900 or over, which the proofs show is the case with over a thousand men. During those years the yearly gain to him in the increase in wages over the increase in food products has been about $40, or somewhat over $3 per month. Now, while this difference in the aggregate, when applied to 3,000 men, is large, to wit, $120,000; yet when it comes to be applied to the individual man, we are satisfied that this figure difference of $40 to each man, which at best is based on statistics and is more or less theoretical, affords no such broad and substantial ground as would warrant us in reducing the wages as contended for by the company. In the nature of things, there can be no fixed standard for determining wages; the best that can be done can not be exact. We therefore are of opinion that the company has not, even by showing, as we think it has, that the increase in wages in these years has been greater than the increase in food products, met the burden resting upon it of showing any substantial ground for changing the scale of wages under which the men and company worked during the past year and which is now being paid.

We next turn to the contention of the men. This, as we have seen, is of a twofold nature, and, as above noted, is, first, to do away with any fixation of wages based on length of service, and, secondly, to raise the wages of all motormen and conductors to 35 cents per hour.

Taking up the first question, it calls for the doing away with all grades of service, and places, so far as wages are concerned, all motormen and conductors on the same basis. This contention, be it observed, not only changes the plan under which this company and its men have been working for many years, but would start a system that, so far as we have discovered from the evidence, is not followed by the street car system of any large city in the country. We think it a safe rule to follow that, when objection is made to any plan or system under which men or States or nations have been working, the burden rests upon him who seeks change to show convincing reasons for the change. To give up any tried and tested plan for an untried and untested one is a step that ought to be based on sure and sound reasons. Without entering on a discussion of the question of the general merits of the present plan of this and other street railways, whereby a gradual raise of wages is provided for with each year of service for several years, and without discussing the merit of a plan which in time creates a reserve force of seasoned and experienced employees, thus affording a company and its men an opportunity to know and understand each other, it must be apparent that from the standpoint of the public the application of such a rule would be highly injurious to the public.

The proofs in the case strikingly evidence the unwisdom of placing new and untried men on the same wage scale as old and proved men. In Exhibit 31 we have a chart showing the contrasted result of the work of new and old men. Take, for example, the six months' men as compared with five year and over men. The chart charges up to each class, in addition to the wages paid such class, the sums they have cost the company in accidents. These figures are striking when they are understood. Take, for example, the five-year men as a class; while he was doing $300 worth of wage work for the company the company paid $29 as the expense of accidents he caused while earning such $300. Taking, however, the average work of the six months' man while he was doing $235 worth of wage work for the company, the company paid $178 as the expense of accidents he caused while earning the $235 wages. In other words, taking the work of that class of new men as a whole, the accidents resulting from it actually cost the company about seven times as much as the accidents of the five-year men. When the further fact is borne in mind that very many men in this five-year class never have any accident, the unfairness of establishing any system of street railroad operation and wages where no distinction is made between length of service and freedom from accidents, the unwisdom of such a plan is apparent. At the argument it was in effect said that a six-months motorman might be put on the same car as a five-year conductor, or a six-months conductor with a five-year motorman, and that so long as the company had the six-months man doing the work of a five-year man the former should receive the same pay. But however this might be in the case of some individual men, reflection shows the argument is not sound. It assumes that six-months men as a class are doing the work in the same way the five-year men are, when in point of fact we have seen by the cost of accidents the new men as a class are doing the work far more expensively and not so well as the experienced men. For every $500 of work the new men as a whole are doing, the company is paying $350 extra for the accidents the new men's work has resulted in. Such actual results show how unsound and unfounded the argument is. Without entering into further detail in this particular we limit ourselves to saying that neither the evidence or the reasons advanced show any ground on which we could base an award that all motormen and conductors be placed on an equal footing without reference to their length of service.

Turning next to the claim that the wages be increased to 35 cents per hour, we inquire what grounds have been shown for this increase? In that regard the counsel for the men in their brief contend that the "wages ought to be higher than those which have prevailed in the past if the work is now harder or more responsible or if it requires more skill, or if it be shown that the wages in the past have been too low or beneath a living wage," and, further, "that the wages paid must be increased side by side with the cost of living in order to secure the welfare of the workers."

As we have said before, each large city has a street car problem peculiar to itself and the system of hours, classification, runs, and general arrangement of the work is so peculiar to each that arguments based on other cities is, when the service as a whole is being considered, unreliable. In spite of this we may safely affirm that no city in the United States pays as much as the flat rate of 35 cents here contended for, and, secondly, that while there are some few large cities that pay somewhat more than Pittsburgh, there are far more cities that pay less. We are justified in saying that, taking the street car system as a whole in the large cities of the United States, the wages paid street car men in Pittsburgh is above the average paid in other cities. We think this fact tends to show the present scale should not be changed in Pittsburgh unless there is something of a local nature that necessitates a different wage scale in Pittsburgh from other large cities. We have carefully weighed the testimony on the question of rents, and while there are proofs of some individual men whose rents have been increased, and while there is the evidence of those owning real estate that they have raised their rents, yet taking the testimony as a whole we are satisfied that during the last few years house rents, as distinguished from business rents, have not increased in Pittsburgh. As to the increased cost of food, we have elsewhere shown that such increase during those years has been more than offset by the increased scale of wages this company has paid to each service grade of its men. As to the work now being harder than in former years, we are unable from the evidence to find any such increased hardship as warrants a change from existing rates. It is true the cars are larger, but with such cars has developed effective mechanism for operating and controlling them.

The work of motormen is under all circumstances responsible, and their vigilance when the car is in motion is constant and unchanging, but it has always been so. While the motorman is constantly apprehensive of accidents, and where sections of his run permit high speed, he is liable to have some unexpected person, animal, or object confront him, yet it must be borne in mind that on streets where traffic is congested and progress necessarily slow he has the elements in his favor of improved regulations and enforcement of traffic rules, of helpful cooperation by cornermen, and, above all, an increased and enlightened observance by the general public of safety requirements. The traction car has in itself been a great teacher to the public of greater care for its own safety. So also with the conductor. While the enlarged car calls upon him to handle more people and collect more fares, yet by the pay-as-you-enter system, as we have carefully watched the work of conductors, has greatly simplified his work of collecting fares and has given him fuller and freer opportunity than under the old system to receive and discharge passengers. Under the old system he had often to remember and stop his car while he was in the midst of a crowded car and busy in the collection of fares. Under ordinary circumstances, he now collects all his fares as passengers are getting on a stopped car, and when he is required to stop the car no fares are then being collected. In that respect the introduction of larger cars has not tended to make his work more difficult.

In considering this whole subject, we have not overlooked the unfavorable factors, the wide spread of hours, the physical and mental strain and anxiety on the part of the motorman and the foot and kidney strain incident to his and the conductor's being constantly on their feet; the necessity at times of the latter entering crowded cars and being subjected to abuse and public remarks at the hands of selfish and unreasonable passengers; and the fact that the hours of labor are spread and separated, but in spite of it all, the fact has been borne in upon us during these hearings that, whatever the cause, the car men presented an appearance of healthy vigor and strength that is more marked than in most other sets of men. In that connection it is to be borne in mind that while there are times when they are exposed to the elements and when the conductor is subjected to the close atmosphere of crowded cars in the brief peaks or rush periods, yet the facts must not be overlooked that, owing to shelter in the front of the car, which the motorman has, and that the pay-as-you-enter car keeps the conductor in the back of the car, there exists in the case of car men the opportunity to do their work practically in the open air while at the same time they are sheltered from the weather. In measuring the hardship of their work, it should not be overlooked that there are but few branches of human labor, whether it be the laborer in the ditch, the farmer in the field, the man at the lathe or roll, the clerk in the store, all of whom are on their feet all day long, the teacher in the school, or, indeed, any kind of human labor where such an opportunity of sheltered and at the same time open-air work exists. We refer to these factors at length as showing that while we have heard with sympathy the proofs in this case of the hardships incident to car men's work, we have also observed that when compared with other branches of employment there are favorable factors in car men's work which must not be overlooked—factors which many other occupations do not have. And in that connection it should not be overlooked that where his residence requires it the street car man has a free daily transfer to and from his work, an extra which in other occupations would amount to at least $30 a year, in addition to such free transportation as he uses at other times.

There is also another factor which must be borne in mind by anyone called upon to adjust the wages of street car men, which must not be overlooked. No business can continue to exist which does not keep a proper relation between the cost of its labor and the price of its product. If the maker of any product is paying his men a certain price to make it and he raises the wages of him who makes it, he must correspondingly increase his price to the man to whom he sells it. If he does not, bankruptcy is ahead of him. This was illustrated by two instances in the anthracite coal industry.

The Anthracite Arbitration Board raised the price of miner's wages, and to meet this advance the operators raised the price of anthracite

coal. In the same way the State of Pennsylvania lately imposed an additional tax on anthracite coal. Thereupon the producer collected that tax in an additional price put on the coal to the consumer. We may object to this, but after all, as there was nothing but the coal to pay the increased wages to the miner or the tax to the State, to make the coal pay it is to make the consumer pay it. And so it has come about that where wages are raised by arbitration boards or State legislatures the consumer, in the end, pays them and can be fairly called upon to pay them, for there is no one but the consumer of any article to pay the cost of producing that article. But in the case of street railways we have a different situation. We have all grown used to paying a 5-cent fare. The habit of our people and the coinage of our country have fixed the nickel as the unit of street car fare. The result is that the traction company can not raise fares and thus charge the passenger the fair and equitable share he should pay in the cost of hauling him which has arisen by reason of higher wages. In that connection it will be observed that while the wages paid by this and other street car companies have from time to time been increased, no corresponding increase has been made over the nickel fare, and in some cases it has been reduced. We do not overlook the fact that electricity, larger cars, a larger volume of business, faster schedules, and other factors have enabled these companies to economize in other directions, but nevertheless the one unchangeable fact of an unraisable nickel fare is such a barrier to increased revenue to a street railway as calls for wise caution on the part of an arbitrator striving to do justice to both car company and men.

After full consideration of this entire subject, and including the matters involved in questions 12, 13, and 14 of the submission, we have reached the conclusion that the contention of the men for an increase over the present scale, or a change therefrom, should not be granted for Pittsburgh or for Washington, Pa.

Having disposed of these questions which, as we have said, constitute the substantial ones which necessitated this arbitration, we turn to the minor ones which, no doubt, would have been adjusted by the parties themselves.

These questions group themselves under certain heads which we will consider collectively. Under the first head we will consider certain claims for extra compensation not allowed by the present or former scales. At present no extra pay is allowed for night or holiday runs, for snow-plow work, or for the five minutes a man is required to report before his platform work starts. Taking these up in order, it is contended by the men that men operating night cars should be paid paid 10 hours' pay for 8 hours' work. This means one-fourth additional pay. In support of this claim the men contend that virtually all branches of industry pay extra for night work; that when a man is required to do night work he should be paid extra; that the night operation of a car is harder than day. On the other hand, the company contend that the night work is easier than day—for the motorman, because of the decrease of street traffic; for the conductor, because of the absence of passengers, and that street car service is a night and day operation of which night work is a regular part. As we have shown before, night work is a necessary incident to street car service. It is an uncontrollable requirement of the public. No extra fare is paid for it, and the proof in this case is that it is done at a loss to the company. It is evident, therefore, that street car night work is an uncontrollable incident to such work; that therein it differs from most occupations where night work can be avoided. In that respect it is like the work of newspaper men, policemen, sailors, and railroad men generally, in that it can not be postponed until day. It is therefore clear that, as a general principle, the same reason which justifies extra pay for night work in time-controllable day occupations does not apply to street car work. The absence of extra pay for night service, with the exception of one city, is the invariable practice of street car companies. As to the work being harder or more objectionable than day work, the proofs show that these night runs are largely chosen by men whose seniority give them a preference of runs; the records show that while the average age in service of the regular men who operates early, late, and swing runs is 8½ years, the average age in service of those who operate night runs is over 9½ years. These facts show that under present conditions night runs are largely chosen in preference to day runs by those whose seniority gives them the right of choice.

What has been said of night work applies to Sunday and holiday work. Both are incident to street car service, and are as unchangeable incidents of it as a public-service occupation. In both Sunday and holiday runs there is less street traffic, fewer pedestrians on the street, and more even distribution of passengers over the entire day. Under ordinary circumstances a street car man can, if he desires, be excused from Sunday work, as there are fewer runs on that day than on week days. The proofs in the case, however, show that the men entitled to preference choose the Sunday runs, and that in many instances where they take a rest day they take a week day in preference to Sunday. The proofs that the general practice of American street railways, including such cities as Buffalo, Boston, St. Louis, New York, Chicago, Cleveland, and several others, is to allow no extra pay for Sunday work. In Pittsburgh the practice has been to pay in some instances for such work by allowing 10 hours' pay for 8 hours' work. The contention of the company is that this extra Sunday pay should be abolished; the contention of the men is that it should be further increased. For example, if a man has a 10-hour run during the week and an 8-hour run on Sunday, he should hereafter be paid 15-hours' pay for his 8-hour run instead of for 10 hours, as is now the case. In our view the contentions of both parties must be refused; in other words, we hold the present schedules should stand. Our reasons for so holding are, as we have said, that Sunday work is an incident to street car service, and stands on the same general footing as the work of sailors, policemen, and like occupations. The almost general street car practice has so regarded it and has allowed no extra pay for it. In that regard we think the present contention of the company is founded on good reason supported by the general street car practice. But as the question comes before us, the Pittsburgh Railways Co. has in the last schedule and for some years made some extra allowance for some Sunday runs. This established practice the company now seeks to change. Its only ground for doing so we have fairly stated above. But these reasons have always existed, and with them before it the company has chosen for some years to make this extra allowance for some Sunday runs. We are now asked to change it, not for any cause that has arisen since it began so paying. As we have said before, where any change in an existing scale is sought the burden rests on him who asks it to show grounds for such change. We therefore adhere to the present scale, and, for reasons stated, we refuse the contention of the company that no extra pay be allowed for Sunday runs and the contention of the men that they be allowed additional pay for such runs.

What we have said as to Sunday runs applies in large part to holiday runs. Holiday work is an incident, a necessary part, of street car service. In that respect it differs from ordinary occupations in which holiday work is not an incident, but an exception, and where if it is done is generally paid for extra. For these reasons the present contention for 15 hours' pay for 8 hours' night and holiday work is denied.

It remains to consider the claim of pay for the five minutes' reporting time. According to present practice, the names of all men who are required to report for duty the following day are posted in the barns. This report must be made to the dispatcher five minutes before the man's run begins, to enable the dispatcher to assign the run to another man in case the posted man fails to report. It is clear that this five minutes' leeway is absolutely necessary to the starting of cars on schedule time. It is of mutual benefit to both parties. The dispatcher has given notice the day before that such a run will be made by a certain man. If that man fails to report, the dispatcher has the five minutes' time to fill his place. If the man reports, the run is his. It will thus be seen that it is of mutual advantage—of advantage to the dispatcher in preventing delays, of advantage to the man in securing the run by his timely report. Such timely advance reports for duty are common in all occupations where a particular person is assigned to a particular work and where such work can not be postponed. Railroad engineers, firemen, and conductors so report. In the city schools the principals must be in their places a half hour and teachers 20 minutes ahead of the opening of the schools, and in large stores clerks are required to report enough ahead of the opening time so that they are in their places at the counters before the scheduled opening time. This five minutes' reporting time is not paid for, and the contention of the men is that it should be paid for as regular platform time. The contention of the men is that during this preliminary time the man examines his car, and of this the company gets the benefit. The proofs show that advance-reporting time is not paid for in the following cities: Buffalo, Cleveland, Indianapolis, Brooklyn, Kansas City, St. Louis, Baltimore, and New York; and to these may be added Toronto, where the inquiry showed there was a 10-minute advance report, for which no pay was allowed. Payment of this five minutes as platform time would require $35,000 a year, and the proofs show that the company already pays as actual platform time nearly $90,000 for other items of dead time. In view of all the facts and the practice in other cities, we are of opinion no change should be made from the present scale.

We next consider the snowplow work. This work is exceptional, not in the ordinary routine, at times calls for unusually long hours, and the successful operation of the sweepers calls for qualifications that are not required in ordinary motormen or conductors' work. In that regard the testimony is, "running the car forward is about the same as other cars; but running the broom ought to be taken care of by a shopman rather than by a conductor. The broom should be operated by a man who is familiar with machinery and mechanical devices. The brooms are operated by a separate motor. When the car is running in one direction the controller operating that motor is right beside the motorman and he operates it, but when it is running in the opposite direction the controller is at the other end of the car and the conductor operates it. The difficulty comes in operating the brooms; if the brooms are a little too low they hammer themselves out on the pavement; or if they are set too high sometimes the chains come off. The heavier the snow the further up the brooms should be; they should not be down hammering the ground. If the snow is too deep and you get them down too low it will tear them out." It is clear to us that this work requires men of special aptitude, and in view of that fact, the irregular and nonroutine character of the work and its liability to long and arduous stretches, an extra compensation of 10 cents per hour for platform time so occupied should be paid.

We next turn to the question concerning the Perrysville Avenue, the Greenfield Avenue, the Verona cars and the manning of mail, money, work, and ash cars. Under the present system the car men themselves, under the seniority rule, select the runs for the Verona and Greenfield Avenue routes and the superintendent can not veto or control the manning of the cars. On the Perrysville Avenue, while the men can select, under the seniority rule, such selection is subject to approval by the superintendent. The men contend the superintendent's power of veto over the Perrysville line should be done away with and that that line should be put on the same footing as the Verona and Greenfield. On the other hand, the company contend the superintendent's approval should be extended to the Verona and Greenfield lines, the same as on the Perrysville Avenue line. The proofs show that the three routes are substantially the same, in that the grades are long and steep, and the operating of the car should be done by men whose coolness, judgment, promptness, and other qualities fit them to meet the emergencies which are more likely to arise on these routes. It is therefore clear that if these facts justify the placing of a superintendent's approval is proper on the Perrysville route, the Verona and Greenfield routes should be put on the same basis.

It is a matter of common experience that among a number of men equally qualified for the ordinary routine work of any occupation there are certain men who are specially fitted to meet unforeseen contingencies. When the particular work to be done may meet such dangers, it is the duty of a superintendent to use corresponding care in selecting men fitted for that work. Indeed, the law would hold a superintendent guilty of negligence in failing to carefully select for such work a man specially fitted therefor. Such being the case, for this board to deprive the superintendent of the power of in any way controlling the selection of the men, while at the same time holding him responsible for not making a proper selection, would not be right. The proofs in this case show a practical illustration. They are:

"There is a long hill from Hazelwood Avenue down to Second Avenue. In the history of the road we have had several very serious accidents on Greenfield Avenue. Greenfield Avenue used to be a preference route—that is, one where the men chose, subject to approval by superintendent—none but old men ran it; but two years ago it was conceded; but we want to make it a preference route again. We had an accident that cost us over $100,000 since the last agreement. It was on account of a car getting away on that street grade. * * * For a number of years the Perrysville Avenue line has been considered a preference line. That is, a man is not permitted to operate on that unless where he chooses his run the superintendent says, 'O. K. You are all right for that line.' This is something we have asked from the men this time. We wanted Verona and Greenfield also included. They are not included, and we wanted that. The reason is we had a very serious accident on Greenfield Avenue some time ago, and we also had an accident that killed a motorman on the Verona line, and we felt the men should be carefully selected."

The same general reasoning applies to the mail, work freight, money and work cars. The manning of these cars require men of special aptitude of whom the management should have the selection with a view to getting men specially fitted for such work. The men handling the mail cars are in effect bonded employees of the company. The

freight men are acquainted with patrons and requirements along the route. The work crew have to handle trains, must be fitted for line work, and must have the ability to direct laboring crews. It is clear that to have all such men assigned to such duties by virtue of a general seniority rule, and with an absence of that discretion of choice which must be exercised to secure men fitted for particular tasks would result in confusion and general dissatisfaction. Summing up, therefore, the different subjects of this group, and in view of the workings under former agreements, we are satisfied that no sufficient cause has been shown to warrant making Greenfield Avenue a preference route and for making Verona one also. We think Verona, Greenfield, and Perrysville should all be subject to veto. We think no sufficient ground has been shown for changing the present arrangement as to the mail, freight, money, work, and ash cars.

We next turn to the extra allowance to trippers. Under the present schedule, as we understand it, late straight men who work morning trippers receive 25 cents extra. It is now contended by the men that this sum should be raised to 35 cents, and the same pay should be extended to a late-early or a late swing man, provided the dead time between the completion of his run and the beginning of the extra work is more than 50 minutes. On the hearing the proofs satisfy us of the reasonableness of extending the practice now applying to late straight men so that it should apply to late early and late swing men, and it is so awarded. We find in the evidence, or in the general situation, no sufficient ground shown for increasing the 25 cents compensation now paid to 35 cents compensation as contended for by the men, or reducing it to 15 cents as contended by the company. The arbitrator adheres to the amount now provided by the scale.

The next contention refers to the mode of counting the money collected by the men. Where the money is not handled by the conductor, but is placed by the passenger in a pay-as-you-enter box no complaint is made, but where the money is personally collected by the conductor, complaint is made. The present practice is at the end of his run the money collected is placed by the conductor in an envelope and handed in at the barn. It is there placed in a safe which is taken to the general office. It is there counted by a force of some 20 women clerks, and if any mistake is discovered the overplus or shortage from the report is at once posted and the man receives his overplus or is compelled to pay the shortage, without his having any opportunity of checking up the mistake. It is evident the fairness of the system rests wholly on the accuracy and honesty of the women who do the counting. This system is in general use in street car companies, and no better method has been devised. At the hearing the board invited suggestions which would enable it to outline some other and better method of counting the money. About one-third of the cars are now equipped with pay-as-you-enter boxes, and it is in evidence that within two years substantially all cars will be so equipped. This will remove all grounds of complaint. The present method, we are free to say, is open to grave objections, for no man is willing to have his count questioned without his being present, and if the practice were to so continue we would feel constrained to find some way to change it, although no practical working method was shown by the evidence or in response to the board's suggestion. In view, however, of the fact that pay-as-you-enter boxes are now being installed, that the company is itself desirous of changing the practice and is now taking steps to supersede it, our now ordering the company to receive such funds at the barn would make a change to a system which experience has shown is also not satisfactory, and that it would require all conductors to remain at the barn until their funds were counted, we feel that no change should now be ordered.

It remains to consider the question of free transportation. The present status is that all motormen and conductors are now furnished free transportation to and from their work and also at all other times when they are in uniform. The contention of the men is that the restriction as to requiring them to be in uniform should be removed. This is opposed by the company on the ground that while it is willing and does extend free transportation to the men, that the requirement of their being in uniform when they travel affords a sure means of identification and prevents the privilege being abused. After full consideration, we are of opinion that no sufficient reason has been shown to warrant any change from existing conditions. It may be possible that in places where the men are few in number and know each other that a free transportation system might safely dispense with the requirement of a uniform, but in such large cities as Buffalo, Chicago, Boston, Brooklyn, Cleveland, Cincinnati, Indianapolis, Kansas City, St. Louis, Baltimore, and New York the wearing of a uniform is necessary if a man desires to avail himself of free transportation. The pass system was subject to so many abuses that in the present state of public opinion on that subject any extension of it beyong the immediate necessities of the business would seem questionable. As we read the award in the Boston arbitration, even the giving by the Pittsburgh Railways Co. of free transportation to its employees when not traveling on the business of the company is condemned. In that regard the arbitrators said:

"Should the employees when not engaged in the business of the company be furnished with unlimited free transportation? It is hard to distinguish in principle unlimited free transportation of employees of a street railway company from free use of the telegraph by the employees of a telegraph company, or unlimited free use of the telephone by the employees of a telephone company, free use of the express facilities of an express company by its employees and free use of electricity by the employees of a lighting company.

"Public opinion to-day, enforced by the legislature and the courts, demands that all elements of discrimination be eliminated by the public-service corporations. The public has a right to know that a public service company serves all persons alike, that its officers, directors, and employees obtain no special privileges by reason of their office or employment, and that, when off duty, they stand as a private citizen."

The grant of such free transportation has always been given in Pittsburgh to carmen whether on business of the company or not, provided they were in uniform, and the uniform, as a means of identification has been the usage in the company giving like free transportation to firemen and policemen when in uniform. We find in the evidence and the general subject no sufficient grounds to lead to a change from existing and long-observed requirements in that respect.

By the submission we are required to write into the agreement the time during which the same shall run. In that regard the arbitrator has suggestions from his fellow arbitrators on the one hand of five years and on the other hand of one year. After careful consideration he has reached the conclusion that the agreement shall stand for two years from the date of this report and that the time blank in the agreement should be filled so as to read "until September 30, 1916," and all other blanks shall be filled in in accordance with the conclusions heretofore stated.

The testimony in this arbitration took a somewhat wider range than the questions involved. In view of that fact, we are moved to bring to the attention of the employees of this company and to the officials of the company certain suggestions, feeling that, coming as they do from outside and disinterested persons, they may possibly be of some service to both the employees in their relation to the company and to the company in its relation to its employees.

These suggestions, for they are mere suggestions, and, of course, have no binding effect on anyone, accompany this report.

JOS. BUFFINGTON, *Arbitrator.*

I concur in the above.

JAMES C. GRAY, *Arbitrator.*

I dissent from the above as per opinion filed herewith.

STEPHEN G. PORTER, *Arbitrator.*

SUGGESTIONS MADE.

Traction transportation is a public service and not a private enterprise, and all who are engaged in it, whether they are owners or operators of its cars and lines, are alike public servants. It is true a shareholder of a traction company who furnishes the money to build, equip, and operate its lines and cars invests his money therein, and he or she is entitled to just regard for his personal property thus invested, and it is also true that the operative who furnishes his labor in operating the road is entitled to just regard for his labor. But over and beyond this it must not be overlooked that the stockholder who furnishes the car and the man who operates it have both undertaken a public duty, and that their respective private rights are subject to the public duty which they have undertaken. The State, in its sovereign power, has created the traction company and has imposed the obligation of public service on the car owner and the car operative alike. To enable these two to carry out this public service of transportation, it pays through its individual citizens the fund in the shape of fares to carry on this public service. Such being the case, it follows that the rights of the car owner and the car operative can never rise higher than the public right of effective public service, and that whenever and wherever operative or owner asserts any claim against the other which affects the efficiency of due public service, such person, whether operative, owner, organization, or corporation, is losing sight of the fact that traction transportation is a public service and not a private right. Such being the case, cars being necessary to transport the public, and men being required to run these cars, it goes without saying that only when there is the fullest and heartiest cooperation between the man who furnishes the car and the man who operates the car will the public be properly served. Where the spirit of cooperation, good will, what we term in common talk "team work," is lacking, where the car owner and the car worker do not understand and help each other the public is bound to suffer. The road is not owned by the company to be operated for its benefit, nor is it to be controlled by the operatives for their benefit; it is only when due public service is the aim of both parties and when each shall so control himself that the public service shall be the aim of both that the purpose for which the law grants the franchise of running the car and creates the work for men to operate it that the true purpose of the great public service of traction transportation is met. It follows from this that the key to the doing of this great public service lies in the proper spirit of cooperation on the part of each and every one engaged in such service. What is cooperation? Its best definition is team work. It means shoulder-to-shoulder work. It means the company, by its officials, knowing the men, appreciating their work, seeking in every possible way their welfare, and the men seeking in every way to aid, better, and improve the company's service. We hear much in these days about the division between capital and labor. We are told the division will be wider. That capital will combine and form its unions against labor, and labor will combine and form its unions against capital. But every man must see that the man who puts the money in the pay envelope and the man who takes it out can not, when they come to understand each other aright, prosper when fighting each other. The true union of the future is the union across the pay envelope by the man who puts the pay into it and the man who takes it out. Now, how can this problem of cooperation be practically worked out? Simply and only in this way—by acquaintance, by financial cooperation, and by a sensible adjustment of differences.

Let us take up these subjects one by one, for they are all bound together, and give our ideas on the subject. First, by acquaintance. Under old labor conditions labor disputes settled themselves, because the man who had a man working for him was generally working with him.

The old-time employer and the old-time employees knew each other, were interested in each other, knew each other's business, each other's needs, and they were enabled to continue a lifetime together with no unsettled disputes. If to-day the old conditions of small operations could be brought back, the large part of our labor and capital troubles would end by the small employer knowing his men and his men knowing him. But changed conditions are upon us and we have for example instead of employee and employer being face to face, 3,000 motormen and conductors in this company, by far the larger part of whom in all probability do not personally know the general superintendent and other officers of this company. This condition can not be changed, but to our minds it could be bettered. That any such condition could be brought about that all of the officials of this company and all of the men should know each other personally is, of course, idle; but we do think that they could be brought much closer together by such a plan as the board of cooperation we have suggested in general outline in our first suggestion. Long experience in court and in the adjustment of those differences and misunderstandings that will always arise between men has convinced us that a great many such differences die a natural death when the parties to a suit get together and find out that every question, like a line fence, has two sides. As the hearings of this arbitration went on, the growth of the spirit of fairness, of cooperation, of respect for each other's rights was manifest in the attitude of both sides. We are, therefore, clear that the organization of a board of cooperation, composed of men selected by the men from the different barns and by officials designated by the company, could and would bring the officials and the operatives of this company closer together, would enable them to understand the mutual difficulties and hardships of the men and of the company, would enable the company to take a broader and fuller view of the rights of the men, the men to take a broader and fairer view of the difficulties of the company, that both would have a better and face-to-face view of each other than before, and that both men and company would have a broader and juster view of their respective duties to the public service than in the past. We can not help but feel that the service rendered by the men in the way of betterments, improvements, avoidance of accidents, better operative methods would largely contribute to the welfare of the company and the betterment of the service to the public, and that regular and full meetings

of such board and the payment of the men for their day's attendance and help would be a wise use of the company's funds. This mere outline will give, in some measure, the reasons why we suggest the formation of a board as outlined in our first suggestion.

Our second point is financial cooperation. The practical basis of cooperation between a traction company and its employees is wages. The one pays wages for work done, and the other works because wages are paid. While there is cooperation in this arrangement, it is often but skin deep, for if the cooperation in a traction company goes no further than mere wages, especially when employer and employee do not really know or appreciate each other, the relation is an at-arms-length one and there is no real cooperation, and the public service suffers accordingly. True cooperation consists in the man who works and the man who furnishes the work being interested, not in wages alone but in the outcome of the public service rendered. And this desirable end, a real deep interest and pride in the work done, will only, in our judgment, be brought about by the workers' financial interest in the work done. To our mind, the final solution of the capital-and-labor problem will only be brought about by profit-sharing labor. As we have said, the true union of the future is the mutual union—interest and sharing of labor in the financial result of capital's work. If such be the case—and far-seeing and thoughtful men are now realizing this fact and trying to work it out—why should not the Pittsburgh Railways Co. and its 3,000 motormen and conductors begin working it out now, for that it will be worked out eventually by other companies and other sets of traction employees is certain? The common sense of men will never be content until capital and labor are enabled to work hand in hand for their common good. This problem would seem more easily solved in traction companies than in any other. The experience of such companies show that under ordinary conditions a certain share of the gross income of such companies is required to pay wages. Such being the case, if, for example, in the operation of the Pittsburgh Traction Co. by the joint efforts of the company, coupled with the more interested work of its motormen and conductors, its gross income can be increased, then the increase in the proportionate share should be devoted to a corresponding increase in wages. In other words, if through the increased and better service of its men the company had less accidents, better service, and increased gross income, if it is able to carry more people and at less cost, the men will receive their proportionate share of such benefit. In other words, as the company benefits the men benefit.

An effort is now being made in the traction lines in one of our large cities to work out this plan and to bring about a condition where the men are financially interested in the outcome of the company's business, and where such welfare brings to them a proportionate increase in wages. In that system, as we understand it, 22 per cent of the gross income of the company is set apart as a fund from which wages are paid, and as the gross receipts of the company increase 22 per cent of this increase goes to the increase of wages of the men. This plan was said by the counsel of the Congressional Commission on Industrial Relations to be "unique in the treatment of employees by a street railway company." To us it is clear that an earnest, broad-minded, and patient effort on the part of the Pittsburgh Railways Co. and of its motormen and conductors to work out some such financial cooperative plan would not only, with the growth and prosperity of Pittsburgh, be of benefit to the company in increased interest and efficiency of their employees, in increased wages to the men, but the company and men would thereby make a great contribution and advance toward the all-important problem of bringing about a true and well-based relation between capital and labor. A study of this problem of profit-sharing cooperation is one of the subjects that could be taken up and patiently worked out by the board of cooperation which we have recommended should be formed.

Attention was called to a plan of proposed insurance to cover the lives of the motormen of this company. Frankly speaking, the whole subject was unfortunate in its handling. The offer of the insurance was made by the company about the time of this wage adjustment. As a result it was looked upon by the men as a sop to affect the wage question. The result was mutual misunderstanding. The testimony in this case shows that the men never considered the offer of an insurance that cost them nothing, and the company felt that a plan that had been worked out only after two years' study by the ablest insurance men had been rejected by the men without any examination. Such mutual misunderstanding affords evidence of the need of the creation of a board such as suggested. Had such a board been in existence, this insurance question would have been talked over and considered, and it would have disclosed these facts. Some two years ago the railways company took up with the Equitable Assurance Co. the project of insuring for a year the wages of persons connected with the company for a year after their death. After negotiations which covered two years a plan of pay-roll group insurance was worked out, and of this two years' work the insurance here offered was the result. Without going into details of the whole plan, it is enough to say that the entire force of the company, covering every officer, clerk, superintendents, motormen, conductors—covering everyone from the president to the track laborers—were placed in groups, and the wages of such groups were insured by the Equitable Co. Without entering into details, it suffices to say that the motormen and conductors formed one group of 3,000 men; each man in the group was to be insured according to his standing on the pay roll. In case of his death, while in the service of the company, his wages were insured to continue for one year after his death at the rate he was then being paid. In the case of men in the employ of the company less than one year only six months' wages were paid, but in all other cases an entire year's wages. The premiums were all paid by the company. No medical examinations were required. The only condition of wage insurance was that the man should be on the pay roll of the company. In case of a man's death the insurance company at once paid the man's family his regular month's wages and gave its bond to continue paying such wages for the 11 months following in case he had worked for the company more than a year or for the following 5 months in case he had worked less. In this way the company was able, by this system of group or collective or union insurance, to procure for every man in its employ an insurance which many of its men could not have gotten if they had been required to pass a medical examination. And in this way the company was enabled, at comparatively light expense to itself—for the proofs showed the yearly premium paid by the company for the insurance of all its employees was about $20,000 per year—to carry out in a systematic way that humane provision that is so often carried out by firms and individuals of continuing for some time after the death of a valued employee his regular wages to his family. Had there been any such board of cooperation in existence such as we have suggested, it is evident that such a plan would have received the thoughtful and businesslike consideration of its members and to-day the family of every motorman and conductor would have the satisfaction of feeling that the husband or father's wages could be continued for one year after his death. To say that such insurance stops when a man leaves the employment of the company proves nothing, for so does his wages stop. This insurance is not and does not purport to be ordinary life insurance. It is wage insurance on the basis of the pay roll. If the company were to-day to issue a general order providing that in case of the death of any man on its pay roll his name would remain on the pay roll and his wages paid to his family for 12 months, this would be highly commendable. And this is precisely what the company, instead of doing itself, proposed to pay the insurance company for doing it. We express no opinion on the subject whether this offer of the company should or should not have been accepted. Our only point is that it was worth consideration. The evidence shows it was not considered. With a board of cooperation, it would have been considered and disposed of. This board would not feel it had done its duty had it not referred to this wage insurance at length, and thus sought to bring it home in simple terms to the thoughtful consideration of the men and their families, as in itself suggesting the need of some such board as we suggest.

In accordance with these views the board recommends to the motormen, conductors, and company:

First. That a board of cooperation be formed, for the forming of which this general plan is suggested, viz: One man will be selected at each barn by secret ballot by the motormen and conductors at said barn in service more than six months. These 20 men, together with the general manager, superintendent of transportation, or such other representatives as the company shall select, not to exceed five persons, shall constitute a board of cooperation. This board shall meet at least once every month. The board will suggest and discuss methods of improving the service, of rendering it safer to the company, and, in general, ways and means of avoiding misunderstandings between the men and the company, promoting good feeling on both parts, and in hearing and suggesting methods of reasonably meeting grievances or complaints that may be made by either the men or the company. The election for the following period will be held at each barn once each year under the direction of the local committee of motormen and conductors and the local superintendent. The trainmen will be paid by the company at their regular rates of wages for all time employed by the men in attending the meeting.

Second. That the subject of profit sharing by men in a certain proportion of the gross earnings of the company be earnestly and jointly taken up by the motormen and conductors and the company, with a view to working out such plan.

Third. This report, together with the dissenting opinion of Mr. Porter, shall be printed in full and a copy thereof furnished to each motorman and conductor in the service.

River and Harbor Improvements.

EXTENSION OF REMARKS

OF

HON. T. H. CARAWAY,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915.

On Senate substitute to H. R. 20189, making appropriations for river and harbor improvements for the fiscal year ending June 30, 1916.

Mr. CARAWAY. Mr. Speaker, I shall discuss briefly House bill 20189, making appropriations for river and harbor improvement.

In the second session of this Congress a rivers and harbors bill appropriating approximately $43,000,000 passed this House. It remained in the Senate without action until a few hours before the close of the session, when an amendment, in the nature of a substitute, making a lump appropriation of $20,000,000 was transmitted from the Senate to the House. The hour of adjournment was so near that no opportunity was afforded to examine the provisions of the substitute, much less to discuss them. It vested in the Secretary of War the power to allot this sum so appropriated to such projects as he might deem most meritorious. This was an unwise abrogation by Congress of its right to control the expenditures of public moneys and vesting that right in the head of one of the departments of this Government. No one at that time presumed such action was to be construed as a precedent. It was urged purely as an emergency act thrust upon us. The friends of the river and harbor improvement were constrained to agree to it, because to refuse to do so at that time meant no appropriation for river improvement at that session of Congress.

The present rivers and harbors bill, H. R. 20189, was reported to this House in January of this year and promptly passed, carrying substantially $34,000,000, and transmitted to the other legislative body. It has remained there without action, other than to be reported from the Committee on Commerce, until within less than 24 hours of the time for final adjournment of this Congress. Once more an amendment in the nature of a substitute, making a lump appropriation this time of $25,000,000, vesting again in the Secretary of War the power to allot this sum, subject to certain restrictions, is returned to this body, and again we must accept it or receive nothing. When this bill was first reported to this House, all the Representatives in this body from Arkansas protested against the unfair

treatment contained therein for our rivers. This condition was, in a measure, remedied in the House. The bill as amended was transmitted to the Senate and has remained there for months without action, and is now, at this last minute, sent back to us with provisions more unjust as to our rivers than those contained in the original bill. Again we must accept this or we can receive nothing. No State in this Union is more vitally interested in river improvement than is Arkansas. We have more miles of navigable streams and have suffered greater disasters from floods than have the people of any other of these United States, and in compelling us, for this reason, to accept this substitute for the bill as it passed the House is to imperil the future improvement of Ouachita, Red, and Arkansas, three of our most important rivers. This peril exists in a provision in this substitute that requires a resurvey of these rivers to determine whether the existing projects shall be modified or the improvement heretofore commenced be altogether abandoned. Not a cent is herein appropriated to continue their improvement, nor to care for existing projects. And I take it from the provisions of the substitute that the Secretary of War would not feel authorized to allot any sum toward the continuation of improvements on these rivers. The Senate substitute leaves him no discretion. The only provision in the substitute is to resurvey these rivers, to determine whether the existing projects shall be modified or abandoned.

Our people should know where the responsibility for this condition rests, for no one questions that this is the end of river improvement if practices such as this are to be indulged in. If a bill is to be passed by the House and returned only when no time for amendment or discussion remains, this body will refuse longer to be a party to that procedure. Moved solely by the tremendous interests affected and the necessity of doing whatever was within my power to protect the lives and property of the people residing along the Mississippi River from devastation by floods, I voted to concur in this Senate amendment. I hope I shall be compelled to do so no more. If river and harbor improvements are to be dealt a deathblow in the other legislative body by methods such as this, and if we are to be compelled to agree to amendments that virtually mean the abandonment of all river improvements in Arkansas, let the reason therefor be known. This complaint of mine arises from no unfair treatment of the rivers in the first congressional district. They have been more liberally dealt with than formerly. Therefore, in protesting against the provisions of this bill, I can not be suspected of being moved by a sense of local wrongs. My complaint is against the treatment meted out to the State as a whole and this travesty on legislation.

Obligations of Neutrals Under International Law.

EXTENSION OF REMARKS

OF

HON. WILLIAM L. IGOE,

OF MISSOURI,

Thursday, March 4, 1915.

Mr. IGOE. Mr. Speaker, under leave granted by the House to Members to extend their remarks in the RECORD, I wish to print the address delivered by Mr. Harry B. Hawes, a member of the St. Louis bar, on March 6, 1915, before the Bar Association of Kansas City. The address is as follows:

OBLIGATIONS OF NEUTRALS UNDER INTERNATIONAL LAW.

On June 28, 1914, the Archduke Franz Ferdinand, heir apparent to the Austrian throne, was assassinated. Thirty days later the Austrian Government sent a peremptory note to Servia making 10 demands and calling for a reply within 48 hours. It was immediately predicted that if Austria engaged in war with Servia all Europe would be involved in the conflict. Servia's reply granted practically all of the demands of Austria; various proposals to preserve peace through conferences and good offices were made by some of the greater nations; but, despite these efforts, the greatest war in the history of the world began within one week after the receipt of Servia's reply. This precipitation is conclusive evidence that the Servian incident was not the cause but the excuse for hostilities.

At the present time all of the great nations of Europe, excepting Italy, are involved. Italy, Roumania, Greece, Switzerland, Denmark, Sweden, Holland, and Bulgaria have mobilized their troops and are prepared to enter the conflict. Part of North America and South America alone are free from entangling alliances and political causes of friction, although Canada (our northern neighbor) is sending money and troops and the Latin races of South America feel the strain.

Shipping has left the sea, the mechanic his workshop, the farmer his plow, the fisherman his net. From high in the air like evil birds of prey, from the bowels of the ocean, from the mountain and the plain, engines of war and men are hurrying to participate in the slaughter of human beings.

UNITED STATES AT PEACE.

We alone are at peace, a neutral Nation. This fortunate position we owe to Washington and Jefferson, who warned the generations succeeding them of the danger of interweaving our destiny with any part of Europe. Avoiding entangling our peace and prosperity in the rivalries, ambitions, and caprices of foreign States, we have only twice departed from our established rule, and, thanks to the sagacity of later statesmen, we were able to retrace our steps without loss of honor.

On November 6, 1914, President Wilson declared the neutrality of the United States. This proclamation follows the usual prohibitions and warnings and contains these words:

"And I do further declare and proclaim that the statutes and treaties of the United States and the law of nations alike require that no person within the territory and jurisdiction of the United States shall take part, directly or indirectly, in the said wars, but shall remain at peace with all of the said belligerents and shall maintain a strict and impartial neutrality."

We are therefore by this proclamation declared to be a neutral Nation.

President Jefferson said:

"No citizen has a right to go to war of his own authority; and for what he does without right he ought to be punished. Indeed, nothing can be more obviously absurd than to say that all the citizens may be at war and yet the Nation at peace. It has been pretended, indeed, that the engagement of a citizen in an enterprise of this nature was a divestment of the character of citizen and a transfer of jurisdiction over him to another sovereign. Our citizens are certainly free to divest themselves of that character by emigration and other acts manifesting their intention and may then become the subjects of another power and free to do whatever the subjects of that power may do."

OBVIOUS REASONS WHY WE SHOULD BE NEUTRAL.

Before discussing the legal phase of our neutrality it may be advisable, briefly, to advert to some of the obvious reasons why, on the ground of morality and enlightened self-interest, this neutrality should be strictly observed.

1. This is not our quarrel; we are not involved in the slightest degree; there is no reason why we should become involved; and we will not be unless the duty of American citizenship rests so lightly upon some of our people that they by agitation force the National Government to take some inexpedient and unnecessary action so manifestly to the disadvantage of one of the disputants as to amount to an act of unfriendliness. Friendship for a foreign nation unfortunately in some seems to blind them to their obvious duty as Americans until we are regretfully forced to believe that they would welcome the entrance of the United States into this world-wide tragedy if by so doing the European nation or nations whose cause they may espouse would be benefited.

2. The United States has led the world in its efforts for disarmament, for peace, for arbitration, and other means of amicable adjustment of international disputes as opposed to settlement by war. To enter the war would be to abandon the enlightened and moral position we now hold and take on military attributes which have made possible the great European conflict.

3. Without ambition to acquire new territory by conquest we are ready to release some which we now hold. We have constituted ourselves under the Monroe doctrine the big brother of South American States, but have never undertaken the advising of European nations. The Monroe doctrine has preserved peace in North and South America, and our long-established policy of refusing to form entangling alliances abroad has minimized conflict with Europe.

4. We are without cause justifying war. On the contrary it is estimated that over 1,000,000 men have been killed and twice that number wounded and maimed. It is estimated that the cost of the great war amounts to over $50,000,000 a day, and has already cost the nations of Europe over $6,000,000,000. Add to this the destruction of property, the loss of productive power, the disarrangement of finance, the inability to man the ship, the farm, and the shop and we can add to this millions of dollars that can not be computed.

Estimating the value of a man's life at $5,000 we can add 1,000,000 dead men, at $5,000 each, the sum of $5,000,000,000; then the care of the wounded, the blind, the armless, the legless, the incapacitated, and allow for each of these the small sum of $200 we find 2,000,000 men, at $200 each, adds $200,000,000 more.

Suffering and misery we can not estimate in dollars. It is conservatively estimated that the first six months of war have occasioned a total loss of at least $15,000,000,000.

With our population of 100,000,000 and estimating that it would involve approximately the same number of men to the population we would arm and equip many million men which, with the attendant cost of equipment and war materials, would cost, exclusive of naval equipment, from ten to fifteen million dollars a day, and would entail, at the European ratio of loss, the slaughter of perhaps 1,000,000 American citizens and the maiming of perhaps 2,000,000 more.

These estimates should cause some of our belligerent Americans to cease their unneutral activities. Interest in foreign nations can not be sufficient to ask such sacrifice of our country, unless fealty to foreign nations is greater than loyalty to their own.

OUR DIFFICULT RACE PROBLEMS.

The United States is confronted with a race problem entirely different from that of any other nation in the world. It is said that Europe, divided into population according to race, is: Anglo-Saxon, 45,000,000; Latin, 100,000,000 to 110,000,000; Teuton (including Scandinavian), 100,000,000; Slav, 140,000,000. These races in Europe are divided into many nations and different tongues. Our people are either immigrants or descendants of immigrants who came from the nations now at war.

Slowly but surely we are raising a new assimilated type of men and women who will ultimately become the real American type. This amalgamation has not been completely accomplished at the present time, so we find sympathy naturally reverting to the mother country in the respective groups, intensified by the recentness of their arrival.

According to the best estimates obtainable, there are in the United States to-day of foreign born, the children of foreign-born parents, and the children of one foreign-born parent, approximately 35,000,000 citizens of all nationalities; and of these Germany has 8,605,000, Austria-Hungary 3,777,000, or a total of 12,382,000 susceptible of friendly sentiments for the Dual Alliance. There are English, Irish, and Scotch, 7,812,000; Russian, 3,926,000; French, 317,500, or a total of 12,055,500 naturally inclined to favor the triple entente; showing a disparity of less than 350,000 between the sympathizers of the alliance and the entente.

These figures, of course, do not include the emigration of Belgium, Servia, Portugal, Montenegro, Japan, and Turkey, all actually engaged in the war. The other foreign born, children of foreign-born parents, and children of one foreign-born parent, amount to approximately 11,000,000, making a total of 35,000,000; leaving what might be termed an assimilated or American type of 65,000,000 who have been citizens of the country for 75 years.

THE MELTING POT.

Immigration began to what is now the United States over 250 years ago. The melting pot has had a longer time in which to weld the descendants of our early settlers into what may be called "the American type" with its Anglo-Saxon strain and traditions. Our English law and traditions came logically from our condition as English colonies. Under early colonial policy only the mother country might trade with her colonies, and her relations, commercial and political, were exclusive.

The loyalty and patriotism of our newer citizens is as great as those who are desconded from our earliest settlers. Human nature, however, is the great controlling force in the world and must be given consideration. Those of our citizens who have fathers and mothers, brothers and sisters, now residing in the war zone naturally and must of necessity have a keener interest, a deeper sympathy, and a more active zeal in their behalf than those whose ancestry is now a mere matter of remote family trees, pedigrees, and ancient parchments.

It follows that, because of this fact, we should adopt an attitude of great tolerance toward their expressions of sympathy. But where this sympathy for the mother country jeopardizes the neutrality of the United States, or has a tendency to draw our Nation into the European war, it should be firmly repressed.

The blending of races into a nation has been only fairly successful in Europe; so when we find the parent race stock so diversified in our own country, and when we consider its youth, we must demand for public safety and public honor that all classes of our citizens shall strictly respect that neutrality which the law and public welfare demand.

INTERNATIONAL LAW NEGLECTED.

Separated by broad oceans, the United States has not had many of the difficult and perplexing questions of international law which propinquity forces upon the nations of Europe. The study of international law, therefore, has been largely neglected in our schools. It is not included, as a rule, in State bar examinations, and the average student gives to this study about the same thoroughness that is given to Roman Law or Code Napoleon.

The American Society of International Law, embracing the entire United States, has a limited membership of about 900. In St. Louis, the fourth city in the United States, it is represented by only 4 or 5 members. This society has from time to time urged that the study of international law should be made part of the examination for admission to the bar, and the wisdom of this proposal is now disclosed by the vast ignorance of this subject exhibited by some of our distinguished lawyers. The present war will undoubtedly tend to make of international law a serious and necessary study.

DANGER OF IGNORANCE.

A present danger that confronts our Nation arises from two sources. One is genuine ignorance of this subject and the other is the ease with which crafty and unscrupulous men impose upon the credulity of large numbers of our citizens, arouse their passions, create prejudice, engender race feeling, promote strife, and endanger our neutrality in the excess of their partisan zeal for some foreign nation.

In the discussion of the causes of the war, the relative strength of armies, and the probability of victory we yield to all the right of free expression and contention. The people's column essayist and the corner war debater unfortunately have moved from these general subjects into the more exact and scientific questions raised by our duty as a neutral Nation.

Inspired by absurd statements of partisans, they endanger our neutrality and make it difficult for our national officers to discharge the duties of their offices with that fairness, equanimity, and poise so essential at this critical time.

LAWYER'S DUTY.

As in time of epidemic, when disease is threatening the life of the nation, the physician freely tenders his services to the public; when cholera, smallpox, and yellow fever appear he, without compensation, goes into the warfare for health and upholds the noblest traditions of his profession, so it is equally the duty of the lawyer to qualify as an authority on what constitutes neutrality and in his own community combat the impressions created by ignorance.

"Error of opinion may be tolerated where reason is left free to combat it," said Jefferson. But the limited knowledge of our position as neutrals affords little opportunity to combat unneutral statements.

Where a lawyer finds a man of intelligence teaching things which are not true and advocating changes which he knows can not be made, he is under an obligation to his profession as well as to his country to expose him to ridicule and reproach for doing not only a dishonorable but a dangerous thing.

SOURCE AND GROWTH OF INTERNATIONAL LAW.

The limited time at my disposal permits but the briefest discussion. My observations will be confined to the sources of international law, the law of neutrality, and some collateral matters connected with it.

While the armies and navies of the warring nations are engaged in work of destruction, diplomats and writers are equally active in discussing the rights and duties of nations under international law. Modern methods of warfare raise new questions almost daily, and some understanding of the source and growth of international law is necessary.

In municipal law the subject is the individual; the sovereignty, the State. In international law the subject is the State; the sovereign power, the agreement or consent of States. The citizen has his conduct regulated by the State, which has power to enforce its decrees by fixed penalties. His conduct is also controlled by the moral law, while the conduct of the State is not necessarily controlled by moral law, but by national interest which can not always be well defended as good morals.

In the former we find coercive, enforcing authority, with courts and police, while in the latter there is no enforcing authority, except the force of enlightened national opinion and protest followed by the doubtful settlement of war.

Hugo Grotius, called the father of international law, in 1625, conceiving that all law consisted of rules prescribed by some high authority, and finding none with reference to sovereign States, attributed its source to nature. In the seventeenth century Pufendorf and Hobbes, not satisfied with the sovereignty of nature assigned by Grotius, and finding no high enforcing power, contended that the rules of international law are not legally binding. In the eighteenth century Bynkershoek, another Dutch jurist, advanced the modern view that sovereignty resided in the common consent of a community, and it logically follows that sovereignty in international law came from the common consent of nations.

Thus we find the gradual evolution of the theory of State and international sovereignty changing, from power coming from divine or inherited sovereignty to one based wholly upon sanction in common consent or acceptance.

ATTEMPTS TO CODIFY THE LAW.

The sources from which this consent arises are diversified, but closely follow the same causes that make our domestic law. Custom, codes, treaties, precedents, and written agreements, supplemented by the opinions of writers, State papers, decisions of prize courts, and arbitral awards all are used as the authority of this collective consent.

Inequalities and lack of precision in the body of rules governing international disputes, have moved statesmen during the last century to bring about a codification of the law.

Many tentative codes have been offered, but so far the only accomplishment has been in the Paris, Geneva, Hague, and London conventions, which have met with indifferent acceptance. A plan which would provide some central enforcing authority has always been lacking.

Certain rules have developed which have been generally accepted and have for their enforcing power the strength of the enlightened approval of civilized nations. These rules refer not only to the conduct of belligerents, but also relate to duties which belligerents owe to neutrals and the conduct of neutral nations during war.

They are broadly divided into those dealing with conditions of war and those with respect to peace. Those relating to war are again divided into operations on land and on sea, the laws of naval war being the least progressive. As an example, largely through the influence of the United States, private enemy property in land warfare is exempt fom seizure; in naval warfare it is lawful prize.

CONTRIBUTION OF UNITED STATES TO INTERNATIONAL LAW.

A review of the contribution to the formation of international law by the United States reveals a record in which every American is entitled to take deep pride.

In order to appreciate the weight of our influence, it must be borne in mind that the United States presented a positive reaction against the Old World oppression of men.

We inverted the divine-right principle, denying the prerogatives of kings, and declared the just powers of government came only from the governed. We made the people sovereign.

We early declared expatriation an inherent right, and our persistent advocacy of the principle has all but battered down the last of the walls which hemmed in the peoples of the various foreign States.

We were pioneers in the principle of naturalization as an incident to that free movement of man upon the earth's surface which our forcing of the right of expatriation permitted.

We settled the further rule of law that belligerent rights do not extend to the invasion of neutral vessels for the purpose of removing persons who are not in the armed forces of the opposing belligerent.

We invented the principle which recognizes a condition of belligerency in those people struggling for the political aims we ourselves have attained, which give particular aid to the South American colonies of Spain, so that it is now a universal principle of international law that a revolutionary body which occupies and administers definite territory and is challenging the right of the erstwhile sovereign authority, may be accorded the belligerent rights of search, blockades, and the like, by neutral States, without giving offense to the parent State.

We are the author of the first comprehensive code defining obligations as a neutral in Jefferson's neutrality act of 1794, which was amplified in 1818 and became the basis of the British foreign enlistment act of 1819.

We amplified and gave clearness by court decision to the doctrine of "continuous voyage" enunciated by Lord Stowell.

We were first to advocate the equality of States without which international law would become an hypocritical blind to shield the avarice of the more powerful States.

We enunciated the Monroe doctrine, that American States shall be permitted to pursue the arts of civilization and peace free from the influence and oppression of European States.

We prevented the European powers from dismembering China. More than a quarter of a century ago the United States alone protested and saved the Celestial Empire and forced the doctrine of the "open door" and "equal opportunity."

We sent delegates to the Hague and London conventions, who, expressing the concrete desires and aims of the United States, placed many American ideals in their expressions and made proposals for an advanced position which will ultimately be approved.

We have advocated a frank and public diplomacy and information about our public business which prevents dangerous situations from arising through secrecy and trickery. The diplomacy of Europe, which wholly ignored the people who were to make the war sacrifices, would not be tolerated by us.

We have stood for the rights of man, under the benign principles of self-government, in their larger application to the rights of States.

NEUTRALITY.

John Bassett Moore, an accepted authority in the United States on the subject of international law, gives this definition of neutrality:

"By the usual principles of international law the state of neutrality recognizes the cause of both parties to the contest as just; that is, it avoids all consideration of the merits of the contest."

And again:

"The idea of a neutral nation implies two nations at war and a third in friendship with both."

It will be difficult to preserve this attitude because the nations at war, pressed by their own necessities, will demand exceptions created by their immediate difficulties.

Until the United States assumed its position as a member of the society of States, there were various degrees of neutrality, based upon the conception that the neutral could permit and undertake on its own account acts of assistance to belligerents provided the acts were of impartial effect upon both. There was what was denominated strict neutrality, imperfect neutrality, impartial neutrality, and qualified neutrality.

Formerly it was not considered inconsistent with these various forms of neutrality to permit belligerents to transport supplies or march troops across neutral territory or to fit out expeditions in neutral territories and harbors so long as the same privilege was accorded to each.

Impartiality in assistance seemed to be the old test. To-day acts of accommodation to belligerents, even if impartial, are the exception rather than the rule, and the underlying principle of neutrality is abstention.

Neutrality in a technical sense is divided into two general classes, the first embracing those obligations coming into operation as between States and those owing to a State by its own citizens. The latter is largely the result of domestic legislation fulfilling the duty of the former.

Authorities on international law confirm President Grant's proclamation of neutrality on August 22, 1870, during the Franco-German War, in which he expressly declared that "all persons" might "lawfully and without restriction by reason of the aforesaid state of war manufacture and sell within the United States arms and munitions of war and other articles ordinarily known as 'contraband of war,' subject to the risk of hostile capture on the high seas." While the United States Government could not sell arms or ammunition, this proclamation made it proper for citizens to do so.

NEUTRAL DUTIES BETWEEN STATES.

Discussing, first, duties between States, we may say that a neutral State as such is under obligation to refrain from all active assistance, either in the lending of money, in the selling of military supplies or warships, or in permitting the use of its territory or marginal waters for the benefit of either or both of the belligerents as a base of operation for the commission of hostile acts.

The belligerent State is under duty to respect the inviolability of neutral territory and marginal waters. This inviolability protects the German merchant ships in our neutral ports.

The territorial waters of a State extend outwardly from low tide to a distance of 3 miles. Practically the only instance of mutuality of assistance allowed to a neutral State are to be found in the rules of international law conceding belligerent war vessels the right to enter a neutral port for a stay of 24 hours, in which time it may coal or provision up to peace standard. It may not put in again at a port in the same neutral State within three months. If vessels of opposing belligerents are in the same neutral port, they may not put out nearer than 24 hours apart. A stay of longer than 24 hours may be permitted in case of the necessity for ordinary repairs, but war damage may not be so repaired. And if such vessels refuse to put out upon order, it is the duty of the neutral to intern the vessel and crew till the close of the war. Since neutral waters are inviolable, it follows that captures made within them are void, besides amounting to an offense against the sovereignty of the neutral State.

As with war vessels overstaying their time in neutral ports, so with armed belligerents getting upon neutral soil. The neutral is under the duty to intern them, as Holland has done in the case of a large number of British and Belgians at the evacuation of Antwerp.

The law of the rights and duties of neutrals and belligerents is one largely of compromise, which was the only way of reconciling conditions of conflict. This conflict is to be seen in the basic propositions that a neutral shall not suffer in its trade owing to a war in which it is not concerned, and that a belligerent, on the other hand, as a matter of self-preservation, should be conceded the right to prevent such trade with his enemy as is increasing its military power.

Hence both neutral and belligerents are confirmed in these rights, and the practical result is that in articles of commerce, such as warlike supplies, the neutral may trade, subject, however, to the belligerent's right of capture. Neutral merchants, therefore, usually escape the liability to loss by requiring previous payment, thus shifting the risk to the purchasing belligerent.

Up to the close of the Crimean War and the treaty of Paris, in 1856, neutral commerce was at the mercy of belligerent anarchy. Starting in the French and English wars and lasting up to the final fall of Napoleon, neutral goods and shipping suffered grievously from the arbitrary exertion of power by belligerents.

For example, during the Napoleonic wars England and France each forbade to neutrals any and all trade with the other in their respective order in council and Milan decrees. These decrees were issued under a supposed right of blockade by which it was intended to bind neutrals with a mere paper fulmination that all the coasts of the respective States were in a state of blockade. Any neutral vessel making for ports of either France or England, or entering them, was made the prey of the other by illegal capture on a charge of breach of blockade. American commerce suffered so heavily that some action was necessary, yet we could not effectively fight both Great Britain and France.

Ultimately Congress passed the nonintercourse acts, forbidding all commerce with France and England, intending thereby to pinch them with regard to certain necessary imports from America, but only done after the United States had sacrificed 1,500 American merchantmen to their lawlessness.

Until this time, also, the status of neutral goods in enemy merchant vessels and enemy goods in neutral merchant vessels was wholly left to the caprice of the belligerents. Russia, enlisting other European neutrals, at one time laid down to the belligerents certain rules which she considered vital to neutrals and notified the belligerents that any departure from them would be met with force. This is known as the armed neutrality.

Finally, out of this chaos, at the peace of Paris in 1856 came the four famous declarations that constitute the first important conventional measure of international law. These conventions are:

First. Privateering is and remains abolished.

Second. Enemy goods, except contraband, are not capturable in neutral vessels.

Third. Neutral goods, except contraband, are not capturable in enemy vessels.

Fourth. A blockade, to bind neutrals, must be effectively maintained with warships.

The United States was invited to subscribe to the declaration, but declined unless it was further stipulated that all unoffending private property be exempt from capture in maritime warfare, as it had become in land warfare. This was not assented to, and while the United States has never expressly agreed to the declaration of Paris, it has conformed to it and acted upon it as public law.

NEUTRALITY AS IT AFFECTS THE RIGHTS OF CITIZENS.

So far we have been discussing neutral duties as between States. We shall now discuss the duties with respect to States and their citizens.

Citizens may do a great many things without compromising the neutrality of a State that a State itself may not do. Citizens may sell arms and ammunition to belligerents, though a State may not.

The tremendous importance of commerce to neutrals has led to a recognition of their right to continue the same in war as in peace, but in recognition of the belligerent's war rights certain classes of goods known as contraband are under the liability of capture and condemnation by the belligerent to whose disadvantage the sales are made.

There is but one article of commerce the trading in which involves a breach of neutrality, and that article is a warship. Neither a neutral citizen nor his Government may sell a war vessel to a belligerent without bringing upon the neutral Government the probability of claims for all the damage the vessel inflicts and the further probability of involving that neutral State in war as the result of active and unneutral assistance. Great Britain paid the United States $15,500,000 in acknowledgment of her liability for the destruction of United States commerce during the Civil War by the Confederate warships, principally the *Alabama*, which was built in England and permitted by the English Government to leave her neutral waters.

The United States had no domestic neutrality statutes until 1794, when Jefferson framed them as the result of the Genet affair. Citizen Genet was the French minister during the French and English War, and upon his arrival proceeded to equip and commission privateers in our ports to cruise against British commerce. He further enlisted men in the United States and set up French prize courts in the French consulates. Jefferson protested vigorously that the minister was violating our sovereignty as well as compromising our neutrality in making our territory a base of operations, and after a bitter dispute Genet was recalled.

Then the United States courts indicted a number of citizens on charges of accepting the commissions on United States soil to cruise against a State with which we were at peace. The first trial disclosed the fact that we had no neutrality statutes and no prosecution was possible.

Jefferson's statutes, intended to remedy these defects, are practically the law to-day. They provide, in substance, that it shall be unlawful for a citizen to accept on United States territory a commission to serve a foreign prince or State; to enlist or hire another to do so; to fit out or arm or augment a vessel intended to be used in war against a State with which we are at peace; to set on foot or be concerned in any expedition to be carried on against such State. There was a revision of these statutes in 1818 and supplementary legislation in 1838.

The Fenian invasion of Canada at Fort Erie in 1866 precipitated an attempt at revision of our neutrality laws which would have enacted much that was sentimental at the expense of sound principle if it had not been killed in the Senate. As it is, the laws of April 20, 1818, stand practically as the domestic neutrality laws of the United States, to be found in sections 5281 to 5291 of the Revised Statutes. There was an amendment March 14, 1912, relating to conditions of domestic violence in American States and authorizing the President to prohibit the shipment of arms thereto.

The United States neutrality statutes are old and necessarily in need of revision, though this need has been supplied to some extent in joint resolution from time to time as occasions arose with no appropriate power applicable. The British foreign enlistment act of 1870, as its neutrality laws are termed, makes it a crime, for example, for a British subject to leave the dominions with the aim of entering the service of a State at war with another with which the British Empire is at peace. The United States concedes to citizens the right to depart and enlist outside its jurisdiction. The adoption of the British view would seem calculated to preserve more completely a neutral attitude.

The duty of citizens of a neutral country are well described in a letter written by Secretary of State Olney on July 18, 1895, to an inquiring banker:

"I have to acknowledge receipt of your favor of the 13th instant and to note the inquiries therein contained.

"Whether the bank or its officers could be criminally prosecuted under the neutrality laws of the United States because the bank had knowingly made itself a depository of funds contributed by sympathizers in the United States in support of the present Cuban insurrection is a question as to which opinions may differ, and which can be satisfactorily settled only by the adjudication of the proper court. Should a bank engage in such a transaction and, as you suggest, publish its acceptance of such a trust to the world it would be my duty to call upon the Department of Justice to test the question whether or not the proceeding was a crime against the United States.

"It might also be my duty to suggest whether a bank holding a United States charter does not abuse its franchise and furnish ground for their forfeiture by acts in aid of hostilities against a nation with which the United States is at peace.

"I do not anticipate, however, that anything done by your bank or its officers is likely to promote the solution of the interesting legal questions your letter presents. You ask me not merely as to your technical legal liability, but also as to your moral obligations, adding, 'for we are all too loyal to our own country to seek to overthrow in any sense her laws.' I heartily commend the sentiment of the question, and am in a position to say that your moral duty in the premises does not admit of the least question. It has been expounded by no less an authority than the Supreme Court of the United States in the following language:

"'The intercourse of this country with foreign nations, and its policy in regard to them, are placed by the Constitution of the United States in the hands of the Government, and its decisions upon these subjects are obligatory upon every citizen of the Union. He is bound to be at war with the nation against which the war-making power has declared war, and equally bound to commit no act of hostility against a nation with which the Government is in amity and friendship.

"'This principle is universally acknowledged by the laws of the nations. It lies at the foundation of all government, as there could be no social order or peaceful relations between the citizens of different countries without it. It is, however, more emphatically true in relation to citizens of the United States. For as the sovereignty resides in the people, every citizen is a portion of it, and is himself personally bound by the laws which the representatives of the sovereignty may pass, or the treaties into which they may enter, within the scope of their delegated authority. And when that authority has plighted its faith to another nation that there shall be peace and friendship between the citizens of the two countries, every citizen of the United States is equally and personally pledged. The compact is made by the department of the Government upon which he himself has agreed to confer the power. It is his own personal compact as a portion of the sovereignty in whose behalf it is made. And he can do no act, nor enter into any agreement to promote or encourage revolt or hostilities against the territories of a country with which our Government is pledged by treaty to be at peace, without a breach of his duty as a citizen, and the breach of the faith pledged to the foreign nation.'"

CONTRIBUTIONS OF MONEY.

It is not a violation of neutrality for a private citizen or coporation to lend money to a belligerent if made as a commercial transaction,

but it would be an infringement if the loan was in fact a gratuitous contribution. So delicate is our position among so many friends that the President has advised against even commercial loans. During the Franco-German War large sums of money were sent by German sympathizers to Germany for hospital purposes, and large sums were sent by sympathizers with France for the relief of persons in French hospitals, and such assistance was not considered a violation of neutrality.

Since that time the organization of the American Red Cross Society provides a means of contribution for hospital assistance, which completely eliminates any question of the violation of neutrality.

This organization will help the wounded and destitute of all the warring nations equally and prevent offense being given to any friendly nation on the ground of neutrality.

CONTRABAND.

Our courts have held, "Neutrals in their own country may sell to belligerents whatever belligerents choose to buy." The principal exception to this rule is that "neutrals must not sell to one belligerent what they refuse to sell to the other."

Our Secretary of State has asserted:

"There is no Hague convention which deals with absolute or conditional contraband, and, as the declaration of London is not in force, the rules of international law only apply. As to the articles to be regarded as contraband, there is no general agreement between nations. It is the practice for a country, either in time of peace or after the outbreak of war, to declare the articles which it will consider as absolute or conditional contraband. It is true that a neutral Government is seriously affected by this declaration, as the rights of its subjects or citizens may be impaired. But the rights and interests of belligerents and neutrals are opposed in respect to contraband articles and trade, and there is no tribunal to which questions of difference may be readily submitted.

"The record of the United States in the past is not free from criticism. When neutral this Government has stood for a restricted list of absolute and conditional contraband. As a belligerent, we have contended for a liberal list, according to our conception of the necessities of the case.

* * * * * * *

"As the Government of the United States has in the past placed 'all articles from which ammunition is manufactured' in its contraband list, and has declared copper to be among such materials, it necessarily finds some embarrassment in dealing with the subject.

* * * * * * *

"Petrol and other petroleum products have been proclaimed by Great Britain as contraband of war. In view of the absolute necessity of such products to the use of submarines, aeroplanes, and motors, the United States Government has not yet reached the conclusion that they are improperly included in a list of contraband. Military operations to-day are largely a question of motive power through mechanical devices. It is therefore difficult to argue successfully against the inclusion of petroleum among the articles of contraband.

* * * * * * *

"Great Britain and France have placed rubber on the absolute contraband list and leather on the conditional contraband list. Rubber is extensively used in the manufacture and operation of motors and, like petrol, is regarded by some authorities as essential to motive power to-day. Leather is even more widely used in cavalry and infantry equipment. It is understood that both rubber and leather, together with wool, have been embargoed by most of the belligerent countries. It will be recalled that the United States has in the past exercised the right of embargo upon exports of any commodity which might aid the enemy's cause.

* * * * * * *

"The duty of a neutral to restrict trade in munitions of war has never been imposed by international or municipal statute. It has never been the policy of this Government to prevent the shipment of arms or ammunition into belligerent territory, except in the case of neighboring American Republics, and then only when civil strife prevailed. Even to this extent the belligerents in the present conflict, when they were neutrals, have never, so far as the records disclose, limited the sales of munitions of war. It is only necessary to point to the enormous quantities of arms and ammunition furnished by manufacturers in Germany to the belligerents in the Russo-Japanese War and in the recent Balkan wars to establish the general recognition of the propriety of the trade by a neutral nation."

Contraband is of two kinds—absolute and conditional. Absolute contraband comprises articles in themselves distinctly military, such as arms and the like; conditional contraband comprises articles susceptible of warlike and peaceful use, such as fuel oil, coal, horses, and the like.

Conditional contraband can not be set out in articles, as it is created only by special conditions arising out of each war.

In the case of articles of a warlike nature solely they become contraband only by hostile destination; their mere consignment to an enemy port or to the enemy country gives rise to liability to capture. If, for instance, merchants in the United States to-day should ship arms and ammunition to Brazil, their destination is so obviously not belligerent territory that they would not be contraband and not subject to capture.

With reference to conditional contraband, the test is destination to the belligerent forces or government, as distinguished from mere belligerent territory. This rule of belligerent destination, as necessary to give rise to the right of capture, has been evaded to a greater or less extent from the time of its appearance by the consignment of contraband goods to neutral ports with the secret object of transshipment by another vessel or by rail.

CONTINUOUS VOYAGE.

This ruse, resulting in defeating the belligerent right of capture, has been met by a rule known as the doctrine of continuous voyage.

Our Secretary of State said:

"The rule of 'continuous voyage' has been not only asserted by American tribunals but extended by them. They have exercised the right to determine from the circumstances whether the ostensible was the real destination. They have held that the shipment of articles of contraband to a neutral port 'to order,' from which, as a matter of fact, cargoes had been transshipped to the enemy, is corroborative evidence that the cargo is really destined to the enemy instead of to the neutral port of delivery. It is thus seen that some of the doctrines which appear to bear harshly upon neutrals at the present time are analogous to or outgrowths from policies adopted by the United States when it was a belligerent. The Government, therefore, can not consistently protest against the application of rules which it has followed in the past unless they have not been practiced as heretofore."

Under this doctrine, even if the trade in contraband is between two neutral ports, the goods are capturable if the ultimate destination is proved to be belligerent.

In the Peterhof case (5 Wall., 49) our Supreme Court, on appeal from the prize court, condemned a cargo of blankets, shoes, horseshoes, and the like, in a British vessel, bound from Liverpool to Matamoras, Mexico, on the ground that it was not shown that the articles were not intended for transshipment to the Confederate forces at Brownsville, Tex.

The United States condemned many British-owned vessels and cargo documented for the British port of Nassau.

This same question of the liability of goods documented to neutral ports has been raised with England by the United States in the case of detained American cargoes documented to ports in the neutral countries of Holland, Denmark, and Italy, which border the Empires of Germany and Austria as Mexico borders the United States.

RIGHT OF PREEMPTION.

In case of doubt as to the belligerent destination of contraband cargo, the captor has a recognized right of purchase at a fair price, under what is known as the right of preemption, and Great Britain seems to be availing herself of this right.

It is not a wholly satisfactory course to our merchants, owing to the greatly increased prices that could be realized in Germany and Austria. It would seem desirable, at the close of the war, that the leading States attempt to reduce to conventional law the American doctrine that all private property—except contraband—be freed in naval warfare. This, of course, can be done only by the common consent of nations.

CABLE AND WIRELESS.

Under the use of neutral soil comes the question of wireless, and the rule is that belligerents may not use the same on neutral soil for the purpose of communication with their troops or war vessels. The use of wireless and cable is open impartially for ordinary governmental business, but to insure the character of information being sent and delivered the United States has restricted the use of code messages, particularly in wireless.

Mr. Bryan, on January 20, explains the freedom of communication by submarine cables and the necessity for censorship of communication by wireless:

"The reason that wireless messages and cable messages require different treatment by a neutral Government is as follows:

"Communication by wireless can not be interrupted by a belligerent. With a submarine cable it is otherwise. The possibility of cutting the cable exists, and if a belligerent possesses naval superiority the cable is cut, as was the German cable near Azores by one of Germany's enemies, and as was the British cable near Fanning Island by a German naval force. Since a cable is subject to hostile attack, the responsibility falls upon the belligerent and not upon the neutral to prevent cable communication.

"A more important reason, however, at least from the point of view of a neutral Government, is that messages sent out from a wireless station in neutral territory may be received by belligerent warships on the high seas. If these messages, whether plain or in cipher, direct the movements of warships or convey to them information as to the location of an enemy's public or private vessels, the neutral territory becomes a base of naval operations, to permit which would be essentially unneutral.

"As a wireless message can be received by all stations and vessels within a given radius, every message in cipher, whatever its intended destination, must be censored; otherwise military information may be sent to warships off the coast of a neutral. It is manifest that a submarine cable is incapable of becoming a means of direct communication with a warship on the high seas. Hence its use can not, as a rule, make neutral territory a base for the direction of naval operations."

SALE OF ENEMY VESSELS TO NEUTRALS.

Neutral States undoubtedly appear to have a normal right to purchase ships from whom they please; that is a normal right of commerce.

On the other hand, belligerent States for centuries have been recognized as having the right to capture each the merchant ships of the other.

If an enemy shipowner is permitted to make a purely colorable transfer of his vessel to a neutral, the belligerent's right of capture is defeated by a fraud. And in any event, even a bona fide transfer, if held valid against the opposing belligerent, defeats his war right of capture.

The practice is not settled. Russia and France maintain no transfers are valid as against them in time of war. The United States and Great Britain, by practice, have taken the view that a transfer that will relieve an enemy vessel of enemy character is possible, but it must not be made in a blockaded port or during transit, that it must be according to the laws of the neutral State where the transaction is consummated, and must be in good faith, with all interest passing irrevocably, and that it must not have as its object the evasion of the consequences to which the enemy character, as such, exposes it.

THE "DACIA."

What applies to the purchase of belligerent vessels by a neutral State applies as well to the citizens of neutral States.

The one conspicuous example that has come to our notice is that of the *Dacia*, a Hamburg-American vessel held in an American port by fear of capture, which was sold to an American citizen. The British authorities not unreasonably wish to try this vessel in view of the extensive sale of German ships that might be involved in a previous recognition of its validity. There have been some recognized transfers to American registry since the outbreak of the war, but these were at a time when ships of the German fleet were still on the oceans and the condition of compulsory stay in neutral ports did not exist in its present effectiveness. They were vessels of corporations of belligerent States, whose shareholders were citizens of neutral States.

BLOCKADE.

A blockade to which neutrals must submit must also be previously notified and the area of effectiveness must be delimited definitely by latitude and longitude. As the high seas are considered the common property of States, blockades extending far beyond marginal waters are of doubtful validity, being, in effect, the unwarranted exclusion of those with joint and common title for the enjoyment of their rights.

Mr. Moore describes a blockade as follows:

"The object of a blockade is to cut off all intercourse with the enemy so far as the blockade extends. It will be recalled that during our Civil War all the ports of the Confederacy were blockaded with results that became more and more appreciable as time wore on. Blockade respects neither the nationality of the ship nor the nationality

or character of the cargo. The penalty of an attempt to break a blockade is confiscation both of ship and cargo, no matter what the character of the goods may be. In former times attempts were often made to forbid access to belligerent ports by proclamation of blockade which were not actually enforced. These were known as 'paper' blockades. But this practice was eventually done away with, and the principle as announced in the declaration of Paris of 1856 came to be universally accepted, that a blockade, in order to be binding upon neutrals, must be effectively maintained; that is to say, maintained by a force reasonably sufficient to prevent entrance to the blockaded port."

CONDUCT CONFORMABLE TO LAW.

The United States is committed by tradition and choice to conduct conformable to law in its international relations. If the law works apparent hardships upon us at times, it is none the less our duty to accept them, while striving to obtain common consent to modification.

The progress of the last hundred years justifies the hope that States are more and more recognizing justice and fair dealing as synonyms with enlightened self-interest. The railroad, the steamship, the cable, and the wireless have afforded such wonderful facilities for traveling and the interchange of intelligence that a world opinion of tremendous potency is in progress of formation.

This world opinion is finally the great molding factor in international law. Self-interest undoubtedly plays its part in the policies of States, but we are daily coming to understand that an injury to one State is felt by all, and that the welfare of the peoples of the earth is bound up in their interdependence upon commerce and finance, which war destroys and peace alone promotes.

PRESIDENTIAL ADVICE.

President Cleveland declared even when our feelings were outraged by the cruelties committed in Cuba:

"Whatever may be the traditional sympathy of our countrymen as individuals with a people who seem to be struggling for a larger autonomy and greater freedom, deepened as such sympathy naturally must be in behalf of our neighbors, yet the plain duty of their Government is to observe in good faith the recognized obligations of international relationship. The performance of this duty should not be made more difficult by a disregard on the part of our citizens of the obligations growing out of their allegiance to their country, which should restrain them from violating as individuals the neutrality which the Nation of which they are members is bound to observe in its relations to friendly sovereign States."

President Roosevelt stated during the Japanese-Russian War:

"The Government of the United States represents the people of the United States not only in the sincerity with which it is endeavoring to keep the scales of neutrality exact and even but in the sincerity with which it deplores the breaking out of the present war, and hopes that it will end at the earliest possible moment, and with the smallest possible loss to those engaged. Such a war inevitably increases and inflames the susceptibilities of the combatants to anything in the nature of an injury or slight by outsiders. Too often combatants make conflicting claims as to the duties and obligations of neutrals, so that even when discharging these duties and obligations with scrupulous care it is difficult to avoid giving offense to one or the other party. To such unavoidable causes of offense, due to the performance of national duty, there must not be added any avoidable causes. It is always unfortunate to bring Old World antipathies and jealousies into our life or by speech or conduct to excite anger or resentment toward our Nation in friendly foreign lands * * *."

If admonition to our citizens were justified then, how much more important, how much more vital, is such admonition now. In the last case only two friendly nations were at war. At the present time six great and four small nations, all friendly to us, are at war.

AVOID THE RACE ISSUE.

Experts say the war will be long; we know it will be deadly. It grips the imagination in a hold too strong to resist; we can not fail to think of it; we must talk of it.

This can be done without making race the vital issue and stirring animosities of nationality that bring bitter personal enmities.

One ever-present danger to our Nation comes from the professional race leader who appoints himself spokesman for a nationality that he may gain political office or personal profit. This professional agitator does more harm than war or disaster, as he spreads enmities and bitterness in a Nation where all should be at peace.

GOD WITH PEACE.

When exhaustion brings prospects of peace, a neutral nation will be asked to conciliate. Our President is available for this delicate task. Each leader of the nations at war claims God's approval of his armies and engines of destruction. We prefer to believe that God is with our President when he counsels neutrality and advocates peace. This is his advice:

"The United States must be neutral in fact as well as in name during these days that are to try men's souls. We must be impartial in thought as well as in action, must put a curb upon our sentiments as well as upon every transaction that might be construed as a preference of one party to the struggle before the other. My thought is of America. I am speaking, I feel sure, the earnest wish and purpose of every thoughtful American that this great country of ours, which is, of course, the first in our thoughts and in our hearts, should show herself in this time of peculiar trial a nation fit beyond others to exhibit the fine poise of undisturbed judgment, the dignity of self-control, the efficiency of dispassionate action, a Nation that neither sits in judgment upon others nor is disturbed in her own counsels, and which keeps herself fit and free to do what is honest and disinterested and truly serviceable for the peace of this world."

CONCLUSION.

Let us preserve the best traditions of our country, hold the scales level, demand fair play; explain that one nation can not make international law nor depart from its recognized international obligations during war. A departure from the accepted law, which would be to the disadvantage of one of the belligerents, would not be the preservation of neutrality, but an act of hostility.

The contents of the national melting pot require your assistance. There is educational work to do; the facts will adjust themselves, but the law must be explained. This is the lawyer's part: He must bring to the work the same courage, determination, and persistence that has marked his course in other critical periods.

Without party feeling or political bias, his work should be done for his country, as an American, for America.

Woman Suffrage.

SPEECH

OF

HON. RUFUS HARDY,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 12, 1915.

The House had under consideration the joint resolution (H. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Mr. HARDY. Mr. Speaker and gentlemen, I shall leave out all question of the doctrine of State rights. My respect for the phrase and for logic has in the last few weeks largely diminished. I have found that every man on either side of any question can use, or professes to, the doctrine of State rights to favor his contention. Therefore I shall simply discuss this question on the broadest basis of reason.

I would like to know, as a matter of common sense, why Texas should have the right to dictate to Massachusetts what the qualifications of her electors should be; why Illinois should have the right to dictate to Texas what the qualifications of her electors should be.

Then I want to present another thought: The prohibition amendment that was passed upon the other day had the excuse that the State laws of one State could not be enforced, and were ineffective unless the national law made all get behind it. But there is no excuse in this case, because every State can enforce its own laws as to the qualification of the elector.

Now, I want to ask another question. If the National Legislature can prohibit the States from making any discrimination on the sex question, can they not also go into my State, where we had adopted not long ago a poll-tax requirement as a qualification for the right to vote—can they not say that there shall be in no State of the Union any law that requires a poll tax as a prerequisite to a vote? Any State in this Union might adopt a broader property qualification to the franchise than a poll tax. I want you to understand I opposed the adoption of the poll-tax amendment in my State, but my State adopted it, and had the right to adopt it, and your State has the right to adopt it. Your State has the right to say that no man shall vote unless he has some property interests in the country. The qualifications of a voter in every country are fixed by law, and in our country by the State law under the reservation of our Constitution, once deemed a wise reservation by all men of all parties.

Mr. RAKER. Mr. Speaker, will the gentleman yield?

Mr. HARDY. I have not the time. Whenever you start in with a national law binding and controlling the States in reference to administration of its local affairs there is no measuring the lengths you may go, no field you may not enter, no smallest local right you may not invade. The broad sea that you sail upon is without shore line. State government and local government are wiped out forever and all is centered in the Government at Washington. I have not even made up my mind fully what my view would be on the question of woman suffrage when submitted, as it will some day be submitted, in my own State. I only know that if I shall reach the conclusion that it is better for womanhood that she be given the right to vote, I shall know or believe it is also better for manhood and for my country. First in my conception, first in my devotion, is the welfare of the womanhood of my State and of my country. I differ with some as to whether voting is a right inherent or a privilege granted by the State. As it exists I know it is a political privilege; but as to the right of woman, she has as much inherent right to that privilege as the man. There is no question about that. But I look back to the days of old and I find that in Rome when woman flaunted herself in the public gaze Rome became degraded and decayed. I look back to the days of Louis XIV, when women were constantly in the public gaze, and I find that then woman fell from her high estate.

The SPEAKER pro tempore (Mr. FLOYD of Arkansas). The time of the gentleman from Texas has expired.

Mr. STAFFORD. Mr. Speaker, I yield the gentleman three minutes more.

Mr. HARDY. Mr. Speaker, it has been said here that in pain woman brings us forth into this world and in sorrow she nurtures us and trains us for this world, and I remember full well, because for 50 years I have carried that memory with me, the lessons that were taught me at my mother's knee, and

every temptation that comes brings back the picture of that sainted mother to my eyes. God knows I would not for the world cast a vote that would be to her injury if her life were to live over. Far otherwise. Because in pain she brought me forth and in sorrow she nurtured me, I would shelter every being that bears a woman's form from the cold storms of the world and the deep damnation of its polluted waters. Point to me anything in which the chivalry of Texas or of those that I know North or South has deliberately or purposely wronged woman and I will change all my views. Because we love her and love to shelter her we guard her in my State in her home. We say that neither creditor nor any other man shall take it away from her, and we say that even a husband shall not overpower or overpersuade her. The law gives her the opportunity before she conveys away that home, and will make her take the opportunity, of going before a notary separately and apart from her husband and stating whether or not she desires to do so. In my State coverture is a condition that protects a woman against the statute of limitations running against her. In my State we have sheltered her by all of the laws we knows how to frame, and if you will tell me another law that we can frame that will shelter her more we will be very glad to adopt it. In my heart of hearts I want to cherish the memory of the mother gone, and in conclusion let me say I cast this vote, as I believe, for country, for home, and for mother, when I vote now against the adoption of this amendment. [Applause.] If the time ever comes when I can see womanhood's better interest in a different vote, I will cast that vote in accordance with that change of conviction.

Rural Credits.

EXTENSION OF REMARKS

OF

HON. EZEKIEL S. CANDLER, JR.,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. CANDLER of Mississippi. Mr. Speaker, on February 5, 1915, I introduced House joint resolution 416, to authorize the Committees on Agriculture of the Senate and House to investigate the system of rural personal credit, which resolution is as follows:

Joint resolution (H. J. Res. 416) to authorize the Committees on Agriculture of the Senate and House to investigate a system of rural personal credit.

Whereas none of the several rural credit investigating bodies appointed by Congress within the past few years has drafted a personal rural credit bill; and

Whereas personal rural credit is more necessary than a land-mortgage system, although such system is good so far as it goes; and

Whereas nearly every highly civilized country has in successful operation a personal rural credit system through which the farmers of those countries obtain credit for productive purposes at low rates of interest and in sufficient amounts to enable them to produce agricultural products more economically than is done in this country, even though our farmers possess many natural advantages not enjoyed by them; and

Whereas the great European war now being waged is wasting capital at a rate never before approached, which condition is bound to result in materially affecting the world's capital and credit markets; and the American farmers having no organized credit machinery, it naturally follows that their interests will suffer more than any other interests in the country and make it more difficult for them to obtain credit in the future than it has been in the past: Therefore be it

Resolved, etc., That the Committees on Agriculture of the Senate and House of Representatives are hereby authorized, through a subcommittee, to investigate and hold hearings on such personal rural credit bills as may be presented to them, in the manner hereinafter more specifically set forth, and make a report thereof not later than the 10th day of December next.

SEC. 2. That such subcommittee or investigating body, which is hereinafter referred to as the commission, shall hold its hearings and investigations in such manner that will permit persons who, in the commission's opinion, have sufficient authoritative backing to present bills for a personal rural credit system in the United States to the commission and appear before them by experts of their own selection to establish the merits of their respective bills and to disprove any provisions contained in bills not presented by themselves. The commission shall notify at least one leading representative of every interest affected by such bills, including the president of the American Bankers' Association, of his privilege to appear before the commission by an expert of his own selection and to advocate or oppose any bill presented, who shall enjoy the same rights and privileges before the commission as the experts of the proponents.

SEC. 3. That it shall be the further duty of the commission to send for persons and papers; to administer oaths; to summon and compel the attendance of witnesses and have the same examined by themselves or by the representatives of the parties at interest appearing before them, or both; to adopt rules of procedure and the same to amend; and to employ such secretaries, experts, stenographers, and other assistants as shall be necessary to carry out the purposes for which the commission was created.

SEC. 4. That the members of the commission shall receive no compensation for their services on the commission, except traveling expenses incurred outside of the District of Columbia while attending to the duties imposed under this act.

SEC. 5. That the sum of $9,000, or so much thereof as may be necessary to carry out the purposes of this act and to defray the expense of the commission, is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated. Such appropriation shall be immediately available and shall be paid out on the audit and order of the chairman or acting chairman of said commission, which audit and order shall be conclusive and binding upon all departments as to the correctness of the accounts of said commission.

In the Aberdeen Weekly, published at Aberdeen, Miss., in the issue of February 26, 1915, there appeared an editorial strongly favoring this resolution. The editorial is as follows:

RURAL PERSONAL CREDITS.

Secretary of Agriculture Houston has declared that agricultural pursuits pay only a net profit of 5 per cent. Upon this premise it is evident that farmers can not operate their lands and pay interest in excess of that rate without loss. It is also a known fact that they can not borrow money in many places upon the security they have to offer at 4 per cent. This leads to the conclusion that some system ought to be provided by the Government which would enable them to procure money at a rate that would leave a part, at least, of their net profits to lay by for themselves for a rainy day. In several European countries such a system prevails, in which the Government is a factor in loaning to producers money at a low interest, predicated on a rating of rural personal credits. Hon. MORRIS SHEPPARD has introduced a joint resolution into the United States Senate to authorize the Committees on Agriculture of the Senate and the House, through a subcommittee, to investigate a system of rural personal credits and report their findings to the next Congress, looking to the enactment of a law which shall have for its purpose the determining of correct rural personal credits as bases of Government loans to producers at a low rate of interest.

The resolution ought to pass both Houses before adjournment of the present session, so that the relief proposed by the measure could become operative at the earliest possible time. The Government aids almost every industry in a way similar to that which is sought for the farmer in the proposed resolution, and it would constitute a crime of indifference or negligence for the Congress to ignore its passage or delay it beyond the present session. The resolution was introduced in the lower House by Congressman E. S. CANDLER, Jr., from Mississippi.

I have received strong approval of my resolution from other sources, and among the number was a letter from Mr. H. S. Gilleylen, of Aberdeen, Miss., under date of February 27, 1915, which is as follows:

ABERDEEN, MISS., *February 27, 1915.*

Hon. E. S. CANDLER, Jr.,
Washington, D. C.

MY DEAR SIR: It is a sore disappointment to learn the improbability of passage at this session of your resolution to properly investigate personal rural credit during the coming recess of Congress. If we could have gotten that, we could have had a bill ready to be introduced at the beginning of next session, and in all likelihood could have secured its enactment at an early date of next session.

If that resolution fails of passage, then we must go to the country on it. We must appeal to the rural press to secure this plan of investigating that important subject. I am frank to say that I do not believe we can secure anything worth having under the ordinary method of investigating this and kindred subjects. We should profit by our experience on land-mortgage efforts at legislation.

If no other farmer takes it up, then I purpose to do so as soon as Congress adjourns, and organize a movement to get the cooperation of the rural press. Both our local papers promise to aid in the movement, and through them I hope to get the officers of the Mississippi Press Association to take it up with the officers of the press associations of the various States.

If the officers of the press association of each farming State could be induced to select an intelligent and successful farmer from each of the rural congressional districts, the farmers so selected to form an association to work with the press in securing this investigation, they could so arouse public sentiment in its favor that Congress could not deny it to us.

With such a commission created, that association of farmers could employ an expert or experts to prepare a bill and go before the commission and prove it up to the satisfaction of all. The rural press could not engage in a movement which would mean more to the country than that. What a lasting monument it would be to them! I have not the least doubt but that if this proposition is properly brought to their attention enough of them will take it up to make it a success.

Let every paper which acts on this suggestion by editorially advocating it send a copy to the Rural Credit Press Association, Washington, D. C., and I shall see to it that all such papers are presented to Congress and afterwards preserved and made to form a memorial to them for giving this legislation to the American farmer.

Very truly, yours,

H. S. GILLEYLEN.

There is no better citizen in Mississippi, or in any other State, than Mr. Gilleylen. He is a farmer, and a man of the highest character, progressive in his views, and everything he says is entitled to be given the highest consideration. I have known him for 25 years, and during all this time he has deservedly received the confidence and the esteem of the people among whom he lives and his acquaintances everywhere. He has large farming interests and pursues the modern methods of agriculture, and hence is successful.

I strongly favor the establishment in this country of a rural credit system which will not only give the farmers who own land relief, but I also go further, and favor giving to those farmers who are not so fortunate as to own land a system of credits by which they can also secure relief. This class of farmers deserve our consideration, just as much as the farmers

who are landowners. We must help, if we can, all classes of our farmers if we would bring about the greatest degree of prosperity.

Since I have been in Congress I have labored at all times to help in every way I could all of my constituents, but everybody who is familiar with my record knows that I have been especially active in doing everything I could for the farmers of my district, realizing that whenever I helped them in any way I helped every other trade, calling, avocation, and interest of the people I have the honor to represent; and so long as I continue in Congress, I expect to faithfully, promptly, and energetically continue to pursue this course. While I regret very much the failure of the passage of my resolution at this session, and regret from the bottom of my heart the failure to secure effective rural credit legislation at this session, still I have done all I could, and I feel confident that at the coming session of Congress we will pass legislation which will meet the approval of the people and greatly benefit the farmers throughout this great Republic. I shall certainly do everything in the world I can to bring about this much-desired legislation. Everybody realizes that upon the prosperity of our agricultural interest depends the prosperity of the whole country. Without it, all business of every kind will be paralyzed, but with our agricultural interest prosperous at all times, every other business interest throughout the country will enjoy a proportionate prosperity, and the people will be happy and our great country continue to press forward to grander achievement and more glorious development.

Two Years of Democratic Rule.

EXTENSION OF REMARKS
OF
HON. LUTHER W. MOTT,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. MOTT. Mr. Speaker, the record of the Sixty-third Congress and that of the Democratic Party in control of the Government for the last two years ending March 4 is not one that the people of the United States can regard with satisfaction. When the control of the Government changed, as a result of the division in the Republican ranks, the Nation was in a very prosperous condition. All that has been changed. The florid promises of the Democratic platform of 1912 and the specious words of the President about removing the shackles on trade and vastly increasing our foreign and domestic commerce read today like mockery. The principal measures that have been carried through Congress at the instigation of the President, and which have gone into effect, have done harm rather than good.

The tariff law, which was the leading feature of the Democratic program, and for which the President predicted such a vast increase in prosperity, has had the very opposite result, just as was predicted by the Republicans, based on the experience of similar legislation in the past. In seven months prior to the European war we lost $248,000,000 of our foreign trade, or $1,000,000 a day. That was wholly the result of the tariff, and this loss extended to our trade with every nation on earth.

Then great things were promised from the new currency law. That has been on the statute books for a year and more without any noticeable result, and whatever good has been accomplished in the way of currency reform came through a measure framed by the Republicans when they were in power, and known as the Aldrich-Vreeland Act. Although the Democrats bitterly denounced that legislation, they have saved the country from a panic by the use of the powers given them under that law.

THE ATTACKS ON BIG BUSINESS—TRADE COMMISSION.

Another one of the conspicuous features of the Democratic program has been its attacks on the so-called trusts and big business. Congress has been kept in almost continuous session, engaged in this kind of work. Business men have been in constant trepidation, not knowing what might be the outcome of such legislation; but the result has been a great deal of talk and very little accomplishment, except in the way of injury. The Sherman antitrust law, enacted by the Republicans, was a wise measure, and all that was needed was its enforcement. The decisions of the Supreme Court opened the way to accomplish everything necessary in that direction. All of this supplementary legislation has done nothing except to injure the business of the country.

The Trade Commission is designed to regulate the business of the country, outside of the railroads, which are controlled by the Interstate Commerce Commission. Then we have an Industrial Commission, which is authorized to travel over the country and investigate business of all kinds, at large expense to the Government. That Industrial Commission has been at work for months, under large expense, without accomplishing a single thing and with no prospect that it ever will accomplish anything. It is under the direction of a politician who gives out interviews occasionally to the newspapers, and that, with the testimony taken by the commission, provides matter for publication, but serves no other purpose. There is no probability that that commission will ever accomplish anything beyond adding to the turmoil of business.

The Trade Commission, for which so much was promised, has not at this moment been organized. The President took several months to select the men for that place, and the universal criticism of his selections is ample proof of his failure in that line. In fact, the President has shown from the beginning a great weakness in selecting proper men to fill the great offices that have been created for his assistance. The salary of the members of the Trade Commission was fixed at $10,000 each, in order that men of the highest character and ability could be obtained for those places. It was also provided by law that not more than three of the places should be filled by members of the same political party, the purpose being to allow representation to both parties. But after months of delay the President chose a lot of politicians, largely of a local character, and does not give the Republican Party a single member of the board. The object in selecting two representatives from the Progressive Party is evidently with a view of strengthening the Republican division. It is a political move, unworthy of the President of the United States. The Trade Commission has vast powers to investigate business corporations, and the President has stated that it would undertake the work of a tariff commission. But not a single person chosen as a member of that commission has any special qualifications to perform the work nor has any particular knowledge of the tariff. The result will be that this commission will add another disturbing influence to the business of the country without accomplishing any good whatever.

The same narrow partisan spirit was shown when the President selected the members of the National Reserve Board. That was an institution that should, of all others, be free from political ends, but the President chose a purely partisan board, and though he afterwards made some changes, his first action disclosed his purpose.

CONGRESS NOT ABLE TO DO ALL THE PRESIDENT WANTED DONE.

Although Congress has been in continuous session, almost, yet it did not do all that the President required of it. It is generally believed that he proposed another extra session, as his talk indicated such a purpose, but the Speaker of this House and other leading members of his party declared that an extra session would mean the doom of their party. The country was tired of the continuous attacks on business by the party in control of the Government. The trouble is too much legislation instead of too little, particularly when that legislation is of the character that has marked the work of the Sixty-third Congress. In the House of Representatives alone 21,613 bills were introduced, to say nothing of resolutions. In the Senate 7,751 bills were offered, making a total of about 30,000 bills and resolutions in this one Congress. Of course a large number of those make their appearance at every session, and probably will continue to do so. Fortunately a very large number were defeated because of the vigorous Republican opposition and the lack of time for the party in power to carry them through.

Notwithstanding this continuous work, two of the great appropriation bills failed of passage. This is the first time in over 35 years that such a thing has happened. Fortunately the Philippines bill, designed to make the people of those islands independent, also failed. It was a measure that accomplished only evil since it was first brought before Congress. Former President Taft and all of the men with experience in the Philippine Islands have condemned such legislation as having only the effect of arousing false hopes in the islands, which are wholly unfit for self-control. Because of this unfortunate course on the part of the administration, business in the Philippine Islands has greatly suffered. New enterprises have been checked, and the splendid progress that took place previous to the advent of the Democrats to power has ceased. But that does not check the short-sighted course of the Democratic Party in regard to the Philippine Islands.

MONEY SAVED BY DEFEATING UNWISE MEASURES.

Two other measures, the Colombian and Nicaraguan treaties, also failed. It is amazing that the President should have insisted so strenuously on the ratification of those treaties. The Colombian treaty proposes to pay to that country $25,000,000 as a gift because that country was not able to prevent us from constructing the Panama Canal. No more shameless expenditure was ever proposed in the history of our Government. The Nicaraguan treaty proposed to pay $3,000,000 to that country for something of no value to us. All of this expenditure was urged by the President and the Secretary of State, although the finances of the Government are in such a condition that a further issue of bonds seems inevitable. Another measure that would have taken $40,000,000 out of the Treasury was the ship-purchase bill, which the President undertook in every way possible to force through. Those three bills would have called for an expenditure of $68,000,000, notwithstanding the fact that there is a deficiency now in the Treasury of about $90,000,000. It was only because of the determined and persistent opposition of the Republicans in the Senate that those bills were defeated.

The Democratic Party has merely registered the decrees of the President. Whatever he has asked for has been granted, so far as the Democrats could accomplish that end. It was some relief to see that seven of the Democratic Members of the Senate refused to continue in the effort to pass the ship-purchase bill. It was kept before Congress to the exclusion of other business, so that the defeat of the two appropriation bills and some other measures was caused wholly by the waste of time on the ship-purchase bill. That measure was pushed through the House in a few hours' time, without allowing any amendment or any fair discussion of it.

GAG LAW AND CAUCUS RULE.

The Democrats were very fierce in their denunciation of the Republicans for the manner in which they controlled the business of this House preceding Democratic control, but there has never been before in the history of the Government any such exhibition of gag law as has ruled in this House under the present Democratic control. All important measures have been considered in Democratic secret caucuses, and then brought before the House to be passed in a limited time, frequently without allowing any amendments and no possibility of fair discussion. Although we have regular rules to control the House, this special-rule method of passing measures has been invoked 60 times. This has been done, too, with the President's approval, although before his election as President he condemned the caucus method of government and expanded in strenuous language in behalf of publicity. No President has ever reversed himself so frequently as has President Wilson. Nearly every plank in the Democratic platform has been violated to such an extent that it has become the laughingstock of the public.

INCREASE IN EXPENDITURES—A BOND ISSUE NECESSARY.

One of the planks of that platform was a very severe denunciation of the Republicans for extravagance, and calling on Congress to cut down the appropriations. What has been the result? This Congress, with a Treasury deficit that promises to force a large issue of bonds, has nevertheless appropriated at this session about $120,000,000 more than was ever appropriated at a preceding session under Republican control, and at the previous session more money was appropriated than at any other session in the history of the Government. The Republicans left about $150,000,000 in the general fund, which the Democrats have depleted, so that there now remains only about $42,000,000. While they have used up that much of that fund, they have increased the taxes by adding an income-tax law and by the so-called war-revenue act, and still there is a large and growing deficit. This result was foreseen by the Republicans when the tariff law was under discussion in this House. Everything said of that law, as to the evil results that would follow its passage, have come true. When the income-tax provision was under discussion its author declared that it would produce $70,000,000, and that prediction was sustained by the House and Senate committees which reported the bill, but the returns show a total receipt of $28,253,534 only, a deficiency of nearly $42,000,000, which miscalculation accounts for more than half the pending Treasury deficit.

When the so-called war-tax measure was under discussion the chairman of the Ways and Means Committee asserted that it would yield $105,000,000, and when it passed the Senate it was estimated to yield $107,000,000. But the Secretary of the Treasury now estimates that the yield will be about $54,000,000 for the present fiscal year, and it will be less next year. Thus the deficit in those two measures, which are in nowise affected by the European war, makes up the deficiency now existing in the Treasury. The deficit is the result of miscalculation. But that is not the worst of the situation. The war-tax measure is soon to expire, so that there will be no yield next year from that source. There will thus be $54,000,000 additional on that account to be added to the deficit. On May 1, 1916, practically $52,000,000 more, now derived from the sugar duty, which then expires, must be added to the deficiency. This is an appalling situation for which no provision has been made, and which would have been vastly worse if it had not been for the strenuous Republican opposition to the shipping bill, the Colombian treaty, and other such reckless measures.

THE TRUE WAY TO MEET THE DEFICIENCY—COST OF LIVING GREATER.

The proper method of meeting this situation would be to restore the tax on sugar and on wool and on other things which could pay duties without inflicting the slightest burden on the American people. The Democrats promised loudly to reduce the cost of living. They put many farm products on the free list and reduced the duties on manufactured articles, a considerable number of which they also placed on the free list. The cost of living has been increased instead of being reduced. Millions of workmen have been thrown out of employment; 4,000,000, according to a recent letter of Mr. Gompers, head of the American Federation of Labor. Charitable societies are more active now than ever before in the history of the United States. Soup houses and all manner of ways of helping the workmen and their families who are denied employment prevail all over the United States. A recent canvass in New York City by a church organization developed the fact that 562,000 persons were out of employment in that city, 125,000 of whom were women. Some sixty thousand of these unemployed were without any place to lay their heads. In Chicago over 100,000 men are in a similar fix. Everywhere comes this cry of distress and call for help.

The frightful war in Europe, the most appalling in the history of the world, has created a demand for war materials and for food. This has helped to increase our exports and has provided work in a few industries. But with the great mass of unemployed the situation grows worse instead of better. The Michigan Republican State Convention, held last month, summed up the situation in these words:

> For the second time since the Civil War the American people have witnessed the calamitous consequences of Democratic inefficiency that has closed factories, increased bankruptcies, reduced bank deposits, lowered wages, crippled production, destroyed confidence, decreased the revenue, increased deficits, and increased appropriations, a record of unparalleled incapacity and violated pledges; and that party has pursued disastrous policies which make it the plain duty of all right-thinking Americans to rescue the administration of national affairs from that party which is incapable of progressive legislation and is content with psychological depression, watchful waiting, and masterful inactivity. * * * Instead of lowering the cost of living, it has been increased. The Democratic Party favored one term for President, but now explains that this does not apply to Wilson. It charged the Republican Party with extravagance, but has greatly increased appropriations. It condemned the Aldrich currency plan, but adopted its essential features. It repudiated its own promises in the matter of the Panama Canal tolls. It has repealed essential features of the civil-service law and filled the Government offices with inexperienced and inefficient party followers. It now proposes to sell the rural delivery of mail to the lowest bidder, while Secretary Bryan frantically demands, even of the Diplomatic Service, more jobs for his political henchmen.

VIOLATING THE CIVIL-SERVICE LAW.

Secretary Bryan wrote to the American minister in Santo Domingo, of which country the United States has the supervision of the customs, asking him to look out for places for deserving Democrats, and to let Mr. Bryan know what places there were, the salaries paid, and so forth, which could be filled with such persons. Think of disgracing the Diplomatic Service of the United States by asking its members to secure places in a foreign country for partisans in such a manner. But that illustrates how far the civil service has been degraded under this administration.

This Congress has created more new places or offices than any other in many years, notwithstanding the denunciation of Republicans for having more offices than the Democrats deemed necessary. In nearly every case the Democrats exempted these new places from the civil-service laws and regulations and put them under the spoils system. The rural credits bill, which did not become a law, although the President and his party were pledged to it, provided that all attorneys, experts, and clerks and other employees should be appointed free from the civil-service law and requirements. The Democratic platform of 1912 says:

> We demand a return to that simplicity and economy which befit a democratic government and a reduction in the number of useless offices the salaries of which drain the substance of the people.

The estimates submitted for 1916 provide for an increase of salaries and the creation of new offices to the extent of

$10,000,000. That is the way the Democrats return "to that simplicity and economy which befits a democratic government." They had a publicity plank on recommendations for appointments to office. But that plank, like so many others, was repudiated, and an attempt to carry out such legislation was defeated.

VIOLATING THEIR BANKING PLANK—POST OFFICE DEFICIT.

The Democrats "condemned the methods of depositing the Government funds in a few favorite banks" and pledged themselves to provide by law for their deposit by competitive bidding in the banking institutions of the country, national and State, without discrimination as to locality. But instead of doing that they have passed a law which gives the Secretary of the Treasury practical control of the matter. The United States bank in Jackson's day incurred his enmity by becoming a competitor of all the other banks. But there is in the Federal reserve-bank system now a similar principle of mischief in that it makes the Federal reserve bank in the district a competitor in the open market with other banks.

The Post Office Department had a surplus when the Republicans went out two years ago, but now a large deficit has to be provided for. That is the result of Democratic rule. We all know how much more it costs the Government to have its printing done at the Government Printing Office than it would cost by contract with private concerns. That is the result of Government ownership in all cases. But it is advisable in some cases that the Government should do its own work, though it is never advisable for it to undertake work that can as well be done by private ownership. Still we have an administration agitation now for Government ownership of railroads, telegraph, telephones, electric lights, and other public utilities, including steamboat lines, and so forth. The result would be to employ 10,000,000 people to operate them. The Postmaster General has advocated the ownership of telephone and telegraph lines and some other things, and he would not do this in a public way without the approval of the President. It requires no great reflection to appreciate the dangers which would beset us if such a course were followed.

THE FORTUNATE DEFEAT OF THE SHIP PURCHASE BILL.

The attempt of the President to force through the ship purchase bill illustrates what he would do in the direction of Government ownership if he could carry out his socialistic principles. Ship crews under the American flag require from 40 to 90 per cent higher pay than under foreign flags. Legislation by this Congress provides that foreign vessels may, with their crews, become registered under our flag. To avoid war risks a number of vessels have pursued that course. But immediately that is done the crews demand higher pay. Then, under our laws it costs more because of the requirements for victualizing such crews. Interest and insurance are higher in this country than in Europe. The result is that vessels can not be run under our flag and compete with those under foreign flags. Nearly every foreign Government pays subsidies. The Japanese Government pays heavy subsidies and the crews of its vessels work for less than one-quarter the sum paid a similar American crew. That explains why our merchant marine in the foreign trade has declined to such an enormous extent while that in our coastwise trade, protected from foreign competition, has increased to a much greater extent. There is no advantage to a vessel in the foreign trade under the American flag, and as soon as the war is over those that have come under our flag will probably return to the Government to which they formerly belonged. We can not build up a merchant marine without we place our vessels on an equality with those of other nations. Hence the President's shipping bill would not only have wasted $40,000,000 but would have been an injury instead of a benefit to our merchant marine in that trade.

Great Britain has 4,235 vessels in its mercantile trade. The most that the President could have secured under his shipping bill would have been about 30 vessels, which could have had no influence on our trade excepting one detrimental to the increase of vessels under private ownership. Still, that measure was kept before this Congress to the detriment of other legislation of great importance. That was done at the instigation of the President, who, in his Indianapolis speech, declared that its opponents were in some cases "ignorant" and in other cases "misguided and blind." It is difficult to realize a President speaking of Members of Congress in such terms. He even went further and threatened those Democrats who "should dare to break the solidarity of the Democratic team for any purpose or from any motive," declaring that theirs would be an "unenviable notoriety which would bring down upon them deep bitterness." Congress has not been accustomed to such methods of forcing through legislation, and, fortunately, there were seven Democratic Senators who resented it.

Congress has not enacted legislation to secure the safety of life at sea, such as was found necessary after the *Titanic* disaster. Fire is not protected against, nor collision with icebergs. Reports from one vessel to another on the great ocean lines in regard to obstacles to be met has not been provided for. Something has been accomplished, but comparatively little as to what is necessary to protect life at sea. The great necessity in the way of legislation of that kind is pushed aside in order to make way for partisan legislation.

NATIONAL DEFENSE NEGLECTED.

In the same way our national defense has been neglected. One of the first things the Democrats did when they got possession of the House was to cut down the appropriations for both the Army and the Navy. Our seacoast defenses are now only provided with 73 per cent of the amount of ammunition required for the guns and mortars now in place. That is only sufficient for a two-hour engagement of one-half the total number of guns manned. Gens. Crozier and Weaver say that that is not sufficient ammunition, but their warnings have not been heeded. There are yet to be appropriated for 117 guns and mortars to complete the seacoast-defense project. And it will require about $40,000,000 to do that work. The range of some of the guns is not great enough to meet the 15-inch guns in foreign navies—about 21,000 yards.

In the bombardment of the Turkish forts in the Dardanelles recently, because of the longer range of the British ships they could strike the forts without the guns of the forts being able to reach the ships. Of course the forts crumbled under such a bombardment. We would be in a similar position in case of a foreign war. New York could be shelled from the ocean; but this Democratic Congress can appropriate money to buy merchant vessels with but it fails to provide for the necessary defense of the country. There is a shortage of coast artillery. Some 25 companies have been taken from the coast for service in the Philippines, Hawaii, and Panama, and 49 more companies are to be taken for the same purpose, leaving 121 instead of 170, as fixed by the law of 1907. According to the British Chancellor the European war is costing England, France, and Russia $10,000,000,000 a year. The cost of our national defenses for this year is only 2½ per cent of that amount. It is a case where an ounce of prevention is worth a pound of cure, but the Democratic Party fails to realize that fact.

IMPORTANT MATTERS NEGLECTED—RURAL CREDITS.

Congress has done nothing for national highways nor for rural credits, although the Democratic platform was pledged in favor of such legislation. The Democratic caucus a year ago, according to Mr. WINGO, of Arkansas, promised early action on rural credits, but nothing was done until the subject was forced on an appropriation bill by a Republican Senator. Other nations have been greatly benefited by such legislation. The landschaften of Germany, the Bavarian Agricultural Bank, the Hungarian Land Mortgage Institute, the Canton banks of Switzerland, and the land credit banks of France are efficient and helpful, but the United States has done nothing in that direction. It is a subject that should have been dealt with, as promised by both parties. A commission went to Europe to study farm credits, and reported in favor of such legislation. It is not an easy subject to solve. Crops vary, and prices also. Farmers are not entitled to more than workmen, but we can do as much for our people in that direction as has been done in foreign countries. The farm-mortgage indebtedness of the United States in 1910 aggregated $3,460,172,851. The farmers and landowners pay an annual interest toll of about $7 per capita for every man, woman, and child in the United States. Farm property is said to be worth $40,000,000,000, in round numbers. Ex-Ambassador Herrick, in his recent book on this subject, says that the average interest rate on farm credits is 8½ per cent. The total paid is over $500,000,000 a year. That is altogether too much, and there should be legislation to stop it. We are spending millions for irrigation and other such purposes, and should pursue a liberal course toward the farmers to enable them to reduce that excessive interest charge.

REPUBLICANS PREVENT GREAT INCREASE IN THE DEFICIT.

The growing deficit in the Treasury has been retarded by Republican opposition to unwise legislation, but the Democrats now are at work to provide cloture in the Senate, whereby they could force through any measure in a manner similar to that followed in the House at this session. The Democrats have always fought any proposition of that kind even to revolutionary lengths. If they had had the advantage of such methods at this session, the deficit in the Treasury would have been

enlarged some $90,000,000 for the purpose of buying ships, paying $25,000,000 to Colombia, and for other purposes, all of which would have been absolute waste.

It is admitted by the Democrats, as has developed in the debate on the shipping bill, that we have been paying from $250,000,000 to $300,000,000 annually to foreign shipowners for carrying our foreign commerce. That money could be largely saved by wise legislation, but no effort is made in that direction. To purchase a few foreign vessels would not help. We need greater transportation facilities, as we provide one-eighth of the total commerce of the world, yet we carry in American ships only 1¼ per cent. But there is no party advantage in the way of patronage in legislation that will promote American shipbuilding, hence it receives no consideration at the hands of the Democratic Party. Provision was made for the expenditure of $35,000,000 for a railroad in Alaska, an expenditure, under the circumstances, not justified. But there is patronage in that matter.

In our foreign relations the course of the Government in regard to Mexico has been almost brutal. Americans have had no protection in that country. We expended some $15,000,000 and more in taking and holding Vera Cruz, to say nothing of the loss of life, without accomplishing a single thing. The President said, in his remarkable partisan speech at Indianapolis, that the Mexicans had as much right to spill blood as the Europeans. That is the cold-blooded way in which he looks at the extraordinary situation in that country.

DEMOCRATS BRING DISTRESS IN PLACE OF PROSPERITY.

The Democratic Party since it came into power has transformed a people enjoying great prosperity to a state of distress almost unparalleled. The Nation was warned of the result of free-trade legislation, but the Democrats paid no heed to the warning, and we all know the result. Last year was remarkable for its farm production, yet to-day all available agencies are at work to relieve the distress that prevails, while soup houses, bread lines, and lodging houses exist in every great city. We have an arrogant partisan at the head of the Government. Congress obeys his orders, and we know the result. The President said in his Indianapolis speech:

I have never been in business, and therefore have no business prejudices.

His course since he has been President is ample proof of the lack of business experience, but his control of Congress exceeds that of any former President because of the methods which he has pursued to attain dominance. An immigration bill, passed by a two-thirds majority in both Houses, was vetoed by him, and, under the influence of his methods, enough Democratic votes were changed to prevent the veto from being overridden in this House. The shipping bill was brought to the House from the Executive and passed under a gag rule. The President went to see the Speaker to get that bill passed, and it was only by the Speaker's aid that that was accomplished. Stephen A. Douglas, in 1858, said that an attempt to control Congress by the Executive was subversive of the Constitution. That is as much true to-day as it was then.

Col. George Harvey, who claims originally to have discovered Mr. Wilson for presidential purposes, has written an article analyzing the last election, showing that the Republicans would have had a majority of the electoral vote on national issues of 49; but in that count Colorado, California, Indiana, Maine, Montana, Nebraska, Wisconsin, Oregon, and South Dakota were counted for Wilson. There is hardly a probability that he could carry a single one of those States in the next national election for President. Mr. Wilson stated in Indianapolis that on the face of the returns of the last election the Democrats would have had a majority of about 80 in the electoral college. But to get that result he took the votes for Senators in some States, governors in others, and for legislators and Congressmen in still other States, a most ridiculous proceeding. There is hardly room for doubt of a large Republican majority in the next national election. The discrimination against the colored vote, by segregation in this city and other such methods, will tell heavily against the Democratic Party. The business of the country does not improve. The Baldwin Locomotive Works, the greatest organization of the kind in the world, has recently issued a statement showing that its output last year fell $24,000,000 below that of 1913, in which year, the greater part of the time, the Republican tariff was in operation. That is the story that comes from all parts of the country, and betokens what will follow when the people have an opportunity to pass upon the record of the Democratic Party under this administration.

On the Provisions of the General Deficiency Bill Affording Relief to Desert-Land Entrymen.

EXTENSION OF REMARKS
OF
HON. H. H. SELDOMRIDGE,
OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. SELDOMRIDGE. Mr. Speaker, under the privilege granted to extend remarks in the RECORD, I desire to express my satisfaction in the enactment into law of a certain amendment inserted by the Senate to the general deficiency bill affording relief to desert-land entrymen. The amendment was prepared by the Interior Department and will afford great relief to many deserving settlers in our Western States who have made entries under the desert-land act. The records of the Interior Department show that prior to the adoption of regulations now controlling the operation of the desert-land act a great many entries were filed that should not have been received, as investigation of said entries would have disclosed the fact that the necessary water to reclaim the land filed upon through irrigation could not be secured.

Many parties in good faith, relying upon statements and assurances of there being sufficient water for irrigation, took out filings under the desert-land act, and later found themselves unable to complete their entries and gain title on account of an insufficient water supply. Other entryman found their water rights attacked by contesting claimants, and still others found themselves deprived of water through the failure of certain ditch companies to secure sufficient means to complete the necessary construction of canals and reservoirs. It will thus be seen that many causes have contributed to defeat the purpose for which the desert-land act was chiefly designed. Hundreds of settlers have complied with the spirit of the law through residence and the erection of improvements upon their holdings. Others have expended labor and money in cultivation under a partial water supply or through dry-farming methods.

In common with other Representatives from Western States, I have been endeavoring to secure legislation granting relief to these settlers and affording them some means by which to secure title to their lands. I realized that no legislation could be passed through Congress that did not have behind it the support and approval of the Interior Department. Secretary Lane and Assistant Secretary A. A. Jones have been deeply interested in the welfare of these settlers, but it was difficult to arrive at some conclusion that would be fair to the Government and to the settlers. I have introduced several bills on this subject, copies of which are herewith appended:

A bill (H. R. 14152) authorizing the Secretary of the Interior to issue patent on desert-land entries upon cash payment for the land.

Be it enacted, etc., That the Secretary of the Interior may, in his discretion, issue patent on desert-land entries upon the cash payment of $1 per acre, in cases where entrymen have purchased stock in an irrigating company proposing to furnish water for the reclamation of such lands and paid therefore in cash, or its equivalent, $10 or more per acre, and have fulfilled all requirements except that of the application of water to the land, and where such company has so far completed its system of irrigation that water could have been delivered upon the lands, but through unavoidable circumstances has been unable to conserve sufficient water to irrigate such lands: *Provided*, That the irrigation company has expended on its system not less than $10 per acre for all lands proposed to be irrigated from such system.

A bill (H. R. 19097) granting a further extension of time to entrymen in which to make final proof under the desert-land laws.

Be it enacted, etc., That the Secretary of the Interior may, in his discretion, in addition to the extension authorized by existing law, grant to any entryman under the desert-land laws a further extension of the time within which he is required to make final proof: *Provided*, That such entryman shall, by his corroborated affidavit filed in the land office of the district where such land is located, show to the satisfaction of the Secretary that because of unavoidable delay in the construction of irrigation works intended to convey water to the land embraced in his entry he is, without fault on his part, unable to make proof of the reclamation and cultivation of said lands as required by law within the time limited therefor; but such extension shall not be granted for a period of more than three years, and this act shall not affect contests initiated for a valid existing reason: *Provided*, That the total extension of the statutory period for making final proof that may be allowed in any one case under this act, and any other existing statutes of either general or local application, shall be limited to nine years in the aggregate.

A bill (H. R. 19250) relating to desert-land entries.

Be it enacted, etc., That a patent for the lands covered by his desert-land entry may issue to any entryman who has heretofore made entry under the desert-land laws and has in good faith expended not less than

$6 per acre upon the land covered by said entry in his efforts to reclaim the same: *Provided*, That such expenditure shall have been reasonably made in his efforts for reclamation and improvement of said lands.

I was not able to secure from the department favorable action on any of these bills, as their provisions were not satisfactory. Realizing the necessity of some action I urged consideration of H. R. 19097, which was purely an extension measure and would have granted no permanent relief. I felt, however, that the passage of this bill would relieve the concern of these entrymen that their holdings might be canceled or forfeited, and that during the period of extension provided for some effective relief legislation might be passed by Congress. In submitting this bill to the department for its consideration a report was made thereon to the Hon. SCOTT FERRIS, chairman of the Committee on the Public Lands, which was signed by the Hon. A. A. Jones, Acting Secretary of the Interior. The report was dated February 24, 1915, and accompanying it was a draft of a bill of general character, which not only provides for the necessary extension of time to entrymen who may be able to comply with the terms of the present law in the matter of water supply, but it also provides relief for other entrymen who can not under any circumstances meet the requirements of the law as it now stands, and yet who are justly entitled to some measure of relief. The report is as follows:

DEPARTMENT OF THE INTERIOR,
Washington, February 24, 1915.

Hon. SCOTT FERRIS,
Chairman Committee on the Public Lands,
House of Representatives.

MY DEAR MR. FERRIS: In response to your request of February 3, 1915, I have the honor to submit the following report on H. R. 19097, introduced by Mr. SELDOMRIDGE, of Colorado:

It is proposed in this bill to confer upon the Secretary of the Interior the discretion to grant to any desert-land entryman a further extension of time within which to make final proof, provided that such entryman shall, by his corroborated affidavit, show to the satisfaction of the Secretary that because of unavoidable delay in the construction of irrigation works intended to convey water to the land embraced in his entry he is, without fault on his part, unable to make the proof of reclamation and cultivation required by law within the time limited therefor. It is further provided in the bill that the extension shall not be granted for a period of more than three years; that the total extension of the statutory period allowable, including that permitted by existing statutes of general or local application, shall be limited to nine years in the aggregate; and that contests initiated for a valid existing reason shall not be affected by the proposed act.

There are in force three general statutes authorizing this department to extend the statutory period on desert-land entries, namely, the act of June 27, 1906 (34 Stat., 519, sec. 5), providing for such extension where the land is within the exterior limits of a withdrawal or project under the act of June 17, 1902 (32 Stat., 388), and the entryman is hindered, delayed, or prevented from reclaiming the tract by the operations of the Government; the act of March 28, 1908 (35 Stat., 52, sec. 3), providing for an extension of time not to exceed three years where, because of unavoidable delay in the construction of irrigation works intended to convey water to the entered lands, the claimant is, without fault on his part, unable to make proof of reclamation within the usual period; and the act of April 30, 1912 (37 Stat., 106), providing for a further extension of time, not to exceed three years, upon the conditions and limitations set forth in the bill under consideration, except that the aggregate extension that may be granted is six instead of nine years.

Statutes of special or local application authorizing extension of time for the submission of final proof in desert-land cases have been enacted, namely, the acts of February 28, 1911 (36 Stat., 960), January 26, 1912 (37 Stat., 56), and October 30, 1913 (38 Stat., 234), all predicated upon unavoidable delay in the construction or operation of the irrigation works intended to convey water upon the lands entered.

There has been introduced in the present Congress a bill (S. 3053), which, in effect, proposes to make the act of October 30, 1913, supra, of general application. There has also been introduced a bill (H. R. 20035), applicable only to parts of Fresno and Kings Counties, Cal., providing for extensions of time for three years upon desert-land entries where the claimant has expended $3 per acre in the reclamation of the land, but has been unable to obtain sufficient water for irrigation.

The effect of the bill now under consideration, if enacted into law, would be merely to authorize extensions of time aggregating 9 instead of 6 years upon the conditions prescribed by existing law. This, added to the statutory period of 4 years, would allow a desert-land entryman 13 years within which to reclaim the land and submit final proof. In my judgment, the bill in its present form is too narrow in its scope, and would afford relief to but a small class of those who are entitled to equitable consideration at the hands of Congress.

In the administration of the desert-land law and of the several statutes above named providing for extensions of time within which to submit final proof, the department has found that the difficulties and hardships confronting entrymen are often due to other causes than delay in the construction or operation of irrigation works. In a very large proportion of desert-land entries, the claimant is confronted by the fact, after having expended large sums upon the land, that a supply of water adequate to the irrigation of the land can not be obtained. Sometimes this is due to prior appropriations of the water; in other cases it is shown that the tract was never irrigable from any known source of water supply. In the class of cases last named entries were of course improvidently allowed under showings deemed acceptable under the regulations then in force. It is obvious that it was never the purpose of the desert-land law to permit the making of entries for lands incapable of reclamation.

In order to remedy the condition that has created the demand for this relief legislation, the department, by the circular of March 23, 1914 (43 L. D., 203), directed the registers and receivers of the various land offices to require, before allowing any desert-land entry of record, a convincing showing of a practicable and feasible scheme of reclamation and of a supply of water adequate for that purpose. Entries allowed prior to the adoption of this rule remain, however, to be disposed of, and it is to this class especially that I would invite consideration of Congress at this time.

I have prepared, and submit herewith, a general bill for the relief of desert-land entrymen, which will, it is believed, provide for every case entitled to equitable consideration.

It will be observed that in the first section of the bill herewith submitted the Secretary of the Interior is given authority to extend the time of final proof for three years in all cases where the entryman or his duly qualified assignee has, in good faith, complied with the requirements of law as to yearly expenditures and proof thereon, and shall show that there is a reasonable prospect, if the extension is granted, that he will be able to make the final proof of reclamation, irrigation, and cultivation required by law. Relief under this section is extended to lawful pending desert-land entries made prior to July 1, 1914, and only to those cases wherein an extension or further extension of time may not properly be allowed under existing law. The date, July 1, 1914, is adopted because at that time the regulations upon which the department is proceeding had been put in operation and were generally understood, and more especially because it is believed that the proposed bill should extend relief to meritorious cases that have arisen, and should not invite future laxity in the administration of the desert-land law.

Sections 2 and 3 of the bill herewith submitted propose to allow desert-land entrymen, in cases where water sufficient for the reclamation of the irrigable land in the entry or any legal subdivision thereof can not be obtained, to perfect the entry in the manner required of a homestead entryman, namely, residence, cultivation, and improvement, or improvement and cultivation, as the case may be, or at the entryman's election, to pay 50 cents per acre for each acre embraced in the entry and thereafter to perfect such entry upon proof that he has upon the tract permanent improvements conducive to the agricultural development thereof of the value of not less than $1.25 per acre, and that he has in good faith used the land for agricultural purposes for three years and the payment to the receiver at the time of final proof of 75 cents for each acre of the land. Relief under these sections is limited also to pending desert-land entries made prior to July 1, 1914, and is further restricted to an entryman or his duly qualified assignee under an assignment made prior to the date of the act. In my judgment, the latter limitation is wise, not only because it will prevent speculation in the equities of desert-land claimants, but will bring the entry within the terms of the homestead law as to the provisions against alienation prior to final proof.

It is believed that the relief proposed in sections 2 and 3 of this bill is in substantial harmony with the purposes of the homestead and desert-land laws. These are laws enacted to facilitate and promote the settlement and development of the public domain. One who has in good faith gone upon a tract in the mistaken belief that it was subject to entry and capable of reclamation under the desert-land law, and has expended time and money in a fruitless effort, has, in my judgment, an equitable claim to the consideration of the Government and should be permitted, if he desires to do so, to acquire title by compliance with the homestead law; or if this be impracticable, by developing the land for agricultural use and paying the price usually exacted of those who avail themselves of the commutation provisions of the homestead law.

If possible, this department would be glad to see the bill herewith submitted enacted at the present session of Congress.

Cordially, yours,

A. A. JONES, *Acting Secretary.*

The bill recommended by the Interior Department is as follows:

That the Secretary of the Interior may, in his discretion, extend the time within which final proof is required to be submitted upon any lawful pending desert-land entry made prior to July 1, 1914, such extension not to exceed three years from the date of allowance thereof: *Provided*, That the entryman or his duly qualified assignee has, in good faith, complied with the requirements of law as to yearly expenditures and proof thereof, and shall show, under rules and regulations to be prescribed by the Secretary of the Interior, that there is a reasonable prospect that, if the extension is granted, he will be able to make the final proof of reclamation, irrigation, and cultivation required by law: *Provided further*, That the foregoing shall apply only to cases wherein an extension or further extension of time may not properly be allowed under existing law.

That where it shall be made to appear to the satisfaction of the Secretary of the Interior, under rules and regulations to be prescribed by him, with reference to any lawful pending desert-land entry made prior to July 1, 1914, under which the entryman or his duly qualified assignee under an assignment made prior to the date of this act, has, in good faith, expended the sum of $3 per acre in the attempt to effect reclamation of the land, that there is no reasonable prospect that, if the extension allowed by this act or any existing law were granted, he would be able to secure water sufficient to effect reclamation of the irrigable land in his entry or any legal subdivision thereof, the Secretary of the Interior may, in his discretion, allow such entryman or assignee five years from notice within which to perfect the entry in the manner required of a homestead entryman.

That any desert-land entryman or his assignee entitled to the benefit of the last preceding paragraph may, if he shall so elect within 60 days from the notice therein provided, pay to the receiver of the local land office the sum of 50 cents per acre for each acre embraced in the entry, and thereafter perfect such entry upon proof that he has upon the tract permanent improvements conducive to the agricultural development thereof of the value of not less than $1.25 per acre, and that he has, in good faith, used the land for agricultural purposes for three years, and the payment to the receiver, at the time of final proof, of the sum of 75 cents per acre: *Provided*, That in such case final proof may be submitted at any time within five years from the date of the entryman's election to proceed as provided in this section, and in the event of failure to perfect the entry as herein provided, all moneys theretofore paid shall be forfeited and the entry canceled.

My colleague, the Hon. E. T. TAYLOR, has been interested in this legislation and has been actively interested in securing its enactment. He was selected by the Hon. SCOTT FERRIS, chairman of the Public Lands Committee of the House, to file the report on H. R. 19097, which was amended by the committee to include the first two provisions of the bill recommended by the Interior Department. The report of the committee as prepared

by Mr. TAYLOR contains the following statement with reference to the necessity for this legislation:

Your committee carefully considered the recommendation of the Department of the Interior and decided to adopt the first two sections of the recommended substitute, but under the showing made deemed it unnecessary at this time to adopt section 3, and for that reason the Secretary's recommendation as to that section was not adopted; but the other two sections were adopted in the identical language recommended by the department.

The hearings before your committee showed that throughout the Western States there are many large irrigation enterprises that have been undertaken by desert-land entrymen as cooperative associations, and that the difficulties and expense of completing their reservoirs and canals have been very greatly in excess of what was originally contemplated; and that their means have been very limited; that many other obstacles not originally foreseen have occurred; many drawbacks and accidents and unavoidable casualties have occurred, delaying the construction. In some cases the dams of the reservoirs have washed out several times; in other cases long, protracted, harassing, and expensive and unavoidable litigation has occurred, and in innumerable ways conditions entirely beyond the control or possible foresight of the desert-land entrymen have arisen that have absolutely prevented them from completing their projects within the time of the utmost limit by extension or otherwise allowed under the present desert-land law. There is now no law that under any condition allows a desert-land entryman more than 10 years' time from the original filling within which to acquire and perfect his water right and reclaim his land and demonstrate his capacity to irrigate the same. In thousands of instances it is absolutely a physical impossibility to comply with the law and get the water within this limit of time.

It was shown to your committee that hundreds and hundreds of desert-land entrymen have expended 10 years' time and all the way from one or two to ten or fifteen thousand dollars apiece in money and labor endeavoring with the utmost diligence and good faith to reclaim their desert-land entries and comply with the law. Neither the desert-land law nor any other law was ever intended to require the performance of utter human impossibilities; and where these conditions are shown, and there is absolutely no question about the entire good faith of all the entrymen to whom this act would apply, your committee feels that in good faith and good conscience, and as a matter of common fairness and justice to these entrymen so situated, they should be given a further extension of time and given a reasonable opportunity to reclaim their lands and comply with the law and perfect title to their entries. If this relief is denied, their claims will become not only subject to cancellation, but they become jumpable, and any adventurer or person who is willing to obtain the fruits of others' labor for nothing may take the property rights of the bona fide entrymen and their many years of toil and expenditure of practically all they have. In many cases the homes of the entrymen may thus be wrongfully and outrageously taken from them by others who have no claim or right thereto. Your committee believes that in the interest of the honest administration of the public-land laws these entrymen should be relieved from the unfortunate position in which they are placed without fault of their own. The equities and hardships of entrymen unfortunately placed in this situation appeal very strongly to your committee, and it is earnestly hoped that this legislation will meet with the approval of the House and that this bill may be speedily enacted into law to prevent the forfeiture and loss of the homes and property rights of a very large number of worthy citizens who are eminently entitled to this relief at the hands of the Government. Your committee, therefore, unanimously recommends the passage of this bill at this session as an emergency measure.

In order that the importance of this legislation may be more fully understood I insert communications which I have received from various persons with reference to the necessity for legislation. The first letter is from the Hon. Charles F. Tew, of Greeley, Colo., who has been actively interested in the development of what is known as the Greeley-Poudre irrigation enterprise. Mr. Tew writes me as follows:

GREELEY, COLO., *September 28, 1914.*

Hon. H. H. SELDOMRIDGE,
Washington, D. C.

DEAR SIR: Herewith I inclose you draft of two bills, one or other or both of which should, in my judgment, be adopted at once for the well-being and protection of a large number of our most important irrigation enterprises in Colorado, as well as throughout the arid West. Knowing of your interest and ability, after consultation with a number of the many interested persons, I am sending you these drafts, and with them some of the reasons impelling to the conclusion of the vital importance of the enactments.

While we hope that the enactment of both bills may be secured, either will suffice to assist in extricating from the surrounding difficulties, and we defer to your good judgment as to the introduction of both or either, or a modification of either, so that the necessary end of serving the enterprise dependent upon such an enactment may be attained.

The purport of the bills inclosed are:

First. An act allowing three years' extension of time by the Secretary of the Interior to desert entrymen to make final proof.

Second. An act to allow final proof by a desert entryman who, in good faith, has expended as much as $6 per acre on his entry. (The water not applied.)

Personally I favor the latter enactment. Judge Gunter, for good reasons, expressed to me, is inclined for the former. After all, I think it safe to say that either will do, and we shall be more than pleased if, as the result of your good offices, either enactment shall be secured.

Perhaps better than a choice of either would be the enactment of both.

All these questions we defer to your good judgment, which, in contact with the situation at Washington, is, of course, the better advised as to difficulties and possibilities before the committees in the House and in the Senate.

As you know, for a number of years I have been closely connected with practically all of the larger irrigation projects of northern Colorado, and therefore have reason to believe myself one of those most familiar with the irrigation development and possibilities from the South Platte River and its affluents, as well as the administrative policies best calculated to work success in the completion of the giant systems we have laid out and in course of completion.

Not alone because it is affected by this proposed legislation, but because its situation is like many another in our irrigation development of the arid West, I am going to explain to you the conditions surrounding the Greeley-Poudre project.

The Greeley-Poudre Irrigation District is a municipal corporation, comprising an aggregate of 125,000 acres of fertile, irrigable land of the same character and lying immediately contiguous to and on the north side of the irrigated territory of the Cache la Poudre Valley.

	Acres.
Of the area there is held in freehold about	80,000
Of the area included in and made part of the district under the laws of the State there are lands held under the desert-land act an aggregate of about	40,000
And lands held under homestead, about	5,000
Total (but these figures are approximates)	125,000

The lands are practically identical in character, elevation, and productivity with those now in irrigation tillage under the ditches of the Cache la Poudre Valley, and when the works not constructed shall be completed and the available supply therefore shall be diverted, stored, and distributed, the area served will almost double the irrigated territory of the north side of the Cache la Poudre Valley.

The enterprise, in my judgment, is the greatest irrigation enterprise now contemplated or in course of construction in our State, and to it, therefore, there is due every support and assistance which can be given by our citizens and representatives, to the end that the enterprise may be completed and its great benefits secured.

The district is bonded for $5,100,000 of 6 per cent irrigation district bonds, of which, in the construction of works here described, there has been expended, approximately, $2,600,000.

And there remains in the Treasury for completion, approximately, $2,500,000.

A total of $5,100,000.

The district works consist of an extensive system of mountain collection ditches, tunnels, and reservoirs, as well as an extensive system of distributing mains, reservoirs, and laterals upon the plains for diversion and storage and distribution of water from the Laramie River and the Cache la Poudre River in Colorado.

Both the entire system of works and the entire area of lands lie within our State and employ only Colorado water flows diverted within the State and carried within our border for the development of Colorado lands and no other. The district was formed April 14, 1909, and by the 9th of September in that year had proceeded with such diligence that, by its directors and engineers, it had devised the comprehensive system of mountain collection ditches, reservoirs, tunnels, plains, mains, reservoirs, and distributing system ample and sufficient to take care of the water flows when obtainable and to distribute in sufficient quantities when needed to answer the irrigation necessities of serving the entire area; and in order to make possible the financing of the district and the completion of the system by bonds, to be a lien upon all the area served, had included, in accordance with Colorado law, under contracts with every homestead and desert entryman, the 45,000 acres of homestead and desert lands.

The district then deposited its bonds in escrow, to be paid in stages to the contracting company as the construction should progress, and thereafter with a diligence equal to that put forth on Government enterprises of like character and size, rapidly pressed this construction work, which was to have been completed within two years from the contract date, until interference with financing, through no fault of landholders or desert entrymen, arose in the way of interstate litigation, which alone has stilled the progress and prevented the completion.

CHARACTER OF WORK DONE.

Before litigation interfered with the enterprise there was completed of the mountain collection ditches upon the Laramie River, including the tunnels and reservoirs, work costing more than $300,000; the Laramie River tunnel was built over two miles and a quarter in length, 7½ by 9½ feet in the clear, and more than half of the distributing main in the Cache la Poudre Valley, almost 120 miles in length, was completed, as well as many of the distributing laterals and many of the reservoirs of the system.

In addition to the work done under the contract of September 9, 1908, the district itself has spent many thousands of dollars in lining the Laramie River tunnel, building the Dover Reservoir, in engineering and like expenses, which it has paid by means of annual levy of tax, which has been each year since 1909 collected from the deeded lands and from the homestead and desert entrymen who have annually paid their annual district charge in conformity with their contracts of inclusion granting them their water right in the district.

Litigation prevented completion.

In 1910, while the construction progress was in full blast at a rapidity sufficient to assure completion within a time limit so that every desert entryman could make his proof conformable to his contractural promise to the Government, threats of litigation over the water flows of Laramie River greatly embarrassed the district and its contractors in disposal of the district bonds; and though the work continued for many months thereafter with extended forces of men, teams, and machinery, a suit was later in 1910 commenced in the Supreme Court of the United States by the State of Wyoming against the State of Colorado and the district, attempting to restrain the use of any of the Colorado water flow of Laramie River upon these Colorado lands of the district, and though, in the opinion of the best legal minds of our State, this action is without merit and will ultimately be defeated, its pendency did interfere with and prevent the sale of the district securities dependent for their worth upon the full water supply by the suit threatened, and the construction work was of necessity discontinued and must remain quiescent until the termination of the case, which it is hoped will be early in 1915.

BONA FIDES OF ENTRYMEN.

The desert entrymen of the Greeley-Poudre district have acted in the utmost good faith, and, but for circumstances entirely beyond the control of the Government and entrymen, would have in every instance been able to apply water and reclaim their lands within the time limit prescribed by the acts under which their entries were made, and the designed object and beneficent purpose of the desert-land act would have been an accomplishment but for these intervening circumstances, for which no party concerned with the statutory contract was in any manner responsible.

The entrymen have each year paid to the district an annual tax upon their lands equal to the taxes levied upon the patented lands for district purposes, and thereby have become and still are an active part of

this body politic, which, through the agency of its board of directors, still in active control, has managed and still is managing the district affairs, expending the district money for such constructions as have been above named for engineering, and many thousands of dollars for the defense of this interstate litigation so vital in importance to the existence of the district and the enjoyment of the water rights necessary for the irrigation of its lands.

In many instances the expenditures of these entrymen in their honest effort to comply with the law is as high as $8 and $10 per acre for water rights in addition to the water rights to be afforded by the district and for district taxes and for improvements and in preparation of the land for tillage by irrigation.

The whole area without water is desert and of the character contemplated by law to be raised to high value by the application of the water supply. The obtainable water supply by means of the contemplated works is adequate, and the whole plan is feasible and practicable. The interruption of the progress is absolutely without fault on the part of entrymen, and wholly beyond their control, so that to subject them to forfeiture of their entry and the loss of their initiated rights is an injustice which the Government should and if possible will prevent.

The success of the enterprise is in a way first dependent upon the determination favorable to the district of the Laramie River litigation, in regard to which, upon precedent and reason, it is safe to say there is no doubt but that it will be terminated within the coming year favorable to the State of Colorado and to the district. And, secondly, upon the protection of the integrity and safety of tenure of the desert entries, so vital to the district, its securities, and its security holders.

This question concerns many hundreds of desert entrymen, as well as creditors of the district, as bondholders and otherwise, and more than all, the success or failure of Colorado's greatest irrigation enterprise now in course of construction, as well as many others of like character, not only in this, but others of the arid States.

It is because of the transcendent importance of the subject here considered that I write you thus at length, and solicit for us your good offices and service in the passage of these bills.

I feel confident that on request you will have the active aid and assistance of Congressmen TAYLOR and KEATING, as well as the assistance of Senators THOMAS and SHAFROTH.

I am sending a copy of this letter to THOMAS and SHAFROTH, and ask that you lay this communication before Messrs. KEATING and TAYLOR, and am going to thank you in advance on behalf of all so materially interested in this important subject for the services you may bestow, and to ask you for report of any progress you may make and any suggestions you may have as to where we may aid you in furtherance of the desired end.

Judge Gunter, who is thoroughly familiar with the situation here in part described, expects in a few days to write you his views.

With kindest regards and good wishes, I am

Yours, truly,

CHARLES F. TEW.

I also insert a letter which I received from the Hon. J. C. Gunter, a prominent attorney of Colorado, who has been interested in the development of irrigation enterprises:

DENVER, *October 14, 1914.*

Hon. H. H. SELDOMRIDGE,
Member of Congress, Washington D. C.

DEAR SIR: Mr. Charles F. Tew has sent me a copy of his letter to you of September the 28th and I have conferred with him as to copies of the two bills submitted.

Mr. Tew has gone into the situation in considerable detail, so I will be brief. The pith of the situation in northern Colorado, to which the legislation requested would be applicable, it this: A stupendous irrigation system—The Laramie-Poudre Reservoirs & Irrigation Co.—was projected and its construction in good faith vigorously and substantially entered upon. A large sum of money was expended in the purchase of reservoir sites, partially constructed reservoirs, irrigation ditches constructed and partially constructed, water rights, lands, and other holdings essential to the success of the projected system. Later an irrigation district was formed embracing 125,000 acres of the fairest lands in one of the best counties of the State—Weld County. Bonds amounting to $5,100,000 were issued and a contract entered into between the irrigation district so formed and the above company for the purchase and construction of the system, and work after the execution of this contract was further vigorously pushed under the terms thereof.

A substantial part of the water supply for the system was to be taken from an interstate stream, the Laramie River. After the contract a suit was instituted by Wyoming against Colorado to prevent the diversion of the waters, or any part of the waters, of this interstate stream. This litigation, at the first, interfered with the sale of irrigation-district bonds, and later entirely prevented any further sale of the bonds. The questions involved in this suit are similar to those decided in the Kansas-Colorado case. I have been of counsel in this case from its inception. The evidence is now all in and extended. I am strongly of the opinion that Colorado ought to and will prevail in this litigation and in this particular suit. I do not believe the irrigation system will be completed or very much progress made in its construction until this case is decided and confidence thereby imparted as to the value of these bonds. I believe it will be decided within 12 to 14 months.

About 40,000 acres in the above irrigation district have been filed upon under the desert-land laws. The filings have been made in good faith, and the entrymen have done all in their power to comply with the desert-land act in the reclamation of their lands. All of them have put substantial sums into these filings and many of them practically all they have. Through no fault of theirs they have been unable to comply with the desert-land laws. Many of their filings will expire by limitation of law during the coming year. If they are allowed three years longer to furnish satisfactory proofs of the reclamation of their lands, I believe that they will be able to satisfy the requirements of the desert-land act. If the system ever is built, and I believe it will be, it will be built within the next three years.

I have said to Mr. Tew that I think the bill allowing these entrymen three years longer in which to furnish satisfactory proof of reclamation is a reasonable one on the part of the Government and a just one on the part of the entrymen. Such a bill will stimulate efforts for the completion of the system, will require reclamation on the part of the entryman, and yet will prevent misfortune being visited upon him—the entryman—through no fault on his part.

I again call attention to the clear and forcible presentation of the facts pertinent to the above in the letter of Mr. Tew.

I respectfully urge interest and action on your part in behalf of such legislation and on the part of the other members of our delegation.

I am, sir,

Respectfully, yours,

JULIUS C. GUNTER.

I also insert two letters from the Willow Creek Irrigation Co., together with a statement of conditions affecting desert-land entries under this project:

THE WILLOW CREEK IRRIGATION CO.,
Greeley, Colo., February 2, 1914.

Hon. H. H. SELDOMRIDGE,
House of Representatives, Washington, D. C.

DEAR SIR: Replying to your kind favor of the 26th ultimo, in the matter of the stockholders of the Willow Creek Irrigation Co.:

We have nearly all taken advantage of the acts relating to the extension of time for making final proof. Many of us made our filings nine years ago this coming spring. I am now pretty well satisfied that an extension of time will do us no good.

As to changing our filings to homestead entries, some of our stockholders have already used their homestead rights. Nearly all of the others are so circumstanced that they can not leave their business and make residence on the prairie. It would cost them more than the land is worth, to say nothing of the damage which a prolonged absence from their business would occasion.

I came to Colorado in 1877; and, having followed the business of surveying and irrigation engineering for a good many years, I am quite familiar with the possibilities of dry-land farming. I am fully convinced that it is more than a waste of time for a man to undertake to farm 160 or even 320 acres of dry land. A man engaged in stock raising who has control of several hundred acres which will furnish a sizable range for stock can generally raise some feed to supplement the winter pasture. Under the Campbell system the tillage of large areas is recommended, at least one-half lying fallow every other year.

Very few of our stockholders have filed on over 160 acres, some not more than 80, and none over 320 acres.

Now, if we did not wish to make homes on this land, why did we take it, and if it is not tillable why should we want patents for it? you may ask. We took the land because Willow Creek, which was to furnish our water supply, was known to be visited by large floods, and we hoped for sufficient water to enable us to farm these lands. The land was in every way attractive, but the region was somewhat remote and it was not easy to determine the extent of the water supply. The floods, though high, proved to be of short duration, and are wholly inadequate for the purpose of reservoir filling.

We wish patents so that we may be secure in our titles and thus be enabled to associate ourselves together to engage in farming under the Campbell system or to engage in stock raising or to make such other disposition of the land as we may see fit and by so doing be recompensed in some measure for the large expenditure we have made in testing out the water supply.

Thanking you for the interest you have shown in our behalf and assuring you of our appreciation of your efforts to help us out of our difficulties, I remain,

Yours, very truly,

C. D. PAGE.

THE WILLOW CREEK IRRIGATION CO.,
Denver, Colo., January 17, 1914.

Hon. H. H. SELDOMRIDGE,
House of Representatives, Washington, D. C.

DEAR SIR: I will inclose herewith a copy of a letter to Congressman TAYLOR, which will partly explain to you what has gone before in our efforts to obtain relief from the undesirable position in which we find ourselves. We solicit your aid in our cause, as you represent the district in which our project is located.

The Willow Creek Irrigation Co. was incorporated in 1905; filings were made on water from Willow Creek, in Weld County, Colo., and construction work was begun in April of that year. We have built a diversion dam across the creek bed, a large intake ditch, a reservoir for storing the water, and an outlet ditch through which to deliver water to the land. By means of this system we intended to reclaim about 3,000 acres of desert land, and, although the system is not complete, we have spent more than $10 per acre for all the land that could be watered. The stockholders of the company have filed desert-land entries and have made improvements on this land in the way of fences, buildings, cultivating the soil, etc., and in every way have shown good faith in our project, but we have been unable to furnish any water for irrigation, and all of our interests are jeopardized. We can not prove up under existing laws, but we feel that there should be some means provided for acquiring title to lands in a case like ours, and if you think it is possible to pass a bill that would give us the desired relief, I urgently request that you make the effort.

No doubt you will require full details regarding our project, its present physical condition, what we have done, the causes that have prevented us from accomplishing what we have undertaken, our financial condition, etc., and I will undertake to furnish you with such information, either by mail or by personal interview, as you may suggest. Please see Congressman TAYLOR in regard to what he has done in this matter.

We realize that the time is short in which to accomplish our purpose during the balance of the present session of Congress, and that if we hope to do anything it should be done promptly.

Hoping for an early and favorable reply, I remain,

Yours, truly,

F. W. REYNOLDS,
Secretary-Treasurer.

A BRIEF OF THE CASE—THE WILLOW CREEK IRRIGATION CO., FOR CONSIDERATION IN CONNECTION WITH BILL (H. R. 14152) FOR THE RELIEF OF DESERT-LAND ENTRYMEN UNDER THIS AND OTHER PROJECTS.

This company was incorporated in 1905; filings were made on water from Willow Creek in Weld County, Colo.; construction of work was begun in April of that year; a diversion dam across the creek bed, a large intake ditch, a reservoir for storing the water, and an outlet ditch through which to deliver the water to the land has been built; by means of this system it was intended to reclaim about 3,000 acres of desert land; the system is not complete, but more than $10 per acre for all the land that could be watered has been spent; the stockholders of the company have filed desert-land entries and have made improvements on this land in the way of fences, buildings, cultivation of the soil, etc., and in every way have shown good faith in the project, but have been unable to secure water for irrigation, and all

interests are jeopardized. They can not prove up under existing laws, as nearly all have taken advantage of the acts relating to the extension of time for making final proof, and many of them made filings nine years ago. It seems certain that an extension of time will do no good.

Some of these stockholders have already used their homestead rights and would be entirely eliminated if their filings were changed to homestead entries; nearly all of the others are so circumstanced that they can not leave their business and make residence on the prairie, as it would cost more than the land is worth, to say nothing of the damage which a prolonged absence from their business would occasion.

Very few of the stockholders have filed on over 160 acres, some not more than 80 acres, and none over 320 acres.

The land was taken up under this project because Willow Creek, which was to furnish the water supply, was known to be visited by large floods, and it was hoped that sufficient water could be conserved to irrigate these lands. The floods, though high, proved to be of short duration and are wholly inadequate for the purpose or reservoir filling.

Patents are desired by these people so that they may be secure in their titles and enable them to associate together to engage in farming under the "Campbell system" of dry-land farming, or to engage in stock raising, or to make such other disposition of the land as they may see fit, and by so doing be recompensed in some measure for the large expenditure of money made in testing out the water supply.

I also have a large number of communications from various parties interested in other projects in the State of Colorado, and am satisfied that the need for general relief is most imperative.

The action of the Senate in adopting the amendment offered by Senator SHAFROTH, of Colorado, inserting the provisions of the proposed law in the general deficiency bill, and the concurrent action of the House conferees, Messrs. FITZGERALD, of New York; BARTLETT, of Georgia; and GILLETT, of Massachusetts, and the adoption of the report by both Houses of Congress, will, in my opinion, afford the relief which has been so much desired. No law passed by this Congress relating to public lands will be so gladly received in all the Western States as this law to which I have just referred. It will relieve the Department of the Interior of a vast amount of work arising from complications in desert-land entries; it will confirm title to those who have complied with the spirit and intent of the law and yet, through no fault of their own, have not been able to perfect title, and it will result in added development upon entries the holders of which can now feel assured that permanent title will ultimately be given to them. The law will only affect entries made prior to July 1, 1914. The regulations now in force which control desert-land entries provide that the entryman must establish to the satisfaction of the department that he has available a good and sufficient supply of water with which to reclaim the land filed upon. This law will stimulate agricutural development in Colorado and other Western States and will be received as a most beneficent piece of legislation.

Alaska Fisheries.

EXTENSION OF REMARKS

OF

HON. JAMES WICKERSHAM,

OF ALASKA,

Thursday, March 4, 1915.

Mr. WICKERSHAM. Mr. Speaker, under the unanimous-consent permission to extend my remarks in the RECORD on Alaska fisheries, given by the House on March 2, I wish to place in the RECORD a copy of House bill 21607, introduced in the last hours of this session by the gentleman from Virginia [Mr. CARLIN]. This bill is a modification of the tentative bill mentioned in the letter addressed by me to the President, which follows immediately after it, with some additional amendments which make it a little more illiberal than the original.

For two or three days the Deputy Commissioner of Fisheries, from Virginia, carried this bill around the Capitol attempting to secure its introduction by Members of Congress from the Pacific coast, who, to their credit, invariably refused to introduce it for him. It is as follows:

A bill (H. R. 21607) to amend the laws for the protection and regulation of the fisheries of Alaska.

Be it enacted, etc., That every person carrying on the business of catching, canning, curing, or preserving fish, or manufacturing fish or fishery products within the Territory of Alaska, or in any of the waters of Alaska over which the United States has jurisdiction, shall, in lieu of all other Federal or Territorial license fees and taxes therefor and thereon, secure licenses and pay license fees or taxes on said business and output as follows:

For each fish-trap site, except in the Yukon River, $100 per annum; for each fish wheel, except in the Yukon River, $100 per annum; for each purse seine in use, $60 per annum; for each haul or beach seine in use, $30 per annum; for each gill-net boat and equipment, $2 per annum; canned salmon, per case, according to the species, king or spring and sockeye or red, 6 cents per case; coho or medium red, 5 cents per case; humpback or pink, 4 cents per case; chum or keta, 3 cents per case; mild-cured salmon, $1 per tierce; pickled salmon, 20 cents per barrel; salt salmon in bulk, 10 cents per 100 pounds; pickled salmon bellies, $1 per barrel; whale oil, 10 cents per barrel; meal made from the bones of whales, whale fertilizer, and whale meal, 50 cents per ton.

No fish cannery, saitery, mild-cure plant, or other establishment for the preservation of fishery products shall hereafter be built, converted, or adapted in Alaska on any salmon stream above its mouth without first obtaining the approval of the Secretary of Commerce. No whaling station, whether on shore or afloat, shall hereafter be built, converted, or adapted in Alaska without first obtaining the approval of the Secretary of Commerce.

All licenses and renewals thereof for fishing appliances shall be issued by the Secretary of Commerce, to whom or to whose local authorized representatives all fees therefor as herein provided shall be paid in advance. All such licenses shall be designated by consecutive numbers and shall indicate the kind of the particular appliance for which the license is issued and the name of the person owning the same. The owner of each fishing appliance shall have conspicuously affixed thereto a tag, brand, or lettered notice bearing the license number. In the case of movable apparatus the number of this tag, brand, or notice shall also be placed in figures at least 6 inches in height on both sides of the bow of each fishing boat used. In the case of renewals of licenses the same serial numbers shall continue year after year.

The specific taxes on the finished products shall be collected by the clerks of the United States district courts of Alaska for the respective judicial divisions of such courts wherein the tax has been created, and all such taxes shall be due and payable on or before December 31 of each calendar year, and if not so paid shall become delinquent and a penalty of 15 per cent shall be forthwith added to the original amount, and the whole amount, including the penalty, shall draw interest at the rate of 1 per cent per month until paid. And it shall be the duty of all United States district attorneys to proceed by civil suit in the name of the United States to collect all delinquent taxes in their respective districts, and neither the product upon which the tax was created nor any property belonging to delinquents shall be exempt from attachment or execution therefor.

All of the license fees and taxes derived from the Alaska fisheries shall be covered into the "Alaska fund" of the Treasury of the United States created by the act of January 27, 1905, to be expended as now provided by law, except that of said license fees and taxes at least 50 per cent, or as much thereof as in the judgment of the Secretary of Commerce may be necessary, may be expended by the said Secretary of Commerce for the construction, purchase, maintenance, and operation of fish hatcheries in Alaska and for other purposes relating to the investigation, development, and preservation of the Alaska fisheries, and such moneys are hereby appropriated for such purposes. The Secretary of the Treasury shall send to the Secretary of Commerce at the end of each quarter a statement of the amount in the "Alaska fund" remaining available for the purposes specified for fisheries work in this act.

SEC. 2. That each fish-trap site shall consist of a reserved area in the water, rectangular in form; the size—to be determined by the locator—shall not be more than 1,000 feet one way nor more than 3,000 feet the other way; a trap may be built anywhere within the limits of such reserved area; the general course of the trap shall be lengthwise of the trap site; not more than one trap or other fishing appliance may be constructed or operated at the same time within the limits of any such reserved area; there shall be clear side spaces or passageways of not less than 2,500 feet laterally between trap sites, and clear end spaces or passageways of not less than 800 feet endwise between all fish-trap sites and between all constructed traps.

Fish-trap sites shall be located by placing two substantial piles, posts, or monuments on the proximate shore at or near the line of high tide, in such position as to indicate the lateral extremities or boundaries running offshore of the trap site to be occupied, one of said piles or markers to be placed on each of said lateral boundary lines produced inshore, the two piles or markers forming a base line from which the trap site may be located: *Provided*, That if it is not feasible on account of local conditions or for any other cause to place markers at or near the line of high tide so as to mark the location in the manner above indicated, such markers may be placed within reasonable proximity to the trap site, so as to form a base line from which the trap site may be located.

There shall be placed on such piles or markers a location notice containing the name of the locator, the date of location, and a reasonable description of the trap site claimed, showing the approximate distances and directions of the lines bounding the same; said notice shall be not less than 12 by 18 inches in size, in black letters not less than one-half inch in height on a white background. But the location piles or markers, or notice, shall not be effective to hold any trap site beyond the 31st day of December of the next succeeding calendar year of the date of location unless a survey shall be made and a map thereof be filed with the Secretary of Commerce as herein directed, and unless a fish trap is built upon the site within such period of time.

Every person who, at the time this act takes effect, shall be occupying or claiming one or more fish-trap sites in the waters of Alaska, or who has occupied and used any fish-trap location or locations during the preceding fishing season, or who may thereafter desire to occupy any unoccupied fish-trap site or sites, wherever it may be lawful to operate fish traps in such waters, shall, before the 31st day of December of the next succeeding calendar year following the date of the passage of this act, in the case of existing locations, and before the 31st day of December of the calendar year in which they are sought to be located, in the case of new locations, cause each trap site to be surveyed by a competent surveyor, unless a satisfactory survey of any such trap site shall have been previously made, in which case such existing survey may be used; the occupant or claimant shall cause to be made from the actual survey of each trap site a location map, drawn to a scale of 1 inch to 400 feet, containing a plat and description of said trap site sufficient for its ascertainment and identification on the premises; and shall also cause to be prepared a vicinity map, drawn to an approximate scale sketched upon or copied from a United States Coast and Geodetic Survey chart—giving the number thereof—showing the approximate location of the proposed trap site with relation to the general locality, showing the location of all adjacent fish-trap sites and location monuments or markers. Such vicinity map may be shown upon the same sheet as the location map, or upon a separate sheet to accompany same. Such maps must be certified by the surveyor who made the survey to be true and correct maps of the trap sites and premises as shown. The location map shall also contain a certificate of the claimant of the said trap site, stating that he claims the trap site shown on the map and specifying the date under which the trap site was located under this act; the last-mentioned certificate may be signed by the occupant or claimant, or by his agent or attorney in his behalf, and shall contain the post-office

address of the claimant. Such maps, with the certificates thereon, shall be filed with the Secretary of Commerce, and shall, from the date of filing, constitute full and complete notice that the trap site shown upon the location map has been appropriated and is held, occupied, and claimed by the person designated thereon as claimant. A duplicate copy of each of such maps shall also be filed in the nearest district office of the Department of Commerce in Alaska; another duplicate of such maps shall be filed at the Seattle office of the Bureau of Fisheries; and—for information only—in the office of the clerk of the United States district court for the the judicial division in which such trap is situate. And it shall be the duty of the public officials in whose office any such maps may be offered for filing to receive and safely keep the same on file in their respective offices.

From and after the location of any such trap site and after the approval thereof by the Secretary of Commerce the claimant thereof and his heirs, executors, administrators, successors, and assigns shall have the exclusive right to occupy, maintain, and fish the same; to renew the license therefor year by year until abandoned, forfeited, or terminated through operation of law; to mortgage, sell, and transfer such rights during such time as he or they shall comply with the laws of the United States pertaining thereto.

Every person being the prior occupant or in lawful possession of one or more fish-trap sites when this act takes effect shall have the preference right until the 31st day of December of the next succeeding calendar year following the date of the passage of this act within which to perfect his possessory rights to such site or sites under the provisions of this act by making, surveying, and filing the maps with the Secretary of Commerce as herein provided. When surveys show adjacent fish traps which have been operated within the preceding calendar year to have been within the prohibited distances of 2,500 feet laterally and 800 feet endwise from each other, as prescribed by this act, that location which has had the longest continuous period of occupation for fishing from season to season shall have precedence and the junior location must give way. No trap site shall be so located as to encroach upon the prohibited distances from any existing trap or occupied trap site then lawfully held by another. Locations for trap sites hitherto unclaimed or abandoned or forfeited shall prevail in the order of location.

If any claimant of a fish-trap site desires to construct and operate a fish trap upon such site during the same season it is claimed, he shall file, in triplicate, with the authorized representative of the Department of Commerce for the district in which the trap site is claimed, an appropriate section of a Coast and Geodetic Survey chart showing the location of the site, the nearest adjacent claimed or occupied trap sites, and the nearest mouths of salmon streams. Such a trap-site claim shall be accompanied by the license fee of $100. It shall be the duty of said representative to telegraph to the Secretary of Commerce recommendations regarding such trap site, and, if approved by the Secretary of Commerce, he shall, with the least possible delay, so advise the claimant by telegraph of such approval, so that the trap site may be used during the current fishing season. This temporary approval shall be operative only during the calendar year in which granted, and shall be granted only upon payment to the Secretary of Commerce of a license fee of $100.

All conflicting claims to trap sites shall be determined by the Secretary of Commerce. Also full power is hereby vested in the Secretary of Commerce to withhold the issuance of licenses for any fish-trap sites or renewals of such licenses, when in his judgment the results of fishing operations in any region indicate that the number of salmon taken is excessive and detrimental to the future of the industry: *Provided*, That such power shall be exercised only after a hearing shall be granted to interested persons in the manner provided for in section 10 of this act. When any waters so closed shall be reopened, the preference to reoccupy fish-trap sites shall be given to previous holders of any such sites therein situated.

Failure for a continuous period of two consecutive calendar years to construct and operate a bona fide fish trap upon any located trap site, or failure to apply for a renewal of the license therefor, at least 60 days after the expiration of any existing license therefor, shall work an abandonment and forfeiture of such trap site and shall preclude the defaulting claimant from relocating the same within a period of two years.

It shall be unlawful to locate any trap site except for the bona fide purpose of constructing an effective fish trap thereon.

No false or fictitious fish trap or other fishing appliance not intended as an effective device for catching fish shall be maintained in any of the waters of Alaska.

No fish trap or other fishing appliance shall be operated or placed where it will impair the efficiency of any fish hatchery. The Secretary of Commerce is authorized to cause the removal of any such fish trap or other fishing appliance: *Provided*, That such authority shall be exercised only after the interested parties shall have been given a hearing.

No bent or recurved end, commonly called a "jigger," directed or turned toward the opening of the trap, of more than 50 yards in length, shall be attached to or operated in connection with any fish trap in Alaska. There shall be no more than one jigger attached to each of the two sides of a fish trap, and such jiggers may be attached only to the heart.

During the entire season each fish trap shall have affixed thereto a conspicuous notice at the outer end of the pot, in black letters not less than 6 inches in height upon a white background, bearing the license number and the name of the licensee.

Nothing herein contained shall be deemed or construed to give to the locator or holder of any fish-trap site any title other than a possessory right of occupation, or easement, for fishing purposes, subject to termination by forfeiture, abandonment, or operation of law.

SEC. 3. That it shall be unlawful to erect or maintain any fish trap, stake net, or other fixed or stationary apparatus, except for the purposes of fish culture or scientific investigation under the direction or with the approval of the Secretary of Commerce, in any of the waters of Alaska, at any point where the distance from shore to shore is less than 500 feet, or within any salmon stream at or above any point where the stream is less than 500 feet in width, or within one-half mile of the mouth of any salmon stream where the same is less than 500 feet in width: *Provided*, That the use of stake nets shall not be prohibited in the delta of the Copper River. The Secretary of Commerce is hereby authorized and directed to have any and all unlawful obstructions removed or destroyed.

SEC. 4. That it shall be unlawful to cast, lay, set, place, drive, construct, or maintain any drift net, gill net, set net, stake net, trap, or any other fishing appliance for any purpose, except for authorized purposes of fish culture or authorized scientific investigation, across or above the tidewaters of any creek, stream, river, lagoon, estuary, channel, or other waters, for a distance greater than one-third the width thereof.

It shall be unlawful to lay or cast any seine or net of any kind within 2,000 feet of the mouth of any salmon stream when the same is less than 500 feet in width: *Provided*, That this shall not apply to the delta of the Copper River, or to the delta of the Yukon River. It shall be unlawful to use or have in possession any seine less than 100 fathoms in length.

It shall be unlawful to lay or cast any seine or gill net or other movable fishing apparatus within 200 yards of any other seine, gill net, or other movable fishing apparatus which is being or which has been cast, laid, set, or placed in any of the waters of Alaska.

It shall be unlawful to lay, cast, or operate any movable fishing apparatus within any fish-trap site upon which a trap is located or within 1,000 feet of any fixed fishing apparatus.

It shall be unlawful to place, anchor, drive, or construct any fish trap, stake net, or other fixed fishing appliance within 3,000 feet laterally or 800 feet endwise of any other fish trap or other fixed fishing appliance: *Provided*, That in the operation of stake nets the distance interval between such stake nets need not be greater than 1,000 feet.

It shall be unlawful to erect or maintain any stake net of greater length than 1,000 feet, or constructed in any other manner than by stakes driven in substantially a straight line: *Provided*, That the restriction as to distance intervals between stake nets shall not be construed to apply to the use by the native Indians of stake nets not over 50 yards in length to take salmon for their own domestic consumption and not for sale.

It shall be unlawful to take any salmon by means of a spear or gaff, except for personal, domestic, or family consumption; and it shall be unlawful to purchase any salmon taken by means of a spear or gaff for use in canning, salting, or otherwise preserving for sale.

SEC. 5. That for the purposes of this act, the width of a creek, stream, river, lagoon, estuary, or other waters shall be determined by measurements at right angles to the thread of the stream of said waters at mean high water; and where waters are divided by islands, each channel shall be measured independently and not as a part of the greater body of water.

All measurements of waters referred to herein shall be made at mean high water, and the Secretary of Commerce is authorized to determine and indicate by suitable markers, monuments, or notices the mouth of any stream, river, or other waters referred to herein. It shall be unlawful to efface, destroy, or remove, or in any manner interfere with any marker, monument, or notice provided for in this act.

SEC. 6. That it shall be unlawful to put or place in any of the waters of Alaska any explosive or poisonous substance whatsoever for the purpose of catching, taking, killing, or injuring fish; or to place or deposit in, or discharge or pass into, or cause or suffer to be placed or deposited in, or to place or cause to be placed where it may pass into any stream, creek, river, lake, lagoon, estuary, or the approaches thereto, any lime or other caustics, tar, petroleum, asphalt, bitumen, or other carbonaceous material, oils, acids, or sulphates, or compounds thereof, sawdust, shavings, tanbark, slabs, edgings, mill or factory refuse, slag, sluicings, tailings, smelter or mine refuse, or any other substance destructive to fish, fish fry, or the food of fish, or which is or may be injurious to the spawn or spawning beds of fishes; and in the case of substances known to be deleterious to fishes or fish foods or spawn, it shall not be necessary to prove that the pollution of the waters by these substances in the particular case in question has actually caused the death of any particular fish, fish fry, or spawn: *Provided*, That nothing in this section shall be construed to prohibit the proper use of explosives in connection with the construction of buildings or improvements.

SEC. 7. That it shall be unlawful for any person to waste or destroy salmon, cod, halibut, herring, and trout taken or caught in any of the waters of Alaska: *Provided*, That waste or destruction of such fish shall not be deemed in violation of this section when resulting directly from storms or other unavoidable conditions. The utilization of any part of food fishes, other than the offal and waste thereof from establishments preparing fish food products, shall, after this act becomes effective, be regarded as such waste if utilized in the manufacture of fertilizer, fish meal, fish oil, or by-products thereof.

It shall be unlawful in handling salmon or other fishes to be utilized commercially for human consumption to insert any fish pew, gaff, or hook in that part of the flesh so utilized: *Provided*, That this shall not apply to any fish that are canned.

It shall be unlawful to can or salt for sale for food any salmon more than 60 hours after it has been killed: *Provided*, That no salmon shall be so utilized if unfit for food regardless of how much less than 60 hours it has been out of the water.

SEC. 8. That it shall be unlawful to fish for, take, or kill any fish of any species in any manner or by any means, except by hook and line, solely for purposes of angling for sport and not for commercial uses in any of the waters of Alaska, except in the Arctic Ocean and Bering Sea and the waters tributary thereto, Cook Inlet, and the Copper River Delta, from 12 o'clock noon of Saturday of each week until 6 o'clock a. m. of the Monday following; or to fish for or catch or kill in any manner by any appliance, except by hook and line, solely for angling or sport fishing, any salmon in any stream of less than 100 yards in width between the hours of 6 o'clock in the evening and 6 o'clock in the morning of the following day of each and every day in the week: *Provided*, That the weekly close season shall not be construed to extend to the cod and halibut fisheries.

Throughout the weekly close season herein prescribed the gate, mouth, or tunnel of all fish traps shall be closed by hauling the tunnel to one side against the entrance or tunnel wall of the pot, and the heart shall be closed by an apron placed across its entrance, which apron shall extend from above the surface of the water to the bottom of the water at the place where the trap is maintained, and be connected securely to the piles on either side of the entrance to the heart of such trap, fastened by rings not more than 2 feet apart on a taut wire stretched from top to bottom of piles, so as to effectually prevent any salmon from entering the heart of such trap. There shall also be an opening of at least 10 feet in the hook of all jiggers, and there shall also be an opening in the lead of such traps next to the apron of at least 10 feet wide and extending below the surface at least 4 feet at mean low water, so as to permit free passage of all fishes at all stages of the tide.

SEC. 9. That it shall be unlawful for any person canning, salting, or curing fish of any species in Alaska to use any label, brand, or trademark thereon which shall tend to misrepresent the contents of any package of fish offered for sale: *Provided*, That the use of the terms "red," "medium red," "pink," "chum," and similar well-established terms as applied to the various species of Pacific salmon under trade

usages shall not be deemed in conflict with the provisions of this act when used to designate salmon of these known species.

There shall be embossed on one end of every can used for packing salmon or other food fishes distinctive marks or emblems by which the packer of the can may be identified. Each packer shall file with the Secretary of Commerce samples in triplicate so embossed of each can end used by him.

SEC. 10. That the Secretary of Commerce may, in his discretion, set aside any streams or lakes, or parts thereof, including the waters of the approaches thereto, as preserves for spawning grounds in which fishing may be limited or entirely prohibited, but such power shall be exercised only after all persons interested shall be given a hearing, of which due notice must be given by publication; and when the interested parties are known to the department they shall be personally notified by notice mailed not less than 60 days previous to such hearing. No order made under this section shall be effective before the next calendar year after the same is made.

SEC. 11. That the Secretary of Commerce is hereby authorized in his discretion to purchase any or all of the private salmon hatcheries in Alaska which have heretofore been approved under the act of Congress of June 26, 1906, the same to be paid for so far as possible out of the fund to be created under the provisions of section 1 of this act: *Provided*, That if said fund be insufficient to cover the purchase price of such hatcheries so purchased and also to meet the other current expenses to be met therefrom, the Secretary of Commerce shall issue to the former owners of such hatcheries so purchased certificates of purchase for any unpaid balances due them in such denominations as may be desired by the sellers, and such certificates may be used at any time for the payment pro tanto of any license fees or taxes upon or against or on account of the catch or pack of any salmon in Alaska.

Before any hatcheries shall be purchased as herein provided, they shall be inspected and appraised by three persons, two of whom shall be designated by the Secretary of Commerce and the third by the owners of said hatcheries, and in the event of failure of prompt designation of such third person by the hatchery owners, such third person may be named by the Secretary of Commerce. The report of the three persons herein provided for shall be submitted to the Secretary of Commerce.

The exemption from license fees and taxation in favor of the owners of private salmon hatcheries in Alaska, as provided by section 2 of the act of Congress entitled "An act for the protection and regulation of the fisheries of Alaska," approved June 26, 1906, for the release of red and king salmon fry shall apply to existing hatcheries until the date of their purchase or rejection by the Secretary of Commerce.

SEC. 12. That every person engaged in curing or in any manner utilizing fishery products shall within one month of the beginning of operations each season notify in writing the nearest representative of the Bureau of Fisheries in Alaska of the character of such operations and shall make detailed annual reports thereof to the Secretary of Commerce, on blanks furnished by him, covering all such facts as may be required with respect thereto for the information and use of the Department of Commerce and Congress. Such reports shall be sworn to by the superintendent, manager, or other person having knowledge of the facts, a separate blank being used for each establishment, and the same shall be forwarded to the department at the close of the fishing season, and not later than December 15 of each year.

SEC. 13. That any person violating any provision of this Act, or any regulation established in pursuance thereof, as herein provided, shall be deemed guilty of a misdemeanor and, upon conviction thereof, shall be punished by a fine of not less than $100 nor more than $1,000 or by imprisonment for a term of not more than six months, or by both such fine and imprisonment, at the discretion of the court; and in case of the violation of any provisions of section 3 of this act, and conviction thereof, a further fine of not more than $250 per diem may, at the discretion of the court, be imposed for each day such obstruction referred to in the said section 3 is maintained. And every vessel or other apparatus or equipment used or employed in violation of any provision of this act, or of any regulation made thereunder, may be seized by order of the Secretary of Commerce and turned over to the United States marshal and by him held subject to the payment of such fine or fines as may be imposed.

SEC. 14. That the violation of any provision of this act may be prosecuted in any district court of Alaska or in any district court of the United States in the States of California, Oregon, or Washington. And it shall be the duty of the Secretary of Commerce to enforce the provisions of this act and rules and regulations made thereunder. And it shall be the duty of the district attorney, to whom any violation is reported by any agent or representative of the Department of Commerce, or by any other competent person, to institute proceedings necessary to carry out the provisions of this act.

SEC. 15. That to enforce the provisions of this act the Secretary of Commerce is hereby authorized and directed to make and establish such rules and regulations not inconsistent with law as may be necessary for the proper investigation, inspection, and regulation of the Alaska fisheries and the investigation and protection of marine algæ, shellfish, and all other aquatic animals not otherwise provided for by law, and to depute, in addition to the employees of the Alaska fisheries service, from the officers and employees of the Department of Commerce a force adequate for the performance of the duties required by this act, and he shall annually submit to Congress estimates to cover the cost of the establishment of and maintenance of fish hatcheries in Alaska, the salaries and actual traveling expenses for such officials, and for such other expenditures as may be necessary to carry out the provisions of this act.

SEC. 16. That the catching or killing of any fish or other aquatic animal of any kind or species whatsoever in any of the waters of Alaska, unless otherwise provided by law, shall be subject to the provisions of this act, except when used for domestic food purposes and not for sale or for barter.

SEC. 17. That for the purposes of this act the following definitions are adopted to apply to the words in question whenever the same shall be used:

"Person," any person, persons, firm, partnership, corporation, association, or society.

"Fish trap," any pound net, fish wheel, or fixed or floating trap, whether constructed of piles and webbing and driven or constructed in the place operated, or whether constructed elsewhere and held in place by anchors or moorings, but excluding small native traps which may be transported in toto by one man.

"Stake net," a net, as a gill net, attached or fixed to stakes or piles.

"Case," forty-eight 1-pound cans, or the equivalent weight in cans of other sizes.

"Barrel," 200 pounds of fish, or 50 gallons of oil.

"Tierce," 800 pounds of fish.

"Ton," 2,000 pounds.

SEC. 18. That all acts or parts of acts inconsistent with the provisions of this act are, so far as inconsistent, hereby repealed, said repeal to be effective when this act takes effect.

SEC. 19. That this act shall take effect from and after the date of its passage.

Mr. Speaker, the foregoing bill is put in the RECORD so that I may have it sent to the fishermen on the Pacific coast for their information and criticism. In my judgment, it is the culmination of the efforts of the Fish Trust to secure a complete monopoly of the Alaska fisheries, and unless Congress shall stop, look, and listen and know something about the fisheries situation in Alaska, the Swift Meat Trust, the Booth Fisheries Co., and the Alaska Packers' Association will own, as well as control, the immense food supply of Alaska under their trust arrangement and this bill.

This is a matter of such serious importance to the people of the United States and especially to those in Alaska and on the Pacific coast that the widest publicity ought to be given concerning it.

The following letter was written on its date to the President in the hope that its perusal might in some manner curb the enthusiastic lobbying proclivities of Dr. Jones, of Virginia, the Deputy Commissioner of Fisheries, who is responsible for the introduction of the foregoing bill. The introduction of this bill at the personal solicitation of the Deputy Commissioner of Fisheries makes it an administration measure, and, I think, it is fair to presume that it will now be supported by the adminstration. It is rather remarkable that it should be sent to the Committee on Ways and Means.

Many objections which I think can be urged to this bill have been stated fully by me in my letter to the President. In the preparation of this statement to the President I have attempted to state facts which could not be controverted, since reference is made directly to the record which contains the proof of their existence, and without repeating any part or portion of them I have concluded to put the letter itself in the RECORD for the information of the public.

The letter is as follows:

FEBRUARY 25, 1915.

The PRESIDENT,
The White House.

SIR: The very near social and official intimacy which has so long existed and which now exists between the Seattle-Portland-San Francisco Fish Trust and the Alaska division of the United States Bureau of Fisheries is becoming a public scandal, and well deserves your attention and condemnation.

The total production of the Alaska salmon fisheries from 1868 to 1914, both inclusive, amounts to $201,067,046. This great sum of wealth has been extracted from the natural fisheries of Alaska by the corporate interests almost without law and quite without aid to the development of Alaska. Naturally, where there is no law of restraint the spirit of monopoly has expanded, and the fishery of Alaska has offered an open field. The Morgan-Guggenheim Northwest Fisheries Co. is now the Booth Fisheries Co., and is under indictment before the United States court in Seattle for violation of the United States statutes against conspiracy in restraint of trade and the Sherman anti-trust law. The Alaska Packers' Association is the greatest salmon monopoly on the Pacific coast; it owns and suppresses more canneries in Alaska than any other concern, and grows fat on the peonage of imported fishermen. Libby, McNeill & Libby, Alaska salmon canners, are an offshoot of the Swift Meat Trust. All these are in such close and intimate relation with the Bureau of Fisheries that only the power of the President can break the hold of the Fish Trust over fisheries officials, fisheries legislation, and the fisheries of Alaska.

Herewith you will find a year's monthly issues of the Pacific Fisherman, a paper issued at Seattle, Wash., by one Miller Freeman, a special representative and Washington lobbyist for the Fish Trust. Also herewith is a copy of an indictment returned by the United States grand jury at Seattle, May term, 1914, No. 2791, signed by Clay Allen, United States district attorney. The indictment is against the Booth Fisheries Co., of Delaware and Washington, with whom other corporations and individuals are jointly indicted for violation of the antitrust law, for conspiracy in restrain of trade, and an alleged monopoly of the Alaska fisheries.

THE PACIFIC FISHERIES SOCIETY.

Your attention is specially called to the April number, 1914, of the Pacific Fisherman, at pages 18 and 19, where you will find the details of the organization of the Pacific Fisheries Society, with many very respectable gentlemen as a front, and with John N. Cobb, secretary, and Russell Palmer treasurer.

On page 18 of the Pacific Fisherman, April, 1914, is the following letter:

THE WHITE HOUSE,
Washington, March 26, 1914.

SECRETARY PACIFIC FISHERIES SOCIETY,
Seattle, Wash.

MY DEAR SIR: The President directs me to acknowledge the receipt of your letter of March 18 and to thank you for having written him. He appreciates the compliment your organization pays him in the tender of honorary membership, and has pleasure in accepting.

Sincerely, yours,

J. P. TUMULTY,
Secretary to the President.

Similar letters follow from the governors of Alaska, Washington, Oregon, California, and Nevada. Following the letter which the governor of Alaska wrote is a statement that Dr. Jones, Deputy Commissioner of Fisheries, actively participated in the formation of the society. The statement on page 18 is that Russell Palmer, Seattle agent of the United States Bureau of Fisheries, was also actively engaged in its organization, and became its treasurer.

THE CONNECTING LINK.

Now turn to page 22, the editorial page of the Pacific Fisherman for April, 1914, and you discover who the officers of the Pacific Fisherman are:

Miller Freeman, publisher; John N. Cobb, editor; Russell Palmer, manager.

On pages 11 and 21 of the February, 1914, issue of the Pacific Fisherman it is stated that Mr. Freeman, in addition to being the publisher of that paper, is also secretary of the Puget Sound Salmon Canners' Association and the Association of Alaska Salmon Packers, while on page 21 full credit is given to Mr. Freeman for his energetic and successful effort in Washington as the Fish Trust lobbyist in persuading the Secretary of Commerce to establish a Pacific coast branch of the Bureau of Fisheries for Alaska and the Pribilof Islands fur-seal work in Seattle. Mr. Freeman's success as a lobbyist for the fisheries interests is more formally stated in a resolution of thanks tendered by the exploitation and industrial bureau of the New Chamber of Commerce of Seattle, dated April 13, 1914, to be found on page 31 of the June, 1914, Pacific Fisherman, where it is surrounded by biographies and beautiful cuts of the United States Commissioner of Fisheries, the Deputy United States Commissioner of Fisheries, the Pacific coast agent of the Bureau of Fisheries, and the Pacific coast field superintendent of hatcheries.

Mr. John N. Cobb, the editor of the Pacific Fisherman and the secretary of the Pacific Fisheries Society, was for many years the assistant agent of the Alaska division of the Bureau of Fisheries, and, until his resignation on March 31, 1912. At that time he graduated into the service of the Seattle Alaska fisheries employment, as many Government employees do. Mr. Russell Palmer did not have to resign to hold office under both the Fish Trust and the United States; he was the treasurer of the Pacific Fisheries Society, the manager of the Pacific Fisherman, and the Seattle agent of the United States Bureau of Fisheries, holding these three employments until he resigned the latter on December 21, 1914.

And your attention is further specially called to page 9 of the November, 1914, Pacific Fisherman and to the intimate letter of Rex Beach's to "My dear Freeman" and to Mr. Freeman's "Alphonse and Gaston" appreciation beneath the picture of the "Representative at Large for Alaska." When Rex Beach wrote The Silver Horde in 1909 he was truly an Alaskan, and his delineation of the greed and power of the Alaska Fish Trust therein was a truthful picture; but that was the old Alaska Rex Beach. The present New York Rex Beach is seen in the CONGRESSIONAL RECORD of February 25, 1911, page 3386, where Senator Guggenheim arose from his seat and said:

"AFFAIRS IN ALASKA.

"Mr. GUGGENHEIM. I present an article by Rex Beach, taken from the Saturday Evening Post, on 'What is the matter with Alaska?' I ask that the article be printed in the RECORD and referred to the Committee on Territories."

His request was granted, and the Beach article follows the Guggenheim preface. It was a cuckoo's egg laid in the Post's nest, and gathered in the Senate by the interests which procured Rex Beach to sign it in aid of their efforts to defeat Progressive and Democratic legislation to prevent the Alaska Syndicate from monopolizing the undeveloped wealth of Alaska. From that day to this, Beach and Freeman have been the east and west coast representatives of the Alaska Syndicate and their allied trust builders.

FREEMAN'S BACKERS AND SUPPORTERS.

Even if it is assumed that Freeman is the owner and publisher of the Pacific Fisherman, it is easy to go through its pages and discover who supports it.

The Booth Fisheries Co., of Delaware and Washington, the San Juan Fishing & Packing Co., the International Fisheries Co., and every interest mentioned in the indictment, No. 2791, herewith, will be found to be among its heaviest advertisers, as they are all supporters of the Pacific Fisheries Society.

The Alaska Packers' Association has long been the dominating Fish Trust in Alaska. It is the old Alaska Commercial Co. crowd which held the fur-seal lease on the Pribilof Islands fur-seal herd from 1870 to 1890 and then switched to the unprotected salmon horde. Notice its contribution to the support of the Pacific Fisherman in the publication of its annual statement for 1913, at page 15 of the issue of February, 1914. You will also find the Booth Fisheries published a similar statement at page 19 of the March, 1914, number. A thorough acquaintance with the interests of which the Pacific Fisherman crowd is the center will cause you to know what everyone familiar with them knows—that here is the social and business center of the Fish Trust that has so long controlled not only the Alaska fisheries but Alaska fish legislation as well.

THE BOOTH FISHERIES CO.

Was originally the Northwestern Fisheries Co. and belonged to the Morgan-Guggenheim Alaska Syndicate. About four years ago—in April, 1911—it was reorganized by them as the Booth Co., and its eastern connections and malicious activities toward the monopolization of Alaska fisheries is disclosed in the indictment pending against them—copy attached. The Booth Co. amalgamated with the Northwestern Fisheries Co.—the Alaska Syndicate Co.—on April 1, 1911, and the International Fisheries Co., in 1912 (Poor's Manual of Industrials, 1914, pp. 169 and 2429), and until the indictment last year was reaching out for all the canneries in Alaska. Libby, McNeill & Libby is the title of another big salmon concern in Alaska; its officers are identical with those of Swift & Co. and the Swift Refrigerator Co., of Chicago—the Meat Trust (Poor's Manual of Industrials, 1914, pp. 612 and 955–957). These are the dominating people, Mr. President, who are controlling the fisheries of Alaska, the Pacific Fisheries Society of Seattle and the Seattle activities of the United States Bureau of Fisheries.

PACIFIC COAST FISHERIES ASSOCIATION.

Turn again to the April, 1914, number of the Pacific Fisherman, at page 16, and you will discover that while the Seattle-Alaska Fish Trust was engaged in organizing the Pacific Fisheries Society, on page 18, it was at the same time and place organizing the Pacific Coast Fisheries Association, on page 16—only the thickness of a sheet of paper away. The association is the grim business side, the society the social side, of the same Fish Trust. The society and the Pacific Fisherman are the social parlors where the officials of the United States Bureau of Fisheries for Alaska are entertained and honored by calls for the expression of their opinions—where their vanity is tickled by solemnly listening to and printing their speeches and pictures, by entertaining and giving them the proper surroundings and advice and correcting any wrong impression they may have; while the association is the darkened back room where the hard-headed old trust sits, with a peephole on the front room, and from which emanate the plans for monopolizing the great fisheries of the Pacific coast and managing the sale of the product to the people for all the traffic will bear.

TRAINING UNITED STATES OFFICIALS FOR THE FISH TRUST.

Lieut. Commander J. F. Moser, United States Navy, was in command of the United States Fish Commission steamer *Albatross* in Alaskan waters for some years, the official head of research work on the salmon of Alaska for the United States. In 1904 he was retired on half pay. To use his own language in his testimony before the Senate Subcommittee on Fisheries, on May 13, 1913, page 133, "I retired in 1904 to take a position with the Alaska Packers' Association." Capt. Moser's official position in the Navy and intimate acquaintance with Alaska fisheries gained in his official work makes him an invaluable lobbyist for the Pacific coast Salmon Trust, as I have learned by the skillful work he has done to prevent me from securing needed legislation for the Alaska fisheries. He is now the manager of the Alaska Packers' Association, the largest trust engaged in cannery and other fishery work in Alaska. See its annual report for 1913 and list of officers at page 15 of the February, 1914, Pacific Fisherman. He gets half pay as a retired officer of the Navy, plus $10,000 a year as the manager of the Alaska Packers' Association, and is the shrewdest and most capable lobbyist the Fish Trust has ever sent to Washington.

John H. Cobb and Russell Palmer, the first the editor and the second the manager of the Pacific Fisherman, were both employed in the Alaska Bureau of Fisheries until they graduated into the service of the fish interests, until they could command higher salaries from the trust than the United States would pay. These three men—Moser, Cobb, and Palmer—show how shrewdly the Fish Trust engages the attention of the bureau's officers and transplants them to its own work when they are more useful there, though not more friendly, than in their official positions.

And the trust is still engaged in the work. On page 51 of the January, 1914, issue of the Pacific Fisherman is an interesting article on "The fishery industry of Alaska in 1913, by Ward T. Bower and Harry Clifford Fassett, assistant agents, United States Bureau of Fisheries," preceded by an editorial note which informs the reader that "for permission to utilize this report, which has not yet been published, we are indebted to the kindness of Dr. H. M. Smith, United States Commissioner of Fisheries." There is journalistic enterprise for you! Publishing an official report in the trust paper before it is given official publicity. And for another example, see "Dr. Jones's report of Alaska investigation in 1914," in the January, 1915, issue of the Pacific Fisherman, under date of January 5, 26 days before any Member of Congress could obtain a copy in Washington, D. C. And then look at the beautifully illustrated copy of the November, 1914, Pacific Fisherman, with "The fisheries of Alaska, by Ward T. Bower, Pacific coast agent, United States Bureau of Fisheries."

But what is the use to point out—you can hardly pick up a copy of the Pacific Fisherman for years past that pages are not filled with the speeches, writings, or doings of the officials of the United States Bureau of Fisheries. Their pictures in various sizes and styles and official puffs and palavers fill this Fish Trust paper until the people of the Pacific coast, and especially the fishermen of Alaska, have lost all confidence in the United States Bureau of Fisheries. When Secretary Redfield removed the former head of the Alaska fisheries, and promised us a new and square deal, we expected to be rid of the domination of the Seattle-Alaska Trust influence—but it is distinctly worse now than ever, since Mr. Freeman, for the trust, secured a local office for the Bureau of Fisheries in Seattle, under their eye, manned by their friends. Thus the combination through the Pacific Fisheries Society and otherwise with the present officials of the bureau is more brazen than ever before.

A ROTTEN AND UNSEAWORTHY BOAT PURCHASED FROM THE TRUST.

In Dr. Jones's report of Alaska investigations in 1914, page 70, he refers to the United States Bureau of Fisheries boat, the *Osprey*, as unseaworthy, top-heavy, and dangerous, and relates how in a blow last fall—1913—she all but turned turtle. "The decks, pilot house, and many of the beams are rotten, and the boat must be handled with unusual care. The boiler is also defective, having been installed 19 years ago, when the boat was built." He declares that the boat can be used only part of the time for—"First, lack of appropriation; and, second, because she is unseaworthy and many days unable to leave her dock." He recommends an appropriation of $12,000 for removing her machinery, replacing it with new, and remodeling the craft so that life may be reasonably safe with her.

In "The fishery industries of Alaska in 1913," by Ward T. Bower and Harry Clifford Fassett, assistant agents, United States Bureau of Fisheries, published in the January, 1914, Pacific Fisherman Yearbook, we find this statement: "Steamer *Osprey*. In the fall of 1912 the bureau purchased the steamer *Wigwam* from the Alaska Packers' Association, and the vessel was given the new name *Osprey*. The vessel was built in 1895 at San Francisco, and is of 40 tons gross measurement; 72 feet in length, 17 feet beam, and 6 feet in depth," etc. Upon inquiry at the Department of Commerce I was informed that the department paid the Alaska packers' Fish Trust $13,000 for this derelict. If now the sum of $12,000 additional is spent on remodeling her the bureau will then have only an old rotten hull—a worthless craft—and will have expended the sum of $25,000—twice her value. This is merely another example of how the Fish Trust puts it over the Bureau of Fisheries through its control of its officials. Conceding that no official can be proven to have received money or other value for buying this old, rotten, and utterly worthless wreck out of the Alaska packers' bone yard, yet it shows such gross incompetency in the official who purchased her that he can not escape just criticism. If that was the end and we could be assured of a new beginning it would not be so bad, but the situation is growing worse—not better.

MINOR ALASKAN OFFICIALS CRITICIZED BY DR. JONES.

In the Jones report, at page 92, the deputy commissioner severely arraigns certain minor officials in Alaska for failure to enforce the fishery laws. He cites a single instance where a commissioner (ex-officio justice of the peace), a deputy marshal, and a deputy clerk were actually interested in a cannery in Alaska and adds that "It is hard to realize the antagonism and influences brought to bear by these men on other officials of the United States Government who are trying to live up to their oaths and enforce the fisheries laws."

Yes; it would be hard for one who is acquainted in Alaska to realize the infinitesimal influence of a single justice of the peace, a single deputy marshal, and a single deputy clerk under such circumstances. As a matter of fact, there are no laws of a substantial nature on the

statute which they could violate if they wished. The first law for the protection of the salmon in Alaska was the act of March 2, 1889, forbidding the erection of barriers in Alaskan streams, under penalty of a fine of not less than $250 for each day the barrier is maintained; the section then provides that "the Secretary of the Treasury is hereby authorized and directed to establish such regulations and surveillance as may be necessary to insure that this prohibition is strictly enforced and to otherwise protect the salmon fisheries of Alaska" (25 Stat. L., 1009). In 1896 (29 Stat. L., 316) Congress amended and extended the above act, but still left the whole matter of control by rules and regulations with the Secretary of the Treasury. By section 460 of the Criminal Code of Alaska, passed by Congress in 1889 (30 Stat. L., 1336), a tax was first levied on the output of the fisheries of Alaska, to be covered into the United States Treasury; by the act of January 27, 1905 (33 Stat. L., 616), the "Alaska fund" was created in the Treasury Department of the United States, and all these Alaska taxes on fisheries and their expenditure were thus kept and are now under the control of Congress. In 1906 (34 Stat. L., 263; compiled laws of Alaska, 1913, p. 196) Congress passed an act to prohibit aliens from fishing in the waters of Alaska, but it was drawn by the Alaska Fish Trust, and is therefore as full of holes as a seive. However, the act provides (sec. 5) "that the Secretary of Commerce and Labor shall have power to make rules and regulations not inconsistent with law to carry into effect the provisions of this act. And it shall be the duty of the Secretary of Commerce and Labor to enforce the provisions of this act and the rules and regulations," etc.

On June 26, 1906, Congress passed "An act for the protection and regulation of the fisheries of Alaska" (34 Stat. L., 478), giving wide powers to the Secretary of Commerce and Labor over them, and providing in section 14: "And it shall be the duty of the Secretary of Commerce and Labor to enforce the provisions of this act and the rules and regulations made thereunder. And it shall be the duty of the district attorney to whom any violation is reported by any agent or representative of the Department of Commerce and Labor to institute proceedings necessary to carry out the provisions of this act."

And finally, in the act of Congress approved August 24, 1912, "An act to create a legislative assembly in the Territory of Alaska, to confer legislative power thereon, and for other purposes" (37 Stat. L., 512), it is provided in section 4 "That the authority herein granted to the legislature to alter, amend, modify, and repeal laws in force in Alaska shall not extend to the customs, internal revenue, postal, or other general laws of the United States, or to the game, fish, and fur-seal laws," etc.

It follows from this statement of the law (1) that the sole defender of Alaska fisheries under the United States statutes now in force in Alaska is the Secretary of Commerce, and (2) that neither the above-mentioned commissioner (justice of the peace), deputy marshal, nor deputy clerk had any duty to perform in respect to it which they neglected. The acts of 1906 were specially prepared in collaboration between the Seattle-Alaska Fish Trust and the officers of the Bureau of Fisheries, and passed by Congress as submitted by the collaborators.

From what is shown in this, it is not unfair to assume that Dr. Jones did not know the law himself when he thus criticized local officials for not performing his duties for him. But why should these minor officials in Alaska, who have so little duty to perform and so little power to exert, jeopardize their jobs by fighting the Fish Trust, when the head officials of the United States Bureau of Fisheries—the Smiths and the Jones, the Cobbs and the Palmers, the Mosers and the Jarvis, the Bowers, and the Fassetts—all the "higher ups" are being entertained, toasted, applauded, and socially controlled as guests at Fish-Trust banquets and wind-jamming functions in Seattle, Portland, and San Francisco—employed as editors, managers, and assistants in the publication of the Pacific Fisherman, always with an oportunity, if they conduct their official work properly and discreetly, of sometime being employed in the service of the Fish Trust at a big salary? And notice that on page 92 of the Jones report a cannery superintendent threatened one fishery official that he would "get him" and "would see that he did not long remain in the service." Fortunately, that official "got" to the record first, and is probably safe; but how many others the superintendents and trust officials "got," before this one escaped, would be a much more interesting part of the history of trust control where superintendents have not feared to make such threats openly because the trust had the power to separate honest officials from their jobs.

A COLLABORATING BUREAU—TRUST LOBBY.

The story of the passage of the Alaska fishery bills of 1906 is told by Senator NELSON in his testimony before the Senate Subcommittee on Fisheries in its hearings on June 28, 1912, pages 522–524. It is the old, old story.

"Lieut. Jarvis, who had been in the Government service in Alaska, resigned, and was employed by some of the corporations engaged in the fishing industry. He came to Washington and lobbied a bill through Congress by which the packers got rid of all that cannery tax, and that practically depleted the fund about one-third. The Alaska road fund lost about one-third by that unfortunate legislation. * * * I knew that Jarvis was here lobbying for the passage of the measure, but I was very busy with other things. I tried to keep track of the matter, and a Senator who was on the committee promised me to look after it and to see that the bill did not go through. I relied on him, but I was disappointed. My interest was wholly in behalf of the people of Alaska. I became interested in their welfare, and I wanted them to get the full benefit of that fund, and I looked upon the scheme as robbing them of that fund. In this bill the same vicious system is continued, and the vice of the whole thing is that there is no Government supervision."

The "Jarvis bill," as Senator NELSON calls it, was prepared by Jarvis and the Bureau of Fisheries in 1906, and by them lobbied through Congress. Jarvis had been for years in the United States Revenue-Cutter Service in Alaska, with his winter headquarters in the clubs of Seattle. He resigned from the Revenue-Cutter Service and was immediately made the Pacific coast treasurer and manager of the Morgan-Guggenheims in their efforts to control Alaska. His long, intimate relationship with Alaska fisheries made him specially valuable, and he became the manager of the Northwestern Fisheries Co., belonging to the Alaska Syndicate, and which was later reorganized as the Booth Fisheries Co. (See indictment No. 2791, filed herewith.) Jarvis also controlled the coal deals for the syndicate with the Army posts in Alaska, and committed suicide just as the movement was made public which brought about the indictment of Jarvis, Bullock, and Houston, and the trial and conviction of the latter.

In the passage of the Alaska fishery acts of 1906 the Bureau of Fisheries yielded to the more powerful influences of the Seattle-Alaska Fish Trust centered in and around the Alaska Syndicate, and the laws now on the statute books for the control of the Alaska fisheries are those prepared in collaboration between the lobbyists of the Alaska Syndicate and the Bureau of Fisheries.

NEW FISHERIES LAWS NEEDED FOR ALASKA.

For nearly 10 years the people of Alaska have been attempting to secure the enactment by Congress of adequate and honest laws for the administration of Alaska fisheries, and during that period the Bureau of Fisheries and the representatives of the Fish Trust have been and are now united in opposition thereto. We sought to get Congress to lodge power with the Legislature of Alaska to enact the needed legislation, but were defeated by the limitations placed in the organic act by those friendly to the fishing interests forbidding it. The Delegate from Alaska has introduced bills to secure the needed legislation, only to have them opposed and defeated by the Bureau of Fisheries. The Delegate also has made successful efforts so far to prevent the passage of S. 5856, introduced in the Sixty-second Congress by Senator JONES, of Washington, on March 15, 1912, and in the House (H. R. 153) in the Sixty-third Congress, on April 7, 1914, by Mr. FLOOD, of Virginia.

Herewith is a copy of the Jones bill, S. 5856, and the Flood bill, H. R. 153, and you will see they are substantially if not quite identical in phraseology. Also herewith is a copy of the hearings before the subcommittee of the Senate Committee on Fisheries on S. 5856, Sixty-second Congress. Senator JONES was chairman of the subcommittee, and if you will glance over the hearings you will find that the lobbyists for the Fish Trust and the officials of the Bureau of Fisheries generally agreed in its support, while the Delegate from Alaska did what he could to defeat it.

THE SIAMESE TWINS—THE FISH TRUST AND THE BUREAU.

That a combination between the Fish Trust lobby and the officials of the Bureau of Fisheries existed is, of course, ordinarily hard to prove; but in this instance we have a written confession of both parties. Herewith is a copy of the confession. It is marked on the back as follows:

"[Confidential committee print.]

"Tentative draft of bill suggested by the United States Bureau of Fisheries and the representatives of the various Alaskan fisheries, which has been agreed upon and prepared by them jointly after numerous conferences."

This copy was given to me, at my request, by Senator JONES on June 12, 1913. It embodies all the bad features of both the Jones and Flood bills—and then some others. The "joker" in the Jones and Flood bills is in section 4; it is section 2 of the "tentative draft." Those sections are intended to establish a basis of private ownership in choice fishery sites, whereby the Fish Trust by reason of their preference rights can secure title to the fisheries of Alaska. I called attention of the Senate Committee on Fisheries to that evident design in the hearings on the Jones bill (pages 470–472); but notwithstanding the objection, the agreed "tentative draft" contains still more vicious clauses, whose only effect can be to divest the United States not only of the control but of the very title to the Alaskan fisheries.

"TENTATIVE BILL" DENOUNCED BY ALASKA LEGISLATURE.

In the senate joint memorial No. 26, adopted by the Alaska Legislature on April 26–30, 1913 (session laws of Alaska, 1913, pp. 413–415), the legislature says:

"We object generally to the whole bill prepared by and entitled 'Tentative draft' of bill suggested by the United States Bureau of Fisheries and the representatives of the various Alaskan fisheries, which has been agreed upon and prepared by them jointly after numerous conferences, and especially to section 1 thereof, reading, etc.

* * * * * * *

"And we further recommend that no law be enacted by Congress whereby any right or title to the tidelands or waters now occupied by fishing appliances in Alaska can be acquired for fish-traps sites, or any area of tideland or waters be in any way reserved for the operation of any certain kind of fishing contrivances to the exclusion of other fishing gear."

Under the well-settled law, one who is in peaceable possession of a tract of public land, even tideland, can not be dispossessed by another who shows no better legal right than that claimed by the occupant. The courts in the western countries have had to deal with that question frequently from the beginning of western occupancy, and the rule of law is as fixed and certain as any rule of property in the United States. A canneryman in possession of a cannery or trap site, can not be ousted by any but the United States, without the claimant has a title from the United States, or a prior and better title by occupancy than his opponent. There is no reason for the provisions in section 4 of the Jones or Flood bill, or section 2 of the "tentative draft," except to provide for acquiring a title against the United States. It is the first step in taking over the ownership of the fisheries of Alaska by the great cannery interests which now possess from 10 to 50 sites each, in the most favored localities, and who seek this method of acquiring title against the United States and excluding their less favored rivals from any participation in the fisheries. It is the longed-for legal basis for the monopoly of the Alaska fisheries.

DR. JONES FOLLOWS SUIT.

Notice that the first paragraph of section 2 of the tentative draft of bill, approved by the trust and the United States Bureau of Fisheries, provides:

"SEC. 2. That each fish-trap site shall consist of a reserved area in the water, rectangular in form; the size (to be determined by the locator) shall not be more than 1,200 feet one way nor more than 4,000 feet the other way. A trap may be built anywhere within the limits of such reserved area; the general course of the trap shall be lengthwise of the trap site; no more than one trap or other fishing appliance may be constructed or operated at the same time within the limits of any such reserved area; there shall be clear side spaces or passageways of not less than 1,800 feet laterally, and clear end spaces or passageways of not less than 300 feet endwise, between all fish-trap sites and between all constructed traps; and it shall be unlawful for any person to fish by any means whatsoever in any of such passageways between constructed traps."

Including one end and one side passageway, which are reserved just as effectually by the bill as if included in the trap site, each trap site includes an area of 3,000 by 4,000 feet square, or 275 acres. Nor, does the tentative draft limit the number of trap sites which any one person or corporation may locate and own, but it does exclude all other persons from fishing within the limits of the trap sites or passageways, and thus gives the trap-site owner what the trust wants—an exclusive right without limit as to number or area. That is monopoly—backed by the Government—the worst form of monopoly.

Now, read this extract from section 2, page 8, of the "tentative bill":

"From and after the location of any such trap site the claimant thereof and his heirs, executors, administrators, successors, and assigns shall have the exclusive right to occupy, maintain, and fish the same, to renew the license therefor year by year until abandoned or forfeited, to mortgage, sell, and transfer such rights during such time as he or they shall comply with the laws of the United States pertaining thereto."

Here, then, is a deliberate and premeditated plan suggested by the Bureau of Fisheries and the representatives of the Meat and Fish Trusts "which has been agreed upon and prepared by them jointly after numerous conferences" for the entire monopolization of the salmon fisheries of Alaska, one of the greatest of all the natural food supplies belonging to this Nation! Nothing prevented this bill from becoming a law in 1912, but the persistent fight which the Delegate from Alaska made against it, and the substance of it is now placed before the Congress in pending bills.

In the meantime, the salmon fisheries in Alaska are being monopolized in accordance with that scheme by the trust by gathering unto itself the present locations of traps and preparing for the day when they can get the tentative bill "job" over, and get the titles agreed on in the tentative bill. And what is your adviser doing? What information of this attempt to get a title to these fisheries by the trust has reached the President?

In his report, on page 12, Dr. Jones falls into the view which the Jones and Flood and tentative bills all put forward. He says:

"Trap sites. There has been much controversy regarding trap locations and the plan that they should be sold outright to their present holders and other sites sold to those who make application. The proposal to sell sites does not meet with the approval of all concerned. I do not think it wise myself, but I do believe that where the traps on the present sites meet the requirements of the law and as long as they continue to do so it is proper and right for the United States Government to protect their holders."

And in his "recommendations," on page 154, he says:

"20. The holders of fish-trap sites be protected in their rights, but that no permanent title to such sites be allowed."

If the fisheries of Alaska can not have more intelligent understanding than that, or more courageous protection from monopoly than they have so far received from the Bureau of Fisheries, it will be just as well to turn them over to their natural protectors, the people of Alaska. Any official having the duty of the protection of this great natural public food supply who would suggest or agree to the plan proposed in the above-quoted extracts from the tentative draft, is either highly dishonest or lowly dull; and any adviser to the President who hides the true facts and approves the plan half way, is not a dependable adviser.

Now, why should any affirmative legislation be passed to survey and locate trap sites "to protect their holders"? Why should the holders of fish-trap sites be protected in their rights "by act of Congress"? Neither Dr. Jones nor anyone else can show a single instance in Alaska where the holder of such a site has been ousted therefrom by the United States or by any citizen. They are now "protected in their rights" by the laws of the land, well settled and backed by a century of precedents. Then, why are these shrewd efforts for additional affirmative legislation being urged? The answer is simple: It is an effort to establish the basis for a title as against the United States.

The Deputy Fish Commissioner, even, has discovered that the Fish Trust trap-site men "plan that they should be sold outright to their present holders and other sites sold to those who make application," and in his innocence of the law, he recommends that the United States shall take the first step demanded by the trap-site occupants in the Jones, the Flood, and the agreed "tentative bills."

That my view is not a strained one, or without justification, is shown by a resolution adopted by the Seattle Commercial Club at its meeting on February 22, 1913, proceedings hereto attached, wherein the Jones bill is denounced in this language:

"We find that section 2 (4) of the proposed law is especially objectionable, because if enacted into law it would grant to those now in possession of fishing locations the exclusive privilege and monopoly of such locations in perpetuity, which is contrary to the principles of free government; that the national fishing grounds should be conserved and maintained for the free use of the people engaged in the fishing occupation as a livelihood, and that the national fishing grounds should not be maintained by the Government for the benefit of a few, as this bill, in effect, proposed."

> "Vice is a monster of so frightful mien,
> As to be hated needs but to be seen;
> Yet, seen too oft, familiar with her face,
> We first endure, then pity, then embrace."

The Bureau of Fisheries has long "endured," it is now filled with "pity"; if the President shall refuse to interfere, the "embrace" will soon put the Seattle-Alaska Fish Trust in the ownership of the Alaska fisheries. They now own fee simple title to all the choice shore cannery locations and have control by law of prior occupancy of all choice trap sites: and, but for the recent indictment of the trust by the Seattle grand jury, would be in the way to the full monopoly of Alaskan fisheries. We need your help, Mr. President, right now.

THE LAW OF CONTROL AND CONSERVATION.

On July 30, 1914, the Delegate from Alaska introduced a bill (H. R. 18144) for the control and conservation of the fisheries of Alaska, and for other purposes. Your special attention is called to section 1 of that bill, for it states a national policy in relation to the food fish supply of Alaska, which must be adopted or the supply will first be monopolized and then destroyed, even if destruction shall await on monopoly. Filed herewith is a copy of that bill, and the following is a copy of section 1 thereof:

"SECTION 1. That all those waters, streams, rivers, and lakes in Alaska which empty into Bering Sea or Bristol Bay south of and easterly from Cape Newenham and into the Pacific Ocean, or any of its bays, channels, straits, or waters from the outer Aleutian Islands easterly and southerly to 54° 40', the south line of Alaska, which are frequented by salmon or other food fish for spawning, or in which fish or other marine food animals appear in such numbers as to be valuable for fishery, be, and the same are hereby, forever reserved from sale or other disposition to any person, association, or corporation; and the title to all said waters, and all waters along said coasts out to the limit of the territorial jurisdiction of the United States, and in all tide and shore lands on said waters, streams, rivers, lakes, bays, channels, and straits up to the line of ordinary high-water mark, is hereby reserved by the United States for fishery purposes; and the President of the United States is hereby authorized, empowered, and directed to mark and reserve for such fishery purposes so much of the uplands upon and adjacent to the shores of said waters as may be necessary to the conservation, preservation, and propagation of the fish or other marine food animals which may resort thereto or which may be propagated or transplanted therein. Nothing in this act shall be held to prevent the use of the tidelands or navigable waters in Alaska by wharves or other approaches from the land to the navigable waters, nor to prevent ingress or egress between the shore lands and the navigable waters as that right has long existed: *Provided*, That nothing in this act shall interfere with the free navigation of any navigable waters, nor be construed as impairing in any degree the title of the Territory of Alaska or of any State or States which may hereafter be erected out of said Territory to the tidelands and the beds of any of its streams or its fisheries, nor the right of the United States to control commerce and navigation therein, it being hereby declared that the rights of fishery and to the tidelands herein mentioned shall continue to be held by the United States in trust for the people of the Territory of Alaska, and of any State or States which may hereafter be erected out of said Territory. The term 'navigable waters,' as used herein, shall be held to include all tidal waters up to the line of ordinary high tide, and all nontidal waters navigable, in fact, up to the line of ordinary high-water mark."

The Delegate from Alaska is aware, of course, that the foregoing section is a mere restatement of the common law which now governs both tidelands and fisheries in Alaska, but if it is declared by Congress to be a settled policy by statutory enactment for the conservation of the great food supply in Alaska fisheries, it will probably, put a visible barrier in the way of private ownership and monopoly which will not be easily put aside. The difference between that rule of protection and conservation and that proposed by the Jones, the Flood, the tentative bill, and the recommendations of Dr. Jones, is the difference between north and south. The first means a step along the road to monopoly; the latter means a settled national policy of protection and the conservation of the Nation's great natural food supply in the fisheries of Alaska. Which way shall we travel, which policy shall be adopted—monopoly or conservation?

THE PRINCE RUPERT QUESTION.

At page 146 of his report, Dr. Jones propounds the inquiry: "Are the fishing interests to leave the United States?" And he then points out the danger which Seattle faces in regard to losing the fish and fishing trade and its transfer to Prince Rupert, British Columbia. The fish from Alaskan waters can be transported to Chicago, or to any point east, two days quicker via Prince Rupert than via Seattle; hence the perspiring gentleman from Seattle (who so recently visited Washington) crying for help!

Prince Rupert opens a second and much better market for local fishermen from Alaska, who have long paid double rates to Seattle, only to find the market overstocked and their fish worthless. Prince Rupert is two days closer to the place of catch—that is a great advantage with fresh fish—and if the market there is overstocked, then the fisherman has another chance at Seattle.

Of course, Prince Rupert contains a threat against local Alaska fishermen, too; for, having the support of the Canadian Government, the fisheries there are a practical monopoly, controlled by the Grand Trunk Railroad—the transportation company. The fishing boats will almost necessarily be Canadian boats. The Canadian fishermen at Prince Rupert, will have local advantages, and the situation promises to gather Alaskan fishermen at Prince Rupert, and with free fish, Alaska will lose not only her fish and fish trade but her local fishermen as well!

Section 8 of House bill 18144, introduced by me on July 30, 1914, is a copy of the law which is in force in British Columbia. To be effective in Alaska it must be amended so as to read as follows:

"SEC. 8. That it shall be unlawful to export from Alaska, or the Territorial waters thereof to any foreign country, any salmon or other food fish except in a frozen, canned, salted, smoked, dried, or other prepared condition."

The act must be further amended by penalizing violations thereof. Alaska would then be protected just as British Columbia is now, for fish from British Columbia waters can only be exported to the United States under the conditions mentioned in section 8 of the bill H. R. 18144. There is no use to discuss the general question of tariff or restriction of trade. The situation in Alaska is an exceptional one, and if some barrier is not put up by congressional enactment, the fish and fishermen of Alaska are going to Prince Rupert, British Columbia.

Section 8 of House bill 18144, even with the suggested amendment, will only affect the fish taken from the Territorial waters of Alaska, and since the greater part of them may and will be caught outside the 3-mile limit, that question is an interesting one.

My view is that the only way to hold the fish trade of Alaska is, first, to exclude foreign fishermen from the local fisheries in Alaskan waters; and, second, to encourage the local trade, as Canada does, that it may not only put the fish out of the Territorial waters, but those from beyond the 3-mile limit into the trade as quickly and cheaply as the Canadians can. That means that we must build up a local fishing population and local manufacturing plants in Alaska—again, as Canada is doing. The Bureau of Fisheries is incompetent to do that. It must be done with the assistance of Congress by the people of Alaska through their own lawmaking body, and with the skill of local manufacturing and fishing plants, and by our own traders and merchants.

ALASKA FUR-SEAL FISHERIES A FAILURE.

When the United States purchased Alaska in 1867, there were approximately 5,000,000 fur seals on the Pribilof Islands—the herd was at its maximum. Congress passed the act of July 1, 1870, for the lease of the fur-seal monopoly, and it was taken over for 20 years at its maximum by the Alaska Commercial Co. During that maximum period, 1870–1890, the United States made a profit of $5,738,724 on the face of the books from its lease. In 1890 a new lease for 20 years was entered into with the North American Commercial Co., and in that period, 1890–1910, the United States lost, on the face of its ledger, the sum of $2,247,544! Herewith, is a copy of Senate Document No. 605, Sixty-first Congress, second session, and you will find the statement of profits and losses on the seal herd following page 14, in a chart. But what is worse, it was then discovered that it had also lost the fur-seal herd! Instead of a herd of 5,000,000 fur seals that it started with, in 1870, it had remaining only about 150,000. In 1870, the herd of 5,000,000 seals was worth $50,000,000, and its value has been capitalized at not less than $100,000,000 for the 40-year period; but it was lost also. Of course pelagic sealing had something to do with it, but the inefficiency and incompetency of the United States agents in charge were the greater causes. The fact is, the United States kindly furnished the appropriations and dreamy-minded "scientists," while the Fish Trust supplied

the business sense and trade tricks. The result naturally followed—the trust soon had the money, and the United States, the experience and a library of drivel about "science" in its application to Alaskan fisheries.

HISTORY REPEATING ITSELF.

The experience of the United States with the fur-seal fishery, is now being repeated with the salmon fisheries before your eyes. The difference is this: That the fur-seal fishery was a Government monopoly for the purpose of furnishing a vain and foolish woman, whose husband had more money than sense, a more expensive coat than her more modestly dressed neighbor possessed: but the destruction of the salmon fishery will be the loss of one of the most valuable natural food supplies under the control of our Government, a supply that a wise business man would conserve in perpetuity. The Bureau of Fisheries never has exhibited and will not now, or in the future, exhibit any business ability in its management.

The Karluk salmon stream was the most productive salmon stream in the world. The first Russian vessel to reach Kodiak Island found the natives in possession of it—with a food supply for all who wished to eat. Under both native and Russian rule it continued to furnish a food supply greater than any salmon stream in the world. At once the Alaska Packers' Association (the salmon fishery side of the Alaska Commercial Co., which had the first 20-year lease, and helped destroy the fur-seal herd) established canneries at Karluk. Other canneries crowded in, and Karluk, to-day, is substantially deserted! Like the fur-seal herd, it is destroyed. And so it is going with the whole fishery of Alaska. Years ago the United States was warned by even its so-called "scientists," that the limit of safety in fishing had been reached; but the uncontrolled Fish Trust, with its stationary and floating traps, its gill nets and power boats, its steamers and sailing vessels is covering the territorial waters of Alaska, and even the extra territorial waters thereof, in its eagerness to pay huge dividends, well knowing that the fate of Karluk awaits all the Alaska fisheries.

In the hearings, of course, the representatives of the fishing corporation deny this decrease; but it is everywhere known on the Pacific coast that the fishermen are, while actually canning more fish, *doing it out of the mass* and *not from the yearly increase*. Even the Jones report (in his address to the Juneau grand jury), on page 98, says: "At all events it is obvious that the great industry is on the wane, and radical steps should be taken to protect it before it is too late."

The Congress sleeps; the "scientists" make beautifully illustrated reports and silly speeches at the Pacific Fisheries Society, and contemplate their handsome faces in the Pacific Fisherman, while the Nation's salmon supply is being destroyed, and the cost of eating increases.

Mr. President, you can yet save the Alaska fisheries if you will—but not by piddling along with a few mollycoddle "scientists," while the trust does to the salmon what it has already done to the fur seals!

BUREAU "SCIENTIFIC," BUT WITHOUT BUSINESS SENSE.

The Bureau of Fisheries has never pretended to have, or to exercise any business sense in the management of the fisheries of Alaska—the trust does that. In his testimony before the Senate subcommittee on July 10, 1912, at page 492 of the printed hearings, Dr. Evermann, then, and for years prior thereto, the chief of the Alaska fisheries service, said:

"Dr. EVERMANN. I do not quite understand just what Judge Wickersham's criticisms of the Bureau of Fisheries are. So far as I have thought of the matter, all that the Bureau of Fisheries has tried to do and feels that it is called upon to do is to enforce the laws and regulations regarding the fisheries of Alaska and to make investigations in Alaska which will be for the benefit of those fisheries. Now, as a matter of fact, if there is a tax of 2 cents or 4 cents, or any other number of cents upon any fishery product, that is not a matter in which the bureau is primarily concerned.

"Mr. WICKERSHAM. Now, that is the exact criticism, Dr. Evermann, which I make against the Bureau of Fisheries. You make no effort to care for the interests of the Territory of Alaska in your legislation.

"Dr. EVERMANN. Well, I do not believe that is a proper thing for the Bureau of Fisheries to consider as one of its primary duties. I do not believe the Bureau of Fisheries should consider the disposition of the revenue derived from a tax. It seems to me that that is a matter of secondary consideration for the bureau, and it does seem to me exceedingly proper that the bureau should hope that funds adequate for the support of a sufficient number of hatcheries to keep up the supply in Alaska should be provided from some source or other."

Dr. Evermann's idea is much more clearly expressed by Mr. Dorr, one of the attorneys for the Fish Trust, at page 402, where he said:

"Mr. DORR. I believe that the true function of the Bureau of Fisheries—and it is certainly a most important one to the Government—is in the line of fish culture—the scientific and biological end of the work. I do not believe that the Bureau of Fisheries should be burdened with or charged with the duty of acting as a police force. I think that belongs to another branch of the Government. I believe that the best results would be attained by the bureau if it and its efficient corps of employees is encouraged, as they should be, in the line of scientific work—the cultivation of the fish—not only in Alaska but elsewhere in the United States. Alaska covers a very small part of their field for activity. Their jurisdiction extends throughout the entire United States."

That clearly expresses the view upon which this bureau has always acted, and must always act so long as it is managed and controlled as it now is. It is a so-called scientific body, largely engaged in writing discreet reports, while the great trusts gather the crop, conduct the markets, and control the legislation that governs even the bureau itself. The larger elements in the Fish Trust are not able to agree among themselves as to either the form of a law, or a business arrangement which will create a single monopoly; so their only plan of operation in the absence of strong Government control, is to keep the fisheries open, and going as long as possible, while each grabs all he can while the grabbing is good. So far as the United States is concerned, it has neither business control nor laws for the conservation of these great fisheries; it looks on helplessly while they die. In his beautifully illustrated "Report on Alaska Investigation," at page 146, Dr. Jones says of the problem presented at Prince Rupert: "The present situation and what it is leading to is deplorable and should be dealt with promptly and with the seriousness it deserves." He suggests a tentative remedy and its obvious defect, and then helplessly asks "What Canada would do?"

Canada would not "do"—it did. Long ago, Canada adopted the provision contained in section 8 of H. R. 18144, and thereby controls not only the fisheries in its own British Columbia waters, but threatens to control those in American waters as well.

DR. JONES A BARRIER TO PROGRESS.

The Delegate from Alaska had fought the adoption of the Senate bill 5856, denounced the tentative bill, and waited for the change of administration for progressive legislation in aid of conservation instead of monopoly. He hoped for support in aid of proper legislation until Dr. Jones's report was published in the Pacific Fisherman, on January 5, 1914.

When the Sixty-third Congress met, with the Democrats in power in each branch, it seemed a day of hope for Alaska fisheries. The Flood bill was introduced promptly, and all the provisions of H. R. 18144 were set out in the Senate hearings of 1912, ready to be submitted to the House Committee on the Territories as amendments to the Flood bill. Other bills were introduced to cure other defects in the Alaska fisheries legislation; the cannerymen from Seattle were before the committee—under duress they claimed; and the Delegate from Alaska was pressing the hearings earnestly, while the representatives of the canneries were begging, as usual, for a continuance for the season. Herewith is a printed copy of the hearings before the Committee on the Territories for March 13, 20, 31, and April 3 and 7, 1914, and you will discover on pages 36 to 41 how earnestly the fishmen were pressing for a continuance and how with equal earnestness the Delegate was pressing for action. Notice that on March 31, pages 35 to 38, the attorneys for the Fish Trust were saying everything they could to get a continuance. When the committee again met on April 2 a letter was presented from Dr. Jones urging the continuance. Dr. Jones's letter is as follows, pages 39 to 40, hearings:

DEPARTMENT OF COMMERCE,
BUREAU OF FISHERIES,
Washington, April 1, 1914.

Hon. WILLIAM C. HOUSTON,
Chairman Committee on Territories,
House of Representatives, Washington, D. C.

MY DEAR SIR: Acting on your suggestion, I am herewith outlining briefly the purpose of my trip to Alaska this summer. As United States Deputy Commissioner of Fisheries, Secretary Redfield has placed under me the direct supervision of the fisheries of Alaska. He has further authorized me to go this summer with a view to making a complete survey of all the hatcheries, both Government and private, canneries, salteries, fertilizer factories, cold-storage plants, herring stations, and, in fact, all parts of the work that come under this bureau's jurisdiction in that Territory, and upon my investigation to make a clear and comprehensive report that will be backed up by facts, which will enable the Secretary to clearly place before Congress and its various committees the present conditions of the fisheries in Alaska, with suggestions as to what is necessary to protect, build up, and perpetuate the fishing industry.

The Secretary's ideas in this matter have been indorsed by a great many Members of Congress, and he is making preparations that will enable me to carry out the object of my trip with perfect satisfaction. This great work before me is well appreciated. I do not even in the smallest degree underestimate the seriousness of this great problem and undertaking. I expect to leave some time in May, to be gone four or five months, and you can rest assured that I will do everything within my power to deliver a comprehensive report that will be of real benefit and help in enacting future legislation for the welfare of the Alaska fisheries. I am taking with me a photographer. The results of his work will enable me further to substantiate my report as to certain existing conditions that will be well illustrated by photographs.

I earnestly hope that any pending legislation pertaining to this subject, if proper and consistent with the views of yourself and your committee, may be withdrawn temporarily until after my return.

Realizing fully the importance of this mission, I will go on it with the single purpose of learning all conditions exactly as they are. I am,

Respectfully, yours,

E. LESTER JONES,
Deputy Commissioner.

Immediately upon the presentation of this letter the Delegate from Alaska protested, as follows:

"Mr. WICKERSHAM. The result of these delays will be, Mr. Chairman, that Congress will not do anything with the fisheries in Alaska. The Fish Commissioner can not make a report until after he returns in July. That delay will adjourn the whole matter over for this session. The next session of this Congress, beginning in December, is the short session, and it will be so arranged that nothing will be done then. It will go over until the next Congress, and the same delays will occur again. That has been the result of these efforts for continuance and delay year after year. All Alaska gets is a volume of hearings and never any laws for protection. In the meantime, the Alaska fisheries are being destroyed, and I earnestly protest against further unusual delay in this matter. I think Congress ought to take hold of this question and protect this great food supply from destruction."

Also, on page 41, the delegate made this additional protest:

"Mr. WICKERSHAM. Mr. Chairman, and gentlemen of the committee, I have been trying for five or six years to get some legislation from Congress for the protection of the fisheries in Alaska, but always in vain. We have had numerous hearings from time to time, but no results have come from them. Invariably efforts to continue the matter somewhat indefinitely, have been made, and invariably the matter has been continued without passing any laws for the protection of the Alaskan fisheries."

And on April 3, Dr. Jones came before the committee and personally urged continuance (p. 60), whereupon the Delegate from Alaska again protested against delay. The continuance was granted, and thereupon the Delegate gave the representatives of the fishing corporation present notice that the matter would be called up in December, but when December came, neither the representatives, nor Dr. Jones, nor his report were present. The fish trust had gained another victory.

Dr. Jones's report came to the chairman of the Committee on Territories, to the Delegate from Alaska, and to other Members of Congress on February 1, 1915—10 months after the date of his letter—too late, of course, for any consideration in the Sixty-third Congress, and when the legislation for the conservation and protection of Alaska fisheries will be considered is now a problem for the Sixty-fourth, or some later Congress.

THE PRESIDENT'S MESSAGE—"FULL TERRITORIAL FORM OF GOVERNMENT."

In the President's message of December 2, 1913, he used this phrase: "The people of Alaska should be given the full Territorial form of government." I never did know just what he had in mind when he said that, for Alaska then had a full Territorial form of government: viz, a governor appointed by the President and confirmed by the Senate, just as every other Territory before us had; a system of district courts, whose judges, marshals, district attorneys, clerks, and other officials

were appointed just as in other Territories, while the courts have even wider jurisdiction; a legislature, whose members are elected by the people of the Territory, with wide powers of legislation, though rather more restricted in some lines than in most Territories. The form is the same as that in all other Territories, and is full in the same sense as in other Territories, except in the matter, probably, of limitations upon legislation. We have assumed that the President meant by that phrase that he favored extending the powers of our legislature by removing some of those burdensome restrictions, thereby giving the people, through the legislature, as full powers of legislation as other Territorial legislatures had.

All other Territorial legislatures before Alaska, have had a much wider range of power over fisheries and fur-bearing animals than the Alaska Legislature was given; in fact, they all had legislative power over fisheries and fur-bearing animals, subject only to the paramount power of Congress to disapprove such laws, as it might do, of course, in Alaska. But in the organic act of August 24, 1912, creating the Alaska Legislature, Congress provided a special limitation upon the Alaska Legislature as follows:

"That the authority herein granted to the legislature to alter, amend, modify, and repeal laws in force in Alaska shall not extend to the * * * game, fish, and fur-seal laws and laws relating to fur-bearing animals," etc. (Sec. 2, act Aug. 24, 1912, 37 Stat. L., 512.)

This was the character of the limitations that we assumed the President had in mind when he declared in his message that he favored giving Alaska a "full Territorial form of government."

But now comes Dr. Jones, in his report, and strongly urges withdrawing from the people of the Territory, and from the power of our legislature, any and all power over the salmon fisheries and fur-bearing animals! On page 6 he makes the argument, and on page 153, his first recommendation is:

"1. That full control of the fisheries and fur-bearing animals be vested in the Department of Commerce. There should be no division of this authority with other Federal departments or with the Territorial government."

Your attention has been called to the fact that during the 20 years 1890–1910 the United States Treasury lost $2,247,544, and the United States $100,000,000 in addition, by the loss of the fur-seal herd, which suffices to show that the Treasury Department and its successor, the Bureau of Fisheries, have been unable to manage even the simplest fishery problem without enormous losses. The evidence is not to be doubted that the Alaska salmon fishery is halfway from the maximum to extinction also, and now comes a new demand to take away from the Territory of Alaska its jurisdiction over the minor fur-bearing animals—fox, martens, mink, rabbits, etc.—and give control thereof to the Bureau of Fisheries.

Dr. Jones spent 10 months laboring—and brought forth this mouse. He has made no effort to get legislation for the protection of the salmon fishery, which yielded $19,565,648 worth of food supply for the Nation in 1914, and is rapidly declining toward destruction; but, leaving that great food supply to monopoly and loss, he appeared before the Ways and Means Committee of the House, with his subordinate officials, to lobby for a bill to take away from the Territory of Alaska, its legislature and its people, all control over minor fur-bearing animals, and to give his bureau such control, with full power of legislation, over the same.

BUREAU FOR THE CONSERVATION OF JACK RABBITS.

I file herewith a copy of the bill (H. R. 21159) introduced by Mr. PALMER on January 25, and favorably reported the same day by the great Committee on Ways and Means, and now on the House Calendar for passage.

"No person shall kill" any fur-bearing animal, "except under such rules and regulations as the Secretary of Commerce may from time to time prescribe."

"No person shall have in his possession" any fur-bearing animal, "except under such rules and regulations as the Secretary of Commerce may from time to time prescribe."

"No person shall ship out of Alaska" any furs, "except under such rules and regulations as the Secretary of Commerce may from time to time prescribe."

Nothing shall be done "except under such rules and regulations as the Secretary of Commerce may from time to time prescribe." If the Secretary fails to make the rules and regulations, the wheels do not move. He can abridge, he can enlarge, he can suspend the law, or add to it any limitation he pleases. He can permit Indians to kill or capture, and refuse permission to whites. Nothing can be done without his rules and regulations, and there is no limit on the grant of legislative power to this executive officer. In the case of United States *v.* United Verde Copper Co., 196 U. S., 207 (215), the court says of a rule of a department: "If rule 7 is valid, the Secretary of the Interior has power to abridge or enlarge the statute at will. If he can define one term, he can another. If he can abridge, he can enlarge. Such power is not regulation; it is legislation." If it be assumed that H. R. 21159 is constitutional, it certainly gives the Secretary of Commerce (the Bureau of Fisheries) the power to legislate, by making rules and regulations for the control of minor fur-bearing animals in Alaska without restriction. This power is taken away from the legislative assembly of Alaska, which now possesses it, and given to an executive officer. No such action has ever been before taken, purposely and designedly, by Congress since the formation of our Government!

Herewith is the Report of the Governor of Alaska to the Secretary of the Interior, 1914, and on page 37 he says, "I am firmly convinced that the protection of game in Alaska should be directly under the control of the Territorial Legislature." The people of Alaska would be unduly hampered and restricted in their efforts to domesticate foxes and other fur-bearing animals by the enactment of such a law administered from Washington. I strongly urge the President to order the Deputy Commissioner of Fisheries to limit his lobbying to efforts to save the great salmon fisheries in Alaska from destruction, and I specially beg you to remember your message promise that "the people of Alaska should be given the full Territorial form of government."

THE VANITY OF IGNORANCE.

In his argument in support of the demand for Federal control of the fisheries, on page 6 of his report, the Deputy Commissioner of Fisheries declares that "the contention of some in Alaska that the Territory can better administer its own fishery affairs is susceptible of adverse criticism, because of the strife and friction between the diverse local interests that would almost inevitably follow such efforts to handle the situation." He thinks for that reason the Bureau of Fisheries control is preferable. I think not. That "strife," contention, and publicity which comes of preventing abuses—not that secrecy, peace, and death therefrom, which comes otherwise—is what the fisheries of Alaska need! The mild, modest, and gentle officials of the Bureau of Fisheries have acted too long behind closed doors in secret conference with the representatives of the Fish Trust. Such efforts to monopolize these fisheries and transfer them to private ownership, as is made in the tentative bill, could not succeed in the strife and friction which would arise in the broad daylight over them in the halls of a Territorial legislature. It is my judgment that the Alaska Legislature could not do worse than Congress and the Bureau of Fisheries have done with this great food supply; and it would do a great deal better if it had the opportunity.

In the same paragraph on page 6, the Deputy Commissioner gives another reason why he thinks the bureau ought to control these Alaska fisheries:

"And, furthermore, owing to the vast amount of practical and scientific knowledge and information acquired and developed during an extended period by men of unusual training and experience in the Bureau of Fisheries, any idea or thought of transferring jurisdiction over this highly important industry to another institution or board of the National Government should be dismissed at once, as such action would be a serious mistake and would prove a handicap to the greatest development of Alaska's rich fishery resources."

Notwithstanding "this vast amount of scientific knowledge" possessed by the Bureau of Fisheries, on page 24 of his report, Dr. Jones advises the President of the United States that the canneries operate too late in the season, "and the result was that in an effort to make a full pack, many of the salmon they used were spent. Although these fish were fresh from the traps and had been out of the water only a few hours, they were quite inferior for food purposes on account of having spawned."

Now, what do you think of that? What do you think of the "vast amount of scientific knowledge" possessed by the leader of "men of unusual training and experience in the Bureau of Fisheries" who talks of "spent" salmon in the traps "quite inferior for food purposes on account of having spawned"? Why, every child on the Pacific coast knows that when any of the five varieties of Pacific coast salmon once leaves the sea, and go up the rivers to spawn, they never return to the salt water, where the traps are located, but instinctively fight blindly upstream until they die.

In his testimony before the Senate subcommittee on fisheries, on May 16, 1912, Capt. Jefferson F. Moser, long the commander of the United States Bureau of Fisheries steamer the *Albatross*, and since 1902 the manager of the Alaska Packers' Association, at page 136, hearings, said: "We have on the Pacific coast five species of salmon proper. There is the sixth, called the steelhead, which is now classed under the trout species and whose habits differ from the Pacific coast salmon in this, that the Atlantic coast salmon and the steelhead, when they enter the river to spawn, return to the sea after spawning, whereas the Pacific coast salmon—the five species—after they have spawned and performed that function in life, all die."

On page 139:

"The CHAIRMAN. They go back to the spawning grounds and die?

"Mr. MOSER. Yes, sir; they go back to the spawning grounds and die."

And again, in the Senate Committee on Fisheries, Monday, May 20, 1912, during the progress of a hearing on the subject of better legislation to protect and conserve the Alaska salmon runs, the following frank admission of total ignorance by the chosen Alaska fishery experts, was made, to wit:

"Mr. MOSER. For instance, it has been said here this evening and it has been said generally that the young sockeye remained a year over. In fact, I have stated that here myself; but I can get evidence, or I am quite sure that I could get evidence, to the effect that many go to sea as soon as they are free swimmers.

"The CHAIRMAN. I have no doubt but that you can get expert evidence on both sides of the question.

"Mr. MOSER. You can. You know, Senator, there is very little known about the movements of the fish in the water.

"Mr. DORR. May I ask Mr. Bower a question?

"The CHAIRMAN. Yes.

"Mr. DORR. I think what these gentlemen want and what we all want to hear, if you can state from any information you have, is what becomes of the fry after they are liberated? I think that is the real point of efficiency that is involved.

"The CHAIRMAN. That is it.

"Mr. DORR. Do they live or are they lost?

"Mr. WICKERSHAM. At Karluk?

"Mr. DORR. At Karluk.

"Mr. BOWER. I do not think that any observations have been made to prove this point conclusively one way or the other."

Here is the awful admission by Bower, speaking for the whole aggregation of science and scientific knowledge gained during 30 years' study by the Bureau of Fisheries of the life and habits of salmon fry hatched under the eyes of, and released by these scientists, that they actually do not know whether any of these millions upon millions of fry so hatched "live or are lost"!

It is admitted in the hearings, that these scientists have no knowledge or information about salmon life from the moment the minnow leaves the parent stream, until it, or its kind, returns to the stream to spawn in the last year of its life. The average Alaska coast Indian knows all the Bureau of Fisheries scientists know about salmon, except their Latin names, and probably much more.

THE NATURAL ENEMIES OF THE SALMON.

The people of the Pacific coast who have necessarily been so familiar with every phase of Alaska salmon life for so many decades, are yet always more or less mildly surprised at the amazement exhibited by a tenderfoot who sees this wonderfully instructive reproductive movement for the first time. They have seen the finny hordes struggle unceasingly upstream to the spawning grounds; have noted the activity and numbers of their natural enemies; and, for so many years, have seen the millions of "spent" and dead salmon on the bars and along the banks of the headwaters, that they look on without emotion. Dr. Jones, having now witnessed this wonderful fish movement for the first time, returns to Washington with the feeling of a Columbus—he has discovered a new world. No man can absorb the great scene at one glance—he will get one detail here, another there, but will too often miss others of the greatest value. Some men of peculiar vision can see a hair on a cow's back at a great distance without the ability to see the cow herself!

Of course, bears, gulls, ducks, and Dolly Varden trout, hair seals, and sculpin are the natural enemies of the salmon; now are and always were. But altogether, they do little damage. When the myriads of fish are crowding the streams they begin to die almost from the moment of leaving the salt water. The bears drag a few out for food, and the gulls peck at a few, but among the millions this loss is infinitesimal. The seals catch a few near the mouths of the fresh-water streams. The

deputy commissioner, however, seems entirely to have missed the *suidæ cannerii*, the most recklessly destructive of all the animal enemies of the salmon. More fish are destroyed in one trap, in one season, than all the bears, seals, and gulls in Alaska will kill! The trap works day and night. It is set across the salmon's "Pennsylvania Avenue" and catches every fish, salmon or any other, which moves along the highway. As the tide recedes, the mass of fish settles in the trap; the air is exhausted; thousands die; and if not bailed out promptly, a trap full may be destroyed. This happens far too often, and the number of fish thus destroyed is vastly greater than all the seals, bears, gulls, and other natural enemies destroy. Yet, the "vast amount of practical and scientific knowledge and information" obtained by those modest men "of unusual training and experience in the Bureau of Fisheries" does not permit them to see the cow, while the single hair which they can see on her back, looks to them like a telegraph pole on a hilltop.

The fact is, the salmon are being depleted and destroyed by the corporate fish trust cannery hogs. A scow load of "humps" comes to the cannery just as another of "reds" arrive; the "humps" are thrown overboard. Multiply this common occurrence by the number of different ways they have of recklessly wasting the fish, and you have the cause of the rapid disappearance of the Alaska salmon fisheries.

The trap is not wholly to blame, either; for there are many other ways of catching fish and some waste in all; the prodigal waste goes on, after the capture of the fish, in almost equal proportions. But the cannery men give the preference to the trap, which is probably the most convenient and the cheapest method of catching fish, as well as the most wasteful. It does not demand wages or food, works night and day, and catches everything that travels the fish highway. But the real criminal in the useless waste of Alaska fish is the "foreman" for the fish trust, who knows that his salary and employment depend upon his ability to get the "pack" demanded by the home office. Karluk was destroyed by the seine rather than the trap; but it was the foreman who used the seine, and not the local fisherman. It is the manager of the cannery in Alaska, who wastes the fish, and not the bears, gulls, or other natural enemies of the salmon.

RESIDENT ALASKA FISHERMEN V. PEONAGE.

Alaska is, and the President and Congress ought to be, deeply interested not only in conserving the fisheries of the Territorial waters, but in settling in Alaska a permanent population of fishermen. The "strife and friction" which the Jones report condemns in the Alaskans, and in which the fish trust joins, is a struggle between the small but growing permanent population of American fishermen in Alaska, and the fish trust system of peonage.

The Jones report, under the head "Labor question," page 98, notices the "strife and friction" without apparently giving any importance to the cause. The report says:

"Resident Fishermen: In southeast Alaska this element composes a considerable proportion of those engaged in taking salmon for the various canneries. The past season there were many idle men in southeast Alaska, and upon inquiry I learned that most of them were fishermen. Their idleness was attributable to two causes—first, they were refused employment by certain canneries which preferred imported and alien labor; and second, because of the fact that they had listened to agitators and trouble makers who did not have their interest at heart, but who simply desired to create trouble for the canneries. Instead of accepting regular employment and making use of the opportunity to earn good wages during the fishing season, they spent their time in saloons and around the town creating dissension and bad feeling against the fishing interests in general."

Here Dr. Jones recognizes that the fishermen "were refused employment by certain canneries, which preferred imported and alien labor," and then excuses the Fish Trust, by damning the local fishermen with such words and phrases as "idle men," "idleness," "agitators and trouble makers," "to create trouble for the canneries," "spent their time in the saloons," "creating dissension and bad feeling against the fishing interests in general." A very good defense of the Fish Trust, and its usual condemnation of the permanent residents of Alaska. It sounds like an editorial from the Pacific Fisherman.

But his first statement must not be allowed to escape, for there lies the truth and the crime of the Fish Trust—which did not seem worthy of condemnation by the Bureau of Fisheries—"they were refused employment by certain canneries, which preferred imported and alien labor."

The Fish Trust, the Alaska Packers' Association; Libby, McNell & Libby; the Booth Fisheries Co., and others of that type, hire their laborers, especially their inside help—Chinese, Japanese, Filipinos, Mexicans, etc.—either in San Francisco, Portland, Astoria, or Seattle for the fishing season, about the 1st of May each year. Their great canneries in Alaska have only a watchman between seasons: but, about the 1st of May, a fleet of vessels, ships, steamers, and tugs leave the southern ports for those in Alaska. They are loaded with supplies for the canneries and with imported and foreign fishermen. When they reach their canneries in Alaska, the supplies and imported fishermen are put ashore, and the slaughter begins. For the next four or five months, all is life and bustle about the canneries. The business never stops. Fish, fish, fish everywhere. Boats, scows, wharves, and canneries are filled with fish; the machinery grinds, men work with nervous haste, and the finest crop of salmon ever seen in the waters of the world is caught and canned. Day and night the harvest goes on, for the northern bays are then sunlit 20 out of the 24 hours: and, it is never dark. Crews are changed with military precision—while part sleep, the others work—and the movement of the fish from the sea into the cans never ceases. In a few weeks the season is ended; every can is filled!

And now the vessels are loaded with Alaska's fish crop. This year it amounted to $19,565,648. Then, the Chinese, Japanese, Filipinos, Mexicans, and other peons are loaded, and they sail away. Alaska has lost another crop, and not a home, church, or schoolhouse has been built; not a child educated in Alaska out of the great fishery. Suppose Georgia should send such a fleet loaded with such imported laborers, and take such a crop from the oyster beds of Maryland, what would happen?

But we were talking about peonage in relation to those very imported Chinese, Japanese, Mexicans, and Filipinos who were on the vessels north to Alaska and back.

Hereto attached is a copy of a letter dated September 11, 1914, addressed to the Attorney General, Washington, D. C., and signed by Clay Allen, Esq., United States attorney at Seattle, Wash., written after an interview with the Delegate from Alaska in his office. In that letter he reported to his superior officer in the Department of Justice the facts in regard to the special cases of peonage mentioned, supported with affidavits of some of the peons and an affidavit of good faith made by the Mexican consul at Seattle. The facts stated in this letter are so typical and common, and throw such a light upon the peonage system as practiced by the Fish Trust in Alaska, and are so fully attested by the accompanying affidavits and common knowledge, that it is copied in full, as follows:

SEPTEMBER 11, 1914.

The ATTORNEY GENERAL,
Washington, D. C.

SIR: The attention of the Attorney General is called to the following matter of public interest:

Inclosed herewith you will find affidavits of some men who were employed in Alaska canneries at Nushagak and Bristol Bays. I deem it necessary to call this situation to your attention, for the reason that the penal statutes of the United States are entirely inadequtae to cover a situation of this character.

Shortly after taking office last fall some 20 or more Filipinos came to us complaining that a Chinese contracting firm in Portland, Oreg., had employed them to work in an Alaskan cannery at a stipulated sum for the season; that they had performed a season's work under conditions of indescribable hardship and misery, and, when the time came to receive their pay at the office of the Portland contractor, found that the concern had been adjudicated a bankrupt, and that they were without any relief whatsoever in the matter of collecting their season's wages. Their story of employment in Alaska and the treatment they received at the hands of the cannery bosses and Chinese contractors was one of amazing cruelty and such as to be almost unbelieveable in the present day and age. These men claim that they had been advised that the peonage statutes applied to their case. Upon examining the Federal statutes covering peonage I came to the conclusion that anything short of an involuntary servitude imposed upon the men did not come within the statutes. Nature, herself, however, served to impose an effectual restraint upon the men. The canneries on Bristol Bay and Bering Sea are several hundred miles from any habitation or other settlement. The Alaska tundra, namely, a soft, marshy, mosquito-infested area back of the beaches, is well nigh impassable at this season of the year, and for a person not used to the hardships of the Alaska trail it would not be possible to leave Bristol Bay to go overland to any of the trade centers, towns, or cities in Alaska. The several canneries appear to have a mutual understanding to the effect that an employee discharged from one cannery can not obtain employment at another. I believe they have a United States commissioner at Dillingham, a little town on Bristol Bay, but he appears to be completely under the control of the canneries, and will not use what little authority he may have in the premises to correct this situation. The cannery bosses threaten the men with violence, make false charges against them before the commissioner, in some instances cause arrest, and thus have these laborers under their control.

The Japanese contractors, at the time of employment in Portland or Seattle, furnish the men liquor, make false representations to them, get them drunk, if possible, and, in short, resort to almost any subterfuge to get the men under their control and ship them to the canneries. Once loaded upon an old sailing ship bound to Alaska they have no recourse or redress whatsoever. An instance of this is furnished in the pending case of the United States *v.* Henry Bune et al., on a charge of kidnaping, which case will be tried in October of this year.

Another vicious feature about the whole business is that the great cannery corporations will not deal directly with the men, and thus avoid legal responsibility for the acts of the Japanese labor contractors. The whole system seems to be devised to secure the services of cannery hands at a minimum expense to the company and a maximum of work and labor on the part of the men. The instance cited by Joseph Howard in his affidavit of a liquor and drug commissary appears to be a petty side graft of some of the Japanese bosses or of the subcontractors.

We have had a number of complaints in addition to those of the 20 Filipinos. The inclosed affidavits are made by members of the 1914 crew, and I have every reason to believe that the same conditions have existed for several years, as evidenced by the complaints last fall and the evidence furnished in the kidnaping case now pending on the trial docket.

I call your attention also to that portion of Joseph Howard's affidavit regarding the unnecessary waste of salmon in Alaska waters. I am told that 16 different canneries are operating at the mouth of the Nushagak River and Bristol Bay. I believe the other canneries are guilty of the same waste as in the case of the particular cannery mentioned. After a careful search of the criminal laws of the United States I have been unable to find any statute which furnishes an adequate remedy in the premises.

As I understand the present laws of the United States and Alaska, Congress, in granting to the Territory the right to make its own laws, has not divested itself of its Territorial control and still retains the right to regulate Alaska by direct congressional enactment. If I am right in this assumption, Congress could very effectively control labor conditions in Alaskan canneries if it should pass a law prohibiting the farming out of labor contracts. This is another phase of the old padrone system, which has flourished so long and powerfully in Mexico and other Latin countries. Such a system of vicarious employment and responsibility should have no place among our American institutions. The great cannery corporations should not be permitted to lease out the right to employ hundreds or thousands, as the case may be, to irresponsible Japanese or Chinese padrones or contractors, and thus escape a personal or corporate liability to pay the men their wages and to treat them fairly and decently during their term of employment. A statute such as I suggest could in a few words prohibit such employment and attach a severe penalty for its violation. Again, it occurs to me that the fisheries of Alaska could well be placed under the control of the Department of Agriculture, under an inspection system similar to that which obtains in the regulations and control of the packing-house industries of the United States. I have mentioned the presence of a United States commissioner at some point on Bristol Bay, but I am not advised just where he maintains his office nor how near he may be to the canneries in question. If there is no United States commissioner at this point, Congress could easily provide for one who would have jurisdiction of complaints for violation of the inspection law, if such a law were passed, and for a violation of the contract-labor law suggested. I would also urge that the district courts of the United States for the districts of California, Oregon, and Washington, as well as the Territorial courts in all of the districts of Alaska, be given jurisdiction over any violation of the proposed laws. There is authority for this in the present laws regulating the seal fisheries of Alaska and the importation of fur seals from Alaska to the United States. Under these laws the United States district courts of California, Washington, and Oregon have concurrent jurisdiction with the courts of Alaska to punish all offenses under these laws. This I deem necessary for the reason that

under the present system the men are gathered up in San Francisco, Portland, and Seattle and shipped to Alaska by the outside passage in the cannery sailing ships, and after completing the season's work the men are returned by the same route directly to these cities and paid off. They do not go within a thousand miles of Valdez or the seats of the district courts of Alaska. The several United States attorneys in Alaska are therefore unable to prosecute for any violations of present laws, and it would present much the same condition with reference to proposed laws unless the jurisdiction be extended to the States mentioned. The men, in most instances, have but a few dollars upon their arrival in Seattle, and are not able to pay their expenses to Valdez or other Alaska points to make a complaint. It would seem that a statute might be enacted requiring that the men be paid off in cash monthly or semi-monthly, so that it would not be possible for these men to be dropped in Seattle late in the season, there to be the victims of unscrupulous and irresponsible contractors in the settlement of an entire season's wages and accounts.

This letter is written after an interview with Judge JAMES WICKERSHAM, Delegate from Alaska, and I have transmitted a copy to Judge WICKERSHAM and to Senator POINDEXTER, who are both well advised of general conditions in Alaska.

Respectfully,

CLAY ALLEN,
United States Attorney.

Again, referring to the Pacific Fisherman for April, 1914, you will find the general peonage contract, which all these miserable creatures are forced to sign before they are shanghaied from San Francisco, Astoria, or Seattle, on pages 13–14, while the Pacific Fisheries Society record, with the acceptance of the President and the governors of Alaska, Washington, Oregon, California, and Nevada, and a report of the activities of Dr. Jones, is on pages 17–19.

The Delegate from Alaska has time and again called these criminal peonage practices of the Alaska Fish Trust to the attention of the Bureau of Fisheries, but without effect. On May 27, 1912, before the subcommittee of the Committee on Fisheries, this matter was fully presented. There were present at that examination Senator JONES, chairman, the Delegate from Alaska, Mr. Ward T. Bower, then and now assistant agent of the Bureau of Fisheries, and the agents and attorneys for the Fish Trust. Capt. Moser, the manager of the Alaska Packers' Association, was being examined, and he testified as follows:

"Mr. WICKERSHAM. Capt. Moser, you have a Chinese boss there by the name of Chew Mock?

"Mr. MOSER. Yes.

"Mr. WICKERSHAM. How long has he been with you?

"Mr. MOSER. He is a labor contractor for several different locations. He furnishes the orientals for that location.

"Mr. WICKERSHAM. Does he not furnish other than orientals?

"Mr. MOSER. No; he furnishes what we call the oriental crew—the cannery crew. Of course they are Porto Ricans and Mexicans and all mixed in together.

"Mr. WICKERSHAM. Portuguese and all classes of people?

"Mr. MOSER. No; there are not any Portuguese. There are Filipinos and people of that race.

"Mr. WICKERSHAM. What wages do you pay there at that cannery?

"Mr. MOSER. You mean per case?

"Mr. WICKERSHAM. No; per season. For instance, take 1911; what did you pay the cannery men there?

"Mr. MOSER. The cannery men—Chew Mock and his people?

"Mr. WICKERSHAM. Yes.

"Mr. MOSER. I do not know what the contract was."

The trust always pretended ignorance of these peonage contracts, though they are in writing and are used to secure their cannery men; but, as the district attorney points out, the Fish Trust puts the peonage contracts on the head of Chew Mock, as Capt. Moser calls him, on page 346:

"Mr. MOSER. Our labor contractor, Chew Mock."

At this point I introduced one of these peonage contracts in evidence, and Mr. Ward T. Bower, of the Bureau of Fisheries, saw and heard, and the Bureau of Fisheries officials have all read and have knowledge. It is on page 359–360 of the hearings, and it reads as follows:

SAN FRANCISCO, *April 15, 1911.*

It is hereby stipulated that a roustabout (a man of all work) in whatever line of work that has to be done in the Wrangell, Alaska, cannery must comply with the orders of the American and the Chinese foremen. He must willingly go to work whether work starts early or late. He must not refuse or oppose, in any manner whatsoever, any kind of work assigned to him. It is understood and agreed that he shall work on Sundays and all holidays. The work must be completed before he or any one of them can leave. An excuse can not be made because those assigned to another line of work should quit earlier or later. Should anyone be cantakerous and quit work contrary to this stipulation, a deduction of 50 cents is to be made for each hour until he returns to work. Food is to be provided for in sufficient quantities by the foreman. The bill of fare is to be Chinese. No unreasonable demand for food is to be made. There shall be no discussion whatever should there be only two meals per day, 9 a. m. and 4 p. m. Each person is to be paid $40 wages in advance, which amount is to be handed over in full upon the laborers going aboard. The balance, * * * dollars, is to be paid as per account five days after the return of the laborers to the city. Gambling is to be strictly prohibited.

No one shall be permitted to carry firearms or liquor of any kind along; those guilty shall be fined according to the rule of American company; $50 shall be fined for fighting.

All unforeseen cases of fatality shall be adjusted according to the rules of the American company pertaining to such cases.

The wages are to be $165 per man for the season of 1911.

All money due to the foreman and money advanced for poll tax shall be deducted from wages, and after all deductions balance of wages will be paid in full.

In case the cannery is destroyed by fire from any cause, and also in case ordered to work in other cannery by the foreman, no increase of pay shall be demanded, but the order of the American foreman shall be obeyed.

This instrument is drawn up to be proof, and no departure from these stipulations is to be allowed.

CHEW MOCK.
ZACHARIAS FERNANDES.

This contract is signed, so I am informed, in addition to that form found beginning on page 351 (which is a copy of the above referred to) in the April, 1914, Pacific Fisherman. The long form is used on shipboard; the short one on shore, when the peon is disconnected from the vessel.

Now, Mr. President, there is the official proof of a system of peonage which has long been practiced in the Alaska fisheries by the Alaska Packers' Association and other fishery trusts: it is slavery in its severest and most unjust form; for, while it robs the peon and degrades him with abuse and misery, it also takes away the fair living wages which these enormously wealthy criminals could and fairly ought to pay the resident fishermen of Alaska.

Referring again to Dr. Jones' "Labor Question" (remarks, p. 98, report), it is not hard to understand why there are idle men among the resident fishermen in Alaska, nor why there are even "agitators and trouble makers." But Dr. Jones convicts himself of criminal indifference to the truth of the situation, when he fails, and refuses to report to the President the facts that create the idle men there; and he adds insult to his injury when he abuses the resident fishermen, and defends these Fish Trust officials, who grow rich and destroy the salmon food supply by a criminal system of peonage in violation of the United States statutes.

Dr. Jones and the Bureau of Fisheries can not plead ignorance; they well knew the facts. But they did not disclose them to the President or to Congress in the Jones report, or at all. One who is so stupid as not to appreciate the facts of peonage and monopoly when they are so publicly exposed, is a poor adviser to the President, to say the least of him.

THE JONES RECOMMENDATIONS.

Compare the Jones "recommendations" with the statements and conclusions of Moser, Dorr, Evermann, Gorman, Bower, and the whole array of witnesses and bureau experts who drew the "tentative bill" and you will find that he condemns what they do, and recommends what they do. He denounces any control of the fisheries by the people of the Territory; so does the trust. He condemns any control by the legislature; so does the trust. He strongly demands supreme control by the Bureau of Fisheries; so does the trust. He modestly informs the President that the Bureau of Fisheries has a vast amount of scientific knowledge; and the trust admits it, with a wink. He is positively shocked that anyone should consider the idea or thought of transferring jurisdiction to any other institution or board; and so is the trust. He condemns the local resident fishermen; so does the trust. He calls them idlers and worse names; and so does the trust. He condemns them as agitators and trouble makers; and so does the trust. He declares they are saloon bums; and so does the trust. He says they desire to create trouble for the canneries; and so does the trust; and bad feeling against the fishing interests generally—meaning the trust—and the trust agrees with him. He says the resident fishermen make unjust demands; and so does the trust. He thinks the fishermen guilty of a general lack of reliability; and so does the trust.

RECOMMENDATIONS (P. 153).

1. He urges full control of fisheries in the Department of Commerce—no division with other departments or the Territory—so does the trust.

4. A just and fair revision of fish-trap tax; so does the trust—downward.

5. A license tax on the resident fishing gear; so does the trust.

6. Thirty per cent of tax revert to fisheries fund; so does the trust.

8. That all local-owned power-boat trolling be prohibited; so does the trust.

9. That customs officers refuse shipment of fish without the prepayment of tax; so does the trust. It would put the little man out of business.

11. Five new Government hatcheries; so does the trust.

12. All hatcheries to be operated by Government; so does the trust. It will sell its hatcheries like it did the *Wigwam-Osprey* tug.

13. Specified closed seasons; so does the trust.

15. Prohibit aliens from fishing; so does the trust. It works its peons in the canneries.

20. That the holders of fish-trap sites be protected: so does the trust.

22. That seines less than 100 fathoms long be prohibited; so does the trust. It would put every local fisherman out of business.

20. That the holders of fish-trap sites be protected; so does the trust. It has some old derelicts left in the bone yard.

25. That $12,000 be appropriated to remodel the trust *Wigwam-Osprey;* so does the trust, with a smile.

27. That the fish law be amended to allow packing 60-hour fish; so does the trust.

Every statement of fact or argument which might hurt the great corporate trust engaged in monopolizing the fish of Alaska, and peonizing imported fishermen is carefully censored out of the Jones report. Not a single suggestion is offered tending to encourage the settlement of a permanent fishing population there. The principle of free and popular government "of the people, by the people, for the people" is denounced in the usual language of the trust. No remedy is suggested whereby the fisheries of Alaska may be conserved and saved to the Nation for the use of the people. No recommendation is made whereby the fisheries of Alaska may be made useful and beneficial in building up an American Commonwealth in the far Northwest. Not a criticism of the peonage and slavery of imported fishermen is offered; and the trust corporations are shielded from even a suggestion that such crimes exist there. Whatever the Seattle-San Francisco-Chicago Fish and Meat Trust have asked for in the "tentative bill," is approved and fortified by argument to the President.

THE REMEDY.

1. Pass an act of Congress declaring a national public policy of reserving to the people of the Nation, the fisheries of Alaska, and trap sites, fishing grounds, streams, lakes, and waters frequented by food fish for spawning and feeding.

2. Amend the organic act of August 24, 1912, creating a legislature in Alaska, by giving it the power to conserve and protect the fisheries and fur-bearing animals of Alaska.

3. Pass an act of Congress to forbid, under penalty, fishing or working in the fisheries of Alaska by any person or persons except natives of Alaska, or citizens of the United States.

4. Enforce the provisions of the United States criminal laws against the Alaska Packers' Association and other Fish Trust corporations, and all other persons engaged in the peonage of imported fishermen to Alaska.

5. Enforce the criminal laws of the United States for the punishment of persons and corporations guilty of acts of conspiracy in restraint of trade or violations of the Sherman antitrust act.

6. Pass section 8 of H. R. 18144, amended to read as follows:

"SEC. 8. That it shall be unlawful to export from Alaska or the Territorial waters thereof, to any foreign country, any salmon or other

food fish except in a frozen, canned, salted, smoked, dried, or other prepared condition."

7. Discharge from the public service every official who suggested, agreed to, or in anywise approved the "tentative draft of bill suggested by the United States Bureau of Fisheries and the representatives of the various Alaskan fisheries, which has been agreed upon and prepared by them jointly after numerous conferences."

8. If it must continue its unnecessary existence, remove the branch office of the Bureau of Fisheries now located in Seattle, Wash., to Ketchikan, Alaska.

9. Make an Executive order forbidding the officials of the Bureau of Fisheries from appearing around the Capitol or in committee rooms as enthusiastic lobbyists for the passage of legislation for the Fish Trust, or at all.

10. And, finally, if the President needs official, full, and fair information about the fisheries of Alaska, I recommend that Congress send the chairmen of the Senate Committees on Canadian Relations, Commerce, Conservation of National Resources, Fisheries, and Territories, and the chairmen of the House Committees on Merchant Marine and Fisheries and the Territories, with the ranking Republican member on each of the said Senate and House committees, as a special committee to Alaska to report both the facts and a remedy for the control and conservation of the Alaska food fisheries, with recommendation. A report, with recommendations, from such a committee would be accepted by the country as worthy of confidence, and would result in saving the Alaskan fisheries to the Nation and in preventing their monopoly or destruction by the Fish Trust.

Respectfully,

JAMES WICKERSHAM,
Delegate from Alaska.

Agricultural Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. ISAAC R. SHERWOOD,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. SHERWOOD. Mr. Speaker, the ponderous and unusually expensive Agricultural bill carries a liberal appropriation for horse breeding and experiments in live-stock production. It is the universal opinion among expert horsemen that there are sufficient ways to spend the tax money of the people without going into competition with private enterprise in scientific horse breeding. Every intelligent horseman knows that the United States standard-bred trotting horse, bred for over three-quarters of a century by private enterprise and private capital, is the superior of any horse in either Europe or Asia. He is in stamina, quality, speed, and style the superior of the Orloff trotter bred under Government auspices in Russia for a quarter of a century longer than the American trotter.

The following resolution, unanimously adopted, expresses the prevailing views on this subject of not only saddle-horse devotees, but of all other classes of horsemen in the United States, especially the breeder of standard trotters and thoroughbreds:

Resolved by the American Saddle Horse Breeders' Association, in annual meeting, this April 11, 1914, That it be, and is, the sense of this meeting that the breeding of horses is not properly within the function of the Government, and the undertaking on the part of the War Department and Department of Agriculture of the United States Government to breed horses for Cavalry service is an unwarranted and unjustifiable interference with private enterprises; and, further, that each member of this association be, and is hereby, requested to communicate with his Member of Congress and the two Senators from his State, protesting against this Government's interference with private affairs.

HOSTILE LEGISLATION HAS RUINED HARNESS RACING.

How is it possible to promote scientific horse breeding by the United States Government in the presence of so much hostile legislation by the States to wipe out horse racing or horse culture? Speed horses of high quality commanded very remunerative prices when breeders were allowed to race their products in the grand circuit. There were plenty of ready home buyers at the end of the grand circuit for tried and educated horses of speed, manners, and quality, and buyers from Russia, Austria, London, Paris, and nearly all the leading capitals of Europe. Millions of good gold dollars were brought into the United States by foreign buyers, prices ranging for stallions of fashionable breeding and extreme speed from $25,000 to $75,000. All the stock farms were prosperous, and there was neither a demand nor an excuse for Government patronage or Government aid until the hypocritical blatherers, masquerading as reformers, started on their destructive work.

I am not here to criticize the efforts of the Government to promote scientific horse breeding, but to call attention to the notoriously unfortunate fact that nearly all the States north of the Ohio River have enacted hostile legislation to discredit and practically ruin scientific horse breeding. This has been done largely by legislation against pool selling on race tracks. This legislation has practically ruined the splendid series of harness racing known as the grand circuit, which a decade ago furnished to millions of horse-loving enthusiasts the most wholesome and recreative and alluring of all the outdoor sports and pastimes of the American people. This legislation has also ruined the county fairs, which for half a century have afforded so much wholesome enjoyment to the boys and girls of the farms.

HAS ONLY INCREASED GAMBLING.

And what has been the result of this legislation upon the speculative element of modern society? Has it stopped gambling? No; it has increased it. Has it elevated the moral tone of society? No; it has degraded it. All peoples—Christian, pagan, and Mohammedan—have their recreations and pastimes. If they are not allowed the best they are liable to go to the worst. In the United States we have practically killed high-class horse racing and inaugurated prize fighting, baseball, and football. And we are now gambling three times as much on these games as we ever did in the very heyday of horse racing. And a game that is outlawed in every civilized country around the world—prize fighting—is now the most popular pastime of the sporting element of the American people. The brutal bouts of the nose smashers and rib crackers of the prize ring are the leading features of all our leading daily newspapers. They are even betting disgracefully on the polo game. And the select ladylike are gambling on it far more than was ever known on race horses.

Here is a reliable telegram showing the big hit made by Mrs. Hitt:

LOS ANGELES, CAL., *March 4.*

Perry Beadleston won the laurels in to-day's polo round robin, his individual score of 6 being the best. Mrs. William Hitt, formerly Katherine Elkins, bid in Beadleston at the auction pool last night for $35 and won the $700 pot. Some one estimated that at least $12,000 a game has changed hands during the season.

And no protests anywhere.

As I never bet a dollar in my life on a horse race and never bought a pool ticket on a horse and never bet on any other sport, not even a twilight tango, I am giving an entirely disinterested opinion on this vital question, based on over 60 years of personal observation.

When the football team of the University of Pennsylvania met in combat the football team of the University of Michigan at Ann Arbor, Mich., this team of high-class university students carried with them $4,000 to bet on the game, and the game was played and the money was bet within the sacred precincts of that great university. Not a sound was heard against it. Had a horse race transpired on that highly cultivated ethical soil, with $4,000 bet on the result, all the gamblers in the game would have been arrested and penalized. As an ethical question, is it more of a crime, either morally or by statute, to bet on a four-legged animal than on a two-legged human being?

In England, when Edward VII was Prince of Wales, only a few royal degenerates of his fast set patronized the prize ring; but in all the larger cities of the United States the "four hundred" are in the craze to witness the nose smashing and human blood letting of the prize ring. In view of this deplorable degeneracy, the harness horse offers to-day the most recreative and morally wholesome entertainment of all the outdoor sports and pastimes—a sport free from both brutality and blood, a sport free from smut and all immoral trend, a sport full of good health and good cheer. The actor and the showman are always the best types of the moral and social elevation of any people. The actor acts to please only. If the people demand smut, the actor is always a smut machine. If the people demand brutality and blood, the prize fighter and the bully become the stars. How far are we away from that condition now? The grand plays of Shakespeare and all dramas of moral import are everywhere being supplanted by the frivolous, vulgar, and smutty vaudeville.

WHY GOD CREATED THE HORSE.

The monkey and the magpie, on their respective perches, are always interesting. The former with his grimaces and antics and face, reminding us of the primeval man; and the latter, with his song and chatter, seems the incarnation of the music of the woods. But it is not given to man to know why an All-Wise Creator made them companions in the forests. But every intelligent human being knows why God created the horse. In the domain of the utilities of life, in the more esthetic field of the recreations, in poetry and song and sculpture, and on the red fields of war, the horse, since creation's dawn, has been the omnipresent companion and helpmate of his master—man. Let us now scan the law of the inevitable—the natural loves and instincts of man as illustrated by all history. From the ancient Pharaoh of the Exodus to Gen. Phil Sheridan, the horse has shared the honors of war, the glamours of love, the wild witchery of chivalric tournament, and the gloom and glory of all

the crusades, Christian or Mohammedan. By a law of Moses the Jews were forbidden to ride horses. The horse at that period, before the invention of gunpowder, was regarded solely as an engine of war, and Moses desired to make his people a pastoral people, devoted to the arts of peace. This is why Christ rode into Jerusalem on the more docile and peace-loving ass—to symbolize more fully his mission of peace and good will to all mankind. And right here let me turn aside to point a moral. To-day we have too much of the machine in our social and political life. The almost universal pursuit of money is trampling in the mire all poetic and patriotic feeling and wearing all the verdue out of men's hearts—and women's hearts, too.

THE HORSE IN THE HEROICS.

From time immemorial the horse has been immortalized with his immortal master. He has been perpetuated in stone and iron and bronze with the poets, philosophers, and soldiers of the world.

In Berlin it is Frederick the Great and his horse.

In Trafalgar Square, London, it is Lord Wellington and his horse.

In Paris it is Napoleon and his horse.

In our National Capital it is Grant and his horse, Jackson and his horse, Sherman and his horse, Gen. Logan and his horse, and glorious old "Pop" Thomas and his horse. In Richmond it is Washington and his horse, Robert E. Lee and his horse, and Stonewall Jackson and his horse.

On the obelisks of dead old Egypt, on the Arch of Trajan at Rome, and the Arch of Triumph that Napoleon built in Paris to celebrate his victories, the horse and his hero rider are multiplied on every ascending circle.

The Old Testament prophetess Miriam, taking her timbrels to swell the song of triumph which Moses gave to the poetry of the ages, in celebrating the drowning of Pharaoh and his cavalry in the Red Sea, says:

Sing ye to the Lord, for He hath triumphed gloriously. The horse and his rider He hath thrown into the sea.

You will notice that the inspired prophetess gives the horse first mention over the soldier, doubtless on his merits, as the more humane of the two.

Prof. Darwin does not tell us in his great work on the evolution of man the number of years that elapsed between the development of the manlike ape to the apelike man; but, since history began, with its dim and uncertain light, I believe the horse with hoofs to have been coexistent with the devil with hoofs and coexistent with the apelike man, if not coequal.

Prof. Leidy, very high authority, says the prehistoric man had a prehistoric horse for his companion. The same high authority says that while it is true that Columbus discovered no horses with the native Indians when he discovered America, there is no longer room for doubt that the horse lived on the American Continent before the race of Adam.

I believe that he lived alongside of the mastodon as the companion of the prehistoric man.

Dr. Allen, in his great work entitled "Civilization," gives a vivid picture of the first arrival of the barbaric Huns in Europe in the fourth century. The chiefs are all mounted on magnificent horses, richly caparisoned, that, as Lord Byron says in immortal Mazeppa, "look as if the speed of thought were in their limbs."

In Bulfinch's fascinating book entitled "King Arthur and His Knights," which includes the heroic age of chivalry, we find the horse the conspicuous figure in every joust and tournament, escapade and romance. He is prominent in all the songs of the troubadours, many of which were written by women. Indeed, the word chivalry is from the French word cheval, a horse.

The history of all civilizations, Christian, pagan, and Mohammedan, prove that God made the horse for man's utility, comfort, and pleasure. Those who think that any man-made machine, however artistic, can ever take his place know little and think less. Of course we shall have machine motors, as we have wax flowers and paste diamonds and crockery dolls. But wax flowers will never shed fragrance on the bosom of a divine woman, like the God-grown blossoms; and crockery dolls will never take the place of real babies; neither will the counterfeit blaze of paste diamonds ever mock successfully the rainbow tints of the real gems. And the live horse, the horse immortalized in song and story and sculpture and romance and war, will ever be animate and imperishable; man's best and most wholesome friend among the animals.

THE HORSE IN HEROIC LITERATURE.

It is a historical fact, with 2,000 years of civilization to verify it, that the introduction of the horse in public amusements has always marked the improved moral tone of every people, either Christian or pagan. In that period of brutal rule so vividly depicted in that great historical novel Quo Vadis, when Nero sat above Rome, wild beasts from the forests of Germany were brought to fight gladiators and devour Christian martyrs in the Roman amphitheater, amid the wild applause of the Roman populace. Later, when Rome was touched with a gentler and more benign civilization, under the Emperor Augustus, the bloody bouts between men and wild beasts were supplanted by the chariot races, where the horse was the main factor of the entertainment.

All the poets of modern times put horses under their heroes. King Richard III, according to Shakespeare, offered his whole kingdom for a horse, after his game steed fell dead on the bloody battlefield of Bosworth. He could not get another horse on his offer, and thereby lost the battle and the crown, and the blood of Plantagenet was dried up forever, and the blood of Tudor came in to rule England, all for lack of a horse.

All the standard English poets were horse fanciers. Lord Byron's Mazeppa, a poem of horse and romance and escapade, is one of the grandest in the language. Sir Walter Scott in immortal Marmion puts into Lady Herron's sweet mouth the story of Young Lochinvar, one of the most thrilling musical gems in the English language. And young Lochinvar's horse is the supreme factor of the escapade. You remember when young Lochinvar stole away the bride, who was about to wed "a laggard in love and a dastard in war," he caught her on the home stretch, and throwing her willing form behind his own, astride his prancing steed, while two pairs of chivalric legs were thrilling the throbbing ribs of his game flier, the lads and lassies of the laggard bridegroom had no steeds fleet enough to follow and young Lochinvar got away with everything.

Even Tennyson, late poet laureate of England, with all his finical, fine ladyisms of versification, occasionally braces up into the robust heroic when he mounts the English thoroughbred. He does this in Locksley Hall, but his best effort by far is The Charge of the Light Brigade. But Tennyson is hardly in the same class with Sir Walter Scott. In all the minstrelsy of Scott the horse always comes in to gild the heroics, whether he sings of love or war.

And the finest dramatic poem of our great Civil War is Sheridan's Ride, written by our Ohio poet, T. Buchanan Read, in which the horse is the hero, because, without that game flier Sheridan could never have turned defeat into victory in that immortal 20-mile ride from Winchester to Cedar Creek. It was the fleet black stallion that carried Sheridan that gray October morning in 1864 that made victory possible. And the poet tells it well:

With foam and with dust the black charger was gray;
By the flash of his eye and his red nostrils play,
He seemed to the whole great army to say:
I have brought you Sheridan to save the day,
From Winchester, twenty miles away.

* * * * *

And when their statues are placed on high,
Under the dome of the Union sky,
Be it said in letters both bold and bright,
Here is the steed that saved the day,
By carrying Sheridan into the fight
From Winchester, twenty miles away.

In the language of Lord Byron, in his immortal Mazeppa, "Bring forth the horse"—the harness horse—man's best, most useful, and most wholesome animal friend. Let us see him, often and again—in the swift-footed flights of the charmed circle, in the bright aurora of the twentieth century, under our benign skies and suns, under our flag with the gleaming stars of States.

Have you ever stopped to think what would have become of Gen. Sheridan and our Army that desperate day had Gen. Sheridan made the ride in an automobile? Could he have made it with a "busted" tire? Could he have inspired the boys with courage anew with a machine instead of the black charger that, with foam on his flanks and nostrils red as blood, carried the courage of his great master into the hearts of the musketeers? An immortal poem was born that day that will go singing down the ages; not inspired by Gen. Sheridan, but by Gen. Sheridan and his horse.

It is not the war horse that Christian civilization of the twentieth century, now in its dawn, should care to exploit. It is the domestic horse. The horse of peace, the horse that carries his master, in the exhilaration of the wind, along pleasant valleys, by running brooks, and meadows green with verdure, by woods vocal with the song of birds, to make him forget his nervous worry over business cares and catch an appetite and the serene joy that awaits good digestion.

THE HORSE IN MYTHOLOGY.

Is it possible that a mere animal like the horse should have been a vital part of the creed that linked men and gods in the

religion of the most poetic and accomplished of all the ancient peoples? The religions of ancient Greece and Rome have long since become extinct, but the poetry and literature of the age of mythology have enriched the literature and poetry of all living languages. The religion of these two, now dead, civilizations is the most poetic and irresistible of all the high-wrought witcheries of men or gods in the mystic domain of the supernatural. And if the horse is a vital element in the ministering power of the gods of mythology, it indicates that of all the animals in the animal kingdom the horse, in the conception of the pagan world, was endowed with a creative potency ranking with the superior gods.

We learn that the god Neptune controlled all the waters of the great ocean—the Mediterranean Sea being the only ocean the Greeks knew—and that he created the horse. Homer, in his Iliad, sings of Neptune thus: "He yokes to the chariot his swift steeds, with feet of brass and manes of gold, and himself (Neptune) clad in gold, drives over the waves."

Prof. Murray's Manual of Mythology, speaking of Neptune and his sea horses, says: "The sea rejoices and makes way for him. His horses speed lightly over the waves and never a drop of water touches the brazen axle."

In Greek statuary Aurora is represented as a spirited maiden with expansive wings, clad in flowing robes of white and purple, riding Pegasus, and distilling through clouds of amber the morning dew. For the benefit of all horsemen who dote on pedigrees, I submit herewith the high-wrought pedigree of Pagasus:

When the cruel god Perseus cut off Medusa's head, as the mythical story runs, the blood sinking into the earth produced the winged horse Pegasus. Minerva, the Goddess of Wisdom, caught him wild and tamed him, and presented him to the Muses. And the fountain of Hippocrene, on the Muses' Mountain, Helicon, was opened by a kick of Pegasus's hoof. This seems like a large horse story, but it is as reliable as some of our modern tales. Minerva gave Pegasus a bridle of gold lace, and with his wings he soared the sky like a bird. In fact, he is the original first-class flier in the grand circuit of the skies. An agile youth, who came to the Court of the Gods, named Bellerophen, rode Pegasus into the upper air and with his spear killed the fiery dragon, Chimaera, as he was cavorting about the sky.

Not only is the horse a foremost factor in the religions of ancient Greece and Rome, but he figures still more conspicuously in the religions and mythologies of ancient Persia and India. In the Vedic hymns of Persia, the most interesting and instructive of all the weird and mystic literature of that country, we gather a true idea of the religion of the ancient Persians and learn therefrom the most sublime conceptions of the Supreme Being. These hymns were written a thousand years before Christ. The Vedic theory of the creation is far more poetic than the Mosaic account. It attributes all created things to a single being—the Golden Child, "who established the earth and this heaven, who built the firmament of ether, measured the air, and set the sun on high, and who begot the bright and mighty waters." In the Vedic hymns, running through 50 pages of Prof. Timothy Dwight's great book, The Ancient Classics, I find the horse is mentioned no less than 60 times, always as a potent factor in the supernatural control of earth, air, and the heavens. Here is a specimen quotation:

Oh Rudras, friends of the golden chariot, come hither for our welfare, possessed of good horses and chariots, penetrating the clouds, shaking down the rain from the sky; red horses and faultless, noble by birth, golden breasted. Oh, oh, Maruts, you have given us wealth of horses, chariots, and heroes; golden wealth.

In the wonderful religion of Buddha, the first great teacher and prophet of the Golden Rule, the horse has a conspicuous and ever-abiding place. According to Prof. Ephephanius Wilson, in his fascinating book, the Life of Buddha, the great Buddhist prophet taught the perfect life of virtue, temperance, morality, peace, and brotherly love at least 800 years before Christ. In fact Buddha is the first great philosopher of human destiny—immortality—as we now understand soul life. And after the lapse of over 25 centuries Buddhism still stands first among the four great religions in the number of its devotees. In the life of Buddha as translated from the Chinese into English by Prof. Samuel Beal, Buddha was the world's first great teacher of the true life. Like the only Christ, Buddha was sorely tempted to abandon the path of virtue and sobriety, but he was not tempted by a personal devil, but by the spirits of evil in the guise of bewitching nymphs, and, according to all the books on Buddhism, it was the horse that carried Buddha away from temptation to a rarer air and the calm delights of flower-embowered gardens. The temptation of Buddha forms a most delicious chapter; first translated from the ancient Sanskrit language into Chinese by the great Chinese scholar Dhar Maraksha, and from Chinese into English by Prof. Samuel Beal:

Dancing women gathered about the Buddha; around his straight and handsome form. Their half-clad forms bent in ungainly attitudes; their garments in confusion or like the broken Kani flower; others pillowed on their neighbor's lap, their hands and feet entwined together, their bodies lying in wild disorder; their hearts so light and gay, their forms so plump, their looks so bright. But the prince (Buddha) stood unmoved by his horse; his milk-white horse—unmoved. And now he said, "I leave this false society. I will mount my horse and ride swiftly to the deathless city. My heart is fixed beyond all change." The Devas then gave spiritual strength, and the prince (Buddha) mounted the gallant steed, fitted with all his jeweled trappings for a rider.

All the above is supposed to have happened over 2,500 years ago. And yet what turf writer of to-day can give a more dramatic sketch of the high-mettled horse than this? Here let me point a potent moral to adorn this dizzy, divinized history of the escape from temptation of the world's first great prophet.

THE HORSE SAVED BUDDHA.

Was it not the horse that saved Buddha, and carried him away from the environment of evil? Have we not quoted enough of the history of the pagan classics to prove that for a thousand years of the brightest and best civilization known to the pagan world the horse was the divinely equipped motor of supernatural power. And have we not shown that in the most witching civilization of the ancient Orient the horse was the chosen instrument of the first great prophet of moral ethics to escape from evil thoughts and evil ways into the rarer region of a divinely appointed life? And in view of all this, have we not the basis of true moral judgment in the claim that the horse, in the evolution of all civilizations, has been always regarded as more than an animal? And is he not indissolubly linked in mythology, poetry, and sculpture with the great prophets, heroes, and the divine idols of the world?

A PARTING WORD.

As a parting word, let me voice the universal opinion of the horsemen and breeders of the United States. They are not asking any advice or aid from the Federal Government. All they ask is to be allowed to do business free from the cruel handicap of restrictive and unjust legislation. Let us aim all present and future legislation against the reign of prize fighting and all other brutal and degrading games, and give to the horse and his master, man, a chance to elevate the spirit and wholesome moral tone of the outdoor sports and pastimes of the American people.

The Late Hon. Lewis J. Martin.

MEMORIAL ADDRESS
OF
HON. DOW H. DRUKKER,
OF NEW JERSEY,
IN THE HOUSE OF REPRESENTATIVES,

Sunday, February 14, 1915,

On House resolution 735, as follows:

"*Resolved*, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. LEWIS J. MARTIN, late a Member of this House from the State of New Jersey.

"*Resolved*, That as a particular mark of respect to the memory of the deceased and in recognition of his distinguished public career the House at the conclusion of these exercises shall stand adjourned.

Mr. DRUKKER. Mr. Speaker, death prevented Congressman LEWIS J. MARTIN from rounding out a career which had been devoted for many years to public service. Until near the end of his life, when he consented to enlarge the scope of his activities, he had been content to confine his labors to Sussex County, where he toiled faithfully and added dignity to the positions of trust he occupied. His career was ended shortly after he had started to fulfill the duties in this Chamber as Representative from the sixth district of New Jersey.

Judge MARTIN was a man of eminence in his home county and State, displaying such qualities as must have won for him the same regard and esteem in this body. As State senator, prosecutor, and judge of the court of common pleas he gained for himself the general respect of the community. More intimately, perhaps, can I speak of his work as judge, for he occupied the bench in Passaic County on a number of occasions. He tempered justice with mercy; he showed a kindliness of feeling toward the unfortunate; his judgment was not questioned.

Of a genial, lovable nature, Judge MARTIN made many lasting friendships. Sussex, indeed, will not soon forget the fine qualities of her son nor the high place he holds in her annals.

War Risk Insurance.

EXTENSION OF REMARKS
OF
HON. JOSHUA W. ALEXANDER,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. ALEXANDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to print a letter from Hon. W. G. McAdoo, Secretary of the Treasury, of date March 3, referring to certain statements made on the floor of the House recently relative to certain policies which have been written by the War Risk Bureau in the Treasury Department.

The letter follows:

TREASURY DEPARTMENT,
Washington, March 3, 1915.

DEAR MR. ALEXANDER: My attention has been called to certain statements recently made on the floor of Congress relative to certain policies which have been written by the Bureau of War Risk Insurance of this department, and which do not correctly state the policy of this department in accepting its risk.

The conduct of all matters connected with the Bureau of War Risk Insurance has been under advice of an advisory board composed of three men versed in the practices of war-risk insurance and of recognized positions in that class of business.

The valuations accepted on vessels have been based upon the market value of the property insured at the time the insurance was taken out. It has been the invariable practice of marine underwriters throughout the world to endeavor to base the valuations on which they insure vessels upon a close approximation of the value of the vessel in the market at the time the insurance is taken.

Taking specifically the cases of the two vessels that are lost, the steamer *Carib* was insured by the bureau for $22,253 and valued at $75,000, the balance of the insurance on war risks being assumed by companies; that is to say, on a total valuation of $75,000 the War Risk Bureau assumed the risk of $22,253. This valuation is the valuation accepted by a number of the most representative and best-known marine insurance companies doing business in the United States.

The valuation on the steamer *Evelyn* of $100,000 was accepted by the bureau as representing a fair market value for this boat at the time insurance was taken out, their judgment in this matter being substantiated by the fact that the cost price to the owner insuring was in excess of $92,000, of which fact they have conclusive evidence. In addition to this they have had evidence of considerable amounts spent on repairs.

It is well recognized that the value of all steamers under the American flag has greatly enhanced since the 1st of August.

Both these vessels were under the American flag for years prior to the war, and both have been engaged in the coastwise trade by permission of Congress.

The statement that the bureau is issuing contraband and conditional contraband is not in accordance with the facts, as the policy contains a clause providing that such classes of merchandise are not insured.

Respectfully, W. J. MCADOO, *Secretary.*

Hon. JOSHUA W. ALEXANDER,
Chairman Committee on Merchant Marine and Fisheries, House of Representatives.

Also a letter from Hon. William C. Redfield, Secretary of Commerce, of date February 20, addressed to me, and copies of accompanying letters addressed to Secretary Redfield by L. P. Tolman, of L. P. Tolman & Co., general contractors, Central Building, Seattle, Wash., and a letter addressed by Mr. Tolman to the Seattle Port Commission, Central Building, Seattle, Wash., of date January 18, 1915, and referring to the unsatisfactory conditions existing with reference to water transportation between Atlantic and Pacific coast ports:

DEPARTMENT OF COMMERCE,
OFFICE OF THE SECRETARY,
Washington, February 20, 1915.

Hon. J. W. ALEXANDER,
House of Representatives, Washington, D. C.

MY DEAR JUDGE ALEXANDER: I inclose an interesting letter received from Mr. L. P. Tolman, of Seattle, under date of February 15, together with copy of letter sent by him on January 18 to the Seattle Port Commission. It is commended to your thoughtful reading.

Yours, very truly,
WILLIAM C. REDFIELD, *Secretary.*

(Two inclosures.)

L. P. TOLMAN & CO.,
GENERAL CONTRACTORS,
Seattle, February 15, 1915.

Hon. WILLIAM C. REDFIELD,
Secretary of Commerce, Washington, D. C.

DEAR SIR: As emphasizing our present lack of shipping facilities between Atlantic and Pacific coast ports, I attach copy of my letter to the Seattle Port Commission under date of January 18.

During the discussion which this letter brought about the fact was emphasized that navigation laws are not favorable to American shippers and should be revised. However, you are doubtless familiar with the situation in this respect.

Matter of regulation was also discussed, although this is apparently a disputed question on which there is a difference of opinion.

Am referring this letter to you, as it serves to emphasize the need of better shipping facilities between the Atlantic coast and the Northwest.

Respectfully, yours,
L. P. TOLMAN.

JANUARY 18, 1915.

SEATTLE PORT COMMISSION,
Central Building, Seattle, Wash.

GENTLEMEN: At the request of one of your members, I wish to call your attention to the unsatisfactory condition existing with reference to water transportation between Atlantic and Pacific coast ports.

Briefly, the most serious objection is the uncertainty as to how long a given rate will remain in effect and the refusal of protection over a specified rate for a definite and reasonable time, particularly with material such as structural steel, which has to be fabricated after order is received.

Further, the apparent lack of space in proportion to actual requirements and the difficulty of arranging to make prompt shipments by water present another serious difficulty which deserves your earnest consideration.

It is also a fact, doubtless well known to you, that water rates have been given decisive advances during the last 60 days. I mention this as it has a direct relation to the lack of shipping accommodations. However, matter of rates in themselves is not the main question at issue.

So far as the port of Seattle is concerned, and as regards water traffic between the two coasts, the American-Hawaiian Steamship Co. may be said to dominate the situation, being the largest of the steamship companies regularly handling freight between the east and west coasts. This company is able in a large measure to control rates and to stipulate terms to shippers.

In order to emphasize the unsatisfactory workings under the present system, I have been asked to bring to your attention recent transaction which I handled for the Phoenix Iron Co., of Phoenixville, Pa. One of the representative Seattle concerns placed an order with me on January 6 for about 350 tons of structural steel based on proposal submitted to them under date of December 21. The next day I called on the acting agent here of the American-Hawaiian Steamship Co. in order to reserve space, the desire being to begin shipping in three or four weeks. The gentleman representing the American-Hawaiian Steamship Co. treated my request with consideration and wrote their New York office in order to arrange for shipment of this material. In the meantime, it developed that the freight rate had just been increased, the advanced rate to go into effect January 9. I promptly asked the American-Hawaiian Steamship Co. to protect us by allowing us rate originally quoted and used as a basis in this transaction. We had made a delivered price, as is customary in quoting on structural steel. Not being able to secure promise of protection at this end, I immediately wired the Phoenix Iron Co. to take the matter up with the traffic manager of the American-Hawaiian Steamship Co. at New York. However, it was found to be impossible to secure this protection or any promise that the rate would not be still further advanced before shipment of this order could be completed; moreover, the steamship company stated that they would be unable to handle shipment of this material before the latter part of February and there was considerable uncertainty in regard to any definite time of shipment.

When I received wire from the Phoenix Iron Co. apprising me of the situation I immediately took the matter up with other steamship lines and shipping brokers, searching the transportation field thoroughly both here and at San Francisco, with the result that no relief was to be had, most of the other lines declining to make any rate on account of having all the freight they could take care of for a reasonable time. As illustration of this, Sudden & Christenson Steamship Line, San Francisco, wired me as follows:

"Replying to your night letter eighth, we can not give you rate and shipping dates asked for at present, as we have nothing now scheduled to leave New York on which space has not already been taken. Will be glad to advise you later if we can care for this business."

On account of all of this uncertainty the Phoenix Iron Co. finally withdrew their proposition, and we therefore lost the business entirely on account of transportation difficulties.

The purpose of submitting this report to you is twofold:

First. To emphasize that, while we now have well-equipped harbor facilities, yet comparatively few steamship lines running between Atlantic and Pacific coasts avail themselves of this port, with the result that traffic with the few lines which do make Seattle is badly congested. This would seem to urge the need of making further traffic arrangements.

Second. Present steamship lines make any rates they see fit and lay down their own terms to shippers. Present conditions seem to warrant the conviction that steamship lines should be brought under some form of regulation in a similar manner as the railroads, so that the shippers will not be subjected to the uncertainty over rates as at present. In this connection would call your attention to a bill entitled "Proposed regulation of carriers by water," which has been drawn up by one of the committees of the House of Representatives. I believe Mr. W. A. Mears, of the transportation bureau of the Seattle Chamber of Commerce, is familiar with this proposed legislation.

I have submitted the general lines of this report to a number of practical transportation men, and I believe in the main they agree with me that the time is ripe for action of some kind. If the various commercial bodies, such as the chamber of commerce, commercial club, transportation club, and the Seattle Port Commission, could get together and agree on a plan of action, much good could doubtless be accomplished.

Respectfully submitted.

L. P. TOLMAN.

Also the following copy of a letter addressed to me by Hon. William C. Redfield, Secretary of Commerce, and a copy of a letter addressed by him to Hon. JAMES R. MANN and referring to the wire drag used by the Coast and Geodetic Survey to discover obstructions to navigation:

DEPARTMENT OF COMMERCE.
OFFICE OF THE SECRETARY,
Washington, February 17, 1915.

MY DEAR JUDGE ALEXANDER: I inclose copy of letter sent Hon. JAMES R. MANN to-day, which speaks for itself. There will be no objection on my part to your putting this letter in the RECORD should you think it worth while. A copy has been sent to Judge ADAMSON and Hon. JOHN J. FITZGERALD.

Yours, very truly,
WILLIAM C. REDFIELD, *Secretary.*

Hon. JOSHUA W. ALEXANDER,
House of Representatives, Washington.

(Inclosure.)

FEBRUARY 17, 1915.

MY DEAR MR. MANN: I notice in your remarks printed on page 3940 of the RECORD for February 11 the following words:

"* * * Here is a wire drag pictured as stretching across a considerable expanse of water, supported by buoys, the drag being attached to a boat at either end and to one in the middle. One can see that the boat at one end is moving away from the center at an angle of more than 45° from a forward course, while the boat attached at the other end is moving away in the opposite direction from the center at an angle also of more than 45°. It would be impossible, therefore, Mr. Chairman, for those boats to proceed for 20 feet without breaking the wire drag."

Thereafter you proceed to comment, assuming the accuracy of the quoted statement.

Permit me to advise you as follows:

"The angle at which the boats are represented as pulling in the painting of the wire drag is not exaggerated. It is necessary that the boats pull out at an angle from the line of progress of the drag, so that the drag will be stretched out and cover as much area as possible.

"If the boats were headed along the line of progress, the resultant of the inward pull of the drag and the forward pull of the boats would tend to force the boats in, and the area covered would grow smaller and smaller until the boats met.

"The work is usually planned so that the progress of the drag is with the tidal current. Often, in actual practice, the boats are heading directly away from each other and at right angles to the progress of the drag. In this manner the drag is stretched to its greatest extent and the tidal current carries boats and drag in the desired direction.

"No. 7 telephone wire is the smallest wire used in wire-drag work. This will stand a tension of over 1,700 pounds. The engine in each boat is run at a speed that produces a tension of about 350 pounds (shown by scales) on the towlines and wire. This leaves a fairly safe margin of over 1,350 pounds.

"No boat ever used by the Coast and Geodetic Survey in wire-drag work has had sufficient power to break No. 7 wire with a steady pull, even when running at full speed."

The above statement has been carefully verified by an officer who has had continued experience in wire-drag work upon our Atlantic coast. He will, at your request, be invited to call upon you, should you desire it, to give any information you desire on this subject. I know you so well as to be sure you would not willingly make inaccurate or haphazard statements in your responsible capacity as leader of the minority in the House of Representatives. Therefore, I venture to assume that you will consult the officer who has done this work, and either point out to him the error he has so long been making or will yourself state in the RECORD that you were mistaken in your criticism.

You will remember saying that the accuracy of the picture was "probably equal to the accuracy of the work that is done by the department."

You also say respecting the painting that "it is a useless expenditure of money to have had it painted." If this is so, charge it to the administration of President Taft, under whose administration it was prepared when Mr. Nagel was Secretary of Commerce and Labor, as a part of the exhibit of the Department of Commerce and Labor at the Seattle Exposition.

I beg to remain, with sincere respect and with kind regards,

Yours, very truly,

——— ———, *Secretary.*

Hon. JAMES R. MANN,
House of Representatives, Washington, D. C.

I also wish to incorporate in my remarks a letter addressed to me by the Secretary of Commerce, of date February 17, with the accompanying copy of letter received by him from the Syracuse Smelting Works, of New York:

DEPARTMENT OF COMMERCE,
OFFICE OF THE SECRETARY,
Washington, February 17, 1915.

Hon. J. W. ALEXANDER,
House of Representatives.

DEAR JUDGE ALEXANDER: By direction of the Secretary of Commerce I am pleased to send you the inclosed copy of letter received by him from the Syracuse Smelting Works, of New York.

Yours, very truly,

U. GRANT SMITH,
Private Secretary.

—

NEW YORK, *February 15, 1915.*

Hon. W. C. REDFIELD,
Secretary of Commerce,
Department of Commerce, Washington, D. C.

DEAR SIR: Your name was given to us by Mr. E. C. Porter, of the Bureau of Foreign and Domestic Commerce, and we take the liberty of addressing you in reference to the ship-purchase bill. As shippers of our manufactured products all over the world we feel that this country certainly requires a bill of that kind, as, in the first place, the shipping is in the hands of such a lot of financiers, who handle these matters just as they please; in fact, at the present time shipments that have to be made to the Continent, when you inquire from any of the steamship companies they simply name you a high figure and request you to engage space promptly. Otherwise they simply tell you that the rate will be higher; and, sure enough, when you find in a few days that you can make the shipments and you inquire from them for space, up goes the price. So the more times you inquire the higher rates you have to pay.

This is now getting to be unbearable, and we believe that if the ship-purchase bill was passed that in due time the manufacturers and shippers of this country would at least be relieved from being held up to such an extent, and trust that you will make a special effort to see that this bill is passed.

Yours, truly,

SYRACUSE SMELTING WORKS,
Per L. SAPERY.

The following joint resolution and bills reported from the Committee on the Merchant Marine and Fisheries during the Sixty-third Congress have become laws:

H. J. Res. 217. Joint resolution to convey the thanks of Congress to the captain of the American steamer *Kroonland*, of the Red Star Line, and through him to the officers and crew of said steamer, for the prompt and heroic service rendered by them in rescuing 89 lives from the burning steamer *Volturno*, in the north Atlantic Ocean.

H. R. 14377. An act to amend section 4472 of the Revised Statutes. (In reference to carrying explosives on vessels.)

H. R. 14950. An act to authorize the city of Louisville, Ky., to open a parkway through the United States fish station and hatchery in Jefferson County, Ky. (Added on sundry civil bill and passed.)

H. R. 15605. An act to amend an act entitled "An act to adopt regulations for preventing collisions upon certain harbors, rivers, and inland waters of the United States," approved June 7, 1897.

H. R. 16055. An act to amend section 4474 of the Revised Statutes of the United States. (Regulating the carrying of petroleum.)

H. R. 16269. An act to regulate the taking or catching of sponges in the waters of the Gulf of Mexico and the Straits of Florida outside of State jurisdiction; the landing, delivering, curing, selling, or possession of the same; providing means of enforcement of the same, and for other purposes. (Senate bill 5313, which was identical with the above, was reported from the committee and has become a law.)

H. R. 16346. An act to amend section 4131 of the Revised Statutes of the United States of America as amended by the act of Congress approved May 28, 1896, relating to the renewal of licenses.

H. R. 16392. An act to better regulate the serving of licensed officers in the merchant marine of the United States and to promote safety at sea.

H. R. 18202. An act to provide for the admission of foreign-built ships to American registry for the foreign trade, and for other purposes.

H. R. 18685. An act to repeal penalties on foreign-built vessels owned by Americans.

H. R. 18686. An act to provide for provisional certificates of registry of vessels abroad, and for other purposes.

H. R. 10084. An act to authorize the changing of the names of the steamships *Buckman* and *Watson*.

H. R. 20107. An act to amend sections 4421, 4422, 4423, 4424, and 4498 of the Revised Statutes of the United States, and section 12 of the act of May 28, 1908, relating to certificates of inspection of steam vessels.

H. J. Res. 391. Joint resolution authorizing the Secretary of Commerce to postpone the sale of fur-seal skins now in the possession of the Government until such time as in his discretion he may deem such sale advisable.

S. 136. An act to promote the welfare of American seamen in the merchant marine of the United States; to abolish arrest and imprisonment as a penalty for desertion, and to secure the abrogation of treaty provisions in relation thereto; and to promote safety at sea.

S. 3362. An act to authorize the Secretary of Commerce, through the Coast and Geodetic Survey and the Bureau of Fisheries, to make a survey of natural oyster beds, bars, and rocks, and barren bottoms contiguous thereto, in waters along the coasts of and within the State of Texas.

S. 5289. An act to provide for warning signals for vessels working on wrecks or engaged in dredging or other submarine work.

S. 2335. An act to provide for the register and enrollment of vessels built in foreign countries when such vessels have been wrecked on the coasts of the United States or her possessions or adjacent waters and salved by American citizens and repaired in American shipyards.

Six Years in Congress.

EXTENSION OF REMARKS
OF
HON. JOHN A. MAGUIRE,
OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. MAGUIRE of Nebraska. Mr. Speaker, at the close of this Congress I will return to the great constituency who commissioned me here as a Representative. I have been elected three times, and as the period of six years is drawing to a close I wish to make a few brief observations. During that period I have been the recipient of many courtesies from the membership of this and preceding Congresses of which I have been a Member. The associations here formed and the part I have had in the parliamentary and political history of my country give me every reason to feel deeply grateful, for it is an opportunity afforded to but few men in this Republic. I was selected by the people of the first congressional district of Nebraska as their Representative in this the greatest parliamentary body in the world, and my gratitude is due them in the fullest measure.

To be clothed with such constitutional power is an honor which I not alone appreciate, but which carries with it a responsibility which I have constantly and prayerfully tried to measure up to. The wishes of my district and the welfare of a great country, I hope, have never failed to receive my best efforts. While representing a district, still I am legislating for the whole country with 100,000,000 souls. Though the public interests of a district may receive the special solicitude of a Representative, still the broader interests and larger welfare of all can not help but merge and be much the same. When I go back to the people I represent I hope I may return the commission they gave me as clean and unsullied as when it came into my hands.

While the acts of representatives and public servants may not always reflect the highest wisdom, still, as long as the motives governing their conduct are of the purest and loftiest

the country is not in great danger. Industry, experience, wisdom, and patriotism are much to be desired; still it is not common that all the necessary elements are found together in proper combination. In a representative government the regular and frequent reflections of the will of the people through the ballot box serves always as a potential regulator of representative conduct and a wholesome instrument of protection to the people's welfare.

This is the popular branch of a coordinate legislative department of the Government. That it is quite truly representative can not be better proven than by observation of the manner and growth of legislation through the body itself. Every angle and point of view—political, social, economic, and industrial—is manifested in the deliberation and votes, not alone in the local application, but in the great national policies considered. Men of every temperament and educational training and environment, the millionaire and the man without property, are all found here mingling in a democratic way, each clothed with the same authority and exercising his influence without reference to his wealth or social standing.

The period over which my service extends has been one in which Congress has dealt with many problems, not alone momentous to the people of to-day, but of commanding importance to the country's permanent welfare. To have lived in such a period is fortunate, but to have had the further good fortune of having had a part as a Representative in formulating enactments is indeed an honor and a valued privilege.

Problems of internal improvements, conservation and development of our national resources, social and industrial improvement, the conservation in many lines of the energy and power of the individual citizen, the correlating and assembling of the Nation's forces have all received legislative attention during my service. The problems of production, distribution, and consumption in all their related applications have been problems for our legislative consideration. It is only necessary to hint at these larger problems in order to suggest the numerous enactments more in detail.

Labor Provisions of the Clayton Act.

EXTENSION OF REMARKS

OF

HON. MARTIN B. MADDEN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915.

Mr. MADDEN. Mr. Speaker, my present effort is one neither of advocacy or defense of a proposed or pending measure, but of review and criticism of parts of an act already passed.

It is now more than four months since the Clayton Act received final approval by the President and was enrolled among the laws of the Nation. Since that time important events have occurred having a direct bearing upon the particular fact that such legislation was enacted. One important fact is that the courts have, in all the cases where the so-called labor provisions of the act were invoked in labor's behalf, shown their wholly innocuous character as relating to injunctions, and the inapplicability or irrevelancy of the so-called exemption clause in cases arising under the antitrust act was clearly pointed out. Another important event was the election of last November, proving conclusively that the labor leaders, working in the interest of the Democratic Party, were not able to "deliver the goods" as per contract. Notwithstanding wholesale issues of exaggerated nonsense industriously uttered on the floors of the Congress, promulgated from the White House and elsewhere, printed in the CONGRESSIONAL RECORD, in the Commoner, and in the labor organs issued at Washington, and other publications, labor in all the centers of industry—east and west, north and south—somehow learned or divined the truth. The election returns from all the debatable States were so overwhelmingly Republican as to not only paralyze the Democrats but even to astound the Republicans. I do not, of course, assume that the complete failure of the Democratic Party to redeem its definite labor pledges fully accounts for the result, but it is safe to say that the grist and flood tide of exhortations sent forth were as chaff before the whirlwind, and totally abortive as affecting the vote of those whom they were intended to influence.

So much of the stuff has come to my notice that I have neither the time nor patience to enter upon its full recital, much less its categorical refutation. I will merely call attention to a few items. In a letter of congratulation or adulation from President Wilson to Secretary McAdoo during the campaign anent the setting of the reserve bank act in operation, and totally unconnected with that subject matter, he claimed the liberation of labor and the safeguarding of the workingman from all forms of injustice as one of the things accomplished in the enactment of the Clayton law. In the December issue of the Commoner, Mr. Bryan, in a signed editorial, made the fantastically absurd statement that the Clayton Act had been passed during the administration of President Taft and had been vetoed by him. In the monthly magazine published by a national labor organization at Washington, have been various articles disclosing the entire innocence of knowledge concerning the Clayton Act on the part of its editor. When the recent decision of the Supreme Court in the hatters' case came down and the defendants implored the American Federation of Labor to come to their relief, Mr. Gompers said in his personally conducted organ, in effect, "See what great service I have already performed; behold, I got for you the Clayton Act." And he gave them fulsome assurances that, because of the Clayton Act, no such case as that could ever again arise.

Before closing I shall show how utterly destitute of reason is such a representation. At this point I must admit that much has been done by the present administration to increase the difficulties encountered by the jefe politicos stationed, camped, rendezvoused or maintained at the National Capital, when asked to tell the truth concerning the treatment accorded by it to the common great cause which they profess to espouse. Federal berths have been provided for many of them; in some instances luxurious, in others merely comfortable. Not many, it is true, have been very highly honored or oppulently served, but certain members of the executive council have certainly been well provided for. Knowing as we do the frailties of humanity, we have not the heart to harshly censure them for their conduct. We can not, however, avoid having our faith in humanity shocked at the hardihood of the performances. It would be difficult to believe, did we not see it progressively developing before our eyes from day to day and from month to month that any political reward would be, by leaders of labor, rated of sufficient value to justify complete self-stultification, where the interests are so great and the trust so sacred. And I for one hope that the ruinous campaign of error will be in great measure abandoned, now that all the indispensable States in a presidential election have gone so emphatically Republican that only the most optimistic Democrat can see any other result in 1916 than defeat for the Democratic Party.

Great scientists, after centuries of study and investigation, have continued to speak of the "unsolvable riddle of the universe." But there is another riddle which perplexes me even more than that, all inclusive as it is. I refer to the ingrained, intractable perversity of some of my fellow men. What I shall say to-day analytically and historically about the Clayton Act will impart no new truth nor add to any intelligent man's stock of real wisdom on the subject. All I expect to do is to restate in new, and I trust better, forms of speech, what was not much less clearly and conclusively set forth by me on former occasions. And yet, what I then said was rejected summarily by all those for whose use and benefit principally it was said. And they, the representatives of labor in this body, without analysis or the slightest attention to the bill, as it was spread out before them, proceeded in various speeches to pronounce the legislation to be labor's "bill of rights," the Magna Charta of the human race and the greatest piece of constructive legislation in all history. But since those halcyon days when the measure was pending they have had a season of thought and introspection; they have had, also, some sad experiences, and they will never again dare, in the face of judicial results and election returns, to repeat the vocal performances of the last session.

I do not, of course, intend entering upon the general subject of labor legislation, much less do I intend committing myself to any measure or legislative programme. But in all discussions of the labor provisions of the Clayton bill, and more recently of the Clayton Act, the Peare bill of former Congresses has been the admitted measure of Democratic obligation and the standard of labor's demands. That Democrats are estopped from denying that it is the standard is proved by the fact that in numerous speeches and pronouncements they have claimed that the labor provisions of the Clayton Act contain substantially the provisions of that bill. It provided, among other things, in the first section, that neither the right to seek or create the relation of employer and employee, nor to carry on or continue to do business of any kind, or at any particular place, or at all, should constitute property or a property right. And

the second section incorporated by reference the definite limitations of the first, and also prohibiting any prosecution or injunction against men for agreeing or combining to do any act or thing which would be lawful when done by a single individual. Without specifically mentioning the antitrust act, we see that the provisions sought out and reached the foundations of the general law of conspiracy, of which the antitrust act is only a part, and rendered it impossible to ever maintain a charge of conspiracy against anyone acting in these specified relations under that law or under any other law, no matter what the form of procedure, whether by injunction, civil action for damages, indictment, or information. All forms of striking, boycotting, and picketing were rendered immune from judicial interference. To see how wide the departure of Democratic promise from Democratic performance, we have only to keep the standard thus erected in mind and in view of it state what the Clayton Act accomplishes. It will be seen that it not only fails to give any aid or relief to laborers but that it deprives them of important rights and safeguards which they previously possessed. And back of all that was openly done is the fact that the ignorance of the labor leaders was taken advantage of and their credulity played to the limit.

I shall begin with a section which does not specifically relate to labor conditions or interests, though it becomes relevant and intensely important because of its sinister effect and bearing on other provisions. The cunning and overreaching design of those who formulated section 17 has eluded the attention of all the labor representatives and most others. All of it that I need quote reads as follows:

That no preliminary injunction shall be issued without notice to the opposite party.

No temporary restraining order shall be granted without notice to the opposite party, unless it shall clearly appear from specific facts shown by affidavit or by the verified bill that immediate and irreparable injury, loss, or damage will result to the applicant before notice can be served and a hearing had thereon.

The bearing of this section upon the questions before us can not be understood without recurrence to the fact that it was the alleged pervertion of a general principle of jurisdiction which gave rise to all labor's grievances founded on the action of the courts. The exact complaint was that, disregardful of the ancient limitation of injunctive relief to the protection of property rights, the courts had adopted the practice, in labor cases and in these only, of employing the remedy to protect the mere right to do business—a mere personal right. Keeping that in mind, and carefully examining section 17, no person of even mediocre discernment can fail to see that the section wipes out the distinction between property rights and personal rights with respect to injunctions. Also that it embodies and puts in force the exact reverse of what labor leaders contended for during all the years that they were before Congress urging legislative protection against judicial abuses.

The first sentence of section 17 was inserted either because the draftsman knew little of the subject or because he intended to deceive. I prefer the latter construction, because of the high degree of cunning evident in the whole performance. None except those well trained in the technicalities of legal phraseology and rules of interpretation could have framed an instrument calculated to, and which actually did, so completely fool the labor leaders, to their thorough discomfiture, as did the Clayton bill. I think the men who controlled the situation here in Congress knew exactly the legal effect which they and the administration desired to produce; that they set themselves industriously at work to produce it; and that they have produced it exactly according to their program.

This first sentence, "that no preliminary injunction shall be issued without notice to the opposite party," is completely nullified by what follows it. Its meaning is as completely eradicated as if the space it fills were left blank. While there may be a faint distinction between a preliminary injunction and a restraining order, yet there is no difference in true legal effect. In fact, as the hearings before committees of Congress abundantly show, most of the so-called judicial abuses consisted in the issuance not of preliminary injunctions but of restraining orders which were kept hanging over the defendants indefinitely.

As this section passed the House it contained, between the words "to" and "the," in the fourth line, the words "property or a property right of." The presence of these words did not, however, redeem the provision from its vicious meaning, as was fully explained by me on a former occasion. Either before the words were pruned out in the Senate Judiciary Committee or as the provision now stands, a new jurisdiction, not heretofore sought by anyone to be conferred upon the courts, is conferred by essential implication. I mean the jurisdiction to grant injunction in any case which appeals to the discretion of a Federal judge, whether pertaining to rights of property or not. If the case involves a property right, that being heretofore a prerequisite to the issuance of an injunction in any case, as had been well understood, the process can issue without notice, as heretofore, but by merely going through the form of giving notice under the provision it is now immaterial how the complaining party would be affected by the impending act, whether with respect to his property right or personally. Now, by such legislation the whole propaganda of Mr. Gompers and his attorneys during several years of past agitation is made farcical. They must feel that they have been misled. It is just as if one had started a crusade for the provision of better fire protection for a city and had been answered by the enactment of a statute or ordinance requiring all hydrants to be removed and the fire department to be abolished.

I will next notice section 20, which, in so far as it is of consequence at all, directly affects labor. It was important to first discuss section 17, because of its close relation to and bearing upon section 20. The latter section reads as follows:

SEC. 20. That no restraining order or injunction shall be granted by any court of the United States, or a judge or the judges thereof, in any case between an employer and employees, or between employers and employees, or between employees, or between persons employed and persons seeking employment, involving or growing out of a dispute concerning terms or conditions of employment, unless necessary to prevent irreparable injury to property, or to a property right, of the party making the application, for which injury there is no adequate remedy at law, and such property or property right must be described with particularity in the application, which must be in writing and sworn to by the applicant or by his agent or attorney.

And no such restraining order or injunction shall prohibit any person or persons, whether singly or in concert, from terminating any relation of employment, or from ceasing to perform any work or labor, or from recommending, advising, or persuading others by peaceful means so to do; or from attending at any place where any such person or persons may lawfully be, for the purpose of peacefully obtaining or communicating information, or from peacefully persuading any person to work or to abstain from working; or from ceasing to patronize or to employ any party to such dispute, or from recommending, advising, or persuading others by peaceful and lawful means so to do; or from paying or giving to, or withholding from, any person engaged in such dispute any strike benefits or other moneys or things of value; or from peaceably assembling in a lawful manner and for lawful purposes; or from doing any act or thing which might lawfully be done in the absence of such dispute by any party thereto; nor shall any of the acts specified in this paragraph be considered or held to be violations of any law of the United States.

Of course any conduct of laborers or of labor organizations which might be taken from within the jurisdiction to enjoin and restrain by section 20 would escape amenability to the enlarged jurisdiction confirmed to the courts by the provisions of section 17 wiping out all distinction between property and personal rights, because the jurisdiction to issue injunctions in the cases specified in section 20 is limited to those cases which involve rights of property. But the point I make is that the exception, if indeed any case can ever by any possibility arise to which section 20 can apply, is so narrowed by limitations and conditions that the section is utterly worthless as a protection against injunctions and restraining orders. From the very fact that section 20 does purport to create exceptions, however infinitesimal, any conduct not therein expressly excepted falls clearly within the new jurisdiction created by section 17. And whatever prohibition upon the courts, if any, section 20 contains must be considered and treated as carved out of the scope of new jurisdiction created in section 17.

Taking up the first paragraph of section 20 we find that standing alone it would make complete sense; and now, glancing at the second paragraph, we see that even though the first covers so small a margin that it could probably never be invoked in a labor case, yet the second has a still further narrowing or limiting effect.

The ultimate effect of all the provisions in sections 17 and 20 is as if one person said to another, "If you own an automobile and you ever have any business to transact 40 miles from Washington at 3 o'clock in the morning, and if you can travel that distance by starting at 2 o'clock a. m., and if the business can not be just as well done at some other hour, and if the business should involve your property interests, and if several other unique and unusual conditions exist, correlating and corresponding in time and place—stating them—then you may make that trip, otherwise whether you will be permitted to make it rests in the discretion of a third party not of your selection."

According to this paragraph, as between persons holding certain relations, if the case involves a dispute concerning terms, and so forth, no restraining order or injunction may issue "unless necessary to prevent irreparable injury to property or to a property right." It will be noted that there is not here, as in the Pearre bill, a definition of property. That is left with the courts, as before. Can there be a doubt that the right to do or continue business or to seek employment will be deemed so far a property right as to be entitled to protection as hereto-

fore? But, not satisfied with these precautions, the word "or," where in the Pearre bill it appeared before the word "involving," was also cut out. The far-reaching effect of that mutilation was clearly and emphatically pointed out on the floor of the House by myself and others, and an attempt was made to restore it by amendment. The amendment was so obviously just and reasonable that those in charge of the bill were about to accept it, when orders came from somewhere outside Congress forbidding the change. So instead of a comprehensive class being added to the other narrow and restricted, or, for this purpose impossible, classes, the phrase "or involving or growing out of a dispute," and so forth, was converted into a further limitation of the specified classes.

I pass now to the second paragraph. We observe that it is tied by apt words to the first. And the reason for not giving the second the absolute form of the first is obvious. Why were the words "and" and "such" tagged on in the first line? Why does it not begin with honest and direct language and say, "No restraining order or injunction," and so forth? Simply because the pretense of exemption had been limited in the first section to certain relations and cases that might arise while such relations existed, and it was well known that no limitation leading to an application for an injunction or a restraining order was possible until the severance of such relations, whereupon the whole plan of exemption would be foreign to the case and totally inapplicable.

I beg leave to take up the second paragraph of section 20, clause by clause, attaching to each the opening words of the paragraph as context.

"And no such restraining order or injunction shall prohibit any person or persons, whether singly or in concert, from terminating any relation or employment, or from ceasing to perform any work or labor, or from recommending, advising, or persuading others by peaceful means so to do; * * *." This would be amply sufficient to satisfy all reasonable demands of labor with respect to striking, were it not that, back of it untouched, is the law of conspiracy as applied in the Oakes case, the Phelan case, the Debs case, and other cases. It will soon dawn on the learned as well as the ignorant and benighted among labor leaders that acting in concert, as by spontaneous common impulse, means one thing, while acting in combination or pursuant to an agreement or mutual understanding may mean something very different. It is upon the latter that the law of conspiracy was founded centuries ago. And during the intervening period it has had a very comprehensive and healthy development, evidenced by numerous decisions and precedents, all standing today in full force unaffected by any section, line, or word of the Clayton Act. Within that judge-made law strikes may and frequently have been enjoined and otherwise sternly dealt with where back of the naked act of striking the courts could discover an ulterior purpose such, for instance, as boycotting or otherwise injuring a business collaterally, as in the Payne lumber case, or to cause indirect losses to a railroad company by stopping its trains, as in the Oakes case, or to endanger the lives of or to greatly inconvenience the public, as in the Debs case. And even since the Clayton Act went into effect this same general law of conspiracy was applied in the Missouri Cotton Belt Railroad case, in the Indianapolis street railway case, and in a case involving public corporations in Oklahoma. So that taken by and large and accepting decisions prior to and after the Clayton Act only such strikes find protection in its terms as are of strictly limited scope and are conducted "peacefully," as the courts may define the word. The very best that can be said is that labor is exactly where it started in the matter of strikes. And I would have you distinctly understand that I am now merely stating the record. I would not consider my own views on a great legal subject as of peculiar value. The Democratic Judiciary Committee is in part my authority. In reporting the bill to the House the committee distinctly stated so much. Here are its words: "The bill does not interfere with the Sherman Antitrust Act at all; it leaves the law of conspiracy untouched and is not open to effective criticism on any constitutional grounds." And the Senate Judiciary Committee in reporting the bill back to the Senate after it had passed the House used identical words, and others even stronger and of the same import.

"And no such restraining order or injunction shall prohibit any person or persons, whether singly or in concert, from * * * attending at any place where any such person or persons may lawfully be, for the purpose of peacefully obtaining or communicating information, or from peacefully persuading any person to work or to abstain from working * * *." This has been properly designated as the picketing provision. The idea that any legislative authority for, or protection in the exercise of, the rights and privileges thus described was ever necessary is utterly preposterous. The words "peacefully" and "lawfully," with which the clause is thickly studded, appear to be superfluous. They were perhaps used through excessive caution. I do not care to do more on this clause than to call attention to what was said under the preceding. In a general way, all that I said is equally applicable here.

"And no such restraining order or injunction shall prohibit any person or persons, whether singly or in concert, from * * * ceasing to patronize or to employ any party to such dispute, or from recommending, advising, or persuading others, by peaceful and lawful means, so to do; * * *." The words "or to employ" seem unimportant here, even if not fully covered in a preceding clause, so that we need only deal with the question of ceasing to patronize. The first thing to notice is that this clause differs from the other in the respect that the right here exempted is expressly limited by the provisions of the first paragraph of the section, because the party against whom the effort to deprive of patronage is directed must be a "party to such dispute," and the term "dispute" is not used in any preceding part of the second paragraph. So the entire limitation of the first paragraph is here introduced and incorporated. Hence, this exemption, so far from being general, is available only where a dispute has already arisen in a case where the specified relations are found to exist, which case must have been brought into a Federal court. It must also call for injunctive relief against threatened injury to property. And the dispute between the parties must not only involve rights of property, but the terms and conditions of employment as well. If it be possible that all these circumstances shall concur and corelate in time and place in any one case, then the courts may not prohibit "advising or persuading others, by peaceful and lawful means," to abstain from patronizing.

The area of this so-called exemption scarcely has the dimensions of a minute speck on the page of the statute books, discernible with the aid of a magnifying glass. But conceding that there may be some small margin of exemption, then what becomes of all the boycotts not so privileged? Much more can be said about this clause, but I reserve it for the discussion until I take up the much-advertised exemption of labor organizations from the antitrust act, claimed to find consummation in section 6.

I shall here pass over two or three clauses without other than a general remark. An insidious and cunning result is achieved by the injection into all these clauses of the words "lawful," "peaceful," "lawfully," "peacefully," and "peaceably." In order to exemplify, let us suppose that a private corporation applied to Congress for a franchise to lay gas mains in one of the streets of Washington, and stated that it had already a perfect legal right to lay them, the exercise of which the courts had refused to recognize. Would it not be a cruel mockery and the sheerest nonsense if Congress, instead of conferring any right or confirming any existing right, took away part of the latter and passed an act which merely, in expressed terms, authorized the corporation to exercise such legal rights as it already possessed in laying its pipes in that street "lawfully" and "peaceably," or by "lawful" and "peaceful" means? Necessarily and obviously that would leave open the whole question of whether to dig up the street and occupy it was legal or illegal. Such an enactment would have only one effect, and that to refer the controversy back into the courts and to leave the corporation exactly where it started, except that it would have been shorn of some of its substantial rights. So the labor people came to this Congress claiming certain rights denied them by the courts, and Congress not only placed drastic limitations upon the rights so claimed and as heretofore exercised, but enlarged the powers of the courts and sent them back into the courts to obtain a readjudication, according to preexisting decisions, of the rights thus newly circumscribed and limited.

I come now to a general provision consented to after prolonged negotiations between labor leaders and Democratic members of the Judiciary Committee, involving frequent trips to the White House. "And no such restraining order or injunction shall prohibit any person or persons, whether singly or in concert, from * * * doing any act or thing which might lawfully be done in the absence of such dispute, by any party thereto; * * *." The most general statement that I can make about this clause is that it is wholly abortive. I have given it considerable thought, turning it this way and that in the light of other provisions, and it still appears to me wholly innocuous and devoid of legal effect. Perhaps I could not truly so state were it not for the presence here of that constantly recurring word "lawfully." Its presence completely thwarts any such construction as would relieve labor from the menace of injunctions and restraining orders against them otherwise refer-

able to that clause. The use of the term "lawfully" throws every question that could possibly arise under this clause back into the domain of judicial decisions heretofore rendered, and it still remains for the courts to determine what any person or persons may lawfully do "in the absence of such dispute by any party thereto."

I have likewise carefully studied the clause with which the section ends, "nor shall any of the acts specified in this paragraph be considered or held to be violations of any law of the United States." This has been broadly claimed to contain preservative values, but no one has been able; or if able, has thought it worth while to specify what such values are. Even if it made any change in existing laws, the courts would, to say the least, be very reluctant to give effect to amendments attempted in a form so slovenly and inept. Under the Constitution Congress can not, of course, dictate to the courts how they shall construe and apply existing laws to a given fact. But I may pass that by without stopping to argue it in the presence of a more obvious and tenable objection. What act specified in this paragraph is now, or ever was, violative of any law of the United States? You could search in vain for any. There is not a line of Federal statutory law applicable to one of them per se. What law, then, that bears on them at all consists of precedents founded on general principles of jurisprudence analogous to the common law of England? Not one of these subjects is mentioned in any law of the United States. I may, however, end the discussion of this clause by a reductio ad absurdum in the form of a question. How can any act which must be lawful and peaceful violate any law of the United States?

I shall dismiss the subject of jury trials in contempt cases, as provided for in the act, with only a few words. The exceptions contained in section 24 are exactly coextensive with the privilege granted in other sections. After taking out all cases in which the Federal Government is a party, all disobediences, "in the immediate presence of the court, or so near thereto as to obstruct the administration of justice," are also denied the privilege of jury trial. Whether or not knowledge that the courts had held that the administration of justice is obstructed by disobedience anywhere within reach of its process—meaning anywhere in the United States—was possessed by the framers and supporters of the bill is perhaps immaterial. At any rate, parties are, by the terms of the act, debarred the benefits of jury trials for all disobediences occurring anywhere in this country unless a court, in the exercise of its discretionary powers possessed prior to as well as since the act took effect, sees fit to call a jury.

I have reserved discussion of section 6 to the last, because of the blind and unreasoning faith in its efficacy which has, in certain quarters, found expression. Upon no subject within my recollection has there been such a waste of words. Fortunately for the peace and the welfare of the country, even if discreditable to the Congress which passed and the Executive which approved the act, section 6 is a mere meaningless string of words. It reads as follows:

SEC. 6. That the labor of a human being is not a commodity or article of commerce. Nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural, or horticultural organizations, instituted for the purposes of mutual help, and not having capital stock or conducted for profit, or to forbid or restrain individual members of such organizations from lawfully carrying out the legitimate objects thereof; nor shall such organizations, or the members thereof, be held or construed to be illegal combinations or conspiracies in restraint of trade under the antitrust laws.

I shall dispose of the first sentence of the section very briefly. It has not the slightest relevancy to the balance of the section or to any other part of the act, or, in fact, to any conceivable idea which should be made the subject of legislation. What would be the sense of declaring in an act of legislation that honesty is the best policy or that a perfect square is equal to four right angles? Although contracts of employment have often been spoken of as sales of labor and mention has been often made of the labor market, the fact that the labor of a human being is not a commodity or article of commerce in the same sense as tangible property has always been too well known to be made the subject of controversy. But if the idea were carried far enough to include the rewards of labor or contracts to serve, the expression would be very prejudicial to labor, in so far as Congress assumes to legislate in labor's interest at all, under the commerce clause. I failed to see in this utterance of mere abstract truth any justification for any of the threadbare "flubdubbery" and self-glorification uttered and sent out in the last campaign and subsequently. The whole performance was the setting up of a stuffed figure. The relation which I hold here to the Government is much the same as that of any wage earner to his employer; and yet, while it might ruffle my sensibilities a little if anyone mentioned it as a sale of my labor to the United States, it would so nearly describe the thing meant that I would render myself ridiculous if I resented it.

I have already fittingly characterized the main body of this section. I will omit agricultural and horticultural associations from the discussion as not being a subject of any interest whatever. Such associations never asked for exemption or for any such legislation, and it was the taking of coarse liberties to include them. That was done merely to sweeten the dose and to give a plausible appearance to legislation which was otherwise silly and absurd and which could not be justified.

How did the heresy of exemption of labor organizations originate? Certainly not from any intelligent or logical analysis or construction of the antitrust act. Not until within a few years has any one seriously insisted that the courts had applied the act to the labor organizations, as such, and in fact no court has ever done any such thing. The antitrust act embodies the wisdom of great minds, and, notwithstanding all the nonsense, the vague and senseless imputations to statesmen and judges, it is to-day, as at first, a regulation of men and other units solely with respect to such of their conduct as comes within its provisions. If the members of an orthodox church should assemble, even in the church house, and resolve to commit arson by burning down all the saloons in the neighborhood and took any definite step to carry out that design, they would be, each individually and all collectively, chargeable with the crime of conspiracy. But that would not involve the church as an organized body or institution in the slightest degree. So when a labor union, or an aggregation of such, acting through officers and members, resolves to enter upon a course of conduct constituting a violation of a Federal statute—for instance, the antitrust act—they and they alone are, in like sense, conspirators and are justly chargeable with conspiracy. The union to which they belong, having other and legitimate objects, can not be in any legal sense implicated or affected by their conduct, notwithstanding their use of its name as a handle or shield. In cases brought into the courts unions and national organizations of labor have been without legal warrant impleaded as defendants along with the individuals who were the only culpable parties. And counsel for such individual defendants have, at the instigation of the latter, who usually were found in control of their organizations, allowed the cases to run their full course without taking advantage of the irregularity, as they might easily have done by demurring or pleading in abatement, because there never was any law or rule of Federal practice to justify making a mere voluntary association, not organized for profit, a party to any action, civil or criminal. There were two reasons for allowing their organizations to stand as defendants without taking advantage of their clear legal rights: First, it gave them a color of authority for laying assessments upon the memberships to reimburse themselves for outlays in making their defense and paying lawyers their fees. It is easy now to see why their "eminent counsel," living on dues and assessments, have shown a willingness to sit into such a "skin game." The second reason was that the fact that the organizations were actually sued and impleaded by name—for instance, in suits brought under the antitrust act—enabled the headmen of such organizations to pull the wool over the eyes of Congressmen and Senators who gave the subject no serious or analytical study.

If the sound and otherwise unanswerable argument was made that the antitrust act was never in fact applied by the courts to labor unions or to their members pursuing legitimate objects, their "eminent counsel" came back with citations of these same cases in which unions and national federations had been actually sued by name. They would say, "There you are; you say it can not be done, but here it was done." So, in the case of the United States against Amalgamated Labor Association, and in Bucks Stove & Range Co. against American Federation of Labor et al., a mere motion or demurrer would have led to expurgation of those organizations from the record and have left the culpable individuals to fight their own legal battles, and incidentally pay their own "eminent counsel." But in the latter case, at any rate, no such motion was made or action taken, because the very pendency of an action of such magnitude, with the organization standing by name in the record as a defendant, lent color of authority and regularity to the assessment upon the entire membership and the collection from them of a large sum.

The persistency of error, the longevity of a social mania or delerium, are sources of human woe and wonderment the world over. Who could believe, were it not a cold, indelible fact that an eminent lawyer, a former candidate of his party for the Presidency, had appeared before a committee of Congress, and after falsely but solemnly asserting that the Sherman Act

had been so construed as to embrace labor organizations, followed such assertion with friendly partisan advice to the effect that this fraudulent, colorless, impotent section 6 had accomplished their emancipation? In stating that he did so, I merely am giving you a rescript of the RECORD, which anyone caring to do so can see for himself.

I do not care to read from the decisions, or even to cite them by volume and page. Not to advertise my own moderate achievements, but in order that the record may be completed and kept straight I will mention that at the last preceding session of this Congress, and near its close, I called attention to the makeshift character and utter futility of all the so-called labor sections of this act, giving ample reasons. The interval has been brief; but within the short period of four months the courts have "driven coaches and fours" through it all and especially through the section which I am now discussing. I have already mentioned some of the decisions, but I have said little about the Hatters' case (Loewe *v.* Lawler), wherein a judgment in favor of the plaintiffs for nearly $300,000 was recently affirmed in the Supreme Court. Among the solemn assertions of Mr. Gompers and his aforesaid "eminent counsel" is this—that now that section 6 has been enacted no such decisions as that in the Hatters' case can ever be given again. They may intend to discredit the courts in advance, or they may be trying to accomplish some temporary political end. However that may be, let's examine for a moment the foundation of their seemingly abundant faith. The section, like several other provisions of the act, attempts to construe a prior act of Congress, and would probably be for that reason alone wholly abortive. Waiving for the moment that obvious defect, let us look at the actual meaning and net result. I deem it sufficient to merely call attention to a few words. The language is that the anti-trust act shall not be construed "to forbid" the existence and operation of certain organizations, instituted so and so, or to forbid or restrain individual members of such organizations from "lawfully" carrying out the "legitimate" objects thereof. According to all the lexicographers, the term "legitimate," as here used, is the exact exponent and equivalent of "lawful." The concluding clause "nor shall such organizations, or the members thereof, be held or construed to be illegal combinations or conspiracies in restrain of trade under the anti-trust laws," is mere surplusage. It adds nothing to what precedes.

Now, it ought to seem too plain for argument that an act of legislation which merely authorizes a man or a body of men to "lawfully" carry out their "legitimate" purposes is mere drivel. Our friends, the labor leaders, and if not they, at any rate their thousands of intelligent adherents throughout the country will soon realize that in the Clayton Act they have not received a new freedom, nor even a sound lemon, but about the worst double-crossing to be found anywhere in legislative annals.

Unallotted Lands of the Creek Nation.

EXTENSION OF REMARKS
OF
HON. CHARLES H. BURKE,
OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2,) 1915,

On joint resolution (H. J. Res. 380) withholding from allotment the unallotted lands or public domain of the Creek Nation or Tribe of Indians, and providing for the sale thereof, and for other purposes.

Mr. BURKE of South Dakota. Mr. Speaker, my only interest in the pending resolution is, first, the interests of the Indians of the Creek Nation as a whole, and secondly, the interests of the Federal Government. I am not concerned about the Black Panther Oil Co., referred to by the gentleman from Kansas [Mr. CAMPBELL], nor am I concerned about the other oil operators, speculators, and promoters in Oklahoma and elsewhere that are striving to prevent the passage of this resolution to enable them to acquire for a nominal consideration lands of great value belonging to the Creek Nation.

Mr. Speaker, one would get the impression in listening to the debate on the part of those who have opposed this resolution that it is a proposition intended to deprive five persons, members of the Creek Nation, of the right to allotments, and that its passage will thereby do a great injustice to such persons. The resolution does not refer to any individual, neither will its enactment affect the vested right of any member of the Creek Nation. The resolution simply provides that the unallotted lands on the public domain of the Creek Nation or Tribe of Indians, including any lands the title to which has been or may be recovered by the nation in any pending suit or otherwise, shall be withheld from allotment. In other words, its enactment will simply withhold such lands to be disposed of by the Secretary of the Interior for the benefit of the Creek Nation as a whole, and if any person entitled to an allotment is deprived from taking one, he shall be compensated therefor by being paid from the tribal funds a certain sum in lieu of an allotment, the same as was done in the last session of Congress when certain persons entitled to enrollment in the Creek Nation were put upon the rolls by a provision in the Indian appropriation act.

Mr. Speaker, if this resolution is adopted and becomes a law it will not affect the individual interests of any member of the Creek Nation so far as any vested right in an allotment is concerned. If there are persons duly enrolled that have not been allotted and have made an application for an allotment, and if a mere application is all that is required to acquire a vested right in the land applied for, the passage of this resolution will not and can not affect them any more than it will affect the 18,712 members of the tribe who were allotted several years ago and who have their trust patents.

In order that there may be no misunderstanding as to what this resolution provides, I wish to read it. It will be noted that the only change proposed in the resolution by the motion of the gentleman from Oklahoma [Mr. MURRAY] to suspend the rules, amend, and pass it is that the amount as compensation for and in lieu of an allotment is increased from $800 to $1,040. This is the resolution:

That the unallotted land or public domain of the Creek Nation or Tribe of Indians, including any land the title to which has been or may be recovered for the Creek Nation in any pending or other suit or otherwise, be, and the same is hereby, withheld from allotment to members of said nation or tribe, and that the Secretary of the Interior be, and he is hereby, authorized, in his discretion, to cause such land to be sold or leased for the benefit of the Creek Nation or Tribe of Indians under such rules and regulations as he may prescribe, the proceeds of such sale or lease to be paid into the Treasury of the United States to the credit of said Creek Nation: *Provided*, That the Secretary of the Interior be, and he is hereby, authorized and directed to pay any citizen of the Creek Nation of Indians of Oklahoma who was duly and legally enrolled on the final citizenship rolls of said nation on or prior to March 4, 1907, who has not received an allotment of land or who may have been allotted and deprived of the land by reason of contest or otherwise, the sum of $800, as compensation for and in lieu of an allotment of land, out of any moneys in the Treasury of the United States to the credit of said Creek Nation.

Mr. Speaker, the original Creek agreement of March 8, 1900, provided for the allotment of the lands belonging to said nation, section 3 of said agreement being as follows:

SEC. 3. All lands of said tribe, except as herein provided, shall be allotted among the citizens of said tribe by said commission so as to give each an equal share of the whole in value, as nearly as may be, in manner following: There shall be allotted to each citizen 160 acres of land—boundaries to conform to the Government survey—which may be selected by him so as to include improvements which belong to him. One hundred and sixty acres of land, valued at $6.50 per acre, shall constitute the standard value of an allotment, and shall be the measure for the equalization of values; and any allottee receiving lands of less than such standard value may, at any time, select other lands which at their appraised value are sufficient to make his allotment equal in value to the standard so fixed.

It will be observed that the law contemplated that allotments should be made with a view to equalization of values, and I may say that this is the only instance where the law with relation to allotting lands to Indians contemplated that they should be made on such a basis. The theory upon which allotments of land have universally been made to Indians has been equality as to area, and an Indian was permitted to take land of his selection regardless as to whether it was equal in value to the land selected by some other member of the tribe. The lands of the Creek Nation were appraised by the Dawes Commission for the purposes of distribution, and $6.50 per acre constituted the standard value. The supplemental agreement made with the Creek Nation and ratified by the act of June 30, 1902, retained the maximum value at $6.50 per acre for allotting purposes. It was the intention of the law that after all the Indians had been allotted, and the law so provided, the surplus lands should be disposed of and the proceeds used first to equalize allotments by paying to those who had received less than $1,040 in value of land the difference between that amount and the value of the land that they had received; then any balance remaining would be distributed equally among all the members of the nation.

By subsequent acts of Congress, and at the instance of the Creek Nation, acting through its tribal council, children born after the original allotment act was passed were added to the rolls and were allotted as new borns, and several thousand were allotted. This resulted in appropriating so much land that the proceeds from the sale of the surplus was not sufficient to pro-

duce enough money to equalize the allotments on a $1,040 basis, and as a result there has been presented a claim on the part of the Creek Nation against the United States of an amount of three or four million dollars, and it was proposed to appropriate from the Treasury of the United States and pay to said nation that amount. This claim, known as the Creek equalization claim, has passed the Senate on more than one occasion, and had it not been strenuously resisted in the House it would have become a law before this time, providing for taking the amount I have named from the Treasury of the United States, and incidentally certain attorneys would have received fees aggregating three or four hundred thousand dollars. If the pending resolution becomes a law, and the lands of the Creek Nation undisposed of and those that may be recovered in pending suits are withheld from allotment and sold, they will produce enough money to equalize allotments and thereby relieve the Federal Government from any possible liability or claim such as is being urged, and therefore it will be seen that the Government of the United States has a direct and a substantial interest in the passage of this resolution. All persons entitled to receive allotments were supposed to have been allotted several years ago, and, in fact, were allotted; but it seems that there are five members of the nation that had sought allotments that were contested, and they were defeated, and therefore are without allotments. Their status is practically the same as those that were added to the rolls by the provision in the Indian appropriation bill approved August 1, 1914, and Congress, in authorizing their enrollment, instead of directing that they be allotted, provided that they be paid $800 each as compensation for and in lieu of an allotment of land, and that is what this resolution proposes as to the five persons before referred to, except it is proposed in the amendment offered by the gentleman from Oklahoma [Mr. MURRAY] to increase the amount to $1,040.

In order that the House may understand the importance of this proposition and what is involved, I will briefly state the conditions that suggest the necessity for the passage of the pending resolution. There have been valuable oil discoveries in the Creek Nation, and the Cushing field is said to be one of the most valuable oil discoveries anywhere in the country, and therefore the land in that field has suddenly become very valuable, and naturally there has been a clamor on the part of speculators and others to obtain oil leases or the title of allotments, and it is not surprising under the circumstances that such a condition should arise, in view of the great possibilities that exist there for making money. I have no disposition or desire to discredit anyone who may be seeking an opportunity to get a foothold in that Cushing field. Before oil was discovered the land where the Cushing field is located had but a nominal value, and originally many of the allotments were arbitrarily made in that section by the commission to such Indians as had refused to select or accept allotments for themselves, and as such persons were the last to be allotted, they very naturally were given lands of the least value. In the making of this class of allotments, due to duplications and mistakes in names and from other causes, it is alleged that five tracts were erroneously and illegally allotted, and suits have been brought in the United States Court for the Eastern District of Oklahoma on behalf of and by the Creek Nation to have such allotments canceled and the lands restored to the nation. Suits are also pending in said court involving the title of the Creek Nation to the beds of the Arkansas and Cimarron Rivers, and it is estimated that the property involved in these suits is worth approximately $22,000,000. The value of the lands that are sought to be recovered because of the five erroneous, fictitious, or illegal allotments is estimated at from five to seven million dollars, so there is involved property of a value of about $30,000,000, and this resolution proposes to withhold all of the lands from allotment in order that they may be sold for the benefit of the Creek Nation. The five persons that we have heard so much about in this debate and who it is said will be done an injustice if this resolution passes are, as I have already stated, persons who originally took allotments but elected to select lands over which there was a contest, and for that reason they failed to get allotments. There was, however, ample opportunity for them to have taken other lands had they so desired, as there were undisposed of lands belonging to the nation that were subject to allotment, but apparently they did not care to exercise their rights, as such lands were not considered of much value.

Now, when the Creek Nation have instituted a suit to recover some land alleged to have been illegally allotted, the lands said to be worth not less than $1,000,000 for each tract, it is proposed that these five persons shall have the right to take them after the nation bears the expenses of prosecuting the pending suits to a successful and final determination. There would be more merit in the proposition if there was any chance or likelihood of these five persons being the chief beneficiaries if they were to be given the lands, but it so happens that such is not the case, and that the real parties in interest are oil speculators who are seeking to acquire the lands by using these persons as stool pigeons or instruments to accomplish their purpose.

Mr. Speaker, the representative of these tentative allottees, so far as I know, is a gentleman of high character. He now resides in Oklahoma and formerly resided in the State of Virginia in the congressional district of the gentleman from that State [Mr. WATSON] who so earnestly advocated that this resolution ought not to pass, assuming to speak for the five members of the Creek Nation. The gentleman I refer to as the representative of these tentative allottees is Mr. M. V. Thraves, of Tulsa, Okla. Mr. Thraves appeared before the committee, threw his cards on the table, made a frank statement of his interest in the matter, and apparently did not attempt to deceive the committee. In his opening statement to the committee, as it appears on page 116 of the hearings, he said:

I represent the interests of Lulu Butler, Jack Eldon Wilson, Millard Sanders, and my own as lessee under them.

He went on and said:

In the case of Lulu Butler, who had been allotted in 1899 by the department, and who had fought her case for 14 years before the department, before the referee, and to the United States District Court of Oklahoma, to the Supreme Court of Oklahoma, where she lost it, and had started it the second time and lost it in the lower court of Oklahoma, I desire to say that her attorneys, after she lost her case the second time and after 13 years of litigation—expensive litigation—began to look around to see if there was not some disposition that could be made of the Lula Butler matter. She was Lula Walcott when she started, when she was allotted. They communicated to me, in talking it over, that there was some land in the Creek Nation, and perhaps in the vicinity of producing oil wells, that was open for allotment—in other words, had been allotted to citizens not in being, and was void for the reason there was no party to whom title could pass; therefore, title never having left the Creek Nation, this would be public domain. I knew that, and the attorneys for Lula Butler made an engagement to have her and her husband meet me in an interview in Muskogee. Lula Butler has been a school-teacher all her life, nearly. She married Dr. Butler, who is a very intelligent physician and a good business man in many ways. He is a man highly educated, although a negro, a graduate from a negro university in Missouri and others. They met me and we had an interview, and after considering the matter for two or three weeks they decided that they would accept a proposition from me of $10,000 for an allotment of 140 acres.

The CHAIRMAN. Was that the amount they were entitled to?

Mr. THRAVES. Yes. Lula Butler had already received 20 acres. They gave her a 160-acre allotment, but she had lost the 140 in a contest with one Garrett. I made them an offer. They filed upon the land and took some time to consider and look around to see if they could do better. My offer was $10,000. They finally told me—they called me up, I think, and wrote me also and asked me to come over and consummate the deal. I went over. We entered into an agreement, approved by their attorney, to the effect that I should pay them $10,000 and undertake to clear the title to this land, bearing all of the expenses, attorney fees, and all other expenses pertaining to the litigation, and give them $10,000.

Mr. NORTON. Did you pay them $10,000 outright?

Mr. THRAVES. I had to pay them $2,500 cash and the balance in 30 days after the certificate of allotment was issued; in other words, after the title was quieted in them, and bear all expenses, which I did. But in order to encourage the colored woman and her husband and show them that I wanted to be fair with them, I told them that this land might eventually have oil upon it, although at that time there was no oil there. It was in the oil field, however, and I told them I would give them one-eighth royalty on 20 acres and $10,000 for the 120. Now, that was my own proposition, which they accepted. They later on made a lease with me, perhaps a month after they had made the contract on the 120.

After entering into a tentative arrangement with Lula Butler Mr. Thraves stated, and I quote from the hearings, page 118:

I went down into the jungles of McIntosh County, Okla., and found a woman who had filed originally as Hettie Lena on a tract of land and had been arbitrarily filed by the department as Emma Coker on another tract of land, that being located in the oil fields. I found that she had sold her 120 acres surplus of the original allotment as Hettie Lena and had leased her 40-acre homestead. So I went down there and induced her to quitclaim the Emma Coker land back to the Creek Nation.

Further on in the hearings, on the same page, he said:

I afterwards filed Lula Butler on the land. Then she made a contract and I proceeded at once to try to get it allotted to Lula Butler, and I came here to Washington before the department to do it.

In view of these statements, it will appear beyond any question that Lula Butler has a very small interest in the land that she is seeking, and that the principal party in interest is Mr. Thraves, formerly from Virginia.

Mr. Thraves, before the committee, explained his arrangements with Jack Eldon Wilson, another of the tentative allottees, and also Millard Sanders, and anyone who wishes to know exactly what he stated can ascertain by referring to the hearings.

His relation to the matter is summed up in his reply to a question submitted by Mr. NORTON, of the Indian Committee, which is found on page 121 of the hearings, as follows:

Mr. NORTON. Without questioning the good faith and propriety, isn't it a fact that you or the interests that you represent in this matter discovered that in this Cushing field there are some allotments that were not legally taken; that you made this discovery after investigation and

then you proceeded to discover some parties whom you might get to make entries on these allotments? Isn't that the whole gist of it?

Mr. THRAVES. That is the beginning of it.

I think I have shown beyond the question of a doubt that instead of this being a proposition to deprive five helpless Indians in the Creek Nation of the right to take an allotment, it is a proposition, if the resolution is not passed, to allow certain individuals not members of the nation to obtain very valuable property for their own benefit, whereas if the resolution is passed the lands that may be recovered by the suits now pending instituted by the Creek Nation may be disposed of and sold and the proceeds distributed among the members of said nation, and, incidentally, the United States will be relieved of the possibility of having to appropriate three or four million dollars in order to equalize the allotments of the Creek Indians.

In conclusion, I want to say just a word with reference to the effect of this resolution, if it is passed, as to the five tentative allottees. They have each filed an application for the lands involved in the suits that are pending to cancel the fictitious and illegal allotments, and if their filings give them a vested right, then the passage of this resolution will affect them in no manner, as it is beyond the power of Congress to legislate to divest an Indian of a vested right that he may have by reason of an allotment. My own opinion is that no vested rights have accrued, first, because pending the existence of the allotments that are being attacked, no right can attach until after they are canceled; and, furthermore, before a right of allotment can vest in a member of the Creek Nation something more than a mere application on the part of an Indian is necessary. Under the law a certificate of allotment must be issued. No certificates of allotment have been issued in any of these cases, and the Interior Department has refused to issue a certificate, and therefore no vested rights have attached; therefore, the passage of this resolution will simply have the effect of withholding from allotment all of the lands belonging to the Creek Nation that have not been allotted or that may be recovered in the pending suits. The courts have uniformly held that it is within the plenary power of Congress to change a law with reference to the disposition of tribal property, and that is all that is proposed by the pending resolution. No one can say that where the law contemplated that the maximum value of an allotment should be $1,040 it would be fair to allot to one member of the nation lands known to be worth $1,000,000; and considering that in fact it is a matter in which private individuals are mostly concerned, and that the rights of the Creek Nation should be conserved and the interests of the Government of the United States protected, I submit that this resolution ought to pass.

Sugar Refining Trust Duplicity.

EXTENSION OF REMARKS
OF
HON. ROBERT F. BROUSSARD,
OF LOUISIANA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, March 4, 1915.

Mr. BROUSSARD. Mr. Speaker, the Members of this House on yesterday received a circular letter sent out by the Federal Sugar Refining Co. and signed by F. C. Lowry, its sales manager, in which the following appeared:

For political purposes Congressman BROUSSARD recently stated:

"Refiners told Congress, and Congress believed the refiners, that if the sugar duties were reduced consumers would receive the advantage of the reduction. On March 1 Congress reduced the then existing duties 25 per cent, and for not a single moment from that day to this has the consumer paid as little money for his sugar as he did before the reduction."

Curiously enough, next day Gov. Carter, of Hawaii, Congressman BROUSSARD's ally in the effort to retain the high duties on sugar, more correctly stated the situation as follows:

"In fact, the war in Europe has made the last year the most phenomenal year in the history of sugar growers. In April, 1914, we got the lowest price for sugar in 20 years."

I will not dignify this miserable scribbler by directing the attention of the House to him further than to recall that when he began to circularize Congress as the mouthpiece of the refiners, some years ago, he posed and signed himself "Secretary" of the "Committee of wholesale grocers, formed to assist in obtaining cheaper sugar for consumers through reduction of duties on raw and refined sugars."

He was afterwards compelled to admit, under oath before an investigating committee of this House, that this committee had never held a meeting, even of two members; that not even a penny of dues had ever been paid into it by the alleged members; that he had elected himself secretary and treasurer; and that his employer (Spreckels) had financed it by contributing approximately $30,000 to circulate the fraudulent and untruthful literature with which he deluged Congress and the country. That piece of deception was in keeping with the dishonest practices that have always been pursued by the Sugar Refining Combine.

Mr. Speaker, I resent this effort by the Sugar Refining Trust to impugn my motives on the eve of my departure from this House.

At noon to-day I leave this body to take my place at the other end of the Capitol, after 18 years of service spent within these walls.

But a handful of the present membership, yourself included, Mr. Speaker, has seen similar length of service, but I believe those of you with whom I have dedicated the best part of my life here in the interest of my State will bear witness that throughout these years I have been making this same fight for a principle.

In it has been bound up the very existence of my people. Two years ago upon this very issue the people of my State in a Democratic primary selected me for Senator as a Democrat. A solid Democratic legislature unanimously confirmed that decision and elected me to the Senate upon this issue, which is so vital to Louisiana.

In that contest I was opposed by two of the ablest and most influential men in my State.

One of them had been for 10 years a Member of this body and had justly attained a national reputation for his service as chairman of the Committee on Banking and Currency.

The other had filled almost every office in the gift of the people. He had been elected successively as member of the legislature, speaker of the house, lieutenant governor, governor, and United States Senator for the term which expires to-day.

It has been a matter of pride to me, Mr. Speaker, that in the 18 years I have been here fighting for the principle which the Sugar Trust now seeks to impugn, I have never had an opponent within my own party save in the first election and in the last one after I had been elected to the United States Senate to take my seat at the end of the present Congress.

The attempt of this great cuttlefish to muddy the waters and hide its own villainy will not succeed. The fight that I have been carrying on against it here will be, I assume, carried on by others; but in the Senate I propose to dedicate what energy and ability I may possess to seeing that it is brought to book for its many offenses against the American farmer, the American consumer, and the Federal Treasury.

When they began to poison the public mind a few years ago they caused millions of circulars to be sent not only to the business men, but to the housewives of the country, in which it was stated:

There is probably no article handled by the wholesale and retail grocers on such a small margin of profit as sugar, so that any reduction in the tariff would immediately result in a corresponding reduction in the price of sugar to the consumer, who would thus receive all the benefit from the reduced rate. No objection can therefore be made against a reduction in the tariff on the ground that the difference in the tax on sugar would go to the refiners or the dealers handling it.

The public benefits from cheaper sugar would not end with reducing the cost of that article to the consumer. Under the present tariff the relatively high cost of sugar seriously burdens our great fruit canning and preserving industries, and by increasing the cost of these products limits their consumption in this country and practically prohibits exportations on a large scale.

They pasted their fraudulent statements, intended solely to deceive, upon the head of every barrel that left the refinery and inserted in every pound package of sugar a circular saying that if the duty was removed the housewife could secure that same sugar at a saving of 2 cents a pound.

Millions of people were deceived. A great clamor arose throughout the country for cheaper sugar, and while the work of revising the tariff was in progress these refiners sold their output at a loss in order to further the deception. They knew they could make up their losses later after Congress had been trapped.

This is proven by the course of this identical Federal Sugar Refining Co. It lost so much money during its campaign for "cheap sugar" that it was compelled to skip the usual dividend on its common stock; and on January 7, 1914, its president, Claus A. Spreckels, Lowry's employer, issued a statement in which he explained the suspension of the dividend by saying:

This is due to the fact that during the past few months the margin between the cost of raw sugar and the price at which refined sugar has sold has been too small to justify a dividend on the entire capital stock.

The company will resume the payment of dividends on its common stock as soon as the normal difference between the price of raw and refined sugars is restored, and the directors believe that such a resumption will occur very soon.

They knew precisely when this resumption would occur, since that event depended solely upon the determination of this same refining combine. Yet in the tissue of falsehood issued yesterday this statement was made:

During the first six months of 1914 consumers in the United States bought their sugar lower than ever before, the average price of refined sugar being 3.91 cents per pound. * * * This was a matter of general comment, and was equally gratifying to manufacturers and consumers.

The duplicity practiced by the Sugar Refining Trust as soon as the European war broke out was explained to this House by the gentleman from Michigan [Mr. FORDNEY] a few days ago.

They seized upon it as the opportunity not only to recoup all the losses that had been incurred while campaigning for "cheaper sugar" but to add millions to their already swollen and tainted fortunes.

They doled out a barrel of sugar to each retailer in August on the pretext that their supplies were limited, but in October, when they attempted to dragoon the Louisiana farmers into accepting less for their crop than it was worth, they brazenly exhibited warehouses in all the distributing centers which were glutted with sugar.

One of the most infamous features of the unwarranted rise they forced in the price of sugar last summer was the loss they occasioned the housewives and farmers of this country. They began forcing up sugar early in August, when the good women of America were on the eve of canning and preserving fruits and vegetables for the coming year. As a result of this chicanery thousands of tons of fruit were allowed to spoil, millions of dollars were wasted, and the very people whom they had deceived into believing that they would furnish cheaper sugar were made the victims of their greed.

But such practices on the part of the Sugar Refining Trust which is now seeking to cast a doubt upon my motives are not to be wondered at, when it is remembered that the United States Attorney General in a recent report charged them with having practiced "a long-continued system of defrauding the Government of unparalleled depravity."

In this attack upon me the refining interests say:

Curiously enough, the next day, Gov. Carter, of Hawaii, Congressman BROUSSARD'S ally in the effort to retain the high duties on sugar, more correctly stated the situation. * * *

I am proud to number such a splendid specimen of sturdy American manhood as Gov. George R. Carter, of Hawaii, among my personal friends, but I never discussed the sugar situation with Gov. Carter, save once in my life, and that only subsequent to the issuance of the governor's and my statements quoted by Lowry.

The people of Hawaii have not been cooperating with the cane-sugar growers of Louisiana, Texas, and Porto Rico in the death struggle they are now engaged in with the Sugar Refining Trust, and while I believe that all the sugar-producing interests under the American flag will eventually realize the wisdom of standing together and presenting a united front to their common enemy, yet there is no more truth in designating Gov. Carter as my ally in the sense intended by the refiners' circular than there is in many of the other false statements with which they have persistently sought to deceive Congress and the consuming public.

Proper Investigation of Personal Rural Credit Bill.

EXTENSION OF REMARKS
OF
HON. WILLIS J. HULINGS,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. HULINGS. Mr. Speaker, the experience of those in control of this Congress in the matter of land-mortgage credit should be a lesson to those who advocate personal or short-time loans to farmers. It is my candid opinion that the subject will never be properly handled except after full and scientific study. The reports of a junketing committee sent abroad to study foreign methods utterly incompatible with American needs is useless.

I am glad to know that there have been several resolutions pending in this House, and one in the Senate, providing for a fair and scientific investigation of personal rural credit. Those resolutions, which are known as the Sheppard and Candler-Doolittle-Helgesen resolutions, provide for the creation of a committee before which farmers or organizations of farmers may appear by experts with bills for the establishment of a personal credit system for our farming classes and not only establish the merits of their own bills but show or point out the defects of other bills. It also provides that every interest affected by such bills may appear and oppose or advocate any bill presented to the commission. The farmer has to meet the banker, but it is far better that he meet the banker in open court with his own expert than to meet him in the secret lobby or caucus. Publicity is the only way in which the farmers will ever get their deserts in this important matter. I therefore unhesitatingly say that it is a great mistake that this Congress does not give the farmers the benefit of this investigation as proposed by those resolutions, and if we could get a vote on them they would certainly have mine.

I believe that one of the most important rights granted under the Constitution is the right of petition. The representatives of some of the leading farm papers of the country, the largest in the world, have petitioned the chairmen of the Banking and Currency Committees indorsing this method of investigation. Several thousand farmers of Virginia did so last fall. The legislative committee of the National Grange has indorsed it, besides leading representatives of the Farmers' Union. Even if this method of investigation did not appeal to my judgment, the fact that it has been asked for by such leading representatives of the farm press and farmers' organizations is enough for me to say that it should be granted, because the appropriation asked to put it in force is only $9,000. An excellent plan, I think, is that proposed by Mr. HELGESEN in House joint resolution 430, a copy of which follows:

Joint resolution (H. J. Res. 430) to authorize the Committees on Agriculture of the Senate and House to investigate a system of rural personal credit.

Whereas none of the several rural-credit investigating bodies appointed by Congress within the past few years has drafted a personal rural-credit bill; and

Whereas personal rural credit is more necessary than a land-mortgage system, although such system is good so far as it goes; and

Whereas nearly every highly civilized country has in successful operation a personal rural-credit system through which the farmers of those countries obtain credit for productive purposes at low rates of interest and in sufficient amounts to enable them to produce agricultural products more economically than is done in this country, even though our farmers possess many natural advantages not enjoyed by them; and

Whereas the great European war now being waged is wasting capital at a rate never before approached, which condition is bound to result in materially affecting the world's capital and credit markets; and the American farmers having no organized credit machinery, it naturally follows that their interests will suffer more than any other interests in the country and make it more difficult for them to obtain credit in the future than it has been in the past; and

Whereas the function of a body to investigate a scientific question like credit is judicial in character and not legislative in any sense, because its chief mission is to ascertain the truth to form the basis of sound legislation, just as it is the mission of the court to ascertain the truth to form the basis of its judgment, and the function of an investigating body being judicial in character, it follows that its machinery should conform to that of other judicial bodies, which provides that the interested parties may appear in open court and establish the merits of their respective contentions; and if the selfishly interested parties are brought into court to fight out their own battles, in an orderly manner and on fair terms prescribed by the commission, then the Members of Congress would not be charged with representing any special interest: Therefore be it

Resolved, etc., That the Committees on Agriculture of the Senate and House of Representatives are hereby authorized, through a subcommittee, to investigate and hold hearings on such personal rural-credit bills as may be presented to them, in the manner hereinafter more specifically set forth, and make a report thereof not later than the 10th day of December next.

SEC. 2. That such subcommittee or investigating body, which is hereinafter referred to as the commission, shall hold its hearings and investigations in such manner that will permit persons who, in the commission's opinion, have sufficient authoritative backing to present bills for a personal rural-credit system in the United States to the commission and appear before them by experts of their own selection to establish the merits of their respective bills and to disprove any provisions contained in bills not presented by themselves. The commission shall notify at least one leading representative of every interest affected by such bills, including the president of the American Bankers' Association, of his privilege to appear before the commission by an expert of his own selection and to advocate or oppose any bill presented, who shall enjoy the same rights and privileges before the commission as the experts of the proponents.

SEC. 3. That it shall be the further duty of the commission to send for persons and papers; to administer oaths; to summon and compel the attendance of witnesses and have the same examined by themselves or by the representatives of the parties at interest appearing before them, or both; to adopt rules of procedure and the same to amend; and to employ such secretaries, experts, stenographers, and other assistants as shall be necessary to carry out the purposes for which the commission was created.

SEC. 4. That the members of the commission shall receive no compensation for their services on the commission except traveling expenses incurred while attending to the duties imposed under this act.

SEC. 5. That the sum of $9,000, or so much thereof as may be necessary to carry out the purposes of this act and to defray the expenses of the commission, is hereby appropriated out of any moneys in the Treasury not otherwise appropriated. Such appropriation shall be immediately available and shall be paid out on the audit and order of the chairman or acting chairman of said commission, which audit and order shall be conclusive and binding upon all departments as to the correctness of the accounts of said commission.

Agricultural Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. WYATT AIKEN,
OF SOUTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915.

Mr. AIKEN. Mr. Speaker, I want to turn for a little while from the more or less disagreeable discussion of how to tax our people, to the more profitable discussion of how to feed and clothe them, how to feed and clothe other nations at a profit, and how to meet some of the taxes we are levying.

The European war has furnished a golden opportunity to many industries in the United States. It has increased the price of farm products in all sections of the United States, save one, and of that section I have the honor of being one of the Representatives here in Congress.

By reason of the fact that cotton constitutes practically the entire money crop of the South and cotton manufacturing has been paralyzed outside the United States as a result of the war, our people have suffered financial embarrassment that is little short of calamity. While I know this embarassment is only temporary, and when it is overcome, will effect a new era of prosperity such as the South has never before enjoyed, the immediate result has been the loss of millions of dollars to southern people.

Our people made appeal to Congress, but they found little sympathy except from the Representatives from the section where the blow had fallen; and some were even disposed to chide them for sticking to the one-crop idea. Nothing more than aid to bridge their troubles temporarily was asked and this was denied.

The southern people are wedded to cotton. They have clung to it through all of its vicissitudes when it varied in price from 4 cents per pound to 40. They have covered their homes with mortgages trying to raise it at half the cost of production, and they have as readily lifted those mortgages with the improved price of the staple during the last 10 years. And I do not hesitate to say now that cotton will continue to be the leading farm product in the South. There is no crop that pays better there, and there is none that pays as well in any other section of the United States. That the southern farmer is to-day laboring under the weight of debts incurred in producing a cotton crop for which he might reasonably have expected 12½ cents per pound is no fault of his. There is in it no error of calculation, no serious error of method of farming, but only an unforeseen calamity against which he could not have guarded and of which he could not possibly have been warned. However, the southern farmer has been taught a wholesome lesson, and the combination of mills and money sharks that has seized upon the war as a pretext to try to force his cotton out of his hands at starvation prices will rue the day that they forced the farmer to curtail his production abnormally. The present supply, under normal conditions, is not equal to the demand, and as sure as fate it will be much less for all time to come, when the Southern farmer has found out to his satisfaction that diversification means less expense, more independence, and more clear money than the old one-crop idea.

While the greatest falling off of crop production will be this year, when the advantages of diversification and stock raising have been fully demonstrated, cotton will be reduced to smaller acreage for all time.

If American manufacturers, who have been holding out of the cotton market except at starvation prices fixed by themselves, remain much longer out of the present market, they may be forced to pay dearly even for the remainder of the present despised crop. There are some facts that every farmer knows, and if the manufacturer turns a deaf ear to them now the time is not far distant when they will be brought home to him in such a way that he can not ignore them. Succinctly stated, these facts are:

First. That 35 per cent of last year's cotton acreage is already planted or will be planted to grain.

Second. That merchants and bankers are not going to furnish supplies, except to the very best of their customers, to grow the present year's crop. They could not if they would.

Third. Hundreds of thousands of mules are being shipped out of the South and none are being brought in.

Fourth. Guano companies are not going to manufacture even 50 per cent of their normal output of fertilizers this year, and, if they do, farmers will not use 40 per cent of the fertilizer they used last year.

Knowing these conditions as I do, and I am not exaggerating them in the slightest, I confidently expect less than half a normal cotton crop to be raised during the year 1915. I know that cotton prices will go up again, and go perhaps much higher than they have gone in the last half century. And there is the very danger that I would have our people warned against. High-priced cotton is a seductive proposition, and I would not have the southern farmer for any reason, seen or unseen, fall again into a snare and become the prey of the very interests that should be most interested in saving the farm from ruin.

Now, Mr. Speaker, I would not presume to advise southern farmers of the best methods of diversification, nor do I blame them for sticking to cotton in the past. It is easy enough for any of us to see what is best to do; but I want the lesson brought home so clearly, brought home by disseminating knowledge obtained through expert agricultural tests, so forcibly that the farmer's intelligence will tie him to diversification for all time. When he is fully convinced of this, and when a thorough test has shown him increased yield per acre of all crops, cash from his cotton equal perhaps even to his largest crop and home-raised food for man and beast besides, he will then be in position to have something to say about what price shall be paid for his products.

The Agricultural Department of the United States is maintained at great expense to give the farmer just exactly that aid that I am not competent to give him and that advice that I would not presume to give him. I have selected certain data from agricultural bulletins as bear directly on the question of diversified crops. I think so well of the selections that I am going to ask permission to reprint them as a part of my remarks in order to bring them directly to the attention of farmers of South Carolina.

These side crops are treated under separate heads, and the first to which I would direct attention is alfalfa.

Alfalfa is being grown in the county in which I live as successfully as it can be grown anywhere in the world. Its use and its value as a stock food are so fully shown in the excerpts given below that I will not undertake to comment on it or any of the subsequent subjects treated. They speak best for themselves.

ALFALFA.

So far as climate is concerned, alfalfa can be grown in every State in the Union.

A deep, permeable soil should be chosen if possible, as alfalfa is naturally a deep-feeding plant that usually sends its roots down many feet to obtain the plant food materials and moisture which are out of reach of shallow-rooted crops.

No other foliage crop requires less lime in the soil than does alfalfa.

Young alfalfa plants are very tender and are apt to be killed by weeds during their early stages of growth.

The time of seeding alfalfa varies in the different sections of the country, but late summer seeding is best in the East and South.

Dairy cows require high protein feeds in order to produce profitable flows of milk. The tests showed that with alfalfa hay at $10 a ton and wheat bran at $20 the saving effected by substituting alfalfa for wheat bran is $2.80 for every 100 pounds of butter and nearly 20 cents for every 100 pounds of milk.

Alfalfa forms probably the best roughage for fattening cattle, as its lack of bulkiness enables the animal to consume sufficient quantities for rapid gains.

Alfalfa is an ideal hay for sheep, but is apt to cause bloat if used for pasturage.

Alfalfa is fed to hogs for the most part in the green state, either as a soiling crop or as a pasture.

Alfalfa may be fed to horses both in the green state and as hay. Instances are on record where horses have performed heavy work during the summer season on nothing but green alfalfa.

Alfalfa makes an excellent feed for all kinds of poultry. They can be allowed the range of an alfalfa field during the summer or it can be cut green and fed to them.

Kentucky blue grass is apt to run out the alfalfa if this grass is used in the mixture in the blue-grass sections.

The following tabulation indicates the approximate cost and returns per acre:

Plowing	$2.00
Harrowing	1.00
Seed, 2½ pounds at $2	4.50
Seeding	.50
Harvesting, 3 tons at $2	6.00
Total	14.00
Three tons of alfalfa, at $15	45.00
Cost to be deducted	14.00
Profit	31.00

SOME ALFALFA DON'TS.

Don't fail to provide for ample inoculation; soil from an old alfalfa field is best.

Don't sow poor or weedy seed.

Don't sow on a weedy soil.

Don't sow on any but a sweet, well-limed soil.

Don't sow on poorly drained soil.

Don't sow on any but a finely prepared, well-settled seed bed.

Don't pasture the first or second year.

Don't lose the leaves; they constitute the best part of the hay.

Don't seed a large acreage to begin with. Experiment on a small area first.

Don't give up. Many prominent alfalfa growers finally succeeded only after many failures.

Alfalfa acts in a manner similar to red clover and other leguminous crops in increasing the yields of the succeeding crops.

SOY BEANS.

As a forage crop, however, soy beans have become of increasing importance in parts of the United States, especially southward. Their culture has greatly increased in recent years, especially in Tennessee, North Carolina, Virginia, Maryland, Kentucky, and the southern part of Illinois and Indiana.

The soil requirements of soy beans are much the same as those of corn.

Throughout the South the proper bacteria for soy beans seem to be widely distributed, so that natural inoculation now occurs generally.

Soy bean hay when cut at the proper stage of growth and carefully cured is excellent, and for dairy cattle at least yields results equal to alfalfa hay.

The planting should be timed so that the crop can be cut for hay in September, as this month is usually the most satisfactory for haymaking. The cutting may begin as soon as the dew is off the plants and continue for the rest of the day.

While the hay is dry it should be put in good-sized stacks or under a shed. If it is stacked in the open field it is very essential that some other material, either grass or a canvas cover, be put over the stack, as soy bean hay does not shed rain well. Yields of from 1 to 3 and occasionally 4 tons of cured hay to the acre are secured. The average yield is about 2 tons per acre.

Soy beans and cowpeas make a very satisfactory mixture for hay purposes.

In sowing soy beans and cowpeas in mixture about 1 bushel of the former to a half bushel of the latter per acre should be used.

Soy beans are more commonly grown with corn than with any other crop.

The growing of soy beans for ensilage has not been practiced very extensively. In a number of instances ensilage has been made of the crop, usually in combination with corn, and it is invariably reported as making an excellent succulent feed.

Growing soy beans for the grain for use as feed is distinctly profitable if the yield is 16 bushels or more per acre. The feeding value of the grain is very high, being slightly superior to cottonseed meal. The grain is rich in protein, while nearly all the other grains produced on the farm are poor in protein but rich in carbohydrates.

Throughout much of the region well adapted to soy beans dairy farmers purchase cottonseed meal for a high protein feed. Numerous experiments have shown that soy-bean meal is equal or slightly superior as a feed to cottonseed meal both for cows and for hogs.

Yields of 20 bushels per acre of soy beans on lands of moderate fertility may confidently be expected in the region where the best medium or late varieties will mature.

The cowpea is used more than any other crop as a soil renovator in the South. Its use is rapidly increasing, but is yet far from general. During the past few years the high prices of the seed has tended to discourage more extensive growing. Recent progress in the harvesting of cowpea seed by machinery will doubtless materially reduce its cost. The seed is at present almost entirely picked by hand. The cowpea is characterized by remarkable ability to grow in poor soils and to cover the ground so densely as to choke out most weeds. It usually bears an abundance of tubercles on its roots, whether the soil has been inoculated or not, although in new localities where the cowpea has not been previously grown the tubercles may be absent. In such cases inoculation is necessary, for it must always be remembered that it is through the tubercles on the roots that the beneficial effects of the cowpea or other legume largely depend.

Cowpeas are very commonly planted between rows of corn at the time of the last cultivation or they are broadcasted upon the stubble of small grains. Cowpeas, however, like other crops, respond remarkably to cultivation, and there is a growing tendency to plant them upon well prepared soil. This practice results in a great increase of the crop, whether grown for hay or for seed.

SILAGE.

Within the last 30 years silage has come into general use throughout the United States, especially in those regions where the dairy industry has reached its greatest development. Silage is universally recognized as a good and cheap feed for farm stock, and particularly so for cattle and sheep. There are several reasons for the popularity of silage.

1. More food can be stored in a given space in the form of silage than in the form of fodder or hay.

2. There is a smaller loss of food material when a crop is made into silage than when cured as fodder or hay.

3. Corn silage is a more efficient feed than corn fodder.

4. An acre of corn can be placed into the silo at less cost than the same area can be husked and shredded.

5. Crops can be put in the silo during weather that could not be utilized in making hay or curing fodder.

6. More stock can be kept on a given area of land when silage is the basis of the ration.

7. There is less waste in feeding silage than in feeding fodder. Good silage, properly fed, is all consumed.

8. Silage is very profitable.

9. Silage, like other succulent feeds, has a beneficial effect upon the digestive organs.

10. Silage is the cheapest and best form in which a succulent feed can be provided for winter use.

11. Silage can be used for supplementing pastures more economically than can soiling crops, because it requires less labor, and silage is more palatable.

12. Converting the corn crop into silage clears the land and leaves it ready for another crop.

In all parts of the United States where the silo has come into general use the principal silage crop is corn.

Some persons have advised mixing clover, cowpeas, or alfalfa with the corn when it is being put into the silo in order to correct this deficiency of protein. Such a procedure is not to be advised, however, if it is at all possible to cure the clover or other crop into hay, and it usually is possible if hay caps are used. Since some dry forage should always be fed along with the silage, the leguminous hay would better be used in this way rather than by converting the crop into silage.

Corn should be harvested for the silo at about the same time that it is harvested for fodder; that is, when the grain has become glazed and the lower leaves of the stock have turned brown.

Sorghum is readily made into silage. The only advantage which sorghum has over corn is that it will sometimes yield heavier on poor ground and that the operation of harvesting may extend over a greater period; that is, it stays in the right stage for harvesting longer than corn. Sorghum, however, makes a poorer quality of silage, being more acid, not so palatable, and less nutritious. Where corn yields well there is no advantage in growing sorghum.

Clover is a successful silage crop, yielding a palatable product high in protein. It does not pack so well as corn, so great care should be exercised in the tramping of the silage at the time of filling, and the depth of the silo should also receive particular attention. A shallow silo will not prove satisfactory.

COWPEAS, ALFALFA, AND SOY BEANS.

These crops can all be successfully made into silage by exercising the same precaution as with clover. They should be cut at the same time as for haymaking. However, it is ordinarily, preferable, as with clover, to make them into hay rather than silage.

POTATOES.

Trusting that some one will read and profit thereby, I insert an excerpt on this food plant printed in a bulletin published by the Department of Agriculture, as I have and will from other bulletins on different agricultural products:

The ever-increasing importance of the potato crop makes it highly desirable that more attention should be given to the subject of seed improvement. As yet comparatively little thought has been given to this phase of the potato industry by the American grower. The European grower, on the other hand, recognizes the futility of attempting to grow profitable crops of potatoes without giving the most careful attention to the source of his seed supply. To this end he either buys his seed from specialists in seed-potato production or becomes a specialist himself. The result of this attention to the use of good seed is well attested by the average yields secured. For the years of 1901 to 1910, inclusive, the average per-acre yield in bushels was as follows: Germany, 200; Great Britain, 200; and the United States, 92. It would be absurd, of course, to claim that all of this increase was attributable to good seed, but it is safe to assume that good seed does play a very important rôle and should not be overlooked by the American grower.

In some sections the same land can be made to produce two crops of potatoes in a single season, thus rendering it a very important and profitable industry.

Within recent years there has been a marked increase in the use of second-crop potatoes for seed throughout the southern potato-growing sections. This crop is frequently grown on the same land from which the first crop of potatoes was harvested.

A conservative estimate of the increase that might be expected from the use of high-grade seed is certainly not less than 10 per cent. Such an increase, based on the average of the past five years, would not amount to over 34,250,000 bushels, having an approximate valuation of $21,000,000.

The value of the method is well attested by the crops produced. The average production on an 18-acre basis for the past nine years—1901 to 1909—has been 282 bushels per acre. The highest seasonal yield during this period was 417 bushels and the lowest 233 bushels. These yields are being secured in a locality where the general average is approximately 150 bushels per acre.

SEED CORN.

Here is what the Agricultural Department has to say about seed corn:

At corn-ripening time drop all other business and select an abundance of seed corn—the process is too important to be conducted incidentally while husking. When selecting seed corn give the process your entire attention. Get the very best that is to be had and preserve it well, and your increased yields will return you more profit than any other work you can do on your farm.

The only proper way to select seed corn is from the stalks standing where they grew as soon as ripe and before the first hard freeze.

The average production of corn to the acre for the entire United States is but 26 bushels, yet in practically every section four times that quantity is frequently produced. Improvement of the quality of seed is the least expensive method of increasing the yield per acre. A full stand of plants may be obtained from inferior seed, but the yield will not be the best possible. The loss is due to delay or negligence. It can be prevented by the selection of seed corn in the autumn. Autumn is the time to prepare for a profitable corn crop the following season.

By far too many consider seed corn simply because it will grow. To be first class seed must be—

(1) Well adapted to the seasonal and soil conditions where it is to be planted.

(2) Grown on productive plants of a productive variety.

(3) Well matured and preserved from ripening time till planting time in a manner that will retain its full vigor.

The importance of the three requirements just enumerated has been demonstrated experimentally by the Office of Corn Investigations of the Bureau of Plant Industry.

TOMATOES.

Commercial tomato growing in the Southern States is almost exclusively confined to the production of tomatoes at a season when they can not be grown at the North except in greenhouses. On this account the commercial production of this crop is restricted to areas where there is very little, if any, freezing during the winter months. Florida and Texas lead in the production of this crop.

The yield of fruit in the South, under the conditions mentioned, is much less than it is in regions having the long growing periods characteristic of higher latitudes. Yields vary from 75 to 250 bushels to the acre, but the high price obtained for the fruits which are thus produced at a season when the sole competition comes from the products of northern greenhouses renders the crop when well handled very remunerative.

The tomato as a field crop is adapted to a wide variety of soils, though a medium clay loam is probably the best. In fact, any soil well adapted to potatoes will grow the tomato to good advantage.

The cost of production per acre is much less for fruit for canning than in the case of early tomatoes, the chief difference being in the production of the plants. The several items may be classified as follows:

Cost of growing an acre of tomatoes for canning:	
Plants	$2
Manuring and fertilizers	8
Preparation of land, setting plants, and cultivation	8
Packing and carting	10
Total	28

The yield, as in the case of the early tomato, varies widely, ranging from 5 to as high as 20 tons per acre, even 30 tons per acre having been reported in exceptional cases, although the average for a series of years on average land will probably be under 8 tons. Where all conditions are carefully observed, 20-ton yields are frequently obtained, and at the prices received at the cannery, ranging from $5 to $7.50 per ton, according to the locality, the crop is a fairly good one, and the net profits are quite as large as for other field crops.

ASPARAGUS.

The popularity which asparagus has achieved during recent years is remarkable. Formerly a luxury on the tables of the rich, it is now, during the reason, a vegetable seen daily upon the tables of people of moderate or even of small incomes. It is also frequently recommended as an article of diet for the sick and convalescent.

The fact that asparagus appears in the market at a time of the year in which few or no other fresh vegetables are available has had much to do with its increased consumption in our cities. It can also be easily preserved by canning, the product in this form being almost equal to the fresh article, and this has increased its use, being, as it were, a lengthening of the season.

Brinckmeier, in his "Braunschweiger Spargelbuch," gives the following three rules for guidance in selecting a location for asparagus beds:

(1) One should choose, in reference to the ground characteristics, open, free-lying ground, protected to the north and east, of gradual slope, free from trees or shrubbery.

(2) The field should be exposed to the rays of the sun all day long; therefore a southern exposure is desirable; or, if that is not obtainable, a southwesterly or southeasterly slope, because either east, west, or north exposure will cause shadows during a greater or less portion of the day.

(3) Standing, stagnant ground water, which can not be drawn off by drainage, is to be avoided, the requirements of the plants indicating a somewhat damp subsoil, but not too high ground water.

From the above it is deduced, and experience corroborates the theory, that a not too porous, but a well-drained, light, deep, sandy loam, with a clay subsoil, is to be preferred to all others.

A prominent and successful New Jersey grower says:

I can not give the cost in detail of establishing asparagus beds, as so much would depend upon whether one had roots to buy, and upon other matters. Where growers usually grow roots for their own planting the cost is principally the labor, manure, and loss of use of land for two years, upon which, however, a half crop can be had.

The cost of maintaining a bed I can only estimate, as at times all the men on the farm may be at work at the asparagus and at other times none at all, and I do not keep an account of the time put in at the asparagus. I should estimate the cost per acre as follows:

Manure (applied in the spring)	$25
Fertilizer (applied after cutting)	15
Labor, plowing, cultivating, hoeing, etc	20
Cutting and bunching	40
Total	100

A bed well established, say 5 years after planting, when cared for should for the next 10 or 15 years yield from 1,800 to 2,000 bunches per annum, or at 10 cents per bunch (factory price), $180 or $200.

This agrees very closely with the actual figures of the yield and receipts of another New Jersey grower, who in 1896 cut 22,584 bunches from 12 acres, all of which were not in full bearing, or 1,882 bunches per acre, and received $2,611 net returns from commission houses, or a fraction over 11 cents per bunch. Of course those getting higher prices or larger yields will exceed this, but it is a fair average for those who sell on commission or to canneries.

The cost of good 1-year-old plants ought not to be over $4 per thousand, and it requires from 1,800 to 3,600 to fill an acre, depending upon the distance between plants; perhaps 2,500 would be a fair number, allowing surplus plants to fill missing hills, or $10 per acre. The plants can be grown from the seed for half that sum, if that plan be preferred.

The cost of establishing a bed can be somewhat reduced by planting for the first two or three years some early garden crop between the rows, such as potatoes, peas, beans, onions, strawberries, and so forth, for as the roots are as yet not occupying all the ground there will be no injury to the plants, and the manure and cultivation necessary for the young asparagus will be sufficient for the other crop, hence the receipts for it will be almost entirely net and yield at least the returns of "a half crop."

The estimate above calls for an annual expenditure of $40 per acre for fertilizer and manure, which is a liberal allowance; another estimate requires 2,000 pounds per acre of a mixture containing 400 pounds of muriate of potash, 1,100 pounds acid phosphate, and 500 pounds of nitrite of soda, which at market prices can be secured for less than the above sum. Asparagus is one of the earliest vegetables, especially if the roots are near to the surface or the soil above them has been temporarily removed so that the rays of the sun can easily penetrate to them.

It is not in the province of this discourse to attempt a description of asparagus canning as practiced in a factory, for such at best would be the detailing of the method practiced at one and might differ widely from the practice of every other, and, besides, it is a business requiring expert knowledge and considerable capital, while domestic canning of asparagus is as simple as for any fruit or other vegetable.

A lady of experience as a housekeeper gives the following receipt:

Cut the asparagus the length of a fruit jar, pack the jar closely, fill with cold water, add a little salt, and put the lid on loosely. Place these jars in hot water reaching to the brim and boil for three hours, adding enough hot water to that in the jars to keep them full. Close lids tightly and set jars away to cool.

CABBAGE.

In some sections of the United States cabbage is extensively grown as a farm crop.

According to the last census New York State grew more than 25,000 acres of cabbage, Pennsylvania nearly 11,000, while Virginia grew about 10,000 acres. The three States mentioned outrank all others by at least 2,000 acres. No adequate estimate can be placed on the value of this crop, as it fluctuates very decidedly, both in acreage and in price, from year to year.

While cabbage will thrive upon a wide diversity of soil types, the soil which is usually selected for truck-farm operations is what gardeners call a "quick soil," one composed of sand with a small percentage of clay.

Cabbages from the trucking region are chiefly marketed in carload lots. Long-distance shipments of truck crops of all classes are most economically handled in this manner; in fact, it would be impossible to carry on the trucking enterprises of the country on their present scale unless it were possible to ship such commodities in carload lots.

The truck-crop cabbage business is at present chiefly conducted on a commission basis, although in a few sections crops are grown under contract. Owing to the perishable nature of early cabbage, it is probable that the crop will always be extensively handled on commission.

An item that should be considered by the grower of early cabbage for the northern markets is the quantity of cabbage placed in storage from the northern fields. A short crop of late cabbage at the North means good prices for early southern-grown cabbages. Low prices and heavy storage of the northern-grown fall cabbage usually mean low returns for early southern-grown cabbage. The importance to the southern truck farmer of keeping close tab on the hold-over crop of the North in order that he may not be the loser is obvious.

Cabbage is frequently made the basis of such a combination. Sometimes lettuce and radishes are grown between the rows of cabbage. Sometimes cabbage is planted between the rows of early beets, while late potatoes are frequently planted between the rows of early cabbage. The various combinations of such crops are too numerous to be catalogued.

CUCUMBERS.

The soil best adapted to the cultivation of cucumbers in the open is a light sandy loam, one which responds quickly to the temperature and fertilizer.

As soon as the cucumbers reach marketable size—i. e., from 6 to 10 inches in length—they are picked from two to three times a week and sorted and graded, so as to place all those which are perfect in shape and uniform in size in one grade, which are usually packed in baskets of the Delaware type holding a bushel or a half barrel.

The yield of cucumbers to the acre depends on the season, the variety grown, and the skill of the planter. A normal crop, however, may be placed at about 200 half-barrel baskets per acre, the price varying from 50 cents to as much as $2 per basket.

After the fruit has been harvested and the marketing season has been closed, the vines should be destroyed by gathering and burning or plowing them under, so as not to harbor or breed disease.

The cultivation of cucumbers to supply the demands of the pickle trade has assumed important commercial proportions in certain sections of the United States. As a rule, this industry is not of long duration in any locality. The salting stations, as they are called, which are the gathering points used by the pickle factories, are in the main of inexpensive construction, and those parts which are most durable can be moved as necessity requires. The history of the pickle industry in any particular locality does not cover a period of more than 6 to 10 years.

In general the price paid for cucumbers is remunerative, and the industry, if it could be carried on on an extensive scale, would be a very profitable one. The fact that only a small acreage of cucumbers can be handled by any single grower renders it a less attractive and less profitable crop in the aggregate than it would be if large acreages could be handled. The reason that only a small area can be grown by individual farmers is the great amount of hand labor required to gather the fruits. During the bearing season it is necessary to go over the patch at least three times each week in order to secure the fruits within the range of the sizes which will be accepted by the pickle factories—that is, from 2½ to 4 or 5 inches in length. Few farmers have sufficient assistance to allow them to grow more than 1 or 2 acres. If the pickling of the cucumbers were work which could be carried on by children, it would not present so many difficulties. The fruits are heavy, and the fact that it requires experience to find them under the leaves makes it men's labor rather than that of children.

One of the best paying, easiest managed, requiring less outlay, is the strawberry crop. Always a market for them.

There is a farmer in the southern portion of Lincoln County making a good living raising and selling strawberries. He is buying all the land that joins him, wearing a smile, and it is wrong to give his scheme away.

If you could run upon something equally as profitable, let him alone and try raising beans or onions, or both. Do not be afraid of the smell; it always has worn off. There is always a demand for both vegetables. Armies and navies have subsisted on beans; hence the name "navy bean." Remember there are now 20,000,000 men under arms. Every cornstalk should make a bean pole this year. It will make you some good pin money.

FIELD BEANS.

The census for 1900 gives the area of the bean crop, including both field and garden beans, as 453,867 acres, and the total product is placed at 5,064,844 bushels, an average of 11⅛ bushels per acre. The total amount received by the producers for the crop was $7,634,262, or an average of $1.51 per bushel. In considering this average it must be remembered that the total includes the products of good as well as of poor cultivators and embraces regions in which the crop was a practical failure, as well as those in which it was a success. For those States which make bean growing an important industry the average yield to the acre is somewhat higher than is recorded in this general average.

GARDEN BEANS—KIDNEY, LIMA, STRING, AND SNAP.

Under favorable circumstances the best varieties of beans yield very large quantities of pods. It is not unusual to gather 200 bushels of string beans from an acre, the price ranging from $2.50 to 50 cents per half-bushel basket from early in the season until its close for any particular locality.

ONION CULTURE.

The onion holds third place among the truck crops grown in the United States. In 1908 about 14,000,000 bushels, valued at $10,000,000, were produced, practically all of which were consumed in this country. In addition we annually import about 1,400,000 bushels from Spain, Egypt, Bermuda, and the South Sea islands. The onion is one of the more common crops of our home vegetable gardens, and it is well adapted to growing commercially on a small scale, very little capital being required for a beginning. The market for onions includes practically the entire commercial world, and the demand for a good article continues throughout the entire year.

As a general average, onions will cost in the neighborhood of $80 when ready to market. This does not include the crates or bags in which to market them.

An acre of onions will produce on an average 300 bushels, although large tracts are made to yield an average of 500 bushels an acre, at a cost for growing not exceeding $75. The price paid the grower in the field is sometimes as low as 35 cents a bushel, although 45 cents is about the ruling price, taking one year with another. A yield of 300 bushels, at 45 cents a bushel, gives a gross return of $135 an acre, or about $55 with the cost of growing deducted. The more successful onion growers, and they are many, count upon a net profit equal to the cost of growing the crop.

In districts where the ordinary varieties of onions are planted in rows 3 feet apart and cultivated with horse tools the yield is generally about 150 bushels an acre and the cost of production is frequently not more than $10 or $12 an acre.

The quantity of onion seed that can be grown to an acre depends on several conditions. The yield of seed, as a rule, will be about 400 pounds to the acre, although as high as 800 or even 1,000 pounds have been secured.

The price per pound paid for the seed varies according to the quality, variety, and market demands. For first-class, high-grade seed from specially selected bulbs of desirable types the growers frequently receive as much as $1.25 a pound, but for the general crop produced from bulbs not specially selected, which must be sold in competition with the great mass of seed produced by large growers, the price is generally not more than 40 or 50 cents a pound.

SWEET POTATOES.

With the passing of each year the sweet potato is becoming of greater importance as a commercial crop in the United States.

Sweet potatoes thrive on a moderately fertile sandy loam which does not contain an excess of organic matter. They are frequently grown upon almost pure sand, especially where the subsoil is a yellow clay.

To keep sweet potatoes in good condition they must be (1) well matured before digging, (2) carefully handled, (3) well

dried or cured after being put in the house, and (4) kept at a uniform temperature after they are cured.

Wooden houses are preferable, because they are cheaper and easier to keep dry.

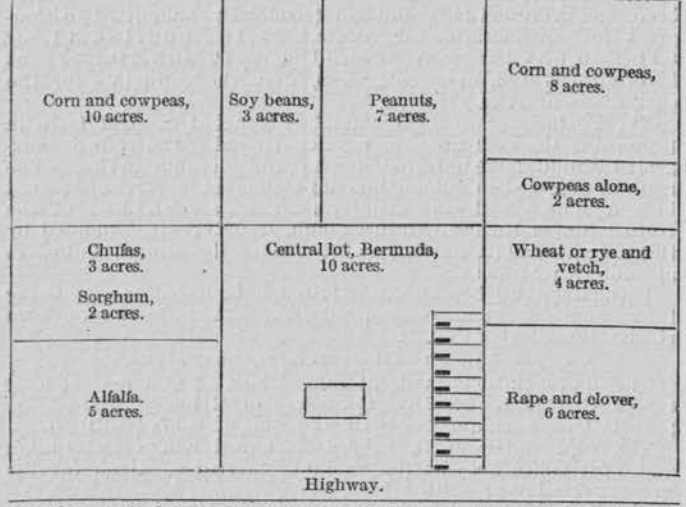
The value of this crop in the United States in 1909 was $34,429,000, 90 per cent of which was produced in the Southern States. The total area devoted to sweet potatoes in the United States increased from 537,000 acres in 1899 to 641,000 in 1909, and the yield increased from 42,500,000 to 52,200,000 bushels. The total value of the crop increased at a much more rapid rate than either the acreage or yield, showing an increase of 78.3 per cent in 10 years.

One reason why southern farmers have not received good prices for their sweet potatoes is that they have not used proper methods of handling and marketing. In many cases the potatoes are badly bruised and cut in digging, are put in bags or rough barrels without grading, and are rushed on the market when there is an oversupply. The secrets of success in getting high prices are (1) to carefully grade, clean, and pack the product, and (2) to put it upon the market when there is a good demand. The greatest demand for sweet potatoes is, as a rule, from the middle of December to the middle of March.

The market demands a medium-sized, uniform type of sweet potato, free from bruises or decayed spots.

The varieties of sweet potatoes that the markets demand should be grown. The potato should be carefully graded, cleaned, and packed in neat and attractive packages.

Sweet potatoes should never be marketed in bags or in bulk.



HOG RAISING.

Cholera hogs should be kept away from running streams of every size, because the stream carries the disease down with the current, thereby spreading the contagion.

Hog raising is one of the most profitable lines of animal husbandry in the South if wisely managed, and one of the most unprofitable if conducted in the ordinary way; that is, if the hogs are raised without care and fed without knowledge or judgment.

The best way to make hog raising profitable in the South is to graze the hogs upon pastures prepared especially for them, supplementing the green food by the addition of a small grain ration. Upon this plan hogs can be raised at an average cost of 1½ to 3 cents a pound, depending mainly upon the management of the sows and pigs and upon an economic plan of fattening.

Prepare a central pasture of Bermuda grass. Adjoining the central pasture should be several small pasture fields, or they may all be in one field, with movable fences for partition as required. The pastures required in addition to the Bermuda are, for winter and spring grazing, wheat and hairy vetch, chufas, early Essex rape, and red clover, where red clover will grow, or crimson clover may be used; for summer and fall grazing, sorghum, cowpeas, soy beans, peanuts, and alfalfa. Adjacent to the central pasture should be a field of corn in which cowpeas are planted at the time of last cultivation. The following plan shows the general field arrangement for a hog-breeding establishment where the hogs are mainly fed on green crops.

Showing central lot with necessary buildings. Convenient outlets to all adjoining lots from central lot.

Details of cropping system for a herd of 10 sows, dropping two litters a year:

The central field containing the buildings, breeding pens, and water should be quite rolling, so as to thoroughly drain at all times; sandy loam land preferred, well set in Bermuda grass, with some trees for shade.

Sow a mixture of burr and white clover on the Bermuda sod in the fall. This will greatly improve it for winter grazing. This lot should contain 10 acres.

On one side of the central field lay off another 10-acre lot, 6 acres of which should be planted in Early Essex rape and red clover; if too far south for red clover, use crimson clover or Japan clover (lespedeza). The remaining 4 acres should be in wheat or rye and hairy vetch.

On another side of the central field lay off a 10-acre lot, 7 acres for Spanish peanuts and 3 acres for soy beans (large yellow).

On a third side should be another 10-acre field, allotting 5 acres to alfalfa, 3 acres to chufas, and 2 acres to sorghum. This will leave two 10-acre fields, one at each corner, for corn and cowpeas. This plan can be enlarged without material modification by including the peanut and soy bean field in the central pasture and adding other fields for forage crops. There should be some movable fences so as to divide the pastures for the most judicious grazing.

Never throw corn for hogs on the ground. It forces them to eat too much dirt.

It is emphatically necessary to avoid all wallowing holes if the herd is to be kept healthy.

Finally, Mr. Speaker, we must look conditions fairly in the face. The war in Europe is likely to continue for another year, perhaps for three, and if it were to stop within 12 months the belligerents will have to be fed at least for two years by the United States. These people can not eat cotton, and they will need only a limited supply of it. The South can produce foodstuffs as cheaply and in as great abundance as any section of the United States, and if she will hold to her present resolution this she will do.

Thanks to the Democratic administration and to the wisdom of that superb man who is at the head of the Nation, we have kept out of war with our neighbor, Mexico, so that there is no impediment in the way of this country reaping the full benefits from European belligerency.

Our southern farmers are intelligent men. They do not need my advice; but if I can bring to the attention of some who might not otherwise see it the well-digested information furnished by the Department of Agriculture, I will feel that my effort has not been in vain.

A great opportunity is immediately before our people, if we will proceed intelligently. The next 10 years should show greater agricultural prosperity, not only in the South but throughout this broad land, than has ever been witnessed, and I for one believe that southern farmers will avail themselves of it.

The Finances of the Federal Government Must Be Readjusted—Direct Representatives of the People Can and Must Curtail Federal Expenditures.

SPEECH

OF

HON. JOHN J. FITZGERALD,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915,

On the subject of appropriations.

Mr. FITZGERALD. Mr. Speaker, the finances of the Federal Government must be readjusted. No more important problem will confront the Congress when it reassembles. The paramount consideration should be to establish our finances upon a permanently sound basis. Makeshift legislation will not be helpful. Temporary expedients will only add to the difficulties and complicate the problems that must be faced. With the organization of the Federal reserve system many uncertainties of our financial system have been removed and the Treasury has been relieved of certain recurring embarrassments. Revenues and expenditures should now be carefully calculated, a definite fiscal policy established, and ample provision made for present and future necessities.

THE NATION'S WORKING CAPITAL.

The working capital, or the available cash, for the transaction of the public business is the money in the "general fund" of the Treasury. When that fund is exhausted or is so depleted that the ordinary daily obligations of the Government can not be promptly met, the fund must be replenished. If revenues are insufficient to permit a sufficient working balance to be maintained, the fund must be supplemented either by reimbursement from the sale of Panama Canal bonds or by the proceeds of 3 per cent certificates of indebtedness authorized for one year by section 40 of the Payne-Aldrich Act, approved August 5, 1909 (Stat. L., vol. 36, p. 117).

The Secretary of the Treasury issues daily a statement of the condition of the United States Treasury. It appears that the net balance in the "general fund" on July 2, 1914, was **$139,652,960.51**; on December 2, 1914, **$74,858,305.46**; on January 2, 1915, **$64,002,737.68**; on February 2, 1915, **$55,522,509.56**; on March 2, 1915, **$42,759,689.10.**

On December 2, 1914, the excess of ordinary disbursements over ordinary receipts was **$55,740,410.52**; on January 2, 1915, **$65,358,773.62**; on February 2, 1915, **$72,353,349.86**; and on March 2, 1915, **$83,229,541.60.**

On March 2, 1915, however, the expenditures during the present fiscal year on account of the Panama Canal were **$21,096,139.11**, so that the expenditures of the Government exceeded its revenues during the current fiscal year to March 2 by **$103,431,443.71.**

EXCESS OF EXPENSES OVER REVENUES.

Should the excess of ordinary disbursements over ordinary receipts continue at the rate of only **$5,000,000** a month for the remaining four months of the present fiscal year, exclusive of the Panama Canal expenditures, the deficit will be **$103,229,541.60**, and including such expenditures, about **$133,000,000.** These figures do not include any expenditures from the "general fund" of the Treasury on account of the Postal Service. Should the postal revenues be insufficient to meet the authorized obligations of the Postal Service, the deficit will be increased to the extent that the postal receipts must be supplemented from the other revenues of the Government.

The failure of the Post Office appropriation bill will probably cause deficiencies in some services of the Post Office Department which are required by law to be performed. The estimates of appropriations for any such deficiencies will be submitted to Congress at the first session of the Sixty-fourth Congress, which meets in December of this year. Any amounts then appropriated will be available immediately and will be a charge upon the revenues for the fiscal year 1916. While it is true that the deficiencies carried in deficiency acts at this session will be a charge upon the revenues of this fiscal year (1915), the failure of the Post Office bill and the appropriation, in a joint resolution, of **$313,364,667** instead of **$325,511,794**, which the bill would have carried if it had been enacted, presents a very unusual condition that must be taken into account when reckoning the charges to be made upon the revenues of the ensuing fiscal year (1916).

In the month of June, however, the bulk of the income tax from individuals and corporations is received.

SUCCESS OF UNDERWOOD TARIFF.

When the Underwood Act was prepared its authors estimated that the receipts from the income-tax provisions would reach annually **$95,000,000.** The receipts for the fiscal year 1914 were **$71,381,275.** The difference between the estimated and the actual receipts has been attributed to the fact that incomes prior to March, 1914, were not subject to the tax, and thus a very considerable sum that otherwise would have been realized from dividends payable in January was not obtained.

The estimated receipts from the income-tax law for the current fiscal year have been placed at **$80,000,000.** If the expectations of the Treasury officials are realized, the great bulk of that sum will be paid during the present fiscal year to offset the deficit.

The Underwood Tariff Act is in no way responsible for the Treasury deficit.

It was estimated that for the fiscal year ending June 30, 1914, that the customs receipts would be **$270,000,000**, and the income-tax receipts **$95,000,000**; the total estimated revenues under the act, **$365,000,000.**

The actual receipts were: From customs, **$292,320,014.51**; from the income-tax provisions, **$71,381,275**; the total, **$363,701,289.51**, a difference between the estimated and actual receipts of only **$1,298,710.49.**

A most casual examination of the Treasury Department statistics discloses that prior to the outbreak of the present almost universal war the Underwood Tariff Act was proving as effective a revenue producer as had been anticipated. The effect of the war has been world-wide. Importations to this country from the European nations have been strikingly affected. As the war continues importations will rapidly diminish and customs receipts will necessarily be less. Apart from the situation of the over-sea carrying trade, it must be that, with the continued drain upon the great producing and exporting nations of Europe for the necessities of the war, their productive activities will be curtailed or diverted to products required at home and not available for export.

WAR TAXES.

To meet the extraordinary situation resulting from the greatly demoralized international trade the Congress enacted the emergency revenue act in October, 1914. It is estimated that during the present fiscal year that law will yield **$54,000,000**, and during the first half of the fiscal year 1916 (July 1, 1915, to December 31, 1915) **$44,000,000.**

The law has been in operation since October 23, 1914, and the figures heretofore given include the revenues thus far obtained under it.

The act expires on December 31, 1915, and thus it is not effective for the last half of the fiscal year 1916; while on May 1, 1916, sugar will be admitted free of duty. Importations of sugar will undoubtedly be limited to the actual requirements for some time prior to May 1, 1916, so that in the last half of the fiscal year 1916, which is the next fiscal year commencing July 1, 1915, the emergency tax act will no longer be in force, and there must be considerable diminution of revenue from sugar importations in addition to the falling off in customs receipts as a result of the present war.

EXCESSIVE ESTIMATES OF APPROPRIATIONS.

For the current fiscal year (1915) the total estimates submitted to Congress aggregated **$1,152,681,777.02.** The appropriations for the current fiscal year, based upon those estimates, amounted to **$1,116,118,138.55.**

The total estimates submitted to Congress, in the regular Book of Estimates at the beginning of, and supplemental estimates during, the session, amounted to **$1,135,187,984.31.**

On the face of the figures the estimates were **$17,493,792.71** less than for the current fiscal year.

The estimates for the Post Office Department for 1915 were **$306,953,117**; for 1916, **$297,355,164**, ostensibly **$9,597,953** less than for the current year.

The postal estimates for 1916, however, were based upon the assumption that certain legislation recommended by the Post Office Department would be enacted by Congress. Had the recommendations been adopted, very substantial economies would undoubtedly have been effected. Among other requests was one that the Rural Free Delivery Service be cared for by contracts made after competition with the lowest bidder. The Congress was overwhelmingly opposed to the change of policy involved. The Post Office bill was prepared upon the requirements of the Postal Service under the existing laws, and the sums required were informally furnished by the Post Office Department. The difference between the formal legal estimates and the sums actually required and informally stated is **$27,774,450.** If this sum be added to the formal estimates submitted in compliance with law, the estimates that should have been, and were actually, but not technically, submitted to Congress for consideration aggregated **$1,162,962,434.31**, or **$10,280,657.29** more, instead of **$17,493,792.71**, as heretofore stated, apparently less, than the estimates for the current fiscal year.

The Postmaster General undoubtedly acted in good faith in presenting the estimates for his department. The reforms suggested would have effected a very considerable saving. The method followed in submitting the estimates, however, was not in compliance with the requirements of section 3662 of the United States Revised Statutes, and, if universally adopted by the executive departments, would render the annual estimates absolutely worthless.

Estimates must be and are required to be based upon existing laws, and not upon recommendations which have not been ripened into legislation.

APPROPRIATIONS THIS SESSION.

The appropriations made at this session of Congress amount to **$1,115,121,408.68.** Contracts involving additional appropriations were authorized in the sum of **$37,400,000.**

The sum stated of the appropriations includes the Indian and Post Office acts at the amounts carried by them for the current fiscal year—1915.

The Post Office and Indian appropriation bills failed of enactment. During the closing hours of the session joint resolutions were adopted by both Houses of Congress and approved by the President to continue during the fiscal year 1916 the appropria-

tions made for those services for the fiscal year 1915. The resolutions expressly limit the expenditures thereunder to the sums carried in the respective acts for the fiscal year 1915.

FAILURE OF INDIAN AND POST OFFICE BILLS.

While the Indian and Post Office appropriation bills failed of enactment, yet all differences had been adjusted in conference. Failure of the two Houses to adopt the conference reports prevented the presentation of the bills to the President for approval. As agreed to by the managers on the part of the two Houses the Indian bill would have appropriated **$443,241.08** and the Post Office bill **$12,147,127**, in all **$12,590,368.08**, more than the sums made available for the respective services by the resolutions to continue the current appropriations. Had the conference reports on these two appropriation bills been adopted, the total appropriations of the session would have been **$1,127,711,776.76**, an increase over the appropriations for the current year of **$11,593,638.21**, a reduction under the strictly technical estimates of **$7,476,207.55**, and a reduction under the estimates properly considered of **$35,250,657.55**.

If the comparison be made between the estimates submitted in strict compliance with the law, the appropriations actually made are **$20,066,575.63** less than the estimates; if comparison be made with the estimates formally and informally submitted, but which should have been submitted under the law, the appropriations actually made are **$47,841,025.63** less than the estimates.

COMPARISON OF APPROPRIATIONS.

The increases in the appropriation acts for the ensuing fiscal year over those for the current year 1915 are:

The Agricultural act, **$3,105,950**, as well as **$2,265,769** over the estimates formally submitted.

The Army act, **$954,983**, and a reduction under the estimates of **$3,150,316.12**.

The fortifications act, **$432,516.90**, and an increase of **$196,575.58** over the regular estimates. The latter, however, had been supplemented by a further estimate of **$330,000** formally submitted to Congress, so that the act is **$133,424.42** less than the estimates.

The Military Academy act, **$71,913.83**, and a reduction of **$672,524.50** under the estimates.

The naval act, **$4,808,148.27**, an increase of **$4,280,045** over the estimates submitted.

The river and harbor act, **$10,000,000**, and a reduction under the estimates of **$19,033,018**. The bill as finally enacted appropriates **$30,000,000**, including **$5,000,000** reappropriated from unexpended balances to the credit of projects provided for in past years and diverted to other and entirely different purposes. If the reappropriation were not made, the possible expenditures under this act would have been limited to a sum not exceeding **$25,000,000**, or **$5,000,000** less than the amount actually appropriated.

Under permanent appropriations there appears, after deducting and transferring to the total of the sundry civil act for 1915, for purposes of comparison, **$16,309,500**, now estimated, that will be expended in 1915 for the Reclamation Service, an apparent estimated increase of **$6,680,300**, including **$1,200,000** out of contributions paid into the Treasury for river and harbor improvements, **$600,000** for cooperative agricultural extension work, and **$200,000** for refunding taxes illegally collected.

The appropriation acts that show reductions under those for the previous year are:

The District of Columbia act **$312,955.04** and a reduction under the estimates of **$3,822,718.52**.

The Diplomatic and Consular act **$248,576.65** and a reduction under the estimates of **$545,902.65**.

The pension act **$5,050,000** and a reduction, at the suggestion of the Secretary of the Interior, after the regular estimates were submitted to Congress, of **$2,000,000**.

The sundry civil act **$3,523,986.60** and a reduction under the estimates of **$11,098,922.10**.

The deficiency acts carry **$12,316,343.90**, as against **$20,296,576.61** appropriated to meet deficiencies at the previous session, a reduction of **$7,980,232.71** in favor of the session just closed and a reduction of **$2,683,656.10** under the estimates considered by the committee.

For miscellaneous purposes covered by special acts the whole sum will not exceed **$2,500,000**, or a reduction under amounts similarly appropriated at the previous session of **$9,209,361.29**.

LEGISLATION ON APPROPRIATION BILLS AN EVIL.

The failure of the Indian and Post Office appropriation bills was due to legislative provisions in the bills to which it was impossible to obtain the approval of the two Houses. The evil of the practice of such method of legislation was further emphasized by the inclusion in the Agricultural bill of legislation to establish a system of rural credits, which threatened to prevent the passage of that appropriation bill.

Under the rules of the House of Representatives legislation can not be incorporated in an appropriation bill unless it "shall retrench expenditures by the reduction of the number and salary of the officers of the United States, by the reduction of the compensation of any person paid out of the Treasury of the United States, or by the reduction of amounts of money covered by the bill."

As early as 1835 an extended discussion was had in the House regarding the delays in the enactment of the appropriation bills. Mr. John Quincy Adams urged the desirability of stripping the bills of everything other than appropriations. On January 5, 1836, the Committee on Rules reported a rule to effect such a result. The rule was not adopted at the time, but the following year the failure of the fortifications bill because of extraneous legislative provisions resulted in the adoption of the rule. It was slightly modified in 1838, and remained in force for 38 years, when Mr. William S. Holman, of Indiana, had it modified so as to permit legislative provisions which would permit the reduction of expenditures.

If such restriction upon the contents of appropriation bills was found essential to the proper conduct of the public business as early as 1838, it must be apparent that such limitations are now imperative. The cost of the Federal Government has increased to a sum never contemplated in those early days, and the appropriation bills demand the utmost care in their preparation. When general legislation is incorporated in such bills it is usually poorly prepared, ill digested, and never properly considered by either House of Congress.

The failure of the two appropriation bills at this session must inevitably result in embarrassment in the administration of the two services affected, with resulting inconvenience to the public.

INTEREST AROUSED IN PUBLIC EXPENSES.

Public interest is keenly aroused to governmental expenditures. The chief topic in many State capitals and in most of the large municipalities is the constantly increasing cost of government with corresponding increase in burdens of taxation. The knowledge that the cost of government increases out of all proportion to the increase of population is attracting universal attention. The taxpayers are giving much closer attention to the tax eaters, who are not the employees of the Government, but are those employees or policy-framing officials who expend with a most lavish hand the moneys obtained by taxation. The question is more frequently asked whether proposed expenditures are properly within the true functions of the Government, and closer attention is given as to whether certain expenditures are not urged or made chiefly to relieve communities or individuals of burdens which belong to them.

HOUSE OF REPRESENTATIVES PEOPLE'S ONLY SAFEGUARD.

Under our system of government the chief hope of the people in the prevention of extravagant and unjustifiable expenditures is in the House of Representatives. The executive department of the Government may cooperate, but as the success of an administration is frequently believed to be measured by the expenditures to carry out predetermined policies, the volume of expenditure must necessarily be of secondary importance. The temptation is ever present to mollify some class or to attach another, or to attract those indifferent or in opposition by some policy not within the true functions of the Government, and which involves expenditures that add greatly to the burdens of the people.

The direct representatives of the people, clothed, under the Constitution, with control of the public purse, if properly organized, can and must curtail Federal expenditures.

This contention is substantiated by some recent events. Mr. Taft, within the past two months, has written several interesting articles relative to public expenditures. He has stated that during his administration he gave considerable attention to the important question of effecting economies in the public service. To accomplish the result desired, appropriations were not requested for certain important and, from his standpoint, essential matters. Failure to request the moneys necessary, he admitted, was not an actual saving, but merely deferred till some future time projects or extensions of services which he believed proper and desirable.

EXTRAVAGANCE OF TAFT ADMINISTRATION.

The appropriations for the fiscal years 1913 and 1914 were made while Mr. Taft was President and the House of Representatives was in control of the Democrats.

The estimates submitted by his administration for the conduct of the public service were:

For 1913	$1,040,648,026.55
For 1914	1,150,206,963.14
Total	2,190,854,989.69

The appropriations for those fiscal years, based upon the estimates of the administration, were:

For 1913	$1,019,412,710.91
For 1914	1,098,678,788.40
Total	2,118,091,499.31

In other words, an administration which boasted of its efforts to effect economies, despite the fact that appropriations were not requested for many things deemed desirable, the sum requested by the administration for the public service for two years was **$72,763,490.38** more than the Congress, in the exercise of its judgment, appropriated.

RESPONSIBILITY FOR APPROPRIATIONS SHOULD BE CENTRALIZED.

To make the work of the House of Representatives really effective there must be a radical change in its methods of handling appropriations. Many times the present system has been condemned as illogical and unscientific. Real reform is impossible with eight committees of the House framing appropriation bills, while seven of the committees have legislative jurisdiction of the matters for which they recommend appropriations. Further consideration deepens my convictions that one committee should be given control of all appropriations and that no legislation should be contained in the appropriation bills. I discussed this matter comprehensively on June 24, 1913, and the views then expressed have been more firmly fixed as the result of further observation and study.

INTERESTING CONTRASTS.

The following figures supplement some furnished on other occasions and may prove of interest and of value:

The total appropriations made in the seven annual appropriation acts (excluding the river and harbor) providing in part for the support of the Government, and prepared by the Committees on Agriculture, Military Affairs, Foreign Affairs, Naval Affairs, Indian Affairs, and Post Office and Post Roads, respectively, for the four-year period 1913 to 1916, amounted to **$2,265,723,864.71**; for the corresponding four-year period 1909 to 1912 they amounted to **$1,979,452,398.68**, an increase for the former period over the latter of **$286,271,466**, or more than 12½ per cent.

The total estimates regularly submitted to Congress during the period 1913 to 1916, and on which the foregoing acts for those years are based, amounted to **$2,254,208,423.08**, or **$11,515,441.63** *less* than was actually appropriated by Congress.

The appropriations made in the four regular annual appropriation acts (excluding the pension act) and in all deficiency acts providing for the support of the Government and prepared by the Committee on Appropriations for the four-year period 1913 to 1916 amounted to **$718,539,187.25**; for the corresponding four-year period 1909 to 1912 they amounted to **$799,290,112.75**, a reduction actually made during the later period (1913 to 1916) under the earlier period (1909 to 1912) of **$80,750,925.50**, or more than 10 per cent.

The estimates regularly submitted to Congress during the first period (1913 to 1916), on which all of those acts were based, amounted to **$819,489,223.26**, or **$100,950,036.01** *more* than Congress appropriated in all of the bills controlled by the Committee on Appropriations.

RIVER AND HARBOR AND PENSION APPROPRIATIONS EXCEPTIONAL.

For reasons manifestly fair, the river and harbor acts have been omitted from the appropriation acts in the foregoing comparison of supply measures prepared by committees solely concerned with appropriations for some one branch of the public service over which it also exercised legislative control. Such committees that are not required, and do not, give heed to the sum total of the national expenditures in the performance of their labors, and no one expects them to do so.

The river and harbor acts make provision for no function of the Government, and if another one were never enacted the country would survive and the Government would endure.

From the appropriation acts controlled by the Committee on Appropriations, a committee without power to initiate legislation but whose duty it is to provide in some degree necessary funds for substantially every activity of the Government, there is omitted the pension appropriation act, which simply makes proper response to the generous impulse of the Nation, as expressed in legislation duly enacted by Congress, and is not to maintain some service of the Government.

The sums appropriated for pensions must, and always do, meet the full measure provided by law, and there is no discretion to be exercised in the recommendation of the sum required.

INADEQUATE ESTIMATES OR EXCESSIVE APPROPRIATIONS.

The estimates submitted to Congress for the Agricultural Department for the four fiscal years, 1913 to 1916, amounted to **$75,288,027.** The appropriations actually made by Congress for the department for those years amount to **$77,476,055**, or an excess of **$2,188,028** over the demands actually made by the department.

The Post Office Department asked of Congress, in its estimates submitted pursuant to law for the fiscal years 1913 to 1916, **$1,147,038,252.** The appropriations for that period actually amount to **$1,183,535,204**, an excess of **$36,496,952.**

The Committee on Agriculture and the Committee on Post Office and Post Roads have jurisdiction of legislative matters affecting the Agricultural and Post Office Departments.

It is inevitable that those who administer a service and those who formulate the legislation that determines the activity of a service will be keen to be overgenerous rather than critically scrutinizing in providing means to conduct the service. If retrenchment is imperative, they believe it should be elsewhere, and nothing is done to curtail the service with which they are intimately identified.

It is different when many services are handled and the total expenditures must be considered.

REDUCTION IN SUNDRY CIVIL EXPENSES.

The sundry civil appropriation bill is one of the bills prepared by the Committee on Appropriations. For the fiscal years 1913, 1914, 1915, and 1916 the estimates submitted for the consideration of the committee aggregated **$553,879,863.79.** The bills as reported to the House carried **$456,473,806.63**, or **$97,406,057.16** less than the estimates submitted for the consideration of the committee. In other words, during the past four years the Committee on Appropriations have made recommendations in accord with the estimates submitted for consideration in connection with the sundry civil bill of **$97,406,057.16** less than was recommended by the executive.

The following table gives the details for each year:

Sundry civil appropriation bills for the fiscal years 1913, 1914, 1915, and 1916.

[Comparison of the amounts of each as reported to the House, with the total estimates and with the law for the preceding fiscal year.]

Years.	Estimates.	Preceding law.	Reported to House.	Reduction under estimates.	Reduction under law.
1913.....	$151,991,106.87	$142,638,044.14	$109,577,414.40	$42,413,692.47	$33,060,629.74
1914.....	138,790,634.98	118,126,982.96	113,271,614.66	25,519,020.32	4,855,368.30
1915.....	125,481,649.05	124,689,948.87	107,696,759.28	17,784,889.77	16,993,189.59
1916.....	137,616,472.89	130,728,037.39	125,928,018.29	11,688,454.60	4,800,019.10
Total..	553,879,863.79	516,183,013.36	456,473,806.63	97,406,057.16	59,709,206.73

The bills as finally enacted into law, after consideration in the Senate and the final adjustment of differences, were **$59,709,000** less than the estimates submitted to Congress. So that if the appropriations had been based upon the recommendations of the executive departments, as expressed in their estimates in the sundry civil appropriation bill, the bills would have carried, on an average, **$15,000,000** additional during each of the four years to which I have referred.

READJUSTMENT OF FEDERAL FINANCES.

In the readjustment of the finances of the Federal Government heed should be given to expenditures. The country should be awakened to the fact that burdens are not evaded by shifting them from State or municipal treasuries to the Federal Treasury, and that the Government should not assume every service, however desirable, at the behest of enthusiastic persons merely because it is difficult to obtain from private sources the means to accomplish good.

The activities of the Government should be restrained to fields which are distinctively governmental. If such a policy is not to be advocated and adopted, it is idle to attempt to prevent a continuing disproportionate increase in the cost of government. The resulting burdens will be such as will arouse the most bitter, unfortunate, and most disastrous controversies to which a people are subject.

The questions involved demand the attention of able and patriotic men, regardless of party, in order that the welfare of the country be advanced and the happiness and prosperity of the people be secured.

The following table shows statistically and chronologically the history of the appropriation bills for the session, beginning with the estimates as submitted and concluding with the approved acts, with a column showing the laws of the previous session:

Chronological history of appropriation bills, third session Sixty-third Congress, estimates and appropriations for fiscal year 1915–16, and appropriations for fiscal year 1914–15.

[Prepared by the clerks to the Committees on Appropriations of the Senate and House.]

Title.	Estimates, 1916.	Reported to the House.		Passed the House.		Reported to the Senate.		Passed the Senate.		Law, 1915–16.		Law, 1914–15.

Amount of estimated revenues for fiscal year 1916	$735,000,000.00
Amount of estimated postal revenues for fiscal year 1916	320,470,000.00
Total of estimated revenues for fiscal year 1916	1,055,470,000.00

[1] One-half of the amounts for the District of Columbia payable by the United States, except amounts for the water department (estimated for 1916 at $138,380) which are payable from the revenues of the water department.

[2] Includes $4,635,000 out of proceeds of sale of battleships Idaho and Mississippi.

[3] Includes all expenses of the Postal Service payable from postal revenues and out of the Treasury.

[4] In addition to this amount the sum of $4,344,800 to meet contracts authorized by law for river and harbor improvements is included in the sundry civil estimates for 1916.

[5] In addition to this amount the sum of $3,982,000 is appropriated in the sundry civil act to carry out contracts authorized by law for river and harbor improvements for 1916.

[6] In addition to this amount the sum of $6,988,500 was appropriated in the sundry civil act to carry out contracts authorized by law for river and harbor improvements for 1915.

[7] Includes $4,344,800 to carry out contracts authorized by law for river and harbor improvements, and $18,931,865.58 for the Panama Canal for 1916; for continuing construction of public buildings that have been authorized.

[8] Includes $3,982,000 to carry out contracts authorized by law for river and harbor improvements; $19,579,048.30 for the Panama Canal; and $13,530.000 for the Reclamation Service previously provided for under permanent appropriations.

[9] Includes $6,988,500 to carry out contracts authorized by law for river and harbor improvements, and $21,842,525 for the Panama Canal.

[10] This is the sum of supplemental estimates for the sundry civil bill and includes $12,208,420 for construction of authorized public buildings; $4,876,000 for Reclamation Service submitted in regular annual estimates, but not included in total therefor; $2,175,000 for additional reclamation work; $3,000,000 for valuation of common carriers; and $2,000,000 for railroads in Alaska.

[11] Includes $16,309,500, transferred from permanent appropriations now estimated as amount that will be expended under latter for Reclamation Service during 1915; $1,000,000 appropriated in special act for railroads in Alaska; and $3,067,010 for 1915 for objects in deficiency acts, all of which sums cover branches of the public service provided for in the sundry civil act for 1916.

[12] Approximated.

[13] Exclusive of $3,067,010 transferred to additional sum under sundry civil act for 1915.

[14] Includes $5,100,000 for War Risk Insurance Bureau, $2,750,000 for relief of American citizens in Europe, $1,000,000 for expenses of representation of foreign Governments incident to European war, and is exclusive of $1,000,000 for railroads in Alaska, transferred to additional sum under sundry civil act for 1915.

[15] This is the amount submitted by the Secretary of the Treasury in the annual estimates for the fiscal year 1916, the exact amount appropriated not being ascertainable until two years after the close of the fiscal year. This amount includes estimated amount of $60,723,000 to meet sinking-fund obligations for 1916.

[16] Exclusive of $16,309,500 transferred to additional sum under sundry civil act for 1915.

[17] In addition to this amount contracts are authorized to be entered into, subject to future appropriations by Congress as follows: By the District of Columbia act, $100,000; by the fortification act, $300,000; by the naval act, $37,000,000; in all, $37,400,000.

[18] In addition to this amount contracts are authorized to be entered into, subject to future appropriations by Congress, as follows: By the fortification act, $600,000; by the naval act, $38,350,000; by the sundry civil act, $819,000; by various acts to increase the limit of cost of certain public buildings, $573,000; in all, $40,333,000.

Democratic Appropriations Empty Treasury—Government Faces Bankruptcy—President's New Doctrine in Public Expenditures—Failure of Post Office Bill Emphasizes Democratic Incompetency—Much Flaunted "Economy" Now a Tradition.

SPEECH

OF

HON. FREDERICK H. GILLETT,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915,

On the subject of appropriations.

Mr. GILLETT. Mr. Speaker, this Congress was pledged to economy by the Democratic platform and by 16 years of unceasing criticism of Republican extravagance. Yet the recommendation of appropriations made by the administration at the last session and the appropriations actually made by the Congress in response to those recommendations were the largest ever known, exceeding the largest of those which they had so unsparingly condemned by about **$100,000,000.** But during the last session they could at least plead inexperience. It was their first taste of power and responsibility for many years. They could claim that their new tariff law and their new income-tax law had not yet been tested and there was a chance that they might produce ample revenue, even for those enormous and inordinate appropriations.

At this session they had no such excuse. Their revenue laws had been tested. They had experience by which they could forecast the income of next year. And in the light of this knowledge, in the midst of a great European war disturbing all commercial and financial activities, with every indication that expenditure must be radically curtailed if it was not to exceed the income, despite all this the administration requested larger appropriations than had ever been requested of any other Congress, and Congress has granted larger appropriations than had ever been granted until last year. Apparently both the administration, which first suggested the expenditures, and the Congress, which finally authorized them, were reckless of how the money was to be provided—they thought only of how the money could be spent. Their appetites must be gratified, regardless of cost. And so I believe by their self-indulgence they have passed the way for an enormous deficit next year, which must be met either by borrowing money or by new and vexatious taxes.

ESTIMATES MISLEADING AND ENORMOUS.

On December 7 the Secretary of the Treasury, as required by law, sent to Congress the estimate of the appropriations which the administration deemed necessary for the fiscal year commencing the 1st of next July. The regular estimates submitted on that day called for **$1,090,775,134.38,** and on the same day came supplemental estimates for **$4,000,000** more. But that estimate was misleading and unfair, for it diminished the expense of the Post Office Department by **$27,774,450,** on the theory that Congress would make a suggested change in the law—a theory that was only based on a dreamy hope and not on a reasonable expectation, and that was proved almost immediately to be unjustified. The report of the Post Office Committee, made on December 14, only a week later, stated that the Post Office Department had already submitted revised estimates **$27,774,450** larger than the original estimates. Restorng that **$27,774,450,** the estimates of expenditure submitted by the Secretary of the Treasury on December 7 amounted to **$1,122,549,584.38.** Last year the original estimates submitted were **$1,108,681,777.02,** and that was larger than had ever been submitted by any Republican administration. And yet in this year of depression and uncertainty and shrinking income this party of economy submits estimates **$13,867,807.36** larger than the record figures of last year.

This huge estimate was not because of sudden and extraordinary need in some one department of the Government. It was distributed over all branches. The estimate for every single appropriation bill, except the Indian bill and the pension bill, was larger than the bill of the preceding year. The administration, in sending to Congress its requests for appropriations, assumed that the country was in a condition to make larger expenditures than ever before for all branches of the Government, except for its wards, the Indians, and the old soldiers. They were the sole victims of Democratic economy.

TREASURY BALANCE SHRINKING RAPIDLY.

What was the condition of the country and its revenues on December 7 when these huge estimates were submitted? What was there to justify housekeeping on this magnificent scale? The cash in the Treasury general fund, using round figures, had shrunk from **$141,000,000** on the 1st of July, the beginning of the fiscal year, to **$75,000,000** on December 7. That means that during the five preceding months the expenses of the Government had exceeded its income by **$66,000,000.** We had been running behind at the rate of **$13,000,000** a month. How much of the insufficiency of income was due to the Democratic revenue laws and how much to the European war I will not here discuss, for both conditions seemed likely to endure through the next fiscal year, and in forecasting probable revenue it would be only prudent to assume their continuance. Indeed, indications point to an even greater falling off of revenues from customs, from the Post Office, and from the income tax. Under these circumstances, in submitting recommendations for the next fiscal year ordinary prudence would have dictated that some program should be formulated to either reduce expenditures or increase the revenues. A monthly deficit of **$13,000,000** leads straight to bankruptcy. The income tax accruing in June would only replenish the Treasury for a short time and could not long support such a drain. The Secretary of the Treasury was not unconscious of the danger. In his annual report he said:

> As long as the expenditures of the Government exceed its income there is always danger. To maintain such a condition is both unsound and imprudent. The corollary of a weak Treasury is impaired confidence.

APPROPRIATIONS LARGEST EVER MADE.

Yet the administration took no steps to avert or remedy that "unsound and imprudent condition," and recommended expenditures on an enlarged scale. Congress proceeded to frame the appropriation bills in accordance with the Executive recommendations. After a month of work, apparently realizing at last the impending disaster, there was a consultation between representatives of the administration and of Congress. Of the details of that conference I know nothing, but apparently no plan could be agreed upon, and the Secretary of the Treasury announced that the appropriation bills ought not to be substantially cut, and Congress proceeded to pass them. The result has been an aggregate of appropriations of more than **$1,115,000,000,** which is about **$1,000,000** less than the appropriations of last year. In addition, contract obligations have been authorized to the amount of **$37,400,000.**

POST OFFICE AND INDIAN BILLS FAIL.

The appropriations would have been **$11,593,638.21** more than last year except that owing to the Democratic inefficiency, which we have so often had occasion to criticize, the Post Office bill and the Indian bill failed to pass at all. They were so loaded with legislation by the committees framing them that the two Houses could reach no final agreement on them, and so, to take their place, the appropriations of last year had to be continued by resolutions.

Those two bills, as agreed upon in conference, were **$12,590,368.08** larger than last year, so that their failure and the continuance of last year's law made an apparent saving of **$12,500,000** and prevented this year's appropriations surpassing those of last year by more than **$11,000,000.** That saving is only nominal, and the full amount will probably be allowed by deficiency bills next winter, and in the meantime the Postal Service will suffer in many of its activities.

FIFTEEN APPROPRIATION BILLS FAIL TO PASS ON TIME.

Extending the laws of the previous year by resolution is an unscientific and an expensive method of legislation; it is an admission of incompetency, but it is a regular concomitant of Democratic administrations. It is a mark of dilatoriness and incapacity, and its extravagance is aptly testified to in the following extract from the last annual report of the Democratic Secretary of Commerce, Mr. Redfield:

> Finally, money loss arises from failure to make appropriations in time to keep the work of the Government moving. The serious results of these latter losses are probably not appreciated. They undoubtedly amount to more than some of the economies thought to be effected by clipping estimates.

During the 16 years of Republican control the appropriation bills were prepared promptly and were invariably passed before they were needed, and an extension resolution was never resorted to. But in the past four years, when the Democrats have controlled the House of Representatives, where appropriation bills originate, 15 regular appropriation bills have failed to pass before the necessary date, so that 15 times a resolution of extension has been required. Inefficiency is always the cause. But, although the first and obvious deduction from these facts is that the incompetent party should be driven from power, yet a secondary lesson can be drawn that there is a crying necessity for a reform in our system of making appropriations and for some concentration of authority which shall

unite power with responsibility. That would put some curb on inefficiency and extravagance.

PRESIDENT DISREGARDS LAW—HIS NEW DOCTRINE IN PUBLIC EXPENDITURES.

But the estimates submitted by this administration prove that the fault is not primarily with Congress. The Executive has been more reckless and improvident than Congress, and with less excuse. In this session the appropriations have been **$47,841,025.63** less than asked by the administration. In the last session they were **$36,563,638.47** less. If Congress at both sessions had appropriated all that the administration recommended, the huge total of appropriations would be **$84,404,664.10** greater still. So the prevalent opinion that Congress is mainly to blame is incorrect. It is the Executive which is primarily at fault. It ought to be vastly easier for the President and Cabinet, a small executive body exempt from the dangers of logrolling, to survey the whole field, calculate the revenues, and cut the estimates to correspond. But they have been wholly recreant to that duty. With the evidence of falling revenues painly before them they have not hesitated to demand increased expenditures, and instead of obeying the law and guiding Congress to obvious and imperative economies, Congress has been obliged to restrain and prune their reckless estimates. As long as the Executive shows no appreciation of his responsibility in advising how to make the two ends meet, Congress, with its large membership and diversity of interests, can hardly be expected to assume the entire responsibility and practice self-denial. To accomplish wise results there must be a sympathy of purpose and a unity of effort and a recognition of mutual responsibility. That has all been lacking in this Congress.

The estimates submitted to Congress at the beginning of the session in December last, including those submitted by supplemental communications, were palpably far in excess of any estimate of the possible revenues for the year. The President, instead of advising Congress as he was commanded to by the law: "How in his judgment the estimated appropriations could with least injury to the public service be reduced so as to bring the appropriations within the estimated revenues," said in his annual message:

> I assert with the greatest confidence that the people of the United States are not jealous of the amount their Government costs if they are sure that they get what they need and desire for the outlay.

This new doctrine of Democratic economy seems to have been impressed well upon the advisers and subordinates of the President, for in the annual report of the Secretary of Commerce I find the precept reiterated:

> No sane business man would ever judge of economy or extravagance in expenditure merely by the total. He would ask, "Was the expenditure needed?" "Was the money well spent?" And he would not regard with tolerance or consider economical the mere absence of expenditure, especially when it involved him either in larger future outlay or in greater cost of production.

No matter what we spend, so long as we get what we need and desire! An entirely new doctrine in public expenditures and one seized upon by the party in control of the taxing and spending power of our Government to bring it to the verge of, if not actually thrust it into, bankruptcy by the appropriations made at this session. In their mad rush "to get what they need and desire for the outlay" they did not hesitate, in the closing hours of the session, to vote a rider on one of the great appropriation bills providing for a financial scheme of so-called rural credits that proposed to take out of the Federal Treasury **$50,000,000** that was not there, and to take and appropriate, besides, **$240,000,000** of Panama Canal bonds that had been authorized to be used solely for the building of the Panama Canal. Fortunately this rider, voted on by the House, was not concurred in by the Senate.

HOUSE COMMITTEE ON APPROPRIATIONS.

But I do not contend that the Democratic claim to be the party of economy is entirely a fiction. I have no doubt the title was once deserved. My only regret is that it no longer applies. Like many of the virtues and principles claimed by the present Democratic Party, it lives only in tradition. And it is provoking to see it still flaunted as an existing virtue when it is contradicted and belied by their every action. And yet it is no more than fair to admit that there still exists in this House a little band of Democrats, headed by the chairman of the Appropriations Committee, who have made an honest and sturdy fight to revive and uphold the obsolete Democratic traditions. They have had no encouragement from the administration, they have had little support in the House, but I have seen at close range their efforts and their discouragements, and as they have had no reward except their own self-approval, I am glad to give my acknowledgment that their attempts at economy have been earnest, disinterested, public-spirited, and sagacious.

What Bagehot said of the English Parliament has been peculiarly true of this Congress:

> If you want to raise a certain cheer in the House of Commons, make a general panegyric on economy. If you want to invite a sure defeat, propose a particular saving.

FOUR RECKLESS DEMOCRATIC YEARS.

The appropriations of this session have shamefully disregarded the principles of sound business and true economy. With revenues falling and precarious, with business and commercial conditions feverish and uncertain, with a steady monthly deficit and no assured prospect of its relief, and with a cash fund reduced to a point that has generally been deemed unsafe, the administration has recommended and the Congress has authorized expenditures on a larger scale than ever before, and no step has been taken to meet the prospective deficit. I can see in such conduct no sign of judgment or foresight or prudence. It seems to me a reckless gamble, a blind trust that some happy chance will effect a deliverance which no sound reason can anticipate.

That is not the way the finances of a Government should be administered. There ought to be some proportion between income and outgo, and their relations ought not to be ignored and their accommodation left to chance. That seems to have been the only fiscal policy of this session, and it is but another reason why the administration has lost the confidence of the people.

The total appropriations of this first Democratic Congress have been, in round figures, **$2,231,000,000**, which is **$113,000,000** larger than its predecessor and **$177,000,000** larger than the last Republican Congress. Moreover, in the four years before the Democrats secured control of the House the Republican Congresses paid out of the current revenues nearly **$70,000,000** more for the Panama Canal construction than has been paid in the last four years. These figures are so vast that it is difficult to appreciate their significance, but we can estimate it better by thinking how comforting it would be if there were now in our lean and depleted Treasury those **$177,000,000** which would have been saved if the Democrats had even been as economical as those prodigal Republicans, whose extravagance they so unsparingly condemned.

LUCRATIVE OFFICES FILLED GREEDILY.

The Democratic platform not only denounced the "lavish appropriations of Republican Congresses," but called for "a reduction in the number of useless offices, the salaries of which drain the substance of the people." I have seen no sign that any of those offices which could be filled by "deserving Democrats" have been considered "useless." On the contrary, no Congress of which we have a record has created so many new offices with high salaries. And in filling these offices there has been exhibited a narrow and avaricious partisanship which has not been surpassed since the halcyon days of the spoils system under Andrew Jackson. In the 10 appointments to the Federal Reserve Board and the Trade Commission, with salaries of $12,000 and $10,000 per annum, not a Republican was included. This Congress is the first since 1894 when the Democratic Party has had full control of all branches of the Government, and so it has given them for the first time an opportunity to prove the sincerity of their platform pledges and of the criticisms which they had persistently directed at the extravagance of the Republican administrations. The figures are illuminating and conclusive.

The description of the Government of France by an eminent author is very appropriate to the work of this Congress. Bodley wrote:

> Millions of the national wealth are squandered by each Parliament on the creation of superfluous posts in a land already overburdened with functionaries and on public works designed only to advance the local popularity of their promoters. The majority offers no opposition, as deputies vote with reciprocal comity for one another's prodigalities.

I recognize that the mere size of the appropriations does not prove extravagance. True economy does not consist simply in making small appropriations, but in a wise and careful adjustment of expenditures to income. Conduct which is extravagant in a poor man might be parsimony in a millionaire. What is a proper and reasonable outlay for the Government in Republican times might be extravagance in pinching Democratic times. When the income is large the expenditure can correspond, but this administration and Congress seems unable to comprehend that a reduction of expenditure ought to accompany a severe reduction of income, and is spending more in these

straitened Democratic times than the Republicans ever risked in their most prosperous days.

REPUBLICAN PARTY COUNTRY'S ONLY HOPE.

The Treasury balance is to-day only **$45,000,000**, instead of the **$166,000,000** which was left them by the Republican policies at the beginning of the fiscal year 1914, although for months we have been paying vexatious "war taxes." A balance of only **$50,000,000** has for years been considered the danger point. The Treasury has not been so empty since the Cleveland administration. I am afraid it can only be replenished, as it was then, by an issue of bonds, and that it can only be made permanently safe, as it was then, by a change of administration.

Immigration.

EXTENSION OF REMARKS
OF
HON. DANIEL J. GRIFFIN,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES.

Thursday, February 4, 1915,

On the veto message of the President on the act (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. GRIFFIN. Mr. Speaker, I will vote to sustain the President's veto, because I am opposed to this bill, which is unfair, unjust, un-American, and entirely antagonistic to the traditional policy of our country.

The pathway of duty was blazed for President Wilson by two distinguished Presidents, Grover Cleveland and William Howard Taft, who in no uncertain terms condemned legislation of this character. On March 2, 1897, Grover Cleveland, in his memorable message vetoing the literacy test, said:

A radical departure from our national policy relating to immigration is here presented. Heretofore we have welcomed all who came to us from other lands except those whose moral or physical condition or history threatened danger to our national welfare and safety. Relying upon the zealous watchfulness of our people to prevent injury to our political and social fabric, we have encouraged those coming from foreign countries to cast their lot with us and join in the development of our vast domain, securing in return a share in the blessings of American citizenship.

A century's stupendous growth, largely due to the assimilation and thrift of millions of sturdy and patriotic adopted citizens, attests the success of this generous and free-handed policy, which, while guarding the people's interests, exacts from our immigrants only physical and moral soundness and a willingness and ability to work.

A contemplation of the grand results of this policy can not fail to arouse a sentiment in its defense, for, however it might have been regarded as an original proposition and viewed as an experiment, its accomplishments are such that if it is to be uprooted at this late day its disadvantages should be plainly apparent and the substitute adopted should be just and adequate, free from uncertainties and guarded against difficult or oppressive administration.

Ex-President Taft, vetoing the literacy test on February 14, 1913, wrote:

I can not make up my mind to sign a bill which in its chief provision violates a principle that ought, in my opinion, to be upheld in dealing with our immigration. I refer to the literacy test. For the reasons stated in Secretary Nagel's letter to me, I can not approve that test.

Ex-Secretary of Commerce and Labor Charles Nagel, in his letter of February 12, 1913, upon which President Taft based his literacy-test veto, wrote the following:

I am of the opinion that this provision can not be defended upon its merits. It was originally urged as a selective test. For some time recommendations in its support upon that ground have been brought to our attention. The matter has been considered from that point of view, and I became completely satisfied that upon that ground the test could not be sustained. The older argument is now abandoned, and in the later conferences, at least, the ground is taken that the provision is to be defended as a practical measure to exclude a large proportion of undesirable immigrants from certain countries. The measure proposes to reach its result by indirection, and is defended purely upon the ground of practical policy, the final purpose being to reduce the quantity of cheap labor in this country. I can not accept this argument. No doubt the law would exclude a considerable percentage of immigration from southern Italy, among the Poles, the Mexicans, and the Greeks. This exclusion would embrace probably in large part undesirable but also a great many desirable people, and the embarrassment, expense, and distress to those who seek to enter would be out of all proportion to any good that can possibly be promised for this measure.

My observation leads me to the conclusion that, so far as the merits of the individual immigrant are concerned, the test is altogether overestimated. The people who come from the countries named are frequently illiterate because opportunities have been denied them. The oppression with which these people have to contend in modern times is not religious, but it consists of a denial of the opportunity to acquire reading and writing. Frequently the attempt to learn to read and write the language of the particular people is discouraged by the Government, and these immigrants in coming to our shores are really striving to free themselves from the conditions under which they have been compelled to live.

So far as the industrial conditions are concerned, I think, the question has been superficially considered. We need labor in this country, and the natives are unwilling to do the work which the aliens come over to do. It is perfectly true that in a few cities and localities there are congested conditions. It is equally true that in very much larger areas we are practically without help. In my judgment no sufficiently earnest and intelligent effort has been made to bring our wants and our supply togther, and so far the same forces that give the chief support to this provision of the new bill have stubbornly resisted any effort looking to an intelligent distribution of new immigration to meet the needs of our vast country. In my judgment no such drastic measure based upon a ground which is untrue and urged for a reason which we are unwilling to assert should be adopted until we have at least exhausted the possibilities of a rational distribution of these new forces.

President Woodrow Wilson in a most forceful, truly partiotic message vetoing the pending legislation, which contains the narrow, un-American literacy test, said:

In two particulars of vital consequence this bill embodies a radical departure from the traditional and long-established policy of this country—a policy in which our people have conceived the very character of their Government to be expressed, the very mission and spirit of the Nation in respect of its relations to the peoples of the world outside their borders. It seeks to all but close entirely the gates of asylum which have always been open to those who could find nowhere else the right and opportunity of constitutional agitation for what they conceived to be the natural and inalienable rights of men, and it excludes those to whom the opportunities of elementary education have been denied without regard to their character, their purposes, or their natural capacity.

Restrictions like these adopted earlier in our history as a Nation would very materially have altered the course and cooled the humane ardors of our politics. The right of political asylum has brought to this country many a man of noble character and elevated purpose who was marked as an outlaw in his own less fortunate land and who has yet become an ornament to our citizenship and to our public councils.

The children and the compatriots of these illustrious Americans must stand amazed to see the representatives of their Nation now resolved, in the fullness of our national strength, at the maturity of our great institutions, to risk turning such men back from our shores without test of quality or of purpose. It is difficult for me to believe that the full effect of this feature of the bill was realized when it was framed and adopted, and it is impossible for me to assent to it in the form in which it is here cast.

The literacy test and the tests and restrictions which accompany it constitute an even more radical change in the policy of the Nation. Hitherto we have generously kept our doors open to all who were not unfitted by reason of disease or incapacity for self-support or such personal records and antecedents as were likely to make them a menace to our peace and order or to the wholesome and essential relationships of life. In this bill it is proposed to turn away from tests of character and of quality and to impose tests which exclude and restrict, for the new tests here embodied are not tests of quality or of character or of personal fitness, but tests of opportunity. Those who come seeking opportunity are not admitted unless they have already had one of the chief of the opportunities they seek—the opportunity of education. The object of such provision is restriction, not selection.

This legislation is an echo of "know-nothingism," which found its expression in the misnamed American Party of unsavory memory. Two of its party declarations might well be stated in these less troublous times.

1. That Europe is industriously ridding herself of an excess population now becoming burdensome to her, and whom does she send? Her paupers, her convicts, the outpouring of her almshouses and jails. Even lately has a would-be regicide been landed upon our shores by a national vessel. * * * These immigrants from Europe leave there filled with all the requisite materials to spread among our citizens immigrant radicalism and liberalism.

2. That the foreigner had become the tool of the political wirepuller; that the naturalization laws had become a dead letter; that the foreign vote had become a decisive factor at election; that the foreigner, especially the Irish, was willing to obtain office and power by any means.

The attacks of to-day against immigration are less bitter in character but very similar to the broadsides aimed against the early immigrants from Ireland, Germany, Sweden, and Scotland.

The Irish, the German, the Swede, and the Scotch have passed through the crucible of opportunity and have added to the strength and stability of our free institutions.

Tear away the mask of hypocrisy, "call a pick a pick and a spade a spade."

The literacy test is not a selective test. It is a provision placed in the bill to exclude from our shores the Russian Jew, the Polander, the Greek, the Bohemian, and the Italian from southern Italy. The Jew, a member of a persecuted and oppressed race in Russia, coming to our shores seeks an asylum of hope and happiness. His energy, his thrift, his thirst for knowledge, his devotion to his parents are elements that contribute prodigally to America's highest type of citizen.

In the Empire State one of the most learned judges of the court of appeals, the court of last resort in our State, Benjamin H. Cardoza, a member of a family of great lawyers, appointed by a broad-minded patriotic governor, Martin H. Glynn, is proud of his Jewish ancestry. In medicine, law, the arts and sciences, and the business world the Jew holds a position of preeminence. In this very Sixty-third Congress there are four distinguished members of Hebraic origin.

In the sacred Revolution War for Independence; in the War of 1812; in the Mexican War of territorial aggrandizement and in the internecine strife to preserve the integrity of the Union; in the Spanish-American War, and at Vera Cruz the Jew con-

tributed his life and his blood to American ideals and American patriotism.

The door of opportunity should be thrown wide open to a race that can produce a Disraeli, a Benjamin, and in our own times a Straus and a Schiff.

The Italian, who proudly points to his Columbus, the discoverer of the Western Hemisphere, the Polander, the Greek, and the Bohemian need no public apologists. They are passing through the crucible of antagonisms that have become a memory to the Irish and German immigrants of the early forties. They will emerge just as triumphantly as have the Irish and the Germans. The "hewer of wood and the drawer of water" of to-day will become the captain of industry of to-morrow. Such potentialities are possible and are not far-fetched in a land where our free educational system is creating an educational level between the rich and the poor. The brawn and sinew of the Italian and Polander, the spirit of liberty of the Greek, and the stolidity of the Bohemian will prove precious elements for deposit in the national melting pot.

The Middle West, the undeveloped South, and far-off Alaska need a great influx of the laboring immigrant. Hundreds of thousands of acres of virginal forest and agricultural land need the magic of American enterprise and the labor of European immigrants.

The American citizen through education has reached a stage where he will not do the work aliens will do.

In the West and Middle West the majority of farms are owned by foreign-born people or their immediate descendants. Among these foreign agriculturists who help supply our foodstuffs are Germans, Scandinavians, Italians, Polanders, and Bohemians. The greater the production of foodstuffs the lower the cost of living.

When we consider our ancestors, even if we can point with pride to Plymouth Rock, we must be convinced in our heart of hearts of the narrowness, the bigotry, and the shallowness of the literacy test. To my colleagues on the other side of this question, some of whom have honestly fought with fanatical fervor for years to place this literacy test on the statute books, I commend a real solution of the problem, and to it I intend devoting much of my time while in Congress.

What is needed in this country is a proper distribution of immigration. Men of character should always be welcome to our shores.

The sacrifices of Jones, Lafayette, Kosciusko, Kossuth, Steuben, De Kalb, and Pulaski in our Nation's building should not be forgotten. The Irish brigade at Fredericksburg fought the battles of their adopted country. Let us not forget, my colleagues, the spirit of our forefathers, who proclaimed to the world that this Nation is the land of liberty and equality, a land where man worships his Creator as his conscience dictates, a land that is an asylum for the oppressed of all nations, a land that stretches out its hands across the sea to the persecuted people of the world, bidding them a hearty welcome to this haven of love and happiness, to this blessed land of promise and opportunity.

Advocating the Appointment of Postmasters of All Classes by the Postmaster General Instead of by the President.

EXTENSION OF REMARKS

OF

HON. THETUS W. SIMS.

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. SIMS. Mr. Speaker, on yesterday, the 3d of this month, I introduced the following bill, which was referred to the Committee on the Post Office and Post Roads:

A bill (H. R. 21606) to provide for the appointment of postmasters of all classes by the Postmaster General, and for other purposes.

Be it enacted, etc., That postmasters of the first, second, third, and fourth classes shall be appointed and may be removed by the Postmaster General, by whom all appointments and removals shall be notified to the Auditor for the Post Office Department.

SEC. 2. That all laws and parts of laws in conflict with this act are hereby repealed.

In his annual report for the fiscal year ending June 30, 1914, the Postmaster General recommends that the appointment of postmasters of the third class be made by the Postmaster General and not by the President, as required by existing law.

In his report the Postmaster General calls attention to the report of the First Assistant Postmaster General for the fiscal year ending June 30, 1914, recommending a change of existing law so as to permit the Postmaster General to appoint postmasters of the third class. I now read from said report of the First Assistant Postmaster General, page 16, as follows:

Under existing law, appointments of third-class postmasters must be made by the President and confirmed by the Senate. This elaborate and costly procedure is not warranted by the relative importance of the positions. Moreover, there is every service reason for classifying these positions and the time now seems opportune for taking this step, following in the wake of the successful administration of the Executive order of May 7, 1913, classifying fourth-class postmasterships. The number of third-class postmasters exceeds 6,000, and the salaries range from $1,000 to $1,900 per annum. There seems to be no good reason why these appointments should not be made by the Postmaster General, by whom the successful applicants are now nominated to the President for appointment. This would expedite the appointments and give the Post Office Department immediate control over the incumbents, and hence tend to increase efficiency.

What I have just read, giving the reasons for authorizing the Postmaster General to appoint postmasters of the third class, applies with equal force to the appointment of postmasters of the first and second class, as provided for in my bill. The duties and functions of postmasters of all classes are in all respects similar. The classes into which postmasters have been divided are not determined by the character of the services to be performed, but is determined altogether by the salaries paid.

All postmasters whose salaries are as much as $3,000 and over are of the first class. All postmasters whose salaries are $1,900 and less than $3,000 are of the second class, and all postmasters whose salaries are $1,000 and less than $1,900 are of the third class, and all postmasters whose salaries are less than $1,000 are of the fourth class.

The law now provides that all postmasters except those of the fourth class must be appointed by the President and confirmed by the Senate. There is absolutely not one good sound argument that can be urged in favor of having postmasters of any class appointed by the President and confirmed by the Senate.

There are now about 8,650 postmasters of the first, second, and third classes, all of whom must be appointed by the President and confirmed by the Senate.

During the fiscal year ending June 30, 1914, there were appointed 3,720 presidential postmasters. The applications and indorsements of all this vast number of presidential postmasters had to be first thoroughly considered and passed on by the Postmaster General before the names of those recommended by him were sent to the President for his consideration and approval. The President, being charged with the responsibility of the successful administration of all departments of Government, must necessarily give a great deal of his time to the consideration of the applicants for these positions before he sends his nominations to the Senate. When finally sent to the Senate all nominations are referred to the Senate Committee on Post Offices and Post Roads, where they are again considered before they are acted on finally by the Senate in executive session. If a vast majority of the nominations for postmasters thus sent to the Senate are not passed on by it in a mere perfunctory way, a great deal of time must be consumed by the Senate and its Committee on Post Offices and Post Roads that is not at all necessary to secure efficiency in the service. If these confirmations as a general rule are made by the Senate with little or no consideration, and thus resulting in no public good, it is in the interest of good legislation to pass the bill I have introduced and save the President and the Senate the time and trouble entailed upon them by the present method of appointing and confirming postmasters of the first, second, and third classes.

While the appointments of postmasters of all classes is an exercise of executive power and a performance of an executive duty for which the President and those acting under him are wholly responsible, a practice or usage has grown up by which the Members of the House of Representatives of the same political party of the administration are requested by the Postmaster General to suggest to him persons to be appointed postmasters in their respective congressional districts, and as a rule the person so suggested is recommended by the Postmaster General to the President, and as a general rule the President nominates the person thus selected to the Senate for confirmation or rejection.

To this general practice there is one exception, and that is that the Senator is asked to recommend a person for postmaster in the city in which he resides instead of the Representative of the district in which the town or city is located. This practice has been followed by all political parties, as far as I am advised.

A Representative in this House has a much better opportunity to know the character and qualifications of applicants for office in his district than is possible for a Senator to know, unless he resides in the same district. As a general rule Senators readily

acquiesce in this practice, and make no effort, either directly or indirectly, to interfere with the exercise of this courtesy extended to Members of this body by the President.

As a general rule Senators confirm the nominations of postmasters made in this way, with one exception, and that is where the person thus selected is personally offensive to a Senator from the State in which the appointee resides. While there is no formal rule of the Senate of this kind, there seems to be an "unwritten rule" by way of courtesy extended to a Senator who alleges that a person thus selected for office is personally offensive to him. In the consideration of nominations by the Senate, it acts in executive session, behind closed doors, with no report or record of what any Senator may say regarding his objection to the confirmation of nominations sent to it by the President. On this account I am unable to find precedents of what has been urged by Senators in the way of "personal offensiveness" that has been thought by the Senate to be of sufficient gravity to warrant the rejection of a person nominated for office by the President. But taking the words "personally offensive" in the ordinary sense in which they are commonly used, I would suppose it means that, apart from all political considerations, that there is a state of personal ill feeling existing between the Senator and the person named for office that would make it embarrassing for the Senator to have to transact official business with the person objected to by him, or something of that kind or along that line.

Mr. Speaker, I must suppose that in order to justify a man big enough and broad enough to be a United States Senator in depriving the President and the country of the services of a man in public office, simply because the man was personally offensive to him, that the grounds or cause for the existence of such a state of mind must be of an extremely offensive character, and that any Senator who would take advantage of such a practice would not hesitate to make public the nature and details of the "personally offensive" matter of so grave a character as to warrant such action on his part.

No doubt this custom or practice that has grown up in the Senate of objecting to the confirmation of applicants for office on grounds of "personal offensiveness" has sometimes, to say the least of it, been abused, and no doubt it has sometimes been resorted to by Senators, as a means of indirect selection of a postmaster at a particular city more desirable to a Senator, for personal and political reasons than the man whose name has been sent to the Senate upon the recommendation of a Member of this House. Suppose there is a city where there are six applicants for postmaster, all of the same political party, all qualified, and all men of good character, and none of them objectionable to the Member of this body in whose district the appointment is to be made. But, while none are objectionable to the Member, one of the six is decidedly preferable, and this man so preferred is recommended by the Member and his name is sent to the Senate by the President. Then, suppose that the man recommended by the Member is less desirable to a Senator from the State of the applicant than any of the other five. Suppose the Senator and the man whose name has been sent to the Senate are of the same political party, but have been of different factions in the party, and the Senator may think that it is not to his personal or political interest for this particular man to be honored with public office, but instead of disclosing his real grounds of objection, he reports to the Senate in executive session, behind closed doors, that this man is "personally offensive" to him, and in this way gets rid of him and secures the appointment of one of the other applicants, to whom the Senator can say: "You owe your appointment to me. If I had not blocked the confirmation of the man recommended by your Member of the House, you would not have been appointed. I, in this way, forced your Member to come to you, and you therefore owe your success to me and not to your Member. I therefore expect your friendly aid and support in my next contest for the nomination for the Senate."

Then, to make the case all the more odious, suppose this objecting Senator had used all the power and influence he had with the Member of the House to get him to recommend one of the other applicants, and in failing to do so resorts to the "personally offensive" submarine objection in order to get rid of the man preferred by the Member, with the purpose of ultimately bringing him around to the support of the man the Senator wants appointed. Of course it is not to be presumed that many such men would ever be elected to that great body at the other end of this Capitol, but it is best to make such possibilities impossible by passing my bill.

Mr. Speaker, under the rules of this House we are not permitted to call the names of Senators in discussing their actions and votes in the Senate. Therefore I can not call names in a case illustrating how the use of a single objection of this kind has prevented the confirmation of a good man, who was recommended for appointment as postmaster in a city in his district by a Member of this body, and whose name was sent to the Senate by the President after fully considering the objections of a Senator from the same State.

In the case I am referring to, when objection to confirmation was made by the Senator, the nomination was referred to a subcommittee of the Senate Committee on Post Offices and Post Roads, which subcommittee gave a hearing to the objecting Senator and the Member of this House upon whose recommendation the name of the man objected to was sent to the Senate for confirmation. The subcommittee fixed a day for the hearing, and at the hearing the Senator filed a letter addressed to the Senators composing the subcommittee making his objection to confirmation in the following language, leaving out the names of the Senator and the man whose confirmation was opposed:

I therefore object to Mr. ——— 's confirmation on the grounds that he is personally and politically obnoxious and offensive to me.
(Signed) ——— ———.

At the hearing this letter was read first, before any other proceedings were had, whereupon one of the Senators on the subcommittee, addressing the Member of this House who had recommended the appointment of the man whose confirmation was under consideration, said:

Then, Mr. ———, there isn't any need of your making a statement.

But upon the earnest insistence of the Member to be heard in his own behalf, in order to give the reasons for having recommended the man thus objected to, one of the other Senators, who was chairman of the subcommittee, then said:

Then state your case as briefly as you can. You understand that it is already settled against you.

The Member, after being requested to be as brief as possible, was permitted in a most hurried manner to make a statement, which was printed afterwards by order of the committee. Subsequently the Senator, who could not be present at the first hearing, was afterwards heard and the Member again heard in reply, In the hearing the Senator reiterated what he had said in his letter in substance, but gave no specific or detailed information as to the "personal and politically offensive" matter, and gave no names of persons who had furnished him with the information, although requested to do so by the Member who was present.

The subcommittee, as I am informed, after the hearing was closed decided to recommend the rejection of the nomination. But in the meantime the Member requested the President to withdraw the name of the applicant, which was immediately done, so that neither the nomination or recommendation was actually acted on by the Senate.

Mr. Speaker, as far as my knowledge goes, this is the first time that a Senator, in objecting to the confirmation of a postmaster in his own State, has ever assigned as part of his grounds for opposing confirmation "political offensiveness." I must confess that I am at a loss for a definition of "political offensiveness," but I suppose that the Senator who urged it has his own standards as to when an applicant for office from his State is "personally and politically obnoxious and offensive" to him. To what extent this applicant was "personally offensive," and to what extent he was "politically offensive" to the Senator I am unable to state. The personal element may have been but 1 per cent of the whole, while the political element may have been 99 per cent. But, to say the least of it, the Senator asked that he be rejected on both grounds. Now, it is just possible that a Senator who is so "sensitive" on "political grounds" might magnify this feeling toward an applicant for office so as to be looking through colored glasses as to the element of personal "offensiveness."

The case I refer to arose in a State where the Democratic Party had been so badly split up into factions that the Republicans had carried the State for Governor in two elections, although the State is normally Democratic by a good safe majority. In that factional struggle the Senator had been active as a member of one faction and the "politically offensive" applicant for the postmastership had acted with the other and larger faction. We all know that factional party strife often develops into contests of great bitterness, in which for the time being members of both factions become politically very offensive to each other. But, Mr. Speaker, are we in this "land of the free and home of the brave" to tolerate proscriptive punishments for opinion's sake? Shall men be punished simply because they have honestly differed with other men on political questions and policies? There is no knowing to what lengths such an abuse of power may go. Suppose it should happen that when a new President is inaugurated and sends the

names of his Cabinet to the Senate for confirmation that a Senator from each of the States from which the several Cabinet members come arises in the executive session of the Senate and urges "personal and political offensiveness" to each member of the new Cabinet. Is it possible that the whole list would uncermoniously be rejected, with nothing more than the bare statements of Senators in the recesses of an executive session that the men, however great, however well qualified for their respective duties, and however patriotic, were "personally offensive" to one Senator from each of the States from which these men may come? Of course such a thing is so unlikely and improbable as to hardly deserve serious notice. But a practice that permits such a course of action to be pursued toward a postmaster is just as bad in principle and just as reprehensible in application as when applied to a Cabinet officer.

Under the possibilities of such an "unwritten rule" a general of the Army or an admiral of the Navy can be rejected for promotion because for some fancied personal grievance of a Senator he may have made himself "personally offensive" to him. But when it gets to be a common practice to refuse confirmation simply because the man named by the President for public office is "politically offensive" to a Senator it is certainly high time that at least one "unwritten rule" of the Senate be abolished; and if this can not be done, the people should take the matter into their own hands and see that no man who is so small and so wrapped up in himself as to have a good man rejected for official place simply because the man is "personally and politically offensive" to him, whatever that may mean. No citizen of this country should be forced to pass over the political "bridge of sighs" to appease the pevish wrath of so small a man, although for the time being he may happen to be a United States Senator.

Mr. Speaker, for these and many other good and sufficient reasons I shall press my bill for passage by the House at the first session of the Sixty-fourth Congress next December.

Export of Arms and Ammunition.

Let us stand on our rights and let us do the right. While just and generous to the smallest, let us fearlessly insist that the greatest powers shall respect our flag and the legitimate commerce carried under its beautiful folds. And let the free winds of heaven no longer be offended by that flag hoisted above a trade that has upon it the curse of Cain. Let us be neutral. Let us be honestly neutral.

EXTENSION OF REMARKS
OF
HON. HENRY VOLLMER.
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES.

Thursday, March 4, 1915.

Mr. VOLLMER. Mr. Speaker, on the first day of the present session of Congress I introduced the resolution known as H. J. Res. 377, to prohibit the export of arms and ammunition. Since that time some 3,000,000 American citizens have petitioned Congress to enact such legislation.

I introduced that resolution as an American citizen and an American representative, knowing my duty as such to prefer the interests of no country to those of the United States, and not to permit inherited racial antipathies, if any, to swerve me from the faithful performance of that duty. I introduced that resolution because as an American I did not want my country, in the eyes of all contemporaries and of all posterity, to stand there as the archhypocrite of the world, that goes into the Lord's holy sanctuary in response to a presidential proclamation and prays for peace, while her pockets are filled with blood money as wicked as the thirty pieces for which Judas sold his Master.

Into what sort of spiritual communion on that Sunday of October 4 did you get, O my American brother, with "the Lord, thy God, who knoweth all things," when you gave Him lip service in the cause of peace and humanity and then on Monday resumed your interrupted occupation of shipping the instruments of murder to one side only of an unequal contest, in which we pretend that all the contestants are our friends. Thus we help part of our dear friends to kill or maim others of our dear friends! Thus we are helping seven who have jumped on two, while a couple of other thugs are waiting around the corner ready to jump on, too, when the right moment comes; but they do not dare just yet, because the minority is putting up too stiff a fight, a fight against which Marathon and Thermopylae and Salamis and Platea were tame exhibitions! How many German and Austrian widows and orphans and cripples will be made with our arms and our munitions? I do not know, but I fear the account will be kept somewhere by the Nemesis that comes to nations as to individuals, who have crimes of blood on their souls! Let us not deceive ourselves. We are particeps criminis to the greatest crime against humanity and civilization in all the annals of time, for so I regard the present world-wide war.

In the Committee on Foreign Affairs of the House, we have had several hearings on my resolution. We have defended it—and some of the most distinguished citizens of this country have assisted us—on moral, economic and sentimental grounds and on grounds of the highest national policy. Against the resolution no argument has been made and I predict that none will be made. The ammunition ring does not do business that way. And in the pro-British press of this country, I have seen but two suggestions that could be dignified with the name of arguments in opposition:

First. That the adoption of the resolution would in itself be an unneutral act against the allies.

Second. That it might be a bad precedent for us to establish, if we should ever get into war and, being in a state of unpreparedness, would ourselves desire to import arms and ammunition.

Now, as to the first argument, my answer is that not only would it not be an unneutral act of which the allies could justly complain, to adopt the resolution, but that we can not be genuinely neutral without it; that the maintaining of our neutrality in spirit as well as in the letter, as George Washington put it, to be friendly and impartial to all—requires such legislation, since the control of the seas is at present absolutely with Great Britain, and our supplies can only reach one side. Ethical obligations always depend on the concrete facts of the particular case. This is not an abstract question. The actual existing conditions determine our duty. As the old law writers put it, when the reason of the rule fails, the rule fails. Trying to be honestly neutral, we do not ask you to help Germany and Austria; but we do ask you to stop helping the other side.

The precedents of 100 years, as such, without considering the reason on which they are based—an implied equality of opportunity for both sides to get these things from us—establish our right to export them, if we choose, but no obligation to do so. We are under no obligation, express or implied, by treaty, international law or law of neutrality, to continue this infamous trade. We are under no obligation to export anything that belongs to us.

I can not understand how our great President, for whom I have always entertained the very highest respect, can possibly reconcile his present declaration that this legislation would be unneutral in view of the following language taken verbatim from his first message to Congress on Mexican affairs, in August, 1913:

For the rest, I deem it my duty to exercise the authority conferred upon me by the law of March 14, 1912, to see to it that neither side to the struggle now going on in Mexico receive any assistance from this side the border. I shall follow the best practice of nations in the matter of neutrality by forbidding the exportation of arms or munitions of war of any kind from the United States to any part of the Republic of Mexico a policy suggested by several interesting precedents and certainly dictated by many manifest considerations of practical expediency. We can not in the circumstances be the partisans of either party to the contest that now distracts Mexico, or constitute ourselves the virtual umpire between them.

Again I find in our highest authority on international law, being John Bassett Moore's Digest of International Law, volume 7, page 748, the following language on the subject:

Much misapprehension as to the quality of the act to supply contraband articles, such as arms and munitions of war, to the parties to an armed conflict has arisen from the statement so often made that the trade in contraband is lawful and not prohibited. This statement, when made with reference to the preventive duties of neutral governments is quite correct, but if applied to the duties of individuals it is quite incorrect. The acts which individuals are forbidden to commit and the acts which neutral governments are obliged to prevent are by no means the same, precisely as the acts which the neutral government is obliged to prevent and the acts which it is forbidden to commit are by no means the same. The supply of materials of war such as arms and ammunition to either party in an armed conflict, although neutral governments are not obliged to prevent it, constitutes on the part of the individuals who engage in it a participation in hostilities, and as such is confessedly an unneutral act. Should the government of the individual itself supply such articles it would clearly depart from its position of neutrality.

That this is a correct statement of international law was recognized by Great Britain when, on April 23, 1898, it issued a proclamation warning British subjects against doing any act "in derogation of their duty as subjects of a neutral power

or any violation or contravention of the law of nations" among which was enumerated the "export of arms, ammunition, military stores, or materials."

From the foregoing it appears that under general international law as recognized by Great Britain itself, the act of our citizens in exporting arms and ammunition, is an unneutral act. If our Government decides to forbid the commission of such unneutral acts by its own citizens, can such action on the part of our Government be declared to be unneutral, since its object is to establish neutrality? It seems to me that with this falls the last argument of the opponents of the various measures pending before Congress designed to stop the export of arms and ammunition.

In this connection I desire to call attention to the further fact that there is now on the statute books of Great Britain an act very similar in its wording to H. J. Res. 377, conferring the discretionary power on the King of England to forbid the export of arms and ammunition. Also that nearly all the neutral countries of Europe have since this war began enacted such legislation; also that the German Government during the Spanish-American War stopped the export of such materials on receiving a protest from our minister, Andrew D. White.

Suppose two men are fighting here on this floor and I have knives and pistols and other arms and only one can get near me and I keep handing out these weapons to him, is that impartial neutrality?

Take for instance another illustration, which I received in a letter from an old apple grower in Oregon. I have an orchard and a neighbor on my right wants to steal my apples and a neighbor on my left hands him a ladder so that he can get at the apples and then gets down on his knees and prays to God to stop all stealing of apples, is that honest neutrality?

Because England may be disappointed in her hope to have this country and her inexhaustible resources as allies, does not establish her right to complain if we say that by reason of existing, unprecedented conditions, for our own moral and material welfare, we do not choose longer to be her accomplice.

Now, as to the second argument: If we fear that we are going to be involved in war, and that we will be short of arms and ammunition, then, for goodness sake, stop exporting them, and conserve these resources, instead of depleting our private arsenals for England's benefit and sending out our cannons and guns and powder and shot and shell and armored automobiles and steel arrows, and so forth, to be used against our traditional friends; yea, possibly some of them sometime to be used against ourselves, since they are going out to the only countries with whom we are liable to have trouble and are having trouble now.

To adopt this resolution would not only shorten this war, which is our overwhelming economic interest, but the incorporation of the principle lying at the base of the resolution into general international law, which I confidently expect sometime to come, will be one of the most efficient deterrents of war and would mark the greatest practical progress ever made by the peace propaganda.

Great Britain's claim that we must continue to export contraband to her, that we are in duty bound to do so, takes on an almost comical aspect, when you observe that she has herself forbidden the neutral countries of Europe to make such exports to Germany and Austria; that we have repeatedly placed embargoes on arms and ammunition beginning as early as 1794 and down to the resolution of 1898, as amended on motion of Senator Root in 1912 and applied by Presidents Taft and Wilson, the latter insisting on genuine neutrality as against a mere paper neutrality, and that for the benefit of a lot of Mexican greasers, saying that Huerta had ports and Carranza had none, and that it was our duty to treat them alike, in fact, and not merely to live up to the dead letter of statutes not equally and impartially applicable under the concrete circumstances of the case. Are Mexican greasers nearer to the heart of our Chief Executive and the Secretary of State than Germans and Austrians, who have from thirty to forty millions of blood relations in this country? England insists that we must not cease exporting contraband to her, a trade frowned upon by international law, but at the same time, having the control of the sea, she arrogates to herself the right to interfere with and stop our trade in noncontraband with neutral countries. She is doing this to-day. She stops our ships, flouts our registry, insults Old Glory, and blockades our ports. Within sight of New York's stupendous skyscrapers, English men-of-war are lying in wait to stop and search every outgoing vessel. They have dragged American ships to their harbors, and have detained them for months. They have trampled on American passports, taken American citizens from American ships and incarcerated them in British prisons. They have violated our mails. They have crippled our foreign trade, and I charge that they are doing all these things, not solely on account of the effect on their belligerents, but with the purpose of thwarting our legitimate hope to build up a merchant marine and get new markets out of the commercial situation produced by the war. They started this war—that is, they created the diplomatic situation which made war not only possible but probable—so that they could steal German trade and German colonies, as well as destroy the German fleet. The Germans were too smart and too enterprising for them. They could not compete with them. They were losing their own markets to them, and the German fleet was growing at such a rate that they could not sustain the two-power standard. All these things were admitted to me personally by people close to the ruling powers in England years ago.

So, some 10 years ago, Edward VII began to travel about Europe weaving the mesh of encircling alliances, all aiming to isolate Germany and leave her unsupported, confronting a great numerical superiority, when the inevitable fatal day should arrive to try out this issue of the ages.

If you want to know the real cause of this war do not read the blue, white, orange, and so forth, books compiled by the trained liars of European diplomacy, but just recall in your memories the explosion that took place when England was flooded with goods bearing the formula "Made in Germany." No; this war was not made in Germany, but "made in Germany" caused this war! At that time a British statesman said:

The moment the German fleet lies at the bottom of the sea, every Englishman will be richer personally in pounds sterling.

Without English encouragement the Russian grand duke would not have dared to attack the educated, trained, and disciplined fighting forces of Germany (not one in a thousand of whom is illiterate) with their ignorant Russian hordes, of whom not two in a thousand are able to read and write. And yet Europe from the North Cape to the Golden Horn is to be placed helpless at their feet.

Failing miserably in their attempt to argue this question, our pro-British press dares to question the loyalty of German-Americans in general and of Members of Congress of that blood in particular, because we favor this legislation. The German-Americans need no defense at my hands. In every war in which this country has been involved, they have furnished more than their numerical proportion of men for the armies of the Union. And in the walks of peace, have they not been good citizens in the main, sober, industrious, thrifty, paying their debts, and contributing their share to the astonishing development of our common country?

As for my colleagues in Congress and myself, who have been threatened by this reptile press with prosecution for treason, deportation, loss of citizenship, and what not, all I have to say to them is: "Do your dirtiest. We defy you." We remember what you said to the revered Carl Schurz in 1870 when under similar circumstances he took a similar position for genuine neutrality. On the floor of Congress he was threatened with a dungeon. But he did not go there, and we will not. We know our duty as American citizens and American officials, and we will continue to perform it, no matter how many fits you throw, and though your spleen should choke you.

If the position of this press is correct, that we are under obligations to Great Britain to continue this trade in contraband, while she has the right to interfere with and stop our trade in noncontraband with neutrals, then what is the use of talking about our neutrality? That presupposes that we are a sovereign, free, and independent Nation; but if the argument of our opponents is valid, then we are not that, but a British dependency; then you are not self-governing, but blooming colonials, territorials, "don't ye know;" you should take down the American flag and hoist the Union Jack. You should tear up that great muniment of freedom promulgated 138 years ago, the Declaration of Independence.

In the name of America's martyr dead, from Lexington to Yorktown and from Lake Erie to New Orleans; remembering Britain's perfidious attitude toward us from 1861 to 1865, and in every crisis of our history; in the name of Ireland's 700 years of tragic story, with its pitiful procession from the prison to the gallows of Irish orators, statesmen, and poets, and its countless thousands of Irish men, women, and children sacrificed to the Moloch of British tyranny by the sword, by fire, and famine; in the name of India, where hunger and pestilence walk hand in hand with British civilization; in the name of the little South African Republics whom she murdered in cold blood because she wanted their gold; in the name of China upon whom

she waged the infamous opium war; in the name of Denmark, of Holland, and even of France, whose fleets she destroyed when her policy so decreed; in the name of every people on earth that desires free and independent development without being constantly under the blighting shadow of English navalism, I appeal to you, my fellow countrymen, without regard to race descent or other discrimination. Let us stand on our rights and let us do the right. While just and generous to the smallest, let us fearlessly insist that the greatest powers shall respect our flag and the legitimate commerce carried under its beautiful folds; and let the free winds of heaven no longer be offended by that flag hoisted above a trade that has upon it the curse of Cain. Let us be neutral! Let us be honestly neutral!

Repeal of Tax on Mixed Flour.

EXTENSION OF REMARKS

OF

HON. HENRY T. RAINEY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. RAINEY. Mr. Speaker, several bills were introduced at the present session of Congress to repeal the tax on mixed flour. These bills will be reintroduced and pressed for consideration at the first session of the Sixty-fourth Congress.

I herewith submit for printing in the RECORD, under the general leave to print, an article sent to me by Dr. Carl L. Alsberg, Chief Bureau of Chemistry, Department of Agriculture, as to the effect of an exclusive diet of wheat flour in the form of ordinary bread on fowls.

I also present for printing in the RECORD an article written by William Jago in the London Lancet on the subject of bread made from a mixture of wheat flour and corn flour, and so forth:

DEPARTMENT OF AGRICULTURE,
BUREAU OF CHEMISTRY,
Washington, D. C., February 25, 1915.

Hon. HENRY T. RAINEY,
House of Representativcs, Washington, D. C.

DEAR MR. RAINEY: In confirmation of our telephone conversation, I beg to say that a copy of the press notice I mentioned has been sent you under separate cover. The title of the article concerning the effects of an exclusive diet of wheat flour which I mentioned is as follows: "Experimental polyneuritis: Effects of exclusive diet of wheat flour, in the form of ordinary bread, on fowls." Inasmuch as this article appeared in a technical journal which is probably not easily accessible to you, I take the liberty of inclosing a photographic copy of it.

Very truly, yours,

CARL L. ALSBERG, *Chief.*

(Inclosure.)

EXPERIMENTAL POLYNEURITIS.

[Received for publication July 27, 1914.]

EFFECTS OF EXCLUSIVE DIET OF WHEAT FLOUR, IN THE FORM OF ORDINARY BREAD, ON FOWLS.

[W. Richard Ohler, M. D.]

In the Journal of the American Medical Association (Journal of the American Medical Association, lviii, 2059, 1912, and lxiii, 1287, 1914) Dr. John M. Little, of St. Anthony Hospital, St. Anthony, Newfoundland, describes a form of neuritis which is fairly prevalent in Newfoundland and on the coast of Labrador. Dr. Little concludes that the disease is true beriberi, and that its cause is to be found in the fact that so many of the natives live on a restricted diet, consisting largely of highly milled white flour. The following experiments were undertaken at the suggestion of Dr. Little in order to study the effects of an exclusive diet of white flour in the form of ordinary white bread. Chickens were selected for the experiments because of the ease in securing them, and because of the general uniform results obtained with chickens in various dietary experiments.

The birds were kept indoors in plain wire cages, each cage built to accommodate two fowls. The floors of the cages were covered with sawdust and were cleaned daily. The fowls were kept supplied with fresh water and from time to time were given cracked oyster shells. No attempts were made to isolate the cages. Control birds were used, and remained perfectly well throughout the whole time of the experiments.

The experiments were conducted as follows:

Group I. 10 fowls. Diet—White bread made with yeast.
Group II. 4 fowls. Diet—White bread made without yeast.
Group III. 5 fowls. Diet—Whole wheat bread made without yeast.
Group IV. 2 fowls. Diet—White bread made with yeast plus 75 grams cracked corn and wheat once every week.
Group V. 2 fowls. Diet—Hominy.
Group VI. 2 fowls. Diet—Whole corn.
Group VII. 2 fowls. Diet—Wheat grain in kernel.
Group VIII. 2 fowls. Diet—White rice. Market variety.
Group IX. 2 fowls. Diet—Starvation diet. Began with normal diet, but gradually cut down the amount until the birds were getting nothing but water.

In the following paragraphs no attempt will be made to relate the full course of the experiment in each fowl. Enough detail is in the table to give a good idea of how the fowls react to each particular kind of diet. It only remains, then, to summarize results in each group and to draw what general conclusions seem justified.

Taking Group I, for an example: Here there were 10 fowls on a diet of white bread made with yeast. The table shows that the disease made its onset in from 22 to 82 days, with an average for the 10 of about 40 days. In 6 birds, however, a meal of corn was given on the nineteenth day, and this, no doubt, influenced the onset of the disease, since in the 4 remaining birds the average was about 28 days. The average duration of the disease for the 10 birds was about 6 days, and the average loss of weight about 30 per cent. In 2 of the birds, No. 46 and No. 30, about 10 cubic centimeters of alcoholic extract of whole wheat bread was fed each day, beginning with the onset of the disease. In no case was there any marked improvement, though the treatment undoubtedly did prolong life to some extent.

In order to give a clear conception of the disease as produced in these fowls it may be well to discuss, first, in general, the symptoms exhibited by the paralyzed fowls, and then to give in detail the clinical record of one fowl.

In the large majority of fowls the first symptoms of paralysis were a slight unsteadiness, together with evidences of an involvement of the nerves supplying the extensor muscles of the legs, manifested by a high step and a tendency to bring the foot down with a very noticeable flop. In many fowls there seemed to be difficulty in coordination early in the disease. In such cases the fowls would stand teetering slightly forward as if trying to balance on their toes and in walking would do so with a decidedly ataxic gait. As the disease progressed in all cases walking became more and more difficult, until the birds could only squat in the cages, and this condition was soon followed by one of complete paralysis. Not very much can be said about the condition of the reflexes owing to the difficulty of interpreting results. In most cases, early in the disease, the achilles reflexes seemed to be exaggerated, and as the disease progressed this was followed by a condition of flaccidity. Toward the end, in practically all cases, retraction of the head and apparent convulsions were prominent symptoms. During these convulsions the leg and wing muscles were in a state of rigid contraction, the extensors overpowering the flexors, the head was sharply retracted, and the neck stiff. After a minute or so this condition was followed by a period during which the fowl kicked out wildly and flopped its wings. From the above description it may be said that while the disease began with symptoms of a peripheral paralysis the progress showed involvement of the higher nerve centers.

The following case is presented to give a typical clinical record:

"Fowl No. 1: During first 10 days fowl ate heartily of diet and appeared at all times active and well, except for more or less diarrhea. On the eleventh day fowl began to refuse food, and on the fifteenth day forced feeding commenced. First symptoms of paralysis noted on the twenty-second day. On this day the fowl was slightly unsteady and stood teetering forward and backward on its toes; when forced to walk, did so with a high step, pushing the feet well forward, as if trying to brush something from in front of him. Three days later a slight head tremor was noted, and the bird walked with a decided stagger, but did not fall. Next day both wings drooped; walked with great difficulty, and every now and then the joint formed by the tibio tarsus and tarso metatarsus seemed to give way and the fowl suddenly assumed a squatting position. In the cage squatted most of the time on the flexed tarso metatarsus, with the feet clawed. On the following day could not stand. Comb very cyanotic; convulsive movements now and then, with retraction of the head. Next day prostrated; chloroformed. Duration of the disease, six days."

This record may be taken as a good example of the disease as seen in all the different groups. In some cases no head tremor was noted, in some retraction of the head was more marked, in others inability to retain food of any kind, even water, was a marked symptom, and in a few the disease ran a very rapid course, lasting only two or three days. These are about the only variations, however, from the description of the disease as given above.

When fed on an exclusive diet of white bread made with yeast, therefore, chickens come down in from four to five weeks with a disease almost exactly similar to polyneuritis gallinarum as produced in fowls with a diet of polished rice. Furthermore, the examination of pathological sections proves conclusively the presence of a definite neuritis, since the leg muscles, especially the extensor group, show marked diffuse fatty degeneration and the sciatic nerves, when stained by the Marchi method, show marked fatty degeneration of the myelin sheath. The condition is not due to inanition, since in all cases at autopsy there was found an abundance of fat.

In Group II four fowls were fed on an exclusive diet of white bread made without yeast. Averaging the results, we find that symptoms of paralysis appeared in 26 days, the disease lasted about 6 days, and the fowls lost 28 per cent of their original weight. The clinical picture was practically the same as that described for fowl No. 1. On the other hand, the pathological findings are not as convincing. In two cases the sciatic nerves showed evidences of a mild degeneration, but the other two cases were negative. No explanation of this discrepancy can be given unless it be due to some error in the preparation of the tissues for sections. From the results in this group it is apparent, then, when fed on white bread made without yeast, fowls come down with a polyneuritis somewhat sooner than when fed with bread containing yeast. This is in accordance with the findings of Holst (Holst, Journal of Hygiene, vii, 1907, 619) upon feeding pigeons with different forms of ship biscuit.

It has been definitely shown that fowls fed on an exclusive diet of white bread, either with or without yeast, come down with the disease similar in practically all respects to polyneuritis gallinarum as produced by polished rice. In view of this fact, it is of interest to note that when fed on a diet of whole wheat bread, even when made without yeast, fowls remain perfectly well for as long as 75 days. As the results under Group III in the table will show, two of the fowls gained in weight, while the others lost only slightly. Further, all the fowls took their food fairly well throughout the whole time—a decided contrast to the behavior of the birds fed on white bread. It is apparent, therefore, that whole wheat bread contains some element (or elements) lacking in white bread, which are necessary for the maintenance of proper body metabolism. This assumption receives added strength when attention is called to the fact that those cases in Groups I and II, where feedings were forced, came down with the disease even sooner than when the fowls were left to take food as they wished. In other words, it is not so much a question of the amount of food given as it is a question of the kind of food; that is to say, whether or not the food contains the required elements or "vitamines."

The two fowls in Group IV were fed on the same white bread as the fowls in Group I, but, in addition, 75 grams of scratch food were given

once a week. Apparently this amount of normal food was sufficient to satisfy the demands of the organism, since the fowls remained perfectly well for 78 days. Sections of the sciatic nerves were normal. During the time of the experiment the fowls took the white bread very well, and in reality ate much more of this food than did the birds in Group I. The scratch food seems to have supplied the elements necessary for proper metabolism. The experiment was hardly conducted long enough to be able to draw further conclusion.

In Groups V and VI we have a condition very much like that in Groups I and III. Fowls fed on whole corn remain perfectly well for a period of 63 days, but when they are fed on hominy, the inside of the corn kernel, they come down with the same disease as when fed white bread. The clinical picture is exactly the same in both cases.

Just as fowls fed on whole corn remain perfectly well, showing no signs of paralysis, so fowls fed on wheat grain for the same length of time remain well. In both groups (VI and VII) one of the fowls showed a gain in weight and the other a loss.

Group IX represents an attempt to ascertain the effect of a starvation diet. Both fowls were started on normal diet, then the amount was gradually cut down, until after about 21 days the birds were receiving nothing but water. One fowl went for 38 days without food and the other for 56 days. In neither fowl was there a typical picture of paralysis, the picture seemed rather to be due to muscular weakness. In No. 23 there was no progress in the disease at all; the fowl remained slightly unsteady for a period of 10 days and was then found dead. In No. 22 the fowl was noticed to be rather unsteady for 4 days, and was then chloroformed. The sciatic nerves in both cases show no clear-cut evidence of fatty degeneration. In No. 23 sections of the liver show many areas of necrosis. The liver cells contain no fat vacuoles and there is no apparent cause of the necrosis.

Before concluding this report it may be of interest to state that in all the groups blood smears were made from living birds and cultures of heart's blood were made at autopsy. The smears were negative and the cultures remained sterile in all cases. Furthermore, examination of stools showed nothing remarkable.

The results are in general accord with the results in fowls fed on various other foodstuffs, including polished rice. In August, 1913, Wellman and Bass (Wellman and Bass. Am. Journal Trop. Dis. and Preven. Med., Aug., 1913), of New Orleans, report a number of experiments with fowls, in which they produced symptoms of polyneuritis with various foodstuffs, including sago, boiled white potato, corn starch, wheat flour, corn grits, boiled sweet potato, cream of wheat, puffed rice, and macaroni. Wheat flour in the form of ordinary bread apparently was not used. Holst (Holst. Journal of Hygiene, vii, 1907, 619) has shown that pigeons fed on biscuits baked with rye flour, either with or without yeast, do not develop polyneuritis, while pigeons fed on wheat bread or on bread made with a mixture of rye flour and wheat flour do. The disease appears sooner if the bread is made without yeast than if yeast is present. The many experiments with fowls on various kinds of rice diets are well known.

CONCLUSIONS.

From the results of these experiments it can be stated with certainty that when fed on an exclusive diet of white bread, whether with or without yeast, fowls develop a definite polyneuritis. This condition has been demonstrated by histological studies of both nerve and muscle tissue.

Furthermore, it can be stated with equal certainty that when fed on an exclusive diet of whole-wheat bread fowls remain perfectly well. To say, then, that any exclusive diet may cause symptoms of polyneuritis is not true to fact. Apparently, there is some substance or substances present in whole-wheat bread not present in white bread which are essential to the health of the organism. In other words, it would seem that in the relation between whole-wheat flour and highly milled white flour we are dealing with the same problem as in the relation between unpolished and polished rice. This problem arises, however, only where the diet is restricted and consists almost exclusively of white flour or polished rice, as the case may be.

Whether or not polyneuritis gallinarum and beriberi are the same disease is still an open question. This much we know, that the results of dietary experiments in both fowls and mammals are generally uniform. In view of these uniform results it is perhaps not too much to assume that the experiments here reported (including the experiments with whole corn, wheat, grain, hominy, and rice, as well as those with different kinds of wheat bread) have added another link in the chain of evidence that beriberi is a "Deficiency disease." Finally, these experiments go a long way toward proving the contention of Dr. Little that a restricted diet, consisting largely of white bread, is a large factor, if not the single factor, in the cause of beriberi in North Newfoundland and Labrador.

[The experiments were conducted in two sections—the first in the Department of Hygiene and Preventive Medicine during the summer of 1913, and the second in the Department of Bacteriology during the spring of 1914—both at the Harvard Medical School. I wish to thank both Dr. Rosenau and Dr. Wolbach for their great kindness and many helpful suggestions.]

Recipes for different breads used:

White bread with yeast:
- 1 quart flour (King Arthur)
- ¼ of an yeast cake (Fleischmann's)
- 1 teaspoonful salt
- 1 teaspoonful sugar
- 1 teaspoonful lard

} 1 loaf.

White bread without yeast (yeast powder):
- ¾ quart flour (King Arthur)
- 2 heaping teaspoonsful baking powder (Royal)
- 1 teaspoonful salt
- 1 teaspoonful sugar
- 1 teaspoonful lard

} 1 loaf.

Whole wheat without yeast:
- ¾ quart whole-wheat flour (Franklin Mills)
- 2 heaping teaspoonsful baking powder (Royal)
- 1 teaspoonful salt
- 1 teaspoonful sugar
- 1 teaspoonful lard

} 1 loaf.

Ingredients in each case mixed with enough water and milk (half and half) to make a dough.

[Copy of an article in the Lancet, London, February 13, 1915.]

THE DEARER LOAF.

To the EDITOR OF THE LANCET.

SIR: As a result of the appearance of your leading article, with this title, of January 30, I have been asked by the Corn Products Co. (Ltd.), to forward you some loaves made from a mixture of wheaten flour and corn flour. My son, Mr. William C. Jago, who now controls the Jago Laboratories, has had some loaves baked for me in a test bakery. Samples of these, numbered 1, 2, 3, and 4, were forwarded to you yesterday.

The following are particulars of the mixture from which the respective loaves were made: 1. London Town household flour only, with salt, yeast, and water. 2. Mixture of 90 parts same flour with 10 parts corn flour; in addition, gelatinized corn flour at the rate of 4 pounds to the sack of 280 pounds, and dry cornstarch sugar at the rate of 2 pounds to the sack were used. Other ingredients as before. 3. Mixture of 80 parts same flour with 20 parts corn flour; additions, etc., as in No. 2. 4. Mixture of 66 parts same flour with 20 parts corn flour and 14 parts pea flour; additions, etc., as in No. 2. The volumes of the resultant loaves, each made from 560 grammes of the flour or flour mixture were as follows: (1) 2,389 c. c., (2) 2,676 c. c., (3) 2,593 c. c., (4) 2,022 c. c. The mixed flour loaves were all smaller than that from unmixed flour, but in every case they were of fair volume and good open texture. The loaves themselves will, however, best show you the general character of the resultant bread. I think you will agree that in color and general appearance Nos. 2 and 3 are fairly equal to No. 1, and would prove quite as digestible.

The employment of No. 2 mixture would increase the available supply of breadstuffs from 100 parts to 111 parts, while in the case of No. 3 the increase would be from 100 parts to 125 parts.

In the case of No. 4 the object of the experiment was somewhat different, viz, to prepare bread that should have about the same protein value as the white flour used in the preceding mixtures. A sample of the flour yielded 10 per cent of protein on analysis. Taking the protein content of pea flour at 25 per cent, a mixture of two parts of pea flour to three parts of corn flour would also contain 10 per cent of protein, and might therefore be used in any desired proportion with the wheaten flour without altering its protein content. In the case of No. 4 two parts of wheaten flour were taken to one part of the pea and corn flour mixture. This represents a somewhat large addition to a flour which to start with was somewhat on the weak side. The dough was naturally very friable in the handling, but nevertheless made a fair loaf. Again, the sample itself will best show you the nature of the bread. (In all cases please make allowance for the staleness and effects of packing on the loaves when they reach you.) I think you will agree that this bread is not at all unpleasant in either appearance or flavor. Judging from its physical character, I should say such bread would be very digestible and its proteins capable of very good absorption. In all probability the ratio of absorption would be slightly higher than is the case of the white bread. The use of such a mixture, if necessity arose, would raise the amount of available breadstuffs from 100 to 150 parts and with no loss to nutritive value.

At present market prices the No. 4 mixture works out slightly lower in price than the flour. There is not likely to be any shortage in the world's supply of corn flour, and in addition to peas there are lentils and soya beans to draw on as auxiliary sources of protein. The latter especially is exceedingly rich in flesh formers, and yields a flour which is light in color and of pleasant flavor.

I am, sir, yours, faithfully,

WILLIAM JAGO.

HOVE, SUSSEX, *February 6, 1915.*

The results are quite interesting. The loaves received appeared to us to be quite acceptable in regard to texture, flavor, and appearance.—Ed. L.

Rural Post Roads.

SPEECH

OF

HON. HUNTER H. MOSS, JR.,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 9, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 11686) to provide that the United States shall, in certain cases, aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads.

Mr. MOSS of West Virginia. Mr. Chairman, I wish to say that when I moved a little while ago to strike out all after the enacting clause, it was for the purpose of substituting some provisions which I believed would improve the bill. I wish to say I expect to vote for this bill in the event the committee does not change it. But I do think that there are some few changes which would add greatly to the efficiency of the bill. In the first place, I believe that the greatest need that we have is not to construct new roads, not to construct fine roads, but to put the roads we now have in good workable condition and make them roads along which the public can travel during the entire year. So in the bill which I introduced at this session I provided that the improvements to be made should be made with reference to making the roads in the different States uniform, rather than with reference to the population and the mileage of the different roads. It seems to me that the true scheme of road improvement now, if we want road improvement in this generation, if we want to see it, is to put the roads we now have in decent condition rather than to construct——

Mr. SAUNDERS. May I interrupt my friend?

Mr. MOSS of West Virginia. Yes, sir.

Mr. SAUNDERS. The very idea which you have in mind is also in the mind of the committee, and section 3 provides that

that very thing may be done. Every dollar of the sum that goes to any particular State as its quota may be expended by that State in the upkeep and improvement of existing roads.

Mr. MOSS of West Virginia. But it also provides for the construction of new roads, as I understand it.

Mr. SAUNDERS. It is possible, if in its judgment it is thought best and it desires to do it. But it may utilize the new roads, and provide for the reconstruction and maintenance of existing roads.

Mr. MOSS of West Virginia. The provision in this bill which requires the State to cooperate with the Government to construct all these different roads will prevent the very uniformity about which I have been speaking.

Mr. BARNHART. Will the gentleman yield?

Mr. MOSS of West Virginia. I would rather not do so now. There are many States which from the fact that they are prohibited by their constitutions from contracting indebtedness or the fact that they are financially unable to do so can not enter into the construction of roads. And therefore the result will be that in certain sections of the country we will have vast road improvement and in other sections, where the States or subdivisions can not contribute, we will have none.

Gentlemen of the House, while the bill that the committee has indorsed does not meet with my entire approval, while the amount of money appropriated is too small and the plan is imperfect, yet realizing that it is a step in the right direction, an opening wedge, and that it is as much as can be obtained from this Congress, I shall vote for it, because I sincerely believe in national aid to road improvement and because I promised my constituents to do all I could here to further that great enterprise, so vital to the prosperity, happiness, and general welfare of our people.

Two Years' Record in Congress.

EXTENSION OF REMARKS

OF

HON. FRANK O. SMITH,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, March 3 (legislative day of Tuesday, March 2), 1915.

Mr. SMITH of Maryland. Mr. Speaker, with the permission of the House, I want to say a few words and then ask to be allowed to extend my remarks in the RECORD.

The time for which I was elected as a Member from the fifth congressional district of Maryland expires on March 4. During the campaign of 1912, in which I was elected as the first Democrat from the fifth district for 20 years, I promised my people if they would elect me I would work and not talk. I have kept my promise. This is the first time I have imposed on the good nature of this splendid body of men, with whom I have been associated for two years, and I would not do so now but for the fact that I can not see this Congress adjourn without expressing to the Members as a body my thanks for the generous as well as courteous consideration I have received from both sides of the aisle. I came among you a stranger, being acquainted personally with only three Members from my own State. I have formed many pleasant acquaintances which will be remembered through the rest of my life; some of them among our Republican friends and one who is now governor of the great State of Ohio. So pleasant have my associations here been that I am reminded of a joke told by my friend from Pennsylvania [Mr. DERSHEM], which runs thus: One of the largest business houses in Philadelphia, which prided itself on the golden rule, required all clerks to tell customers the plain truth and to give some Biblical quotation for each transaction. One day a lady came and asked a clerk for a certain kind of dress goods, which when shown was priced at $2 per yard. This proved unsatisfactory, and he was asked for a better quality. He took down some of the same kind and quoted $4 per yard. This not being good enough he was again asked for a better quality. He again took down some of the same and priced it at $10 per yard. The lady said, "Give me 4 yards." The proprietor, who was standing near and heard the transaction, when the customer had gone called on the clerk for his quotation from the Bible to justify his conduct. His reply was, "She was a stranger, and I took her in." I have listened to many speeches on both sides, to which I have given careful attention, and have learned to discriminate, as I am sure the customer has also. I have also learned that while Members have at times talked for publication and to the galleries, as a whole the Representatives from the North, South, East, and West are actuated by much the same motives—the welfare of our common country.

During my short stay with you I have endeavored to perform my committee duties to the best of my ability. As a member of the Committee on Pensions I want to say I came to Congress much opposed to the system of pensions. During the first meetings of the committee I listened and learned there are two sides to this as there are to every question. I have changed my position, and I am ready to vote a just pension to every deserving case. The records of the War Department show it cost about $20,000 for every soldier killed by bullets during our Civil War, while no mention is made of those killed by disease, of the many invalids who have died after the wars, especially the Spanish-American War, leaving widows and orphans dependent on charity and the community in which they live. Justice to all demands that the Government for whom these men willingly sacrificed health, and many died, should provide, in a measure at least, for those left to the mercy of the cold world.

I was glad to be one of a committee to favorably report the bill for widows of Spanish War veterans. I am glad to say I have been broadened on this subject, as my highest aim has been to do justice to everyone.

I have secured the passage of bills giving pensions and increase of pensions to eight persons, each one a worthy case. I have secured increased mail facilities for my district in 18 cases; have established 13 new post offices, 2 rural routes, with favorable reports for 2 more routes. I have secured promotions and temporary and permanent positions for 125 persons, all employed under civil service. I introduced the bill increasing the capacity of the powder plant at Indianhead, in my district, carrying an appropriation of $500,000, which was incorporated in the naval appropriation bill. When this is completed it will mean a saving of $587,000 per year on the same amount of powder as used in 1913, thus returning the initial cost of the enlargement in one year. I secured the committee's favorable report on a bill introduced to construct a fish experimental station for treatment of diseases of fish and propagating new species. I am sorry to say that this will be left on the calendar for want of time to pass it. This is sorely needed by the Bureau of Fisheries, who are making every effort to increase the supply of food fish, which is decreasing rapidly. The most important bill I have introduced is for a sewage-disposal plant for the District of Columbia. This would have received a favorable report from the committee but for want of time. I deeply regret this, as it vitally affects the health of the people of the District as well as visitors. The sewage of the entire city of Washington is being pumped into the Potomac River, causing pollution of the waters, which in turn poisons the sea food with which the river abounds. Congress owes it as a duty to the entire country to pass a bill prohibiting the emptying of sewage from any city or town in the waters of rivers or lakes. Several millions of dollars are annually appropriated to enforce the pure-food laws, and cities are allowed to cause pollution of waters abounding in fish, oysters, and all kinds of sea food by emptying the wastes of all kinds in the rivers. Chemists assert that 90 per cent of all cases of typhoid fever can be traced directly to such causes. I secured $14,800 for dredging Rockhole Creek, in Anne Arundel County; Bretons Bay, in St. Marys County, in 1914, but the Senate cut out all sums in the rivers and harbors bill except for the completion of work already begun. I have succeeded in having Piscataway, Nanjemoy, and Smiths Creeks, located in Prince Georges, Charles, and St. Marys Counties, respectively, included in the present bill for surveys, which I trust the Senate will not strike out. These creeks are sadly in need of dredging, which will aid the navigation of those waters and give better shipping facilities to a splendid section of the District.

I also introduced House resolution 709, relating to the exemption of the so-called National Geographic Society from the payment of postage on its magazine.

On January 30, 1915, in an oratorical flight by the gentleman from Pennsylvania [Mr. MOORE] he puts down modern tendencies as an "age of bunk"; but this choice terminology is given to those who oppose his views on the honor and credit of polar attainment. He says:

> We are largely in the hands of fakers, principally on the outside of Congress.

I take exception to this statement. It is an insult upon the intelligence of this august body of statesmen. If we are "principally in the hands of fakers outside," who are those inside of Congress? If we have fakers in Congress, their constituents

ought to know it; if we are swayed by "outside" fakers, at the taxpayers' expense, the public ought to know it. I insist that the gentleman from Pennsylvania make his "bunk" and "faker" message clear on the floor of Congress.

In the same "bunk" and "faker" message the gentleman from Pennsylvania points with the white finger of pride to the doings of the National Geographic Society. I ask attention to the following resolution, which is pending in Congress:

House resolution 709.

Whereas the National Geographic Society, of Washington, D. C., a private enterprise, enjoys privileges granted by the Post Office Department which are not granted to other magazines, but which the Third Assistant Postmaster General, in a letter dated January 26, 1914, says he has conceded and is conceding to the National Geographic Society; and

Whereas this discrimination by the Post Office Department in favor of the National Geographic Society means a loss of over $300,000 annually to the Post Office Department; and

Whereas since the National Geographic Society is not national (in the sense that it is not a bureau of nor connected with the National Government in any capacity whatsoever), is not geographic, is not scientific, and is not a society, but is simply and solely a private publishing house, no special privileges should be granted to it: Therefore be it.

Resolved, That the Postmaster General explain to Congress why privileges amounting to discrimination are granted to the private enterprise known as the National Geographic Society.

With the hypocrisy of the Federally suppressed mine-promoting swindlers, this so-called National Geographic Society misuses the mails and deceives 300,000 innocent victims to part with $2 each in exchange for a diploma pretending to make them national geographers. They admit a street sweeper or a diplomat's wife on the same plane, for the sum of $2, to full membership. Three hundred thousand people are thus made a party to an international humbug. Let the gentleman from Pennsylvania, the vender of "bunk" charges, explain his national dough-getting biscuit company, which by a false use of the mails pretends geography and lifts $300,000 annually from the postal revenues.

This same national dough-getting biscuit company, pretending geography, issues a picture book which it has the effrontery to call the National Geographic Magazine. As a pictorial review it has a legitimate place among fourth-class publications, but it is no more scientific, and less national, in its pretensions than Collier's Weekly or the Saturday Evening Post; and other standard weeklies and monthlies must obey the postal regulations. Why is this fake organization, the National Geographic Society, allowed to violate the postal regulations to the extent of $300,000 annually?

In these times of financial depression we are forced to issue a "war tax" to pay legitimate Federal expenses; and yet, under the false pretense of being a scientific publication of a scientific society, this National Geographic Magazine graft gets in on the ground floor of the Post Office authorities by getting its carloads of advertising matter delivered at Government expense. This injustice to the taxpayers calls for an investigation.

Just how this National Geographic pie was cut to suit the North Pole trust of Peary; how, as boasted by the gentleman from Pennsylvania, resolutions now known to carry false statements reached the floor of Congress to boost the claims of Engineer Peary and to deny the claims of Dr. Cook, is another phase of national injustice that calls for investigation.

The postal privileges now granted to the National Geographic clique of political favorites can be claimed by hundreds of private organizations, who, with honest intentions, issue publications, such as labor unions and woman suffrage, and so forth. By what rule of justice are these denied the postal privileges of the geographic picture-book concern?

The $300,000 thus annually wasted would go far to help the problem of woman suffrage, wherein the mother of future generations seeks a hearing at the bar of public opinion.

To refer again to the vital question of sewerage, I may add that the United States Naval Academy at Annapolis, Md., empties the sewage in the harbor within 200 yards of an oyster bed. Cities in Pennsylvania empty all sewage in the Susquehanna River and tributaries, which eventually flow to Chesapeake Bay, thereby aiding in pollution of waters where sea food abounds, and to prevent which the city of Baltimore has spent $23,000,000 and has completed the best sewage-disposal plant in the world, which should be done by the Federal Government.

The public health is of such vital importance that I insert here some information furnished me by Gen. John Floyd King, former Member of Congress from Louisiana, whose life effort has been the health of the public and preservation of the white race, a part of which bears strongly on the pollution of waters, which my bill to construct a sewage-disposal plant for Washington was designed to prevent:

THE HEALTH MENACE OF ALIEN RACES—HOW THE NEGROES AFFLICTED US WITH HOOKWORM AND MALARIA—WHAT DISEASES THE CHINESE AND JAPANESE HAVE—THE LESSONS OF HISTORY.

[By Dr. Charles T. Nesbitt, health director, Wilmington, N. C.]

The most serious problem that Americans face when any large numbers of an alien race enter this country is the menace to the health of the people of the entire Nation.

We are just learning how terribly the negro has been revenged upon us for his enslavement. He brought malaria and the hookworm from his native jungle, and though he showed little effects of them himself, he has spread them among us with fearful results.

When the negroes were brought from Africa they came practically immune to the effects of malaria. They unconsciously carried the organisms of this disease and furnished a never-failing source of infection for the nonimmune whites. For centuries the negroes' ancestors had carried infection, until their red blood cells had accepted the masses of malarial protoplasm as permanent guests and had provided for their occupancy. The southern whites had chills and fever annually, and blamed the mists from the swamps until the discoveries of Lavaran and Ross disclosed the true source of infection and mode of transmission, and Miller's studies in the Delta of the Mississippi River proved that the immune negro could carry virulent malarial organisms in his blood stream without discomfort to himself. In the same way negroes carry various intestinal parasites. The poorer white children of the South became pot-bellied, anemic, and dull witted by thousands. They were in many cases even pitifully inferior, physically and mentally, to the little negroes of the same region. Many did not improve as they grew older, but continued in much the same condition. The medical men treated them for every ailment that could possibly produce the presenting symptoms without improving their condition in the least. They settled into the hopeless state of apathy that has checked progress in every line, individual and otherwise.

In 1902 Dr. Stiles discovered that the hookworms, so common in Africa, which were carried in the American negroes' intestines with relatively slight discomfort, were almost entirely responsible for the terrible plight of the southern whites. It is impossible to estimate the damage that has been done to the white people of the South by the diseases brought by this alien race. Physical inefficiency and mental inertia are its results. Every enterprise that locates in the South to-day, if it uses the available white labor of the South, must reckon on not more than 40 to 60 per cent of normal efficiency. As this phase of the race problem continues to be studied it is inevitable that further investigation will produce still stronger evidence that the races can not live together without a great damage to both; so great that even now the ultimate extinction of the negro in the United States is looked upon by many as assured. We also know that as his extinction progresses it is carrying tremendous damage to the white race.

The Chinese, Japanese, and East Indians are racially alien to us. The question of the protection of the health of the white race makes a study of the diseases of these people of more importance to us than even their economic or social characteristics. If eastern immigrants are likely to deplete the vitality of our people as the negro has done, it is a far more serious question than if they merely force an unwelcome economic competition upon us. Let us examine for a moment the destructive potentialities of the Mongolian race.

History proclaims Asia as the fountain from which has flowed the most destructive pestilences that are recorded. Asiatic cholera, bubonic plague, typhus, smallpox, and malaria are reported weekly as being present in the ports of China, India, and Japan. The United States Public Health Service reports that 2,721 cases of cholera occurred in Japan during 1912. For many generations the Mongols have been afflicted with these diseases. May not they have acquired such a high state of immunity to their effects that they could be the unconscious carriers of virulent infective organisms, and as unconsciously transmit these diseases to the whites of America, just as the negroes have transmitted hookworm and malaria to the whites of the South?

One of the most serious problems in preventive medicine is the typhoid carrier. It is estimated that 3 out of every 100 people who recovered from typhoid continue to carry in their intestines and elsewhere in their bodies active and virulent typhoid germs for months, and even for years. Many serious epidemics of typhoid have been traced to this source. These carriers have been rendered immune, and unconsciously tolerate the germs. Carriers of diphtheria and pneumonia are common among us, and it is now claimed by responsible authorities that the infection of scarlet fever, measles, and whooping cough is perpetuated by the continued presence of virulent organisms in the noses and throats of persons who have acquired immunity. The longer the race carries an infection the greater the possible number of immune carriers. Is it, in the light of these facts, unreasonable to assume that the Mongolian race, by reason of many generations of infection with cholera and plague, has developed within itself a number of immune carriers of these diseases who may, if they are allowed to come among us, become centers of infection wherever they may go?

Is it possible for the Mongols to introduce among the whites of the Pacific slope an insidious chronic disease which will subject them to the same sort of physical deterioration as that which the hookworm has produced in the South?

In Japan the Japanese liver fluke (opisthorchis) is as common in some parts as the hookworm is in Africa. Katasurada, a Japanese investigator, reported 654 infected persons in 1,075 persons examined, or 60.8 per cent. The disease which is produced by this infection is serious, chronic, and devitalizing, and among the Japanese has a death rate of 16 per thousand. This is even more serious than the hookworm, for, despite the immense damage hookworm does, it rarely appears as a cause of death in the South. The result of the infection of the white race which has no hereditary immunity to liver fluke would be almost sure to be very serious. And about 20 cases of the disease have already been recognized in the United States.

Japan and China appear to be the especial homes of the lung fluke (Paragonimous Westermanii). The parasite in this disease invades and destroys the lungs. The disease produced is extremely chronic, is accompanied by more or less serious hemorrhages, and is often mistaken for consumption. Various Japanese physicians report that from 2 to 4 per cent of all their patients with diseases of the lungs are infected with lung fluke. It is stated that in certain parts of Formosa 15 per cent of the inhabitants have this disease.

There are still two other insidious and destructive parasitic diseases which are extremely common in Japan and China: Blood fluke disease, called "wading fever" in the Orient, which is extremely hard to recognize by the ordinary methods of examination; and amœbic dysentery, already known to be widely distributed in the United States.

Every one of the parasitic diseases mentioned above is quite as capable of destroying the efficiency and lives of the white race as is the hookworm disease. To be able to recognize these parasites the physician must have especial training in the microscopic study of parasites. There is no known treatment for any of them that is positively curative. For the first three there is no treatment whatever known.

According to the public-health reports, "During the months of November and December, 1912, among the intending emigrants from Japan to the United States about 70 out of every 100 were found to have hookworm disease." Although there are no statistics on hookworm in Japan, it is probable that the infection is generally disseminated by the use of human excrement in fertilization.

The citizens of the Pacific slope are not only in danger of being exposed to the effects of hookworm infection, which has already damaged so seriously nearly a fourth of our white population, but in addition they are being exposed to not less than four other dangerous parasites which produce diseases difficult to recognize, which slowly and surely destroy human efficiency and life, and for which there is no known positive cure.

The last paragraph of the quotation from the public-health reports contains the key to the method of transmission of the parasite. All are conveyed from one person to another through excreted matter. It is possible to control excrement infection of this kind only in thoroughly sewered cities where there is complete sanitary disposal of sewage. Wherever human excreta is disposed of otherwise these parasites must be spread, for the life cycle of every one of them is nicely adjusted so that they may exist both inside and outside of the body in one or more of their transitional stages.

It is obvious that in the country microscopic disease carriers may reach new human victims in several roundabout ways, as the hookworm is distributed in the South. When, as is the habit among oriental gardners everywhere, the infected excreta are mixed with water and actually applied to growing edible plants which are being prepared for the public market, it requires no imagination whatever to understand how tremendously the chances of general infection are multiplied. At least two of these parasites enter the body through the skin, one from the earth and the other from water. The pollution of the soil with which we must come in constant contact and the pollution of streams and water supplies generally with infected excreta is made doubly certain when the deliberate distribution of excrement is made an important element of agriculture.

There is but one way to deal with the untreatable parasitic disease. It must be prevented, and it is only through the most unremitting and conscientious public-health regulations that this can be done.

With one experience with the subtle death-dealing proclivities of an alien race, it is certainly the part of wisdom to run no further risks. And even the suffering which the negro has inflicted upon the South is light compared with what history shows other people have suffered when exposed to the diseases of alien races.

The revelations of modern scientific research indicate that the true history of the decline and fall of the great ancient civilization will be written by the students of contagious and infectious diseases.

The importation of epidemic and parasitic diseases from Africa is now urged as an important cause of the downfall of the Roman Empire. It would tax the imagination but little to apply the same reasoning to the fall of Greece. The terrible plague which broke out in Rome, B. C. 463–466, is recorded as having begun in Ethiopia, south of Egypt. It was carried into Italy by the invading Peloponnesian army, the gift of an alien race. Thirty years later the Peloponnesians carried the same plague to Athens—the sickness so carefully described by Thucydides.

During the 30 years, B. C. 405–375, in which Sicily was invaded by the Carthaginians, four distinct epidemic distempers, all of frightful severity, which afflicted Carthage and its armies without touching either Syracuse or the Sicilian Greeks, became the most destructive enemies of the Carthaginians.

"The plague of Antonius" (A. D. 164–180) swept the whole Roman Empire from its eastern to its western boundaries. It was brought from Syria by troops returning from that region. In the year 166 this plague appeared in Rome itself, and again in 168. "Entire cities and districts were depopulated, forests springing up where had been populous places. In its last year it became terribly destructive, often killing as many as 2,000 a day."

In 1333 the "black death" appeared in the interior of China. It reappeared in the island of Cyprus in 1347, and from there spread throughout Europe—even to Iceland and Greenland. It reached Russia in 1351, and it was then a marvel that it was checked by the Caucasus Mountains, which separate Europe from Asia. We can understand now that, having arrived at the point of its departure, Asia, this infection found a people who had an acquired immunity and its course was checked. Hecker estimates the loss of life in Europe from this plague at 25,000,000.

Beginning in 1703, bubonic plague appeared in Europe from Asia: In 1709 300,000 persons died from this disease in East Prussia alone. Thirty thousand died in the city of Danzig. It disappeared in 1714 and again reappeared in 1720 in southern France. This disease is still endemic in Asia and has been prevented from spreading over the earth only by the utmost vigilance.

The historian and the economist are concerned only with the facts and effects of these plagues. The student of these diseases, in the light of recent discoveries, knows that every pestilence was the result of the introduction of a disease, common to one race, into the midst of a different race which had never known it.

And all these facts are but a warning to the people of the United States. All these visitations, from the plagues that attacked Rome to the spread of the hookworm in the South, are a warning of the dangers of the diseases of an alien race.

With these imperfect remarks I leave you, taking with me the kindest remembrances of the membership of this distinguished body for their uniform patience and consideration, as well as the officers and employees who have assisted in every possible way a new Member in the discharge of his duties to the most complex and exacting district in Congress.

My Platform.

EXTENSION OF REMARKS

OF

HON. A. W. LAFFERTY,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. LAFFERTY. Mr. Speaker, if I were asked to state my deepest political principles in one sentence, I would say that I favor a liberal protective tariff, genuine farm credits, and more and more Government-owned utilities until all natural monopolies shall be owned and operated by the people.

The fight is on between the people and the 200,000 men who now own 70 per cent of the wealth of the United States, and it is on in earnest. I agree with that group of 200,000 men upon but one thing, to wit, that we should at all times maintain a liberal protective tariff upon American manufactures and the products of American farms. We desire to pay higher wages than are paid in other countries. We desire to have a shorter workday than other countries have. We desire to prohibit child labor, while other countries do not. Therefore we must have a tariff that will protect us from free competition with such other countries. I voted against the Underwood tariff bill when it was passed.

But while tariff protection will help to bring prosperity to the American people, it will not bring to them all the prosperity to which they are entitled.

For illustration, during the past 50 years, while the country has grown in wealth from $25,000,000,000 to $120,000,000,000, that wealth has gone into the hands of a very few men, and at no time has the average citizen had more than a meager living.

I say that this glaring inequality in the distribution of the Nation's earnings is not due to the fact that a few men have all the brains and all the initiative, as some claim, but it is due to conditions which are inherently wrong and which would be remedied if the common people could but once get a majority in the American Congress.

The two things absolutely necessary to be done, in my opinion, in order to start the flow of future wealth toward the people are these:

First. The Government must own and operate those utilities which are monopolies, and through the private ownership of which the people are now being milked drier and drier each year.

Second. The Government must provide for a genuine system of rural credits. By this I mean a system of direct loans of gold Treasury notes to the farmers upon their lands upon first mortgage, thereby turning into the common Treasury hundreds of millions of dollars each year now going to the money power for the loan of "credit" to the farmers.

That both of these reforms mean a fight to the death with the money power goes without saying. But this is just the fight the American people must make if they are ever to achieve a victory that will be worth a row of pins.

As a last stand against public ownership of national monopolies the money power is advancing the argument that "the 1,700,000 men employed constitute a political machine."

Now, if it be true that the 1,700,000 railway employees, if working for Uncle Sam, would "run the country for their own benefit," as some claim, what may we reasonably suppose the same 1,700,000 men will do as servants of the private railroad corporations?

It must be admitted that the 1,700,000 employees are just as powerful a force when working for the money power as they would be working for Uncle Sam. But the argument seems to be that the votes of this great army of men will be exerted for good while under the benign influence of private railroad corporations, while they would vote to destroy the Republic should they once be transferred to the service of all the people of the United States. It is said that these men would be so greedy for larger wages that they would "control elections."

Everyone who knows anything knows that the taxpayers, who would not be on the Government railroad pay roll, would constitute 98.3 per cent of the population, and therefore any Congressman or Senator who might vote to unduly increase the wages of the railway employees would be beaten to death at the next election.

But these same 1,700,000 railway employees do at the present time constitute a dangerous political machine because they are

subject to the secret coercion of the railroads, and they are deceived, defrauded, and coerced by their corporation employers into voting for stand-pat Democrats and Republicans for the United States Senate and the House of Representatives.

Only last night I saw a folder which the railroads are circulating very generally right now among their employees and the general public. It is a lie—every word of it. It is as follows:

DESPERATE CONDITION OF OUR RAILROADS.

The railroads of the United States are now literally on their knees praying for relief. Unless they get that relief they will soon be on their backs, and when they are on their backs we will have such trouble in this country as you and I do not care to contemplate.

The folder goes on to say that the railroads must be relieved from the interference of commissions and prosecuting attorneys, and from the agitation of "the politicians." It also claimed that the railroads took in gross in 1914 $70,000,000 less than in 1914, and that an increase of $36,000,000 in taxes made their "net loss" $106,000,000. A baser lie was never handed out to a free people in order to get sympathy for a thieving business.

The truth is that the railroads for 1914 did not sustain a loss at all, but their net income, over and above all operating expenses and taxes, depreciation, and so forth, was over $800,000,000. The same was true in 1913, and in 1913 the railroads made, net, $100,000,000 more than in 1912. (See actual figures, page 46, 1913, Interstate Commerce Commission Report.) The gross income of the railroads for 1913 was $3,057,000,000, which is thirty hundred million dollars.

In the folder referred to the railroads try to convince their employees and the public that a falling off of less than $1 in $30 in 1914 from 1913 puts them on the verge of bankruptcy. In this way the railroads now intimidate their 1,700,000 employees and their families to vote for reactionary candidates. Under public ownership these men would vote for the benefit of Uncle Sam, for the benefit of all the people, and not merely for the benefit of the private railroad corporations.

I observe with much regret that former Senator Bourne, now of Washington, D. C., has come out squarely for private ownership of the railroads. Mr. Bourne made a vigorous speech against public ownership before the American Civic Federation in New York recently, and Senator GALLINGER, of New Hampshire, read the same into the CONGRESSIONAL RECORD during the filibuster against the ship-purchase bill.

Senator Bourne sees in Government ownership a dangerous "political machine which would destroy the Republic." I see in private ownership of the railroads the same machine.

Excepted Positions Under the Civil Service.

EXTENSION OF REMARKS

OF

HON. NICHOLAS J. SINNOTT,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 29, 1915.

Mr. SINNOTT. Mr. Speaker, on June 28, 1913, W. F. Arant, superintendent of Crater Lake National Park, in Oregon, was summarily removed after he had refused the request of the Secretary of the Interior for his resignation.

Mr. Arant had held this position for some 11 years. The position was known under the civil service as an "excepted position," the appointment not having been made through a competitive examination. Mr. Arant contended that this position was one under the classified civil service and that he was entitled to the protection of section 6 of the act approved August 24, 1912, against summary removal. In this contention he was upheld by the Civil Service Commission. However, on June 23, 1913, the Attorney General held that section 6 of the act approved August 24, 1912, did not apply to "excepted positions," and the summary removal of Mr. Arant followed.

Mr. Arant submitted the question of his removal to the National Civil Service Reform League, which rendered an opinion on September 4, 1914, that his removal was illegal.

Mr. Arant has furnished me with a copy of the opinions and correspondence in this case, which I desire to have printed in the CONGRESSIONAL RECORD on account of the many thousands of Federal employees affected by the decision of the Attorney General as well as on account of the widespread interest taken in this case in my district:

KLAMATH FALLS, OREG., *January 5, 1915.*

Hon. N. J. SINNOTT,
United States Congressman, Washington, D. C.

MY DEAR MR. SINNOTT: I am mailing you to-day under separate cover a number of the papers relating to the unlawful removal of myself as superintendent of the Crater Lake National Park on the 20th of July, 1913.

These papers consist of letters, telegrams, orders, and decisions and other papers which I deem most pertinent to and having the most direct bearing upon the case.

This résumé of the case is given by these papers as nearly as is practicable in the order of developments and the correspondence as it occurred, and are marked as Exhibits 1, 2, 3, etc., from the beginning of the matter to the present time:

Exhibit 1. Section 6 of the Post Office appropriation act approved August 24, 1912, and which was forwarded to me by the Secretary of the Interior, just seven days after its approval, with the warning to be "governed accordingly."

Exhibit 2. The letter of the Secretary requesting my resignation as superintendent of Crater Lake National Park, which, in view of the preceding exhibit as well as other evidences that the position which I hold was clearly and unquestionably in the classified service, I declined to comply with.

Exhibit 3. My answer to the Secretary's letter of June 7, protesting against the arbitrary removal, when under the civil-service laws and rules I was entitled to be furnished with the reasons in writing for my desired removal, and citing numerous and ample reasons why I refused to comply with the Secretary's request to resign.

Exhibit 4. The Secretary's arbitrary order of removal from the office, and for the same reasons as given for declining to resign as requested by the Secretary I still declined to surrender the office.

Exhibit 5. My letter to the United States Civil Service Commission, transmitting copy of my protest against being arbitrarily removed from my civil-service position without being apprized of any fault that had been found with my administration or management of the affairs or business of the park.

Exhibit 6. Letter of the United States Civil Service Commission to the Secretary, informing him that I had written the commission relative to the removal matter, together with notice to the Secretary that positions under Schedule A, one of which this is, were in the classified service, and that section 6 of the act of August 24, 1912, relating to removals, which applies in direct terms to all classified employees, applies also to persons occupying positions excepted from examination under Schedule A.

Exhibit 7. Letter from the United States Civil Service Commission to you, transmitting a copy of the commission's letter of June 7, 1913, to the Secretary of the Interior above mentioned, with his reply to same, and mentioning opinion of the Attorney General.

Exhibit 8. Letter from Mr. J. H. Carnahan, attorney of Klamath Falls, informing you that I had been removed by the Secretary of the Interior and requesting you to have removal order stayed until acted upon by the Civil Service Commission.

Exhibit 9. Telegram from you to Mr. Carnahan, communicating to him Secretary Lane's views relative to the applicability of the civil-service rules to the case and stating that the Secretary refused to stay the order of removal.

Exhibit 10. Telegram from you to Carnahan that Civil Service Commission had notified Secretary Lane that I was subject to civil-service rule, but that commission has no power to enforce opinion or stay order.

Exhibit 11. Telegram of Secretary Lane commanding me to transfer all property to Supt. Steel.

Exhibit 12. Telegram from me to the Secretary, informing him that the United States Civil Service Commission had decided that I was de jure superintendent and declining to surrender the office, believing the removal order unlawful.

Exhibit 13. Telegram from me to the Secretary, expressing willingness to make complete accounting, but refusing to relinquish the office, being convinced that the removal order was without the authority of law.

Exhibit 14. Night letter informing the Secretary that I was at the superintendent's headquarters in the park, ready, willing, and able to perform all duties and work of the office of superintendent, and soliciting his authorization and instructions.

Exhibit 15. Telegram, July 8, 1913, to the Secretary of the Interior, requesting that I be retained in the office of superintendent of the park, and signed by 13 of the leading business men and officers of the county and State, both Democrats and Republicans and nonpartisans.

Exhibit 16. My letter of November 5, 1913, to you, outlining in detail the various matters relative to and moves that were made from the inception of the removal matter, with reference to correspondence, both by mail and by wire, the acts of the United States marshal of throwing me out of my office by force, the driving of my family out of the house, and taking from my rightful possession the office and fixtures, the records of the Government business, the money in my possession belonging to the Government, besides my own private property and money, and putting Will G. Steel in possession and in authority in the park.

Exhibit 17. Opinion rendered June 23, 1913, by the United States Attorney General that the term "classified civil service," in section 6 of the act of August 24, 1912, should not be held to include excepted positions, unless such positions have been filled as competitive positions are filled.

Exhibit 18A. Letter of Clement S. Ucker, chief clerk to the Secretary, informing me that an agreement had been made between the Department of the Interior and the Civil Service Commission placing the position of superintendent of the Crater Lake National Park for the time being outside the operation of the civil-service rules.

Exhibit 18. Your letter of June 23, 1913, to me, stating that the secretary of the Civil Service Commission had informed you that Mr. Ucker was in error in stating to me that there was such agreement, and that he, the secretary of the commission, had said to you that in his opinion I could not be removed except for reasons stated in section 6, referred to in my letter to the Secretary of the Interior.

Exhibit 19. Telegram from the Secretary of the Interior stating that the opinion of the Attorney General overruled the Civil Service Commission and holds section 6 of the postal act of August 24, 1912, does not include excepted positions.

Demands that I make accounting and transfer property to Supt. Steel, Also says, "Failing which, matter will be taken by Department of Justice and your successor put in possession."

Exhibit 20. Letter from the secretary of the National Civil Service Reform League, transmitting to Hon. Binger Hermann, of Roseburg, Oreg., opinion of the law committee of the said league upon the construction of section 6 of the Post Office appropriation act of August 24, 1912.

Exhibit 21. Letter from Mr. Hermann transmitting to me the opinion of the league and expressing his belief that the said section 6 of the act of 1912 does include excepted positions.

Exhibit 22. The opinion of the law committee of the National Civil Service Reform League upon the construction of section 6 of the Post Office appropriation act of 1912.

This opinion of the law committee of the league, composed as it is of some of the most eminent and able lawyers of the United States, among whom is the Hon. Charles J. Bonaparte, who was Attorney General under President Roosevelt's administration, dissents from the opinion of Assistant Attorney General Harr, and which was approved by Attorney General McReynolds, that such officers have "an arbitrary right of selection" to excepted positions, and further says: "The law committee therefore concludes that unless the procedure prescribed by section 6 of the Post Office Department appropriation act was followed the removal of the superintendent of the Crater Lake National Park was illegal."

Exhibit 23. Decision of the Court of Appeals of the District of Columbia overrules Justice Barnard and holds that Samuel T. Kalbfus, a civil-service appointee, having been arbitrarily removed from his position without notice and opportunity for hearing, the procedure prescribed by section 6 of the postal act of 1912, that he had never been out of the office, although illegally excluded from it; and holds the office has never been vacant, but that Mr. Kalbfus has been both in law and in fact the lawful officer.

Exhibit 24. Decision of the United States Supreme Court that Wickersham, a civil-service employee in the office of the surveyor general of Idaho, being suspended without the authority of law, was entitled to compensation during the period of such unlawful suspension.

Exhibit 25. Letter of transmittal with my vouchers for compensation as superintendent of the park for the month of October, 1914. Such vouchers have been transmitted by me regularly each month since and including July, 1913. This is the mode authorized by department letter of June 1, 1903.

Exhibit 26. Department letter acknowledging receipt of letter and vouchers for compensation as superintendent but refusing payment of my claim. Each month from July, 1913, to December, 1913, I received a similar letter from the department, but during each month of 1914 my letters and claims have been entirely ignored.

Exhibit 27. Letter from the Secretary of the Interior to the United States Civil Service Commission acknowledging receipt of its decision that I could not be removed except for cause and reasons given in writing with notice and opportunity to be heard, and informing the commission of the opinion of the Attorney General.

Exhibit 28. Letter from the United States Civil Service Commission of July 16, 1913 (just 23 days after it had emphatically and unconditionally decided the case in my favor), informing me that in view of the opinion of the Attorney General that my protest afforded no basis for action by the commission.

Exhibit 29. Letter of the Civil Service Commission to Mr. J. H. Carnahan, of Klamath Falls, among other things, citing the opinion of the Attorney General as the reason why the commission does not assume jurisdiction to investigate removals from excepted positions.

Exhibit 30. Letter of J. H. Carnahan to Civil Service Commission, arguing that the commission having on the 27th of June, 1913, plainly and unequivocally decided that I was subject to civil-service rules and that the Secretary could not remove me except for cause and in compliance with section 6 of the Post Office appropriation act of August 24, 1912, that it should stand by its decision, and citing many opinions of Attorney General that "it would not be proper for the Attorney General to attempt the construction of regulations of the Civil Service Commission; that is a matter entirely within the province of the commission," and holding that the Attorney General has not the jurisdiction to overrule the Civil Service Commission.

Exhibit 31. Letter from the Civil Service Commission to J. H. Carnahan, admitting that it had decided that section 6 of the postal act of 1912 included excepted positions as well as competitive positions, but claims that the opinion of the Attorney General to the contrary "leaves such positions in exactly the same status with regard to removals that they always previously occupied," notwithstanding the commission in its letter of June 27, 1913, to the Secretary of the Interior said: "In the view of the commission positions excepted from examination under Schedule A of the rules are within the classified service, and section 6 of the act of August 24, 1912, relating to removals which applies in direct terms to all classified employees applies also to persons occupying positions excepted from examination under Schedule A."

Most sincerely and respectfully,

W. F. ARANT.

EXHIBIT 1.

DEPARTMENT OF THE INTERIOR,
Washington, August 31, 1912.

CIRCULAR.

The following excerpt from the act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1913, and for other purposes, approved August 24, 1912, is published for the information of the officers and employees of this department:

"SEC. 6. That no person in the classified civil service of the United States shall be removed therefrom except for such cause as will promote the efficiency of said service and for reasons given in writing, and the person whose removal is sought shall have notice of the same and of any charges preferred against him, and be furnished with a copy thereof, and also be allowed a reasonable time for personally answering the same in writing, and affidavits in support thereof; but no examination of witnesses nor any trial or hearing shall be required except in the discretion of the officer making the removal; and copies of charges, notice of hearing, answer, reasons for removal, and of the order of removal shall be made a part of the records of the proper department or office, as shall also the reasons for reduction in rank or compensation; and copies of the same shall be furnished to the person affected upon request, and the Civil Service Commission also shall, upon request, be furnished copies of the same: *Provided, however*, That membership in any society, association, club, or other form of organization of postal employees not affiliated with any outside organization imposing an obligation or duty upon them to engage in any strike, or proposing to assist them in any strike, against the United States, having for its objects, among other things, improvements in the condition of labor of its members, including hours of labor and compensation therefor and leave of absence, by any person or groups of persons in said Postal Service, or the presenting by any such person or groups of persons of any grievance or grievances to the Congress or any Member thereof shall not constitute or be cause for reduction in rank or compensation or removal of such person or groups of persons from said service. The right of persons employed in the civil service of the United States, either individually or collectively, to petition Congress, or any Member thereof, or to furnish information to either House of Congress, or to any committee or Member thereof, shall not be denied or interfered with."

Please note and be governed accordingly.

CLEMENT S. UCKER,
Acting Assistant Secretary.

EXHIBIT 2.

WASHINGTON, D. C., *June 7, 1913.*

Mr. WILLIAM F. ARANT,
Superintendent of Crater Lake National Park,
Crater Lake, Oreg.

SIR: I have to request that you forward to this office your resignation as superintendent of Crater Lake National Park.

FRANKLIN K. LANE,
Secretary of the Interior.

EXHIBIT 3.

KLAMATH FALLS, OREG., *June 17, 1913.*

Honorable SECRETARY OF THE INTERIOR,
Washington, D. C.

SIR: I am in receipt of your letter, dated the 7th instant, in which you call for my resignation, same to take effect upon the appointment of my successor. In reply thereto I have to state that I had always understood that my position was one embraced in the classified civil service of the United States, and this being so I was not subject to removal without cause, but only for good reasons other than religious or political reasons, and for the good of the Government service. I believe that the following, taken from section 6 of the act of Congress of August 24, 1912, covers my case fully, and I have to request that this law of Congress be followed in making a change in my position:

"SEC. 6. That no person in the classified civil service of the United States shall be removed therefrom except for such cause as will promote the efficiency of said service and for reasons given in writing, and the person whose removal is sought shall have notice of the same and of any charge preferred against him, and be furnished with a copy thereof, and also be allowed a reasonable time for personally answering the same in writing * * * and copies of the same shall be furnished to the person affected upon request, and the Civil Service Commission also shall, upon request, be furnished copies of the same."

Again, by rule 2, section 1, of the civil-service act, rules and Executive orders, edition of February, 1912, it is provided as follows:

"The classified service shall include all officers and employees in the executive civil service of the United States, heretofore or hereafter appointed or employed, in positions now existing or hereafter to be created, of whatever function or designation, whether compensated by a fixed salary or otherwise, except persons employed merely as laborers and persons whose appointments are subject to confirmation by the Senate."

Again:

"* * * No discrimination shall be exercised, threatened, or promised by any person in the executive civil service against or in favor of an applicant, eligible, or employee in the classified service because of his political or religious affiliations." (Part of sec. 2, rule 2, same.)

The foregoing rules, as well as those hereinafter cited, were promulgated by the Civil Service Commission in pursuance of the following provision from the act of Congress of January 16, 1885 (22 Stat., 403):

"That it shall be the duty of said commissioners (civil service)—

"First. To aid the President, as he may request, in preparing suitable rules for carrying this act into effect, and when said rules shall have been promulgated it shall be the duty of all officers of the United States in the departments and offices to which any such rules may relate to aid, in all proper ways, in carrying said rules, and any modifications thereof, into effect." (Sec. 2 of said act of Congress.)

Prior to the act of Congress of August 24, 1912, heretofore referred to, there seemed to be some doubt as to the right of an employee in the classified civil service, who was not appointed as the result of a competitive examination, to be served with notice and charges before removal or reduction or other form of punishment, under the express provisions of rule 2, section 3, of said Civil Service Rules and Regulations of 1912, and the decisions thereunder, it being the ruling of the Civil Service Commission, apparently, that only those should enjoy all the rights of a competitive employee who was appointed to one of the "excepted" positions as the result of a competitive examination.

This ambiguity and doubt, however, are forever set at rest by the act of Congress of August 24, 1912, heretofore referred to, for it is therein expressly provided that "* * * no person in the classified civil service of the United States shall be removed therefrom except for such cause as will promote the efficiency of said service (civil service), and for reasons given in writing; and the person whose removal is sought shall have notice of the same and of any charges preferred against him, and be furnished with a copy thereof * * *."

It is not only provided that every person in the classified service shall be secured against removal without other than political or religious cause, but it is further provided that he must be actually served with notice in writing "and be furnished with a copy thereof," it being the plain intent of Congress when it passed this act to prevent removals of all persons in the classified service except for valid cause, and not then except upon notice and service of the charges upon the delinquent employee. It contemplated that removals should not be made except for misconduct, inefficiency, etc., and for the best interests of the service. I have not been apprised of any shortcoming in the manner in which I have filled the position of superintendent of the Crater Lake National Park in Oregon, although I was its first superintendent, and during the 11 years of my incumbency have brought it from an absolutely new and undeveloped proposition to the high state of development and improvement of which the park now boasts. And during this long period of my incumbency, which has endured the vicissitudes of many political changes, there has never been a single

charge made against me of which I was served with notice by the Interior Department. In fact, everything during all these years has seemed to go along entirely to the satisfaction of everybody. The public has been entirely satisfied with my management of the business of the park, and the present state of road and other development will demonstrate the fact that the small annual appropriations which have been made for the park have been utilized economically and to the very best advantage. Latterly I may have unwittingly, but certainly never intentionally, displeased certain persons who were operating franchises in the park, but I have had an eye single to the very best interests of the Government and the convenience of the general public in my dealings with this concern, and I have endeavored to be entirely fair with them, and do not have the slightest doubt but what I have been eminently fair and just with them.

I have never heard one word of complaint against the manner in which I have run and conducted the business of the park and it does seem to me to be an injustice to call for my resignation, even though in the easiest and most diplomatic way possible, when no complaint is made against me for the way I have done the business connected with the park and accommodated the public travel in the same. If there were charges of delinquency, incompetency, or inefficiency pending against me I could understand why I, an employee in the classified civil service under the protection of the civil-service rules (which surely have in the past meant a very great deal), should be requested to resign, but in view of the fact my record is clear I am at a loss to understand why I should be removed from my classified civil-service position. Surely the civil-service rules should protect me, and I purpose invoking them in my behalf in this emergency, and I do not say this in any ill spirit or by way of threat.

It may be that the following, from the letter of Mr. Clement S. Ucker, of the Interior Department, dated January 15, 1913, is being followed in this case, but if such is the fact, I wish to protest most vigorously against any such action because I believe it to be arbitrary and unauthorized:

"* * * As I advised you in letter of January 7, 1913, you have no civil-service status, the position which you occupy is 'excepted'; that is, it would be under civil service if it were not for the fact that by agreement between this department and the Civil Service Commission it has been, for the time being, placed outside the operation of the civil-service rules; consequently, while you are holding a position in the classified service, by reason of such position being 'excepted' you are subject to removal at any time at the pleasure of the Secretary of the Interior."

Surely Mr. Ucker was in grave error when he made the above statements. How could it be possible, having in view the spirit of the civil-service laws and the regulations promulgated thereunder by the Civil Service Commission and which have been lived up to by said commission, that such an arrangement could be entered into between one of the great departments of the Government and the commission to thwart the very purpose which it was intended by Congress should be accomplished by the civil-service law, and especially by the law of August 24, 1912, heretofore quoted? If special agreements like the one supposed by Mr. Ucker could be entered into at will and without assignment of reason—in other words arbitrarily—the civil-service law would become a fugitive thing to be used only where it did not come counter to political consideration. I do not believe that any power exists for the action taken in said letter of January 15, 1913, and I beg leave to enter my protest against my removal from my position without cause.

Very respectfully,

W. F. ARANT.

EXHIBIT 4.

[Telegram.]

WASHINGTON, D. C., *June 28, 1913.*

Supt. ARANT, *Crater Lake, Oreg.:*

Answering letter 17th, you are hereby removed from position superintendent Crater Lake Park, effective close June 30. Transfer property new Supt. Steel July 1.

LANE, *Secretary.*

EXHIBIT 5.

KLAMATH FALLS, OREG., *June 18, 1913.*

The CHAIRMAN UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C.

SIR: On June 7, 1913, the honorable Secretary of the Interior called for my resignation as superintendent of Crater Lake National Park in Oregon, to take effect upon the appointment and qualification of my successor.

On the 11th June, 1913, I was advised by the Secretary of the Interior that Will G. Steel, of Portland, Oreg., had been appointed my successor, and I was directed to confer with Mr. Steel and make arrangements for turning over to him the property, records, etc., of said park.

I am this day mailing to the honorable Secretary of the Interior my protest against my removal from my position, which is in the classified civil service of the United States, without cause and without apprising me of any fault that has been found with my management of the park business. I do not believe that the so-called agreement between the Civil Service Commission and the Secretary of the Interior can lawfully be entered into, for, should such be the case, the rules can be arbitrarily set aside at the will of the department and the commission and the provisions of the civil-service laws, rules, and regulations hold for naught.

I have to request that the case, as presented by the attached copy of letter to the honorable Secretary of the Interior, be passed upon by the Civil Service Commission of the United States in a judicial way and my rights determined.

Will you kindly advise me of the action taken in this matter and greatly oblige?

Very respectfully,

W. F. ARANT,
Superintendent Crater Lake National Park in Oregon.

EXHIBIT 6.

JUNE 27, 1913.

The honorable the SECRETARY OF THE INTERIOR.

SIR: In a letter of June 18, 1913, Mr. W. F. Arant, superintendent of Crater Lake National Park, in Oregon, writing from Klamath Falls, Oreg., states that he has addressed a protest against his removal to the Secretary of the Interior. The service records of the commission do not show the appointment of Mr. Arant, but it is presumed that he holds a position excepted under Schedule A of the civil-service rules, section 8, paragraph 20, which excepts from examination superintendents or officers in charge of national parks or reservations.

In the view of the commission, positions excepted from examination under Schedule A of the rules are within the classified service, and section 6 of the act of August 24, 1912, relating to removals, which applies in direct terms to all classified employees, applies also to persons occupying positions excepted from examination under Schedule A. This question, it is understood, is now before the Attorney General for an opinion.

The commission will be pleased to receive the remarks of the department to enable a proper response to be made to Mr. Arant.

By direction of the commission.

Very respectfully,

JOHN A. MCILHENNY,
President.

EXHIBIT 7.

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., July 19, 1913.

Hon. NICHOLAS J. SINNOTT,
House of Representatives.

SIR: In compliance with your request there is transmitted herewith a copy of the commission's letter of June 27, 1913, to the Secretary of the Interior, and a copy of the Secretary's reply, dated July 8, 1913, concerning the separation of W. F. Arant from the excepted position of superintendent of the Crater Lake National Park, Oreg., without compliance with section 6 of the act of August 24, 1912, relative to the procedure in removals from positions in the classified service. It appears that in an opinion of the Attorney General rendered June 23, 1913, it was held that the term "classified service" as used in the statute was used in the more popular sense of the competitive service, and that the procedure required by the statute is not necessary in removals from positions not in the competitive classified service.

By direction of the commission.

Very respectfully,

JOHN A. MCILHENNY,
President.

[Telegram.]

KLAMATH FALLS, OREG., *July 8, 1913.*

To honorable SECRETARY INTERIOR,
Washington, D. C.:

We have known Arant number of years. He is honest, upright, and able. Traveling public and park visitors uniformly satisfied with his treatment. Park development and improvement best possible under meager appropriations. We request that he be retained.

Alex. Martin, president First National Bank, neutral politics; Wm. Myer, Ashland, Oreg.; Chas. S. Moore, ex-State treasurer, Republican; Geo. T. Baldwin, ex-county judge, Klamath County, Oreg., Democrat; C. R. De Lap, county clerk, Republican; Wm. Wagner, secretary Democratic Central Committee; J. W. Siemens, president First Trust & Savings Bank; A. L. Leavitt, police judge city Klamath Falls, Republican; T. F. Nicholas, Democrat, mayor Klamath Falls, Oreg.; J. C. Smith, chief police, Klamath Falls; Henry L. Benson, Republican, circuit judge; Geo. Chastain, circuit court clerk, Democrat; Albert E. Elder, secretary Klamath Water Users' Association.

EXHIBIT 16.

KLAMATH FALLS, OREG., *November 5, 1913.*

Hon. N. J. SINNOTT,
Member of Congress, Washington, D. C.

MY DEAR MR. SINNOTT: As I wrote you four or five days ago, Mr. Carnahan, my attorney in the Crater Lake National Park superintendency matter, and I have prepared a general and tolerably complete synopsis of the case, with proceedings to date, but in addition to that we have deemed it not inexpedient that I further write you regarding some of the occurrences after the inception of the removal proceedings: As to the exact dates relative to some of the correspondence with the department, I may not exactly remember, as those letters and telegrams were in the files of the office and were taken from my possession by force, as were all other things belonging to the park, but for all practical purposes are mainly correct. On June 7, 1913, I received a letter from the honorable Secretary of the Interior, of which the following is substantially a copy:

Mr. WILLIAM F. ARANT,
Superintendent of Crater Lake National Park,
Crater Lake, Oreg.

SIR: I have to request that you forward to this office your resignation as superintendent of Crater Lake National Park.

FRANKLIN K. LANE,
Secretary of the Interior.

This I declined to do, giving as my reasons that under section 6 of the act of August 24, 1912, I was entitled to be furnished with the reasons for my desired removal in writing and be given an opportunity to be heard in my own defense; to this, on the 27th day of June, 1913, I received a telegram from the honorable Secretary in which were these words:

"You are hereby removed from the office of superintendent of Crater Lake National Park; make accounting and turn the property of the park over to the new superintendent, Will G. Steel."

In answer to this I made formal protest, copy of which was forwarded to you and copy to the Civil Service Commission, as no doubt you well remember. On the 27th day of June the Civil Service Commission rendered its decision in the case sustaining my contention that I was subject to civil-service rules, and I was so notified by the commission. Early in July, 1913, I received another telegram from the Secretary, stating that the Attorney General had overruled the decision of the Civil Service Commission, to make accounting, and turn the property of the park over to Steel. Failing this the Department of Justice will take matter up and your successor put in possession. Answering this communication, I made an accounting, but again declined to turn the property over. In the meantime I had made at least two accountings of the business and property of the park. Following this, namely, on the 18th day of July, Mr. Leslie M. Scott, United States marshal for Oregon, with deputy United States marshal, Mr. Fuller, arrived in the park, and on the morning of the 19th they came to my office and informed me that they, or, rather, Mr. Scott, informed me that he had come there to turn the office and park over to Mr. Steel. I said to him, "You have papers to serve upon me in this matter?" He said, "No; I have no papers; I don't need any." To which I at once informed him that I took the position that he was without competent authority and that I would not recognize him, nor would I obey any order of his, nor turn over the office to Mr. Steel nor to him. By this time Mr. Steel had arrived. The marshal went through the formality of turning the office over to Mr. Steel by so announcing to Mr. Steel, but I forbade Steel to attempt to exercise any authority over anything in the park without my permission, which order for the time being was not disobeyed. Following this and after a somewhat stormy session of a half hour or more, they withdrew.

The next morning, Sunday morning, the 20th of July, at 8 o'clock, the marshal; his deputy; Mr. Steel; A. L. Parkhurst, the president and manager of the Crater Lake Co., with some 10 or 12 of the company's employees, came to my office, the marshal stating that he would take possession of the office and turn it over to Mr. Steel. I still maintained my position of the previous day, that he was acting without competent authority and that I would surrender nothing. After some parlying he produced a letter from the United States district attorney at Portland, informing him that he had received instructions by wire from the United States Attorney General to have him, the marshal, go up to the park and remove me and put Steel in possession. I believe he also produced a telegram to Reames, the United States district attorney.

Upon my refusing to vacate the office or turn it over to Steel, the marshal, with the assistance of Fuller, his deputy, and with the support of the Crater Lake Co.'s employees, seized upon me and by force threw me out of my office and into the yard and returned into the house and also drove my family out of the house and took possession of the house, the office, and, besides the records and fixtures and property of the office, took my own private property which was in the office desk, consisting of my checkbook and check for $114, some cash, my stationery and postage stamps, some papers relative to a land sale representing a value of more than $5,000. Within a week these things, except some postage stamps, were returned to me. Some of the stamps I never recovered. I am writing these details of this matter that you may know exactly what was done and all that was done. I hope it may assist you in having a perfect understanding of the matter as it progressed and the final result since of the forcible ejection. I have maintained with the Secretary of the Interior that I have never been lawfully removed from the office and am at this time the lawful superintendent of the park; which, of course, is never admitted by the department.

Very respectfully, W. F. ARANT.

EXHIBIT 17.

CIVIL SERVICE EXCEPTED POSITIONS.

DEPARTMENT OF JUSTICE, *June 23, 1913.*

SIR: I beg to refer to your letter of April 25 last, requesting an opinion whether section 6 of the Post Office Department appropriation act, approved August 24, 1912 (37 Stat., 555), which prescribes regulations in respect to the removal of persons from the "classified civil service," applies to those occupying what are known as "excepted" positions.

The provision referred to reads:

"SEC. 6. That no person in the classified civil service of the United States shall be removed therefrom except for such cause as will promote the efficiency of said service and for reasons given in writing, and the person whose removal is sought shall have notice of the same and of any charges preferred against him, and be furnished with a copy thereof, and also be allowed a reasonable time for personally answering the same in writing, and affidavits in support thereof; but no examination of witnesses nor any trial or hearing shall be required, except in the discretion of the officer making the removal; and copies of charges, notice of hearing, answer, reasons for removal, and of the order of removal shall be made a part of the records of the proper department or office, as shall also the reasons for reduction in rank or compensation; and copies of the same shall be furnished to the person affected upon request, and the Civil Service Commission also shall, upon request, be furnished copies of the same * * *."

It appears that the Civil Service Commission has advised you in this matter as follows:

"The classified service comprises all those positions which on the one hand are not subject to confirmation by the Senate and on the other hand are not those of mere laborer or workmen. Positions excepted from examination under Schedule A of the rules are, therefore, within the classified service, and section 6 of the act of August 24, 1912, as it applies in direct terms to all classified employees applies to persons occupying positions excepted from examination under Schedule A."

The definition given by the Civil Service Commission of the classified service in the above statement is substantially that made by section 1 of rule 11 of the Civil Service Rules, first promulgated, I am advised, in March, 1903.

Some of the positions declared by the civil-service rules to be within the classified service, but excepted in Schedule A thereof from examination, are as follows:

"Two private secretaries or confidential clerks to the head of each of the executive departments and one to each assistant head.

"One private secretary or confidential clerk to each of the heads of bureaus, appointed by the President and confirmed by the Senate, in the executive departments, if authorized by law.

"All persons appointed by the President without confirmation by the Senate.

"Attorneys, assistant attorneys, and special assistant attorneys."

Special exceptions are made in the schedule for each department.

The result of the interpretation placed by the Civil Service Commission upon section 6 of the act of August 24, 1912, is that persons occupying the most confidential relations with the heads of departments, or for other reasons deemed advisable to be excepted from the general rule as to examination for competitive positions in the public service, can not be removed at the discretion of such heads, but only for such cause as will promote the efficiency of said service and for reasons given in writing, with notice and opportunity to be heard.

The reasons for requiring this procedure for the removal of persons occupying competitive positions are apparent. Such persons are appointed as the result of examination in accordance with the civil-service rules, by which their qualifications for the positions they hold are determined, and they are not merely the personal selection of the head of the department in which they serve. Having no arbitrary right of selection, it may well be said that the head of a department should have no arbitrary right of removal. But these considerations do not apply to persons occupying excepted positions. Since their appointment rests on personal selection, they can logically claim no better tenure. But the right of personal selection would be defeated if a person so selected could not be removed at the pleasure of the appointing power.

If, therefore, the restrictions in the act in question are applied to persons occupying excepted positions, one of the chief purposes of such exceptions—which are expressly authorized by the civil-service act (sec. 7) and rules (Rule II, sec. 3)—will be defeated. But there is nothing in the history of the act which suggests that Congress had any intention to limit the right of the appointing power to select persons for the excepted positions.

The specific cause for this legislation was a controversy about the Railway Mail Service (48 Cong. Rec., 4653–4657, 4988–5009, 5197–5241, 5625–5638, 9952–9953, 10670–10676), the positions in which are competitive, and no question of excepted positions was involved or mentioned in the debates on the matter.

The situation here appears to be analogous to that presented in the Holy Trinity Church case (143 U. S., 457), where it was held that a thing within the language of the statute was not within the statute, because not within its spirit and purpose, as shown by its history and the evil intended to be remedied.

For the reasons stated I am of the opinion that the term "classified civil service," in section 6 of the act of August 24, 1912, was used in the more popular sense of the competitive service, and therefore should not be held to include excepted positions unless such positions have been filled as competitive positions are filled, in which event, under rule 2, paragraph 3, of the civil-service rules, the person appointed is entitled to all the rights of a competitive employee.

Respectfully,

WILLIAM R. HARR,
Assistant Attorney General.

Approved.

J. C. MCREYNOLDS.

To the SECRETARY OF COMMERCE.

EXHIBIT 18 A.

DEPARTMENT OF THE INTERIOR,
Washington, January 15, 1913.

Mr. WILLIAM F. ARANT,
Superintendent of Crater Lake National Park,
Klamath Falls, Oreg.

MY DEAR MR. ARANT: On December 24, 1912, you addressed a letter to the Secretary of the Interior, asking if the position of superintendent of the Crater Lake National Park is under civil-service rules, and on the same day a similar letter to the President, which was referred to this department, making the same inquiry.

Both letters were answered in the ordinary course of business. I presume that the writing of these letters by you was prompted by a desire to ascertain your exact civil-service status, possibly with a view to predicating your future course with respect to your present office. As I advised you in letter of January 7, 1913, you have no civil-service status; the position which you occupy is "excepted"; that is, it would be under the civil service if it were not for the fact that by agreement between this department and the Civil Service Commission it has been, for the time being, placed outside the operation of the civil-service rules; consequently, while you are holding a position in the classified service, by reason of such position being "excepted" you are subject to removal at any time at the pleasure of the Secretary of the Interior.

Mr. Will G. Steel has sent to the department (generally addressed to me) a number of indorsements for his appointment to the position you now hold. It further appears from the correspondence sent by him that he has been in touch with you over the question of your vacating voluntarily your office and creating a vacancy to which he might be appointed. I have not, however, been furnished with a copy of your conclusions in answer to the inquiry which he propounded. I am about to refer this entire matter to the Secretary for his final consideration.

In view of these letters which you have written concerning your civil-service status, the indorsements, bipartisan in character, submitted by Mr. Steel, the advent of the new administration—in short, that the matter may receive careful consideration, will you not please advise me upon the receipt of this letter what your attitude and intention may be with respect to your present office prior to March 4?

Very truly, yours,

CLEMENT S. UCKER.

EXHIBIT 18.

HOUSE OF REPRESENTATIVES UNITED STATES,
Washington, D. C., June 23, 1913.

W. F. ARANT, Esq.,
Klamath Falls, Oreg.

DEAR SIR: On receipt of your letter to-day I immediately called on the Civil Service Commission. They had not yet received a copy of your letter to the Secretary of the Interior, but they will notify me as soon as they receive it. I asked for an opportunity to be heard in your behalf.

The secretary of the commission informed me that Mr. Ucker was in error as to the agreement between the department and the commission. The only agreement that was made was that the superintendency of parks should not be subject to an examination, but this, in the opinion of the commission, in no way changed the classified civil-service status of such positions.

He, however, informed me that some were contending that it does and that this matter at the present time has been referred to the Attorney General for his opinion. The secretary further informed me that in his opinion you could not be removed except for reasons stated in section 6, referred to in your letter to the Secretary of the Interior.

I shall do all in my power to see that the law is followed in your case. However, under the law I can not act as your attorney in this matter, nor for any compensation, but I shall certainly take pleasure in acting for you as Representative from the second Oregon congressional district.

With kind regards, I remain,

Very truly, yours,

N. J. SINNOTT.

EXHIBIT 19.

WASHINGTON, D. C., *July 7, 1913.*

Opinion Attorney General June 23 overrules Civil Service Commission and holds section 6, postal act, does not include excepted positions.

I demand that you account and transfer property to Supt. Steel.

Failing which, matter will be taken up with Department of Justice and your successor put in possession.

Your pay stopped June 30.

LANE, *Secretary.*

EXHIBIT 20.

NEW YORK, *September 4, 1914.*

Hon. BINGER HERMANN
(Care of H. P. Gatley),
340 Indiana Avenue, Washington, D. C.

DEAR SIR: I take pleasure in sending you herewith a copy of the opinion of the law committee of the National Civil Service Reform League on the construction of section 6 of the Post Office appropriation act of 1912.

Very truly, yours,

HARRY W. MARSH,
Assistant Secretary.

(Inclosure.)

EXHIBIT 21.

LAW OFFICE OF BINGER HERMANN,
Rosebud, Oreg., September 19, 1914.

W. F. ARANT, Esq.,
Klamath Falls, Oreg.

DEAR MR. ARANT: After a long fight, we now win out in having declared the action of the department in your case illegal, as I wire you to-day, and now inclose herein the decision of the National Civil Service Reform League and its letter to me, saying they "take pleasure in sending a copy of the opinion of the law committee," which, as you will observe, denies the right of selection to excepted positions. They have not the right to abuse this power. "They can not remove for political partisanship, personal favoritism, or a regard for mere individual interests of anyone." A removal that does not promote the efficiency of the service can not be made, and even then not until charges are preferred, with an opportunity to file an answer.

Sincerely, yours,

BINGER HERMANN.

EXHIBIT 22.

OPINION OF THE LAW COMMITTEE OF THE NATIONAL CIVIL SERVICE REFORM LEAGUE IN RE THE CONSTRUCTION OF SECTION 6 OF THE POST OFFICE APPROPRIATION BILL OF 1912.

In the Post Office appropriation bill approved August 24, 1912, provision was made for procedure to be followed in the removal of employees in the classified service. The provisions of the statute are substantially the same as those in the removal rule established by President Taft by Executive order. In June, 1913, the superintendent of Crater Lake National Park, in Oregon, a position in Schedule A of the civil-service rules, was removed without any presentation of charges and an opportunity to file an answer. Upon appeal to the Civil Service Commission he received an opinion that the position of superintendent of Crater Lake National Park was covered by the provisions of the act of August 24, 1912, since positions in Schedule A are in the classified service, although they are excepted from examination. Later an opinion was given by the Attorney General of the United States in which he arrived at the conclusion that the act referred to did not apply to any positions in Schedule A.

After careful consideration of the question involved the law committee of the National Civil Service Reform League can see no reason whatsoever for restricting the term "classified civil service" as used in section 6 of the act approved August 24, 1912 (19 Stat., 555), to positions filled by competitive examinations. This term has been in official use as designating inter alia places exempted from examination under Schedule A for more than nine years, being embodied in section 1 of rule 2 of the civil-service rules approved by President Roosevelt and promulgated about March, 1903. In an opinion of the Department of Justice as to certain temporary appointments furnished to President Roosevelt on February 12, 1908, Attorney General Bonaparte said (vol. 26, p. 507):

"Where Congress in an appropriation act makes use of the very term employed in the civil-service act in describing appointments to be made in accordance with its provisions, it is manifest that there was no intention to waive the requirements of the latter statute."

Here Congress has used the very term employed in a definition embodied in the civil-service law for nearly a decade. In the opinion of the law committee the presumption is that the term was used in the act in the same sense as in the rule. It can see nothing to rebut this presumption. Heads of departments and other officers possessing the right of removal with respect to classified employees are authorized to exercise that right for any cause which will, in the judgment of the removing officer, promote the efficiency of the service. The law committee does not believe that it ought to assume that Congress intended to authorize such officers to remove their subordinates for causes which would not promote the efficiency of the service; such, for example, as political partisanship, personal favoritism, or a regard for the mere individual interests of anyone. The law committee does not agree with Assistant Attorney General Harr that such officers have "an arbitrary right of selection" to excepted positions. They are bound by their oaths of office to fill these positions no less than all others so as most effectively to promote the efficiency of the service or otherwise advance the public interest. They have indeed the power to abuse this trust to other ends, but this is not their right.

The law committee, therefore, concludes that unless the procedure prescribed by section 6 of the Post Office Department appropriation act was followed the removal of the superintendent of Crater Lake National Park was illegal.

EXHIBIT 23.

ATTEMPTED APPOINTMENT OF SUCCESSOR TO ASSISTANT ASSESSOR HELD TO BE MERE NULLITY.

The removal of Samuel T. Kalbfus as an assistant assessor of the District of Columbia was illegal and void and the attempted appointment of his successor a mere nullity, according to the decision of the District Court of Appeals rendered to-day. Justice Robb, speaking for the court, declared the office had never been vacant, and in contemplation of the law "the relator has never been out of his office, but, in fact, he has been and now is being illegally excluded from it."

Declaring mandamus to be the most adequate remedy to restore Mr. Kalbfus to his rights, the court directs that the judgment of Justice Barnard of the District Supreme Court be reversed and the cause remanded for further proceedings.

JUSTICE BARNARD'S RULING.

Justice Barnard held that the commissioners had discretion as to the removal of a member of the board, and, having acted within that discretion, the court would not review the action.

Justice Robb sustains the contention of Attorney Frank J. Hogan, for the assistant assessor, that the oath of office taken before the assessor by one of his assistants is valid. Even if invalid, the court suggests, the commissioners having allowed Mr. Kalbfus to serve under it for many years may not be heard to attack it.

The right of the commissioners to remove a member of the board of assistant assessors was curtailed, the court finds, by the act of 1902, prohibiting removal except for causes mentioned. By this act notice and hearing before the tribunal charged with the duty of according it and of determining the issues became requisite, the court holds, to the exercise of jurisdiction.

"The fact that the conduct of an official may have been the subject of inquiry," says Justice Robb, "before another tribunal does not relieve

of its duty the tribunal charged by law with according a hearing before removing him."

COMMISSIONERS' CLAIM.

The commissioners claimed it was unnecessary to try Kalbfus, since a committee of Congress had found that he had engaged in real estate speculation while a member of the board of assessors.

Without passing on the right of the present board of commissioners to review the finding of their predecessors, the court declares it is certain they had no power to review that finding without notice to Mr. Kalbfus. This could no more be done, the court suggests, than could the former board, after two years had elapsed, have reopened the case and reversed their finding without notice to him.

"When the defendants passed their order of removal," continues Justice Robb, "the relator was in the actual and legal possession of his office, Congress having explicitly withdrawn from the commissioners the power of removal except for specified causes, notice and hearing were essential requisites to remove at all. Since their order of removal was passed without notice and hearing, it necessarily follows that their action constituted an arbitrary exercise of power and was void."

REFUSED TO RESIGN.

August 18 last Mr. Kalbfus received a letter from the commission offering him an opportunity to resign from the service of the District. He declined, and on the next day the commissioners passed an order removing him, and naming Edward W. Oyster as his successor. Mr. Kalbfus acknowledged the receipt of the dismissal order, but notified the authorities that he claimed the office and stood ready to perform the functions of the office, if not prevented. The proffer to return to work was ignored and Mr. Kalbfus had recourse to the courts.

It is considered probable, in view of to-day's decision, that Mr. Kalbfus will be entitled to pay for the time he has been excluded from the office. The court holds the office has never been vacant and that Mr. Kalbfus has been both in law and fact a member of the board of assistant assessors.

NEWMAN DECLINES TO COMMENT.

Commissioner Newman was informed of the Kalbfus decision by a reporter of the Star. He declined to comment on it until he had seen a copy of Justice Robb's ruling. The commissioner said that he would probably call a meeting of the full board of District heads late this afternoon or early to-morrow for the purpose of considering what action will be taken in the matter. The office of the assessor of the District is under Commissioner Newman's personal supervision.

EXHIBIT 24.

United States *v.* Wickersham. (201 U. S., 340.)

The United States Supreme Court decided April 2, 1906, that Mr. Wickersham was entitled to compensation from November 1, 1897, the date on which he was illegally suspended, in violation of the civil-service rules, from a classified position by the surveyor general of Idaho, until May 10, 1898, the date on which the department offered him another position in Washington, which he declined.

The court said in part:

"The case comes to this: The appellee, by his appointment, practically made by the Secretary of the Interior in entering his name in the classified list, and designating him for the service required, was entitled to the privileges and emoluments of his position until he was disqualified by his own action or that of some duly authorized public authority.

"The attempted suspension, without the authority of law, he remaining ready and willing to discharge the duties of the place, could not, during the period of such wrongful suspension, have the effect to deprive him of the compensation legally belonging to one entitled to hold the position." (201 U. S., 390.)

EXHIBIT 25.

KLAMATH FALLS, OREG., *October 31, 1914.*

Honorable SECRETARY OF THE INTERIOR,
Washington, D. C.

SIR: Inclosed herewith you will find vouchers for $83.33 and $31, respectively, for the salary and allowance of the superintendent of the Crater Lake National Park for the month of October, 1914.

A reply to my letter of September 30, 1914, is solicited.

Very sincerely,

W. F. ARANT, *Superintendent.*

EXHIBIT 26.

DEPARTMENT OF THE INTERIOR,
Washington, November 8, 1913.

Mr. W. F. ARANT,
Klamath Falls, Oreg.

SIR: Acknowledging receipt of your letter of October 31, 1913, forwarding claim for salary and horse keep as superintendent of the Crater Lake National Park during October, I have to state that, as you were advised in department letters of September 10 and October 7, in relation to similar claims for the months of August and September, inasmuch as you were removed from the superintendency of said park effective June 30, 1913, you are not entitled to compensation and allowance for horse keep claimed by you, and payment is accordingly refused.

Respectfully,

ADOLPH C. MILLER,
Assistant to the Secretary.

EXHIBIT 27.

DEPARTMENT OF THE INTERIOR,
Washington, July 8, 1913.

GENTLEMEN: I am in receipt of the commission's letter of the 27th ultimo with reference to the case of W. F. Arant, whose resignation as superintendent of the Crater Lake (Oreg.) National Park was requested under date of June 7, 1913.

It appears that Mr. Arant was appointed without examination and entered on duty as superintendent of the national park at Crater Lake on September 26, 1902, and that a report of his appointment was not made to the commission for the reason that at the time the status of superintendents or officers in charge of national parks was not definitely fixed and it was not known whether the commission would be interested in their selection or appointment. The final and definite determination of their status as regards appointment under civil-service rules appears to have been based upon the Executive order of October 9, 1908. (See commission's letter of Oct. 13, 1908.)

As stated by the commission, Mr. Arant has protested against his removal from the service in the manner proposed, claiming that under section 6 of the act of August 24, 1912, he could not be removed except for cause and for reasons given in writing, with notice and opportunity to be heard. In this view he was sustained by the commission. The Attorney General, however, under date of June 23, 1913, held:

"* * * I am of the opinion that the term 'classified civil service,' in section 6 of the act of August 24, 1912, was used in the more popular sense of the competitive service, and therefore should not be held to include excepted positions, unless such positions have been filled as competitive positions are filled, in which event, under Rule II, paragraph 3, of the Civil Service Rules, the person appointed is entitled to all the rights of a competitive employee."

In accordance with the opinion expressed by the Attorney General, Mr. Arant was, on June 28, 1913, removed from the position of superintendent, effective at the close of June 30, 1913.

Respectfully,

FRANKLIN K. LANE, *Secretary.*

The CIVIL SERVICE COMMISSION.

EXHIBIT 28.

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., July 16, 1913.

Mr. W. F. ARANT,
Klamath Falls, Oreg.

SIR: With reference to your letter of June 18, protesting against your proposed removal from the position of superintendent of Crater Lake National Park, without compliance with the provisions of section 6 of the act of August 24, 1912, regulating the procedure in removals from positions in the classified service, you are advised that this commission is in receipt of a letter from the Secretary of the Interior, stating that on June 23, 1913, the Attorney General rendered an opinion holding that the statute cited does not apply to removals from excepted positions in the classified service, but only to competitive positions therein and to occupants of excepted positions which have been filled in the same manner as competitive positions are filled.

In view of this opinion it appears that your protest affords no basis for any action by this commission.

By direction of the commission.

Very respectfully,

JOHN A. MCILHENNY, *President.*

EXHIBIT 29.

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., July 19, 1913.

Mr. J. H. CARNAHAN,
Rooms 7 and 8, White-Maddox Building,
Klamath Falls, Oreg.

SIR: The commission is in receipt of your communication of July 1 stating that you have been unable to determine why the Civil Service Commission does not assume jurisdiction to investigate removals from excepted positions, and asking to be furnished with a statement of reasons why the commission does not do so.

In reply your attention is invited to the following extract from an opinion of the Attorney General under date of June 23, 1913:

"I am of the opinion that the term 'classified civil service' in section 6 of the act of August 24, 1912, was used in the more popular sense of the competitive service and therefore should not be held to include excepted positions, unless such positions have been filled as competitive positions are filled, in which event under rule 2, paragraph 3, of the civil-service rules the person appointed is entitled to all the rights of a competitive employee."

Until the Post Office appropriation act to which the Attorney General's opinion refers was passed the commission held that it did not have jurisdiction to investigate removals from excepted positions; but after the passage of that act it held that the provisions of section 6 applied to excepted positions because they were in the classified service, although it still held that the commission did not have jurisdiction to investigate such removals. The opinion of the Attorney General indicates that the recent law does not apply to excepted positions, and thus substantiates the opinion which the commission has held for years regarding these positions.

The very reasons which constitute the basis for the exception of these positions are equally valid as indicating that it should not be necessary for appointing officers to formulate written charges before making removals from these positions. Many of the positions are primarily of a confidential character, and it is recognized as fitting that the occupant should not only be worthy of confidence, but should have the confidence of the officer with whom he is to have close relations. It is eminently fitting that the heads or assistant heads of the executive departments should have the privilege of intimate acquaintance with their private secretaries and confidential clerks, and to require a new head of an office to submit a written statement of charges before dismissing a confidential clerk of his predecessor who may be utterly unknown to him would be absurd.

It also seems proper that persons appointed without complying with the civil-service rules and the requirements of competition under the merit system should not be entitled to the protection of the rules and the merit system in the matter of retention in the service. A man who owes his appointment to the acquaintance of the appointing officer should not expect to retain his position after that appointing officer leaves the service. A man who owes his appointment to political or personal influence should not expect to retain his position after that personal or political influence ceases to be potent, nor is there any principle of law or justice which would seem to render it expedient to grant the protection of the civil-service rules to those persons appointed without reference to the principles enunciated in those rules.

The rules in no case test the fitness or qualifications of the excepted appointee. They do not guarantee that he is a suitable person for the position, and there is no reason why they should attempt to hold him in the position after the appointing power desires to make a change.

By direction of the commission.

Very respectfully, JOHN A. MCILHENNY, *President.*

EXHIBIT 30.

JULY 25, 1913.

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C.

GENTLEMEN: I am in receipt of a letter of date July 19, 1913, unsigned, purporting to come from the United States Civil Service Commission, in reply to my letter of July 7, 1913, in which an excerpt from the opinion of the United States Attorney General, dated June 23, 1913, is set out, and in which the Attorney General gives it as his opinion that the act of August 24, 1912, section 6, does not embrace persons in the classified civil service of the United States who received their appointments without competitive examinations or by noncompetitive examinations, the Attorney General holding that "classified civil service" as used in the act referred to, contemplates those only who entered the classified service as a result of competitive examinations.

This opinion of the Attorney General is, in effect, a complete reversal of the opinion of the United States Civil Service Commission dated June 27, 1913, relating to the positions of W. F. Arant, superintendent of Crater Lake National Park, in Oregon. In that opinion, copy of which I now have in my possession (original having been seen by Congressman N. J. SINNOTT, of Oregon), you clearly expressed it as your belief that Mr. Arant was in the classified civil service, and that he would be subject to the provisions of section 6 of the postal appropriation act of August 24, 1912.

Prior to the controversy over Arant's position this must necessarily have been your opinion, since in the various pamphlets containing the civil-service rules and Executive orders coming under your jurisdiction for execution you clearly and unmistakeably listed Arant's position as being in the classified civil service and subject to the civil-service rules. (See par. 20, p. 69, Civil Service Rules, etc., issued June 2, 1913; also par. 20, Civil Service Rules, issued in 1912, and emanating from your office.)

Not only this, but your latest circular, issued with a view to placing a construction, inter alia, upon the very question involved in Arant's case, on page 3 thereof you say this:

"The classified service comprises all those positions which, on the one hand, are not subject to confirmation by the Senate, and, on the other hand, are not those of mere laborer or workman. Positions excepted from examination under Schedule A of the rules are therefore within the classified service, and section 6 of the act of August 24, 1912, as it applies in direct terms to all classified employees applies to persons occupying positions excepted from examination under Schedule A."

In the above-quoted excerpt from the circular of the Civil Service Commission issued in April, 1913, you very distinctly say that persons excepted from examination under Schedule A are in the classified service, and the act of August 24, 1912, section 6, applies to them. You have always listed Arant's position—namely, that of national park superintendent—under Schedule A.

I desire to be entirely fair and, above all, respectful to the United States Civil Commission, but it does seem to me that the conclusion is unavoidable that the commission has changed its front in this matter from purely political reasons and for reasons of expediency. Else why should it completely reverse itself the first time an important question is put squarely up to it, as was done in the Arant matter?

It is a fact that the United States Civil Service Commission is not under the jurisdiction of the Attorney General, and it is not bound, as are the executive departments, to follow his opinions when he attempts to construe the civil-service laws, rules, and regulations which the Civil Service Commission was specially created to put into operation.

Indeed, in Twentieth Opinions of the United States Attorney General, page 649, it is said:

"It would not be proper for the Attorney General to attempt the construction of regulations of the Civil Service Commission. That is a matter entirely within the province of the commission."

If it be said that the Attorney General is, in his purported opinion of June 23, 1913, construing a law, and not a mere regulation, then I would reply that your regulations are practically held for naught as a result of this opinion, since your regulations placed the position of Arant in the classified service and this opinion attempts to overrule your classification and places the same position outside the pale of the classified civil service.

I should like to ask the honorable commission if it is fair, in their opinion, that Mr. Arant, whom they have for years listed as being in the classified civil service, and whom they have expressly stated, in the circulars issued to the whole civil service of the United States, is subject to the provisions of section 6 of the act of Congress of August 24, 1912, should be arbitrarily and in utter disregard of the civil-service law and the civil-service rules removed from office without the assignment of any reason? Surely if your rules and regulations and the act of August 24, 1912, mean anything they mean that this citizen should be removed, if removed at all, by due process of law and not ruthlessly and arbitrarily and without assignment of reason or cause.

His record has not been impeached during his 11 years in the office of superintendent of the Crater Lake National Park. Indeed, the Secretary of the Interior has not even pretended to find fault with his incumbency of the office, but he has attempted to remove him as though he were a mere laborer, or as though he filled a position which required confirmation by the Senate. Surely this is not right, and I appeal to you, on his behalf, to proceed under the law.

In so far as the opinion of the Attorney General is concerned, I would say that, in the first place, he has no jurisdiction to impose his fiat upon your commission, and, in the second place, it is governed, in my opinion, purely by questions of expediency—political expediency, which should find no place in the classified civil service. This should be administered according to the law of the land, and not by reverting to the so-called "spoils system," which was supposed to have gone out of existence in 1883, when the civil service was first established.

I have to again respectfully request that Mr. Arant be declared superintendent of Crater Lake National Park, in Oregon, and that he continue to draw the compensation attached to that position until such time as he is lawfully removed.

Very respectfully,

J. H. CARNAHAN.

EXHIBIT 31.

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., August 4, 1913.

Mr. J. H. CARNAHAN,
Attorney at law, Klamath Falls, Oreg.

SIR: The commission is in receipt of your letter of July 25, 1913, in further reference to the case of Mr. W. F. Arant, superintendent of Crater Lake National Park, Oreg.

In reply you are informed that the opinion of the Attorney General to the effect that the term "classified civil service" in section 6 of the act of August 24, 1912, should not be held to include excepted positions is conclusive so far as this commission is concerned. Prior to August 24, 1912, this commission never held that persons appointed to positions excepted from the requirement of examination under the civil-service rules were entitled to be furnished with a written statement of reasons and to be afforded an opportunity to make a written reply before being removed from the service.

Section 6 of the Post Office appropriation act approved August 24, 1912, provided that no person in the classified civil service should be removed except for reasons given in writing. The classified service is made up of competitive positions and excepted positions, and the commission expressed the opinion that inasmuch as excepted positions were also classified the provision of the appropriation act just mentioned applied to them. In connection with this opinion of the commission, however, it also made the following statement:

"The commission's power to investigate cases where it is alleged that the required procedure has not been followed does not extend to excepted positions."

The opinion of the Attorney General that the provision of section 6 of the Post Office appropriation act of August 24, 1912, does not apply to excepted positions leaves those positions in exactly the same status with relation to removals that they always previously occupied. The opinion of the Attorney General, already referred to several times, was rendered in response to a request from the Department of Commerce and was in no way occasioned by the case of Mr. Arant, under the Department of the Interior, in whom you are interested.

By direction of the commission.

Very respectfully,

JOHN A. MCILHENNY, *President.*

Farewell to the House of Representatives.

EXTENSION OF REMARKS

OF

HON. J. THOMPSON BAKER,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. BAKER. Mr. Speaker, in leaving the House I wish to express my gratitude to the colleagues whose friendship has made my term of office here delightful.

And I can not say farewell without a word of thanks to the leader whose great ability, unfailing courtesy, and absolute fairness to friend and foe alike must win him the regard of every man who serves his country on this floor.

I offer in extension of my remarks the following eulogy pronounced upon the Speaker of the House of Representatives on the recent occasion of his birthday by Col. John Temple Graves:

"This happy evening marks the sixty-fifth birthday of CHAMP CLARK, an incorruptible statesman and a stainless gentleman.

"It is celebrated in love and loyalty by a little company of those who know best and love best one of the great souls that have moved in majesty and will abide among the master spirits of his time.

"CHAMP CLARK's life, from militant youth to vigorous manhood, has been given and consecrated to the service of his country. For 20 dauntless and strenuous years he has been a Democratic Congressman from the State of old Missouri, for 4 years the leader of his party on the floor, and for 4 years its Speaker in the chair as the second officer of the Federal Government.

"As leader of his party in minority and in majority he won laurels and love by masterly eloquence and unfailing devotion that inspired Democracy's struggling lines in failure and swept them by high example into the splendid and unbroken unity that made their passport to enduring victory.

"It was no partial friendship, but a unanimous conclusion of his contemporaries that has written him among the greatest House leaders Democracy ever developed. OSCAR UNDERWOOD, greatest and serenest of his party colleagues, who succeeded him on the floor, said but yesterday in the sincerity of farewell: 'CHAMP CLARK is the greatest Speaker the American Congress ever knew.'

"JAMES R. MANN, the Republican leader, who has fought the Speaker for a grappling decade of debate, said in 1912 from his front place in the ranks of the opposition: 'CHAMP CLARK is worthy in character, in ability, and in lofty soul, to fill with honor any position in this or any other Government on earth.'

"I have known and loved CHAMP CLARK in every relation that makes up human life. I pay tribute here to a personal grandeur in his mind and spirit that has bettered all my traditions of human friendship and enriched my conceptions of the highest civic character. He is one of the few men I have ever known capable of a friendship that, in its lofty qualities, deserves to rank with Damon's for Pythias or Jonathan's for David, in the old heroic time. Under the massive magnificence of his physical frame there beats a heart as tender and true as it is always brave, and that man who has won and deserved the

friendship of CHAMP CLARK may rest upon a possession as priceless as it is imperishable.

"I have seen the great Missourian make good in all the searching competitions of political and intellectual life. I have seen him rise unspotted above the temptations of a selfish, ambitious, and grasping era. I have seen him ready to break with the most powerful political ally he ever had if unity required the slightest surrender of his integrity of conviction or a moment's forgetfulness of his country's welfare.

"The patriotism of this man subordinates his interest everywhere. His fidelity outweighs his ambitions. His magnanimity to men and his perfect loyalty to party have been proved greater than any sense of personal injury or of private hurt.

"Whatever the future may bring to our great friend, his noble, manly past at least is all secure, and history will write him high and clear upon his country's annals.

"May God bless CHAMP CLARK, of old Missouri, upon his sixty-fifth and all succeeding birthdays. May God keep in health, in prosperity, and in honor this stainless publicist, this flawless friend, this noble gentleman.

"Statesman and friend to truth, of soul sincere,
In honor flawless and of courage clear;
Patient in trial, serene amidst alarms,
Inflexible in faith, invincible in arms."

Mining Safety and Experiment Stations.

SPEECH

OF

HON. MARTIN D. FOSTER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 1, 1915.

The House had under consideration the bill (H. R. 15869) to provide for the establishment and maintenance of mining experiment and mine safety stations; for making investigations and disseminating information among employees in mining, quarrying, metallurgical, and other mining industries, and for other purposes.

Mr. FOSTER. Mr. Speaker, we now have some eight mining rescue stations in the United States, located where they are most convenient for the coal-mining industry.

These mine rescue stations are maintained out of the fund appropriated for the investigation in reference to safety appliances. This bill seeks by act of Congress to authorize seven additional mining stations. Investigation has shown that up to this time there are not a sufficient number of these stations to take care of the whole country, and that they are not sufficiently equipped under the present arrangement. Some additions ought to be made in reference to the employees in this work so that better work may be done in the future. The Bureau of Mines has some Pullman cars which they purchased from the railroad companies, but which are so old now that they can not be taken on a passenger train with safety, so that they are compelled to haul them on freight trains when they go to the scene of an explosion or accident which requires their presence.

As you probably know, there has been a great demand throughout the country for the establishment of these stations where the miners may be instructed in the proper care of lamps and other safety appliances and all that go to make their work safer.

Coal mining is a hazardous occupation for those who work under the ground and are engaged in the actual work of digging coal. Men going down under the ground for a mile or two are at the mercy of an accident, such as an explosion, and we feel that we can well afford to give more attention than is now being given to the safety of the men employed in the mining and quarrying industries, which employ nearly 2,000,000 men throughout the United States.

Mr. COX. Will the gentleman yield?

Mr. FOSTER. Yes.

Mr. COX. What is the difference between a mine experiment station and a safety station?

Mr. FOSTER. The mine safety stations are those which have to do with the safety of the miners in the coal-mining industry and the metal-mining industry—looking out for the safety of those who work in the mines. The mine experiment stations are established for the purpose of dealing with a lot of problems in reference to metal mining, such as the problems of how to extract the metal from the ores in such a way as to be economical.

Mr. COX. Can the same set of men operate an experiment station as are required to operate a safety station?

Mr. FOSTER. No; they can not be the same.

Mr. COX. Is not this a duplication of work?

Mr. FOSTER. No; it is not a duplication.

Mr. COX. Does it require experts in both these lines of work?

Mr. FOSTER. Yes.

Mr. COX. Why not have them both in one?

Mr. FOSTER. Because the metal-mining experiment stations are established in places which are convenient to metal mines and are engaged in solving other problems than the safety of the workers. The mine safety stations are more largely for the benefit of the coal-mining industry, having reference to safety.

Mr. COX. The gentleman says "largely." Does the gentleman mean exclusively?

Mr. FOSTER. No, sir; I do not; because safety mining stations might be established in the metal-mining industry, to look after the safety of the men who are engaged in metal mining. For instance, in certain mining districts in the United States, 10 men out of every 100 who work in the metal mines die from tuberculosis. That is due to the breathing of the dust that comes in certain kinds of metal mining. In coal mining it is a different proposition. The men are afflicted with miners' asthma, which is likely to affect those working in coal mines. What we hope to do in order to save the men employed in metal mining is to solve the problem of getting rid of the dust, so that men will not have to incur that great risk to their health.

Mr. COX. How much will it cost for a mine-experiment station?

Mr. FOSTER. In the neighborhood of $25,000.

Mr. COX. For each one? How much does it cost to establish a mine-safety station?

Mr. FOSTER. That depends upon what is done. If it is a movable station, it would cost in the neighborhood, to operate it as it ought to be, $20,000 a year, although it might be run for a less price. That would keep it going 11 months.

Mr. COX. One $25,000 and the other $20,000?

Mr. FOSTER. We are now spending for this work about $200,000 a year.

Mr. COX. What is the use of starting one up in Alaska?

Mr. FOSTER. I do not know when that would be established, but we thought it better to have it authorized and provided for here.

Mr. LENROOT. Will the gentleman yield?

Mr. FOSTER. Yes.

Mr. LENROOT. Can the gentleman give an idea of the total cost in the immediate future of these stations?

Mr. FOSTER. No; there would be no great cost in the near future. This bill provides that not more than three shall be established in any one year, and three would not cost more than $60,000 or $75,000. We already have eight mine rescue stations, and we are spending for them now about $100,000, possibly a little less.

The second section permits the Bureau of Mines, of the Secretary of the Interior, to accept ground and buildings or contributions from States or individuals. For instance, in the State of Illinois there is a mine rescue station, and the Federal Government is expending about $7,000 on it, while the State of Illinois is paying for the support of the station something like $10,000. So that in any of these stations the expense will be taken care of in this way.

Mr. Speaker, this bill carries no appropriation, as the committee thought that, owing to the financial condition of the Treasury at this time, it was best for the House to decide the matter of appropriation at a later date, and it is expected, in view of these facts, the appropriation the first year would be small.

There is an urgent need for this legislation on account of the great loss of life taking place every year in the mining industry. The industry is growing very rapidly from year to year. At the same time our mines are growing more dangerous to life on account of their increasing depth each year. Since the Bureau of Mines was established much education has taken place among the miners. Many new appliances have been put in operation for the safety of the miner, and a more economical way of mining has been established. There are employed in all branches of the mining industry more than 2,000,000 men, and of this number about 4,000 are killed and 75,000 injured each year.

In order to cope with the work of such magnitude and importance the funds and employees of the bureau are inadequate. From every part of the country where mining is carried on there comes the appeal to Congress to enlarge the investigation and educational work of the bureau so that this work for the safety of these men may be carried on more rapidly.

This educational work for the mines is carried on largely through the use of the eight rescue cars which the Government now owns; but on account of the limited amount of money they can only be operated about half the time, and the number of employees with each car is not sufficient to properly perform the work. With the present facilities it will take approximately 12 years to make the circuit of the mining camps of the country. If this additional number provided for are put in operation, the work could be done in three or four years. Many of the miners are unable to read the English language, and the character of work being done on the rescue cars has proved to be the most efficient way of reaching them and educating them in the safety work.

The work of preventing waste of our resources is closely associated with the loss of life. Each day and year this great waste goes on, amounting to millions every year. This, no doubt, can be prevented in a marked degree if the problem is studied from a scientific standpoint. We can point to one great problem of the preventing of waste in natural gas that now amounts to millions of dollars. This has been given consideration to a limited extent, and through the investigations made by the Bureau of Mines a method has been found to greatly prevent this loss. It is not intended that the National Government should do the work that the States should do, and the money appropriated will only be used for investigation and education in the work along national phases of the industry, so as to benefit the industry in every part of the country.

The States are expected to do the purely local work and solve the problems that are local to them. Our party is pledged to this legislation, and in its last platform had this to say in reference to this work and its importance to the country:

MINES AND MINERS.

We rejoice in the inheritance of mineral resources unequaled in extent, variety, or value, and in the development of a mining industry unequaled in its magnitude and importance. We have the men who, in their hazardous toil underground, daily risk their lives in extracting and preparing for our use the products of the mine, so essential to the industries, the commerce, and the comfort of the people of this country. And we pledge ourselves to the extension of the work of the Bureau of Mines in every way appropriate for national legislation, with a view of safeguarding the lives of the miners, lessening the waste of essential resources, and promoting the economic development of mining, which, along with agriculture, must in the future, even more than in the past, serve as the very foundation of our national prosperity and welfare and our international commerce.

The President has repeated this pledge, and every candidate for Congress in a mining region has stood for this legislation. We should redeem our pledge. Let us now stand for this bill and do our part in helping along in this important work.

The two great basic sources of wealth are agriculture and mining. Congress has been liberal with appropriations for the benefit of agriculture, and we have seen the great advantage gained by increased production on the farm by so doing. But mining has been neglected. Many men may think of the great fortunes that have been made by a few men out of mining, and they immediately get the idea that this work is being done for their benefit. Such is not the case. The bureau has never been called to aid in the development and operation of these great mines.

The first consideration in this work is to safeguard the lives of more than 2,000,000 men engaged in this industry. The amount is here given of the appropriation for agriculture and mining.

This is taken from the report of the Committee on Mines and Mining on this bill:

THE COUNTRY'S RELATION TO ITS TWO GREAT FOUNDATION INDUSTRIES.

A brief statement of facts will indicate in a general way what the National Government is doing to aid development of each of its two great basic industries, and what in turn these two industries are contributing yearly to our national wealth and progress. While the figures are not fully comparable in all respects, they will be found to be essentially correct.

AGRICULTURE AND MINING, THE NATION'S TWO GREAT FOUNDATION INDUSTRIES—WHAT THEY ARE DOING FOR THE NATION AND WHAT THE NATIONAL GOVERNMENT IS DOING FOR EACH OF THESE INDUSTRIES.

What these industries do for the Nation.

	Agriculture, including forestry.	Mining and mineral industries.
Number of employees	13,000,000	2,300,000
Yearly value of products	$10,500,000,000	$4,600,000,000
What each worker in these industries contributes to the national wealth yearly	$800	$2,000
What each industry contributes to the freight tonnage of the country yearly.....per cent..	22	60

What the National Government is doing for each of these industries.

Yearly appropriations.	Agriculture.	Mining.
For education:		
From direct appropriation	$2,500,000	Nothing.
From land grants	1,030,000	.....
From Smith-Lever Act for demonstration educational work	480,000	.....
For 52 experiment stations, one in each State and Territory	1,550,000	Nothing.
For general researches and other work to aid agriculture and mining	22,410,000	$1,967,000
Total	27,970,000	1,967,000
Per capita contribution from the people of the United States for the advancement of these industries	.28	.02

Of this contribution the per capita expended for safeguarding the lives of 2,300,000 employees in the mining industry is about one-half of 1 per cent per annum.

1. The scope here includes mining, metallurgical, and other mineral industries, as does the work of the Bureau of Mines.

2. Four hundred and eighty thousand dollars for 1915, increasing to $4,580,000 for 1925 and each year thereafter.

3. Of this amount less than $500,000 is expended under the Bureau of Mines in behalf of improvement of safety and health conditions among the 2,300,000 employees in the mining industry. The remainder (about $1,300,000) is expended for geology, topography, water powers, and other problems having to do with the commercial side of mining and other industries under the Geological Survey, and $135,000 is expended under the Bureau of Mines for the commercial testing of the coal and oil used by the Government.

Nothing can show the national neglect of the mining industry more clearly than does the above tabular statement in spite of the hazards of that industry and the other conditions which should appeal to the humanitarian as well as to the commercial instincts of the people. But another fact that tells the story with equal emphasis is that during the past 10 years, in addition to the large sums paid out of the National Treasury for the benefit of agriculture and the payment toward the reclamation of agricultural lands in the Western States of all funds arising from the sale of public lands in those States, even the proceeds of the sale of the Nation's mineral resources in like manner have gone, not to aid mining, but to the reclamation of additional agricultural lands.

The great industry of mining has been too long englected and too many lives have been sacrificed. We should make ample provision to prevent, if possible, this human sacrifice. We do not ask that this industry should be cared for to the neglect of necessary appropriations for other worthy objects, but we do submit that where so many lives are lost and such waste of our resources are lost we should give more attention than is now being done. Let us not neglect to care for the life and health of our people. More than 2,000,000 men are concerned in this great work, and our duty should be to assist in every way possible. I feel sure this House will agree to this bill and do its part in conserving the life and resources of our Nation.

Second Inaugural Address of Abraham Lincoln.

EXTENSION OF REMARKS
OF
HON. FREDERICK H. GILLETT,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, March 4, 1915.

Mr. GILLETT. Mr. Speaker, 50 years ago to-day there was delivered here one of the most impressive and patriotic messages ever given to the American people—the second inaugural address of Abraham Lincoln. My home city of Springfield, Mass., through its city government and its patriotic societies, started some time ago a movement for a fitting celebration of this anniversary, and, acting at their request, I introduced a resolution several weeks ago that Congress should commemorate the occasion; but the Rules Committee was, I suppose, too pressed by more practical matters to take action on it. I wish, however, that our RECORD shall show that the historic event was not forgotten on the spot where it occurred.

Fifty years ago this country was divided and devastated by the horrors of civil war. Now those divisions and animosities have healed, we are at peace with all the world, and have acquired a unity, a power, and a splendor of material development beyond all anticipation. But war has not passed away. Europe is suffering to-day as we suffered 50 years ago. And so to-day the spirit of Lincoln's inspiring address is still appropriate, and as we adjourn we may well bear in mind his noble appeal "to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

Indian Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. JOHN H. STEPHENS,
OF TEXAS,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 4, 1915.

Mr. STEPHENS of Texas. Mr. Speaker, I regret exceedingly that the Indian appropriation bill, H. R. 20150, entitled "A bill making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1916," failed to pass Congress before the adjournment of the present session. Our committee—the House Committee on Indian Affairs—spent much valuable time in the preparation of and hearings on this bill.

Its failure to become a law by the inaction of another body is very disheartening to our committee as well as the Members of the House who so nobly aided the committee in perfecting and passing the bill through the House. This bill was reported to this House on January 28 last and passed the House soon after that date, but the bill was not reported to the Senate until February 22, 1915, only a few days before adjournment. The bill as it passed this House carried $7,720,124.25; when reported to the Senate it carried $11,255,865.65, or a net increase amounting to $3,535,741.40.

In my opinion, this vast increase was and is wholly indefensible from every viewpoint. The estimates of the department were only $9,533,463.20, and the Senate reported a bill giving the Indian Department $1,722,402.45 in excess of its estimates, or, in other words, that much more than it asked for or desired.

The above figures are taken from the report made on the bill to the Senate by Senator ASHURST, its chairman. These figures vary somewhat from the figures in the House report on the bill. I have not attempted to reconcile these differences, as it would be a fruitless undertaking, the bill having failed to become a law. My report on the bill is as follows:

INDIAN APPROPRIATION BILL.

The Committee on Indian Affairs presents the accompanying bill (H. R. 12579) making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1915, and submits in explanation thereof the following:

The estimates on which this bill is based are found on pages 333 to 353, inclusive, of the Book of Estimates, and aggregate the sum of $11,784,865.06, of which sum your committee has recommended in the accompanying bill the appropriation of sums amounting to $9,619,737.82, thus reducing the estimates submitted by the department $2,165,127.24.

The bill carries gratuity appropriations, payable from—

Federal Treasury, aggregating	$6,874,437.82
Reimbursable from Indian funds	932,740.00
Treaty items	850,560.00
Indian trust funds in Treasury to credit of Indians	962,000.00

The estimates on which the bill was based carried appropriations as follows:

Gratuity appropriations	$7,858,305.06
Reimbursable appropriations	1,495,000.00
Treaty items	855,560.00
Trust funds	1,576,000.00

The amount carried by the last Indian appropriation bill (for the present fiscal year) for all the above stated purposes aggregated $10,049,394.74. The amount recommended by the committee herein is $9,619,737.82, which sum is $429,656.92 less than the amount carried in the last Indian appropriation bill, and is also $2,165,127.24 less than the department's estimate for the next fiscal year.

The committee, however, have endeavored in this bill to provide all the funds necessary for the economical administration of the affairs of the Indian Bureau. In some cases we have found unexpended balances, and we have reduced these items to correspond with the amount actually expended by the department during the last fiscal year.

We found several claims estimated for payment and carried in the estimates. We have eliminated all such claims and reduced correspondingly the amount carried by the bill. The committee will later present to the House an omnibus Indian claims bill, which will provide for the payment of the claims estimated for by the department and eliminated from this bill, as well as for the payment of claims asked for in various bills now pending before the committee, if, in the judgment of the committee, said claims are just and should be paid.

The committee has reduced many items estimated for by the department when the estimate materially increased the number of students, buildings, and permanent improvements on nonreservation schools. It is the policy of the committee, and also of the present administration of the Bureau of Indian Affairs, to build up and expend more funds on reservation day and industrial boarding schools and less funds on nonreservation schools. The committee finds that last year's reports show that there is 3,040 more pupils in the nonreservation Indian schools than there were four years ago, hence we believe that we are justified in calling a halt in building up schools that are off of a reservation, as we believe the money can be spent to a much better advantage on the reservations. In other words, we believe that the schools should be taken to the Indians and not the Indians to the schools.

We have endeavored to provide all the funds necessary for building hospitals on the Indian reservations for the treatment of tuberculosis, trachoma, and other diseases among Indians. A joint investigating commission of the Senate and House have recently visited many Indian tribes and reported to Congress that the erection of one large hospital for the treatment of these diseases was not feasible for the reason that they found that the Indians would not consent to leave their homes and reservations and go to distant hospitals for treatment, and this committee approves the policy outlined by the joint investigating commission and have, as above stated, provided in this bill funds for the erection, equipment, and maintenance of hospitals on Indian reservations.

The committee in the matter of irrigation of Indian lands have followed the recommendation of the Indian Bureau and allowed the full amounts asked for. Mr. Cato Sells, the present Commissioner of Indian Affairs, appeared before the subcommittee of this committee having hearings on this bill, and on page 4 of the hearings, in giving his reasons for not asking for more money for irrigation purposes, made this statement:

"The CHAIRMAN. I see many items in the bill which are asked for which are under irrigation districts in various parts of the country, and that is along the line of the argument that you are making now.

"Mr. SELLS. The reason for this is that we believe that perhaps it might be better, generally speaking, not to ask for an enlargement of irrigation until we have measurably caught up with the other end and harmonized the situation.

"The CHAIRMAN. In other words, you desire the land cultivated that we now have under these irrigation districts and plants?

"Mr. SELLS. That is the thought, Mr. Chairman, that while these plants should be sustained, and certainly in some instances developed, there are some conditions where it is not now justifiable to make additional appropriations for irrigation plants. But in the instances you speak of, and as a general thought, the answer to your suggestion is that we ought to exert ourselves to harmonize things and without delay give the Indians an opportunity, by way of equipment, to take advantage of the conditions that are now upon them.

"Mr. CARTER. What do you mean by equipment?

"Mr. SELLS. I mean by equipment either a gratuity fund or reimbursable fund that will permit them to have suitable and proper sanitary homes, horses, cattle, farming implements, and those things which make it possible for Indians to do what we are hoping to accomplish for them.

"Mr. CARTER. In other words, you think he can not make bricks without straw, any more than the white man can?

"Mr. SELLS. That is exceedingly apparent, and I think it is our first duty along industrial lines to see that he has this equipment, and that we do things along the lines of industrial development as suggested in this bill. Now, I do not know that I want to take any more of your time along this particular line.

* * * * * * *

"I have requested Mr. Meritt, my assistant, and Mr. Davis, the supervisor of farming, to come here, and they will explain the details of the industrial items in the bill. Mr. Von Bayer, acting forester, is also here, and he will give you information in matters along that line."

Mr. Meritt, on page 451 of the hearings, relative to the appropriation for the irrigation work on the Flathead Reservation, Mont., states:

"Amount of appropriation requested by the United States Reclamation Service for irrigation work on the Flathead Reservation during the fiscal year 1915, $500,000.

"Amount of appropriation requested by the United States Indian Service for field work on the Flathead Reservation during said period, $100,000.

"Referring to the above reduction in the requested appropriation for irrigation work on the Flathead Reservation in Montana, it should be stated that as it was expressly understood that the estimates for irrigation appropriations for the United States Indian Service during the fiscal year 1915 must be materially reduced, it was considered best, as far as the interests of the Indians are concerned, to make this reduction apply principally to the estimates for work upon the reservations where the Indians are less benefited than the white settlers by the system or project now under construction, where the largest reimbursable amounts have already been expended by the Indians for irrigation purposes, and where there is no immediate necessity of expediting the work for the purpose of protecting the Indian water rights thereunder.

"It will be noted that we are asking for only $100,000 for this project this year as compared with an appropriation of $325,000 last year.

"The CHAIRMAN. You will find that it will not be necessary to ask for more than $100,000 for the purpose of carrying on this work next year.

"Mr. MERITT. I will state, Mr. Chairman, that I am not prepared, personally, to justify the manner in which this project has been financed heretofore. This project, as now estimated by the Reclamation Service, will cost about $6,000,000. It will irrigate about 150,000 acres of land and only about 75,000 acres of that land belongs to the Indians. The funds of the Indians are being used to construct a great irrigation project, and in my judgment the method of financing this project is wrong. It should be conducted as a reclamation project, and the Indians should pay their proportionate cost for this project rather than pay all the cost and have the white people gradually reimburse them.

"And on page 463 of the hearing justifying the Fort Peck irrigation item, Mr. Meritt further states:

"Irrigation system, Fort Peck Reservation, Mont. (reimbursable).

"Amount of appropriation requested by United States Reclamation Service for irrigation work on the Fort Peck Reservation during the fiscal year 1915, $375,000.

"Amount of appropriation requested by the United States Indian Service for said work on the Fort Peck Reservation during said period, $50,000.

"Referring to the above reduction in the requested appropriation for irrigation work on the Fort Peck Reservation, in Montana, it should be stated that as it was expressly understood that the estimates for irrigation appropriations for the United States Indian Service during the fiscal year 1915 must be materially reduced, it was considered best, as

far as the interests of the Indians are concerned, to make this reduction apply principally to the estimates for work upon the reservations where the Indians are less benefited than the white settlers by the system or project now under construction, where the largest reimbursable amounts have already been expended by the Indians for irrigation purposes and where there is no immediate necessity of expediting the work for the purpose of protecting the Indian water rights thereunder.

"We are asking for $50,000 for this project. Last year there was appropriated $150,000.

"Mr. CARTER. Mr. Meritt, I wish you would make some statement as to why you reduce this appropriation.

"Mr. MERITT. Mr. Chairman, this is another irrigation project that is being constructed by the Reclamation Service and is being paid for out of Indian funds The Indian Office is not disposed, in view of the method of financing this project, to ask for a large appropriation. We believe that the Flathead, Blackfeet, and Fort Peck irrigation projects should be investigated very carefully by this committee of Congress, and probably by the commission appointed to investigate Indian affairs, with a view to reaching a conclusion as to how these projects should be financed and completed.

"The CHAIRMAN. Do the irrigation engineers under the Reclamation Service or your irrigation engineers prepare the figures and provide for the building of any one of these projects?

"Mr. REED. Those of the Reclamation Service.

"The CHAIRMAN. The figures and plans and specifications were made by the Reclamation Service?

"Mr. CARTER. Yes, sir; the figures, plans, specifications, and estimates.

"Mr. MERITT. Mr. Chairman, I would like to have Mr. Reed make a statement for the record as to his views regarding these three projects.

"The CHAIRMAN. Mr. Reed, we will be glad to have your statement at this point.

"Mr. REED. In view of the fact that only about 50 per cent of the entire land is Indian land, it does not seem right and just that Indian resources should be hypothecated for the repayment of the charges. Had these three projects been entirely Indian projects, they would not have been undertaken on the scale that they have, and the cost undoubtedly would have been less. The Indians would not have had so much of their resources hypothecated in order to build them, and it seems nothing more than fair that the Indian, as long as he has given up his land by the opening process of the reservation, should stand in the same light on these large projects as the white man. His funds should not be drawn upon for the purpose of financing, but should be drawn upon for the purpose of making repayments, the same as the white man would make repayments. We can not understand why—at least I can not—he should be called upon to make all the payments in advance, while the white man is given 15 years after the completion of the job to make his payments, and we believe that since these projects have been advanced so far, since they have been laid out on such a large scheme, it would be impossible to curtail them without a great loss. We believe that they should become irrigation projects, built in conformity with the laws under which they act and under which they are built, and that the Indians' interests should be represented as that of any other member of the water-users association.

"The CHAIRMAN. In other words, you take the position that the Indian is putting up all the security for all the money that goes into the whole project and only gets half of the benefit; is that correct?

"Mr. REED. Yes, sir; and puts it up in advance, while in the case of the white men they do not put it up until 15 years after completion.

"Mr. CARTER. These projects are being carried out under your supervision, Mr. Reed?

"Mr. REED. No, sir; they are not. The present agreement or regulation under which the two departments are supposed to cooperate eliminates the engineering force of the Indian Office; and if I am right in my understanding, very nearly eliminates the Indian Office entirely, not only the irrigation officers but the commissioner and the executive officers as well.

"Mr. CARTER. Then we are appropriating money here to be used by the Reclamation Service.

"Mr. REED. Yes, sir.

"Mr. CARTER. And that is the way this money is being used?

"Mr. REED. Yes, sir.

"Mr. CARTER. When were these three projects put in the bill? They were not all put in the same year, I assume.

"Mr. REED. I do not know that we have the historical part of this matter with us.

"Mr. CARTER. I wish you would put in the record the history of these transactions, because I want to understand them.

"Mr. REED. In order to get the historical part of the transactions, we should have to go to the Reclamation Service, because we have been nothing more than onlookers, or part of the audience, so to speak.

"Mr. CARTER. I do not see why we should appropriate anything for it. They could go ahead with their reclamation project and then when they complete it let the Indians pay for their part of it. It seems to me that would be the sensible thing to do.

"Mr. MERITT. Mr. CARTER, I made that recommendation two years ago in connection with the Flathead project. As an administrative officer of the Indian Bureau, I thought I would be unfair to this committee and to the Indians of those three reservations not to call this condition to your attention, and I think the matter should be investigated and the whole situation straightened out. In order to be perfectly fair to the Reclamation Service, I would suggest the advisability of that service being given an opportunity to make any remarks they may wish to make on these three items."

This bill appropriates $400,000 in an item known as industrial work and care of timber, when the department estimated for $500,000. The committee finds of the last appropriation for this work there was an unexpended balance of a little over $40,000; and we did not feel justified, in view of the unexpended balance, in allowing the full amount of the estimate.

The committee also found that the estimates called for an appropriation of $825,000 for the purpose of encouraging industry among Indians and teaching them to be self-supporting. This is an entirely new policy, and it is the opinion of the committee that, while such work is very much desired and the committee is in full accord with the purposes to be attained, we have felt that this matter is in but an experimental stage, and that we were not justified or warranted in allowing the full amount asked for. The amounts appropriated for the purpose of encouraging industry are reimbursable appropriations and are to be repaid into the Treasury from funds belonging to the Indians.

The committee submits as a part of this report the following analysis and comparative statement showing the various items carried in this bill in detail, viz:

Estimated by department.

	Gratuity.	Reimbursable.	Treaty.	Indian funds.
Surveying and allotting Indian reservations		$225,000.00		
Irrigation, Indian reservations	$345,700.00			
Suppressing liquor traffic among Indians	100,000.00			
Relieving distress and prevention of diseases among Indians	200,000.00			
Indian schools, support	1,500,000.00			
Indian school and agency buildings	480,000.00			
Indian school transportation	82,000.00			
Industrial work and care of timber	500,000.00			
Purchase and transportation of Indian supplies	325,000.00			
Telegraphing and telephoning, Indian Service	10,000.00			
Court costs, etc., suits involving Indian land	2,000.00			
Expenses of Indian commissioners	5,000.00			
Pay of Indian police	200,000.00			
Pay of judges, Indian courts	8,000.00			
General Expenses, Indian Service	125,000.00			
Determination of heirs of deceased Indian allottees	100,000.00			
Encouraging industry among Indians		100,000.00		
Relief:				
Mrs. Robert Leo Bowman	5,000.00			
May Stanley	6,000.00			
Chas. E. McChesney	315.81			
Estate of George A. Miller	200.00			
Omer D. Lewis	2,573.25			
ARIZONA AND NEW MEXICO.				
Support of Indians in Arizona and New Mexico	330,000.00			
Indian school:				
Fort Mojave, Ariz	38,900.00			
Phoeniz, Ariz	146,400.00			
Truxton Canyon, Ariz	21,200.00

The bill as it passed the House contained only 37 pages, and was strictly an appropriation bill and contained no new legislation. When it was reported to the Senate it contained 99 pages, and was loaded down with all kinds of legislative provisions. It is not at all strange that this kind of an overloaded appropriation bill should be killed in the House of its friends. "So mote it be," is the only further remark that I will make on the subject.

The House and Senate passed the following resolution to take the place of the bill, viz:

Mr. OVERMAN. As stated by the chairman of the committee, and as is generally admitted on the floor of the Senate, it is impossible to pass this appropriation bill for the Indians. I therefore ask the Chair to lay before the Senate a joint resolution from the House, and I am directed by the Committee on Appropriations to report it favorably.

The VICE PRESIDENT. The Chair lays before the Senate a joint resolution from the House of Representatives, which will be read at length.

The joint resolution (H. J. Res. 441) making appropriations for current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1916, was read the first time by its title and the second time at length, as follows:

"Resolved, etc., That all appropriations for the current and contingent expenses of the Bureau of Indian Affairs and for fulfilling treaty stipulations with various Indian tribes, which shall remain unprovided for on June 30, 1915, are continued and made available for and during the fiscal year 1916 to the same extent, in detail, and under the same conditions, restrictions, and limitations for the fiscal year 1916 as the same were provided for on account of the fiscal year 1915 in the Indian appropriation act for that fiscal year. For all of such purposes a sufficient sum is appropriated, out of any money in the Treasury not otherwise appropriated, or out of funds to the credit of Indians as the same were respectively provided in the Indian appropriation act for the fiscal year 1915: *Provided*, That the appropriations from the Treasury of the United States or from Indian funds shall not exceed in the aggregate the amounts of such appropriations for the fiscal year 1915: *Provided further*, That this joint resolution shall not be construed as providing for or authorizing the duplication of any special payment or for the execution of any purpose provided for in said appropriation act that was intended to be paid only once or done solely on account of the fiscal year 1915: *Provided further*, That appropriations continued hereunder shall be available for the maintenance, repair, and operation of motor-propelled and horse-drawn passenger-carrying vehicles in the same manner as appropriations were available for those purposes during the fiscal year 1915."

Mr. SUTHERLAND. In the Indian appropriation act of last year several appropriations were made for irrigation projects. Is it the understanding of the Senator from North Carolina that those appropriations would be carried forward, the same amount, for the coming fiscal year?

Mr. OVERMAN. I think the appropriation is just like in the last bill. That is my understanding.

Mr. SUTHERLAND. Would that be so irrespective of the question whether or not the amounts were necessary?

Mr. OVERMAN. The exception is stated in the joint resolution. If he desires to have it read he can see.

Mr. SUTHERLAND. Very well.

Mr. OVERMAN. I ask that the joint resolution be put on its passage.

The joint resolution was considered as in Committee of the Whole.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

Mr. Speaker, I was appointed by you, together with Mr. CARTER, of Oklahoma, and Mr. BURKE, of South Dakota, to represent this House on a joint commission to investigate Indian affairs, and on March 2, 1915, I filed their joint report in this House. And I feel that its insertion in the RECORD as part of my remarks would not be out of place and would make available for public use much valuable information in regard to the matters investigated and reported upon by it.

This joint investigation has already borne much fruit, and caused the removal from the Indian Service of several men who were recreant to the trust reposed in them, and others are under investigation by the department for similar reasons.

I now will personally urge on our able and efficient Commissioner of Indian Affairs, the Hon. Cato Sells, and his alert and active assistants two things in the reorganization of this service, as recommended by our joint commission, but not specifically stated by it: First, that any agent or employee of the service found unfit, delinquent, or unworthy of employment should be dismissed entirely from the service, instead of being sent to some other agency or put into some other position in the service. In my judgment this is a very serious defect and should be remedied by the dismissal of the unfaithful servant.

The second thing I would point out which would, in my judgment, greatly benefit the service is from time to time to change the field traversed by the inspectors of the service, so that they will at least each year have to inspect different agencies; if this is not done and the same inspectors visit the same agencies year after year, there will be great danger that the inspectors will fail to properly inspect and duly report the shortcomings of their friends on the agencies inspected by them, for the reason that—

> Vice is a monster of so frightful mien,
> As to be hated needs but to be seen;
> Yet, seen too oft, familiar with her face,
> We first endure, then pity, then embrace.

The report of this joint commission is as follows:

[For report see pages 5502–5504, CONGRESSIONAL RECORD, March 4, 1915.]

Mr. Speaker, Mr. S. M. Brosius, agent for the Indian Rights Association, has called my attention, in a letter printed herewith, to the many protests of the Sioux Indians in South Dakota against the use of the money of the tribe—the common funds of the tribe as a whole—for the support of sectarian schools, and requesting Congress to prohibit such unwarranted use of their common funds. They further request the division of their funds so that the pro rata share of such funds shall be hereafter credited to each individual Indian. I am in full sympathy with these just demands; but I submit that if the last request was granted each Indian could use his own money in the education of his children in any school he desired, just as white parents can do.

But if, on the other hand, as pointed out by Mr. Brosius in his letter to me, the money paid out to educate Indian children in sectarian schools is gratuity funds, coming from the Treasury of the United States, then such payment is clearly prohibited by law; and, in my judgment, the failure of the Indian appropriation bill to pass ends the old Sioux treaty, because the passage of the resolution does not and can not extend that treaty by implication for one year; hence these sectarian schools under the resolution can not receive any aid from the Treasury of the United States during the next fiscal year.

Mr. Brosius's letter to me on the subject is as follows:

WASHINGTON, D. C., *March 10, 1915.*

Hon. JOHN H. STEPHENS,
Chairman Committee on Indian Affairs,
House of Representatives.

SIR: We respectfully call your attention to the matter of disposition of funds held to be available by the Assistant Commissioner of Indian Affairs for education of Sioux Indians, South Dakota, in a letter dated January 28, 1915, which is embodied in a brief (copy inclosed herewith) submitted to the honorable chairman of the Committee on Indian Affairs of the Senate by the undersigned, dated February 1, 1915. (See Senate hearings on H. R. 20150, 63d Cong., 3d sess., p. 603.)

In addition to the pro rata shares of petitioning Indians in and to the fund arising from the $3,000,000 created by section 17 of the act approved March 2, 1889, amounting to $31,315.49, the assistant commissioner states that the $200,000 appropriated for "Subsistence and civilization," under the act approved February 28, 1877, and $200,000 appropriated under "Education, Sioux Nation," by act of March 2, 1889, are included in the total amount of $431,315.49, which by the assistant commissioner's letter is held to be "available for education" of the Sioux Indians.

It should be noted in this connection that while the three funds mentioned are stated by the assistant commissioner to be available for education of Sioux Indians, Pine Ridge, for the fiscal years 1914 and 1915, and are included in determining the pro rata shares of the petitioners seeking to divert their shares for support of sectarian schools, which amounts to $33.53 per capita, the total amount of these per capita shares for 1914 was paid, and is contracted to be paid for the year 1915, from the fund denominated "Interest on Sioux fund," which are trust moneys due the Indians in fulfilling the agreement of March 2, 1889. No part of the per capita shares seems to have been paid or charged to either of the appropriations of $200,000 each created under acts of 1877 and 1889, as shown by the letter from the assistant commissioner dated January 18, 1915 (copy inclosed; see pp. 513–514 of Senate hearings, supra).

As shown in the brief submitted to the chairman of the Senate committee, the obligation of the Government to provide schools under the agreement of March 2, 1889, expired February 10, 1910, and there is now no unfulfilled obligation to these Indians for educational purposes under act of February 28, 1877, since the provisions for schools under the latter act were perpetuated by the special clause in the act of March 2, 1889, already expired by limitation of 20 years, as shown. Hence it is clear that the "trust fund" of $31,315.49, being money belonging to the Sioux Tribe, is the only amount available from which the pro rata shares can be derived of those Sioux petitioning to have their shares diverted for support of sectarian schools. The appropriations of $200,000 under head of "Subsistence and civilization" and $200,000 "Education, Sioux Nation," as shown, are now gratuities from the public moneys of the United States and not applicable for expenditure for sectarian schools under existing law, as shown by the brief filed with the Senate committee (supra).

Very respectfully,

S. M. BROSIUS,
Agent Indian Rights Association.

(Inclosures.)

DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Washington, January 18, 1915.

TUITION OF PUPILS IN CONTRACT SCHOOLS.

Mr. S. M. BROSIUS,
Agent Indian Rights Association, Washington, D. C.

DEAR MR. BROSIUS: In response to your letter of the 16th instant I have to advise you that payments were made for tuition, etc., of Indian pupils in sectarian schools during the fiscal year 1914 as follows:

Agency, etc.	Fund used.	Source of fund, act of—	Amount.
Osage, Okla.....	Indian moneys, proceeds labor, Osage school.	June 28, 1906 (34 Stats., 539).	$5,839.25

[3] Resolution Quapaw council (9 pupils).

WASHINGTON, D. C., *February 1, 1915.*

Hon. HENRY F. ASHURST,
Chairman Committee on Indian Affairs,
United States Senate, Washington, D. C.

DEAR SIR: In the matter of the use of Indian funds for private schools: We agree that funds held by the Government as guardian for

individual Indians may be expended upon request of such individual Indians for educational or other purposes in the discretion of the Secretary of the Interior.

It is submitted that in view of the wise public policy of maintaining a complete separation of church and state the tribal Indian funds provided for the maintenance of schools among the Indians should be expended for schools conducted by the Government.

It seems most desirable, therefore, from every viewpoint that the funds held in trust by the Government for the benefit of Indian tribes should be divided pro rata and the per capita shares credited to the individual members and paid to them in cash or expended for their benefit in the discretion of the Secretary of the Interior.

After careful consideration by Congress, on June 10, 1896 (29 Stat., 345), an act was approved which provides:

"* * * and it is hereby declared to be the settled policy of the Government to hereafter make no appropriation whatever for education in any sectarian school."

The United States Supreme Court in 1908, in the case of Quick Bear *v.* Leupp (210 U. S., 79), held that money belonging to individual Indians might be expended by the Government for the beneficiaries in schools of their choice.

In referring to the limitation of Congress above cited the court says:

"This limitation, if it can be given effect as such, manifestly applies to the use of public moneys gratuitously appropriated for such purpose, and not to moneys belonging to the Indians themselves. * * * The declaration of the settled policy of the Government is found only in the act of 1896 and 1897, and was entirely carried out by the deductions provided for. Since 1899 public moneys are appropriated under the heading "Support of schools," "For the support of Indian and industrial schools, and for other educational purposes," without saying anything about sectarian schools. This was not needed, as the effect of the legislation was to make subsequent appropriations for education mean that sectarian schools were excluded in sharing in them, unless otherwise provided."

In view of the prohibition of Congress and the decree of the court above cited against the use of public funds for sectarian schools, it is pertinent and important to determine if the funds which are sought to be appropriated by the pending Indian appropriation act (H. R. 20150) are public funds of the United States, available for education, and what portion of them, if any, are bona fide, due the Indians.

We insert in the record at this point a letter from the Assistant Commissioner of Indian Affairs, dated January 28, 1915, giving in some detail the sources of the funds heretofore expended and now proposed to be expended for support of sectarian schools among the Pine Ridge Band of Sioux Indians, South Dakota.

DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Washington, January 28, 1915.

Mr. S. M. BROSIUS,
Agent Indian Rights Association, Washington, D. C.

DEAR MR. BROSIUS: In response to your letter of January 26, 1915, regarding the funds set aside for the Holy Rosary School, Pine Ridge Reservation, S. Dak., for the current fiscal year, you are informed that the share individually of the Pine Ridge Sioux in the interest on the $3,000,000 Sioux fund created by the act approved March 2, 1899 (25 Stat. L., 895), available for education during the current year, in addition to the balance remaining from former years, is approximately $5.55. The interest on the share of the Pine Ridge Sioux fund July 1, 1914, and January 1, 1915, available for education, amounted to $17,884.64; which amount, based on the number of Indians entitled to share in the principal fund July 1, 1914, would give to each Indian $3.17 per capita. The accumulation of interest in Sioux fund, Pine Ridge education, July 1, 1914, in addition to the above, also available for education, amounted to $13,430.85, or $2.38 per capita. It will therefore be seen that, based on 1,008 petitioners, the total amount of interest available for the contract aggregated $5,594.40. In arriving at the value of each share, in ascertaining the total amount that would be available for the above school during the current year, all the Pine Ridge Sioux funds available for education were taken into consideration, as follows:

Interest on Sioux fund, Pine Ridge (education)---------- Section 17, act March 2, 1889 (25 Stat. L., 895).	$31,315.49
Support of Sioux of different tribes, subsistence and civilization---------- Article 5, act February 28, 1877 (19 Stat. L., 254), and Indian act August 1. 1914 (Public, No. 160).	200,000.00
Education Sioux Nation---------- Section 17, act March 2, 1899 (25 Stat. L., 894), and Indian act August 1, 1914 (Public, No. 160).	200,000.00

It was determined that the value of each share in all these funds amounted to $33.53, and there being 1,008 petitioners the value of the shares of the petitioners aggregated $33,798.24. However, the whole amount of the contract, namely, $24,300 was, for convenience in bookkeeping, set aside from "Interest on Sioux fund, Pine Ridge education," it being immaterial whether the full amount was charged to this fund or whether a portion of the amount was charged to each of the funds involved, all of which have been regarded as available, as will be seen by reference to a letter dated March 19, 1913, from the Assistant Secretary of the Interior to the president of the Indian Rights Association.

Hoping the foregoing information will serve your purpose,

Very truly, yours,

E. B. MERITT,
Assistant Commissioner.

It is disclosed by the assistant commissioner's letter that the 1,008 Indians, members of the Pine Ridge Band of Sioux, are entitled to a per capita share of $3.17 annually from the amount due the tribe from the interest available for education on the $3,000,000 "Sioux fund" created by the act approved March 2, 1889 (25 Stat., 895), and that, including balances on the fund, a total of $5.55 per capita is available from money belonging to the Indians. Hence the 1,008 petitioners will be entitled to $5,594.40, and this sum may be diverted for the Holy Rosary or other school, in the discretion of the Secretary of the Interior, upon the request of the Indian beneficiaries.

We further submit that the $200,000 reported by the assistant commissioner's letter as available for diversion for sectarian schools under title of "Subsistence and civilization," stated to be derived through article 5 of the act approved February 28, 1877 (19 Stat., 254), is no longer an obligation of the Government to these Indians for educational purposes, and we believe this fund has not been expended for education in other instances. The article reads as follows:

"ART. 5. In consideration of the foregoing cession of territory and rights, and upon full compliance with each and every obligation assumed by the said Indians, the United States does agree to provide all necessary aid to assist the said Indians in the work of civilization; to furnish to them schools and instruction in mechanical and agricultural arts, as provided for by the treaty of 1868." * * *

The treaty concluded with the Sioux Indians April 29, 1868 (15 Stat., 636), proclaimed February 24, 1869, provides in article 7 as follows:

"ART. 7. In order to insure the civilization of the Indians entering into this treaty, the necessity of education is admitted, especially of such of them as are or may settle on said agricultural reservations; and they therefore pledge themselves to compel their children, male and female, between the ages of 6 and 16 years, to attend school; and it is hereby made the duty of the agent for said Indians to see that this stipulation is strictly complied with; and the United States agrees that for every 30 children between said ages who can be induced or compelled to attend school a house shall be provided and a teacher competent to teach the elementary branches of an English education shall be furnished, who will reside among said Indians and faithfully discharge his or her duties as a teacher. The provisions of this article to continue for not less than 20 years."

Section 17 of the act approved March 2, 1889 (supra), fulfills the obligation of the Government to furnish facilities for education under article 7 of the treaty of 1868 above cited. It provides:
